It is sometimes refreshing to turn from the glare and glitter, the waste and extravagance which attend weddings where souls are sometimes linked together in gilded misery, at glance at simpler scenes where quiet and content wait on true affection. A writer in the *Pittsburgh Dispatch* tells this tale of a simple home wedding.

"It's just a year ago to-day," said she to the story. "We had been schoolmates, and she asked me to come on an early train and help her and her mother through the ceremony. It was nine in the morning when I stepped under the thick woodbine that grew about the corner of that angular little house on the edge of New England village. She had a broad brow and she said, 'Come.'

"We went out into the pasture land beyond the village, and we filled our arms with golden rod and cardinal flowers. Then we walked out to the house and her mother fetched jars and big bowls, and we put our flowers about the rooms.

"He came by the noon train, and she in to the gate in her print dress and her hat to meet him. We had a little dinner together, her mother, he, she, and I.

"Then she went to dress, and came down stairs again in half an hour in a simple white gown. It was two o'clock when the neighbors began to arrive. She went to the door to meet them herself, and she took the minister's hat and showed the minister's wife where to put her things.

"Then by and by the minister said, 'Are you ready?' And she said, 'Yes.' And then the two stood before the minister, and she put her hand behind her and into the hand of her mother, who sat on the sofa. And when the minister began 'Will you—' she said 'I will' before he got half through.

"After that she put on a white apron and saw that we all had cake and ice-cream. When it was time for her to go away she changed her dress again and we all walked to the railway station to see her started. When the train came up she turned to me to say with mother till to-morrow. I'll get a letter to her by that time. She'll be lonely this evening."

FOR THE FRIEND.

Of the ministry, James Emilen wrote: "I need I can say from my heart, I have a friendly feeling for a brief and lively minister, and in this view of the subject, no one has occasion to plead the lack of eloquence, the stammering tongue, for it is not so much the words, how good or how many, but how lively; feeding the hungry with the true and not with pictures and descriptions and doctrines; nay, is it not true, that even a fifty spoken, is like 'Apples of gold in plates of silver.' The rehearsal of a text, with authority, may have the effect to gather assembly upon Christ, the invisible Teacher to settle them upon Him and his teaching, which is all any minister should desire."

The foregoing may have been published in *THE FRIEND* separate from this Memorial which it is now taken; but it is so good, so vital, that it is thought it might be repeated that it has any personal reference to the present time; also, bearing in remembrance

g expression of our late dear Friend, Gibbons; "She would not check the g of a babe in Christ Jesus."

W. P. T.

TOPOGRAPHIC MAPS OF PENNSYLVANIA.—Topographical map sheets of parts of Pennsylvania, the result of a cooperative survey by the State of Pennsylvania and the United States Geological Survey, have recently issued by the Federal organization. These are drawn on a scale of about one inch mile and each sheet covers a rectangular area representing approximately thirteen square miles. They exhibit in great detail features of roads, boundaries, towns, drainage, and the topography of the country is specified by contours or lines of elevation. The Germantown sheet is a map and shows the country surrounding the city of that name in the suburbs of Philadelphia and thence several miles to the north. The new sheet, covers a portion of the western part of Armstrong county and extends to the Allegheny River. Connelville, Pa., and Indiana, also new sheets, show a strip of country northeastward from Connelville to a few miles beyond the Indiana, embracing parts of Westmoreland and Indiana counties. They cover the part of the region from which comes the famous Pittsburgh coaling coal. The maps are available at the usual rate of five cents on application to the Director of the United States Geological Survey.

is do an immense amount of drudgery, and if they do now and then reward themselves by a dainty tid-bit of ripening fruit. The robins have been watched while they carried a thousand earthworms to their nests. Woodpeckers destroy eggs and larvae would develop millions of destructive insects in forests and orchards; and one of the most inevitable foes of the cankerworm is the beautiful oriole, were it but allowed to live in its swinging cradle to the elm. For the fruiting of black and orange on a young apple tree, an apple tree is stripped of leaves and fruit, or an elm is denuded of its leafy foliage by the cankerworm.—*Farm*

that thou hast in hand with perfect and dignity and feeling of affection, and with justice, and to give thyself room all injurious thoughts.—*Marcus*

Notes From Others.

Bradford, in an article written for the *Friend*. The Church has been over-organized. It is made to depend on direction and not on inspiration. We have too many meetings consequently too little time for individual work.

any of which every volume or tablet was prior to Abraham's leaving Ur of the Chaldees has just arrived at the University of Pennsylvania. These treasures were brought to the country in twenty-two large cases. A. T. B. D., considers this the most important geological material ever brought to America.

Spurgeon, father of Chas. Haddon Spurgeon, recently died. He was the oldest Congregational minister in England, having been born in

1810. The *British Weekly* says that John Spurgeon had remarkable pulpit gifts. Visitors found never-failing delight in talking to the wise and gracious old man, whose memories covered nearly a century, and whose intellect remained unclouded to the last.

A prominent New York preacher, McArthur, is looking for an "imperialism of love" which he thinks is yet to dominate the world. "God is raising up a love trust to offset the 'self-trusts' which are menacing our civilization. On the basis of the golden rule, a federation of the whole world will one day be accomplished."

The first of the strange pigmy race in Central Africa, of whom Stanley, Du Chaillu and others have written, has been pronounced converted through the missionary labors of the Church in Toro.

The *Standard* says: "The testimony of those who come in touch with heathenism leads to the admission that human nature the world over is much the same, and human thinking on the great essentials of life as earnest and as searching in heathendom as in Christendom. One is the search of intellect in the dark, the other the progress of the enlightened mind."

Professor William James, in one of his "Gifford Lectures," delivered in Edinburgh recently, said: "If religion be a function by which either God's cause or man's cause is to be really advanced, then he who lives the life of it, however narrowly, is a better servant than he who merely knows about it, however much."

G. Campbell Morgan, the revivalist successor of Moody, is preaching in the Fifth Avenue Presbyterian Church this summer. In his sermon last week he declared that "A man is greater than any form of ritual. The temple itself was not the link between God and man, but only the symbol of the link. Sometimes we think that it consecrates the man. It is not so. It is the worshipper that gives value to the temple. Every human being here this morning is greater than this house, with all its magnificent appointments and aids to worship." "Right where you are," he said, "whether in the desert or the city, on the mountain or in the valley, is the place for you to worship. We do not have to come here to find God. Wherever the worshipper is, there is God."

"Make it a rule to engage each day in conversation with some one whom you know to be your superior" is the advice of Edward Everett Hale. "There is one, even Christ Jesus, that can speak to thy condition," was the testimony of George Fox. By openness to his inspeaking word, there need be no lack of communion with a superior.

FIFTIETH YEAR OF THE INSTITUTE FOR COLORED YOUTH.—This year marks an era in the history of the Institute for Colored Youth in Philadelphia, owing to the resignation of its Principal, Fanny Jackson Coppin. "Her long and faithful service," says the fiftieth annual report, "in the education of the colored people, not only of this section, but of the country at large, is recognized by all who are in any way familiar with the work, and in parting with her, the board of managers feels, in no common degree, the debt which it owes to the one whose long term of service has been marked by such ability and fidelity to the interests of the school."

"The Board has secured as her successor Hugh M. Browne, Principal of the Colored High and Training School, of Baltimore; his services to commence with the next academic year, in the coming autumn. The selection was made after carefully reviewing claims of the various candidates for the situation, and a visit of a committee of the Board to Tuskegee and other points in the

South; and we have every reason to hope that our new principal will worthily sustain the reputation of the position to which he is called."

"We have also to report the resignation of George Astley, the Secretary of our Industrial Department, taking effect with the close of the current year."

"During the period of nine years in which he has been connected with the Institute, the work of his Department has largely increased, and we feel that his earnest and sympathetic efforts have been an important factor in this development. In this connection the board of managers wish to express their appreciation of the good, conscientious work done by our entire corps of teachers, whose unflinching zeal has largely tended to raise the reputation of the Institute to its present deservedly high position."

"It is our intention to reorganize the entire work of the Institute and bring it all under the management of the new principal, and it is possible that in the near future additional outlay may be required to properly develop the work, especially in the industrial lines; we, accordingly, bespeak the financial aid of all Friends and others in Philadelphia and vicinity who are interested in the welfare of the colored race."

SUMMARY OF EVENTS.

UNITED STATES.—An explosion in the rolling mill coal mine of the Cambria Steel Co., near Johnstown, Pa., occurred on the 10th, by which 122 miners lost their lives. About 600 men were in the mine at the time, which is one of the largest in the United States. The section in which the explosion occurred, caused as is believed, by an unexpected leakage of gas into it, is about two miles from the entrance. The men who escaped were familiar with the mine. Lights were out and there was no way for them to find their way to the top had they not known the mine perfectly.

The Internal Revenue Bureau has issued rules and regulations for the refunding of taxes paid by corporations and individuals as trustees or executors upon bequests or legacies for uses of a religious, literary, charitable or educational character. An act directing the refunding of such taxes was passed at the recent session of Congress.

The Grand Jury has recently submitted to Judge Witbank of Court, No. 1 in Philadelphia, a report in which they recommend that the laws pertaining to unnecessary buying and selling on the First day of the week be more rigidly enforced, and that the law against blasphemous language be rigidly enforced, especially among the Government and municipal employees.

A despatch from Scranton, Pa., of the 9th says: "Nine collieries are now in steady operation in the Lackawanna region. These washeries can produce 25,000 tons of coal daily. The success in operating there is encouraging the companies to start others the coming week."

James E. Roderick, chief of the State Bureau of Mines and Mining, in his report for 1901, says: "To my mind, the occupation of the miner and his laborer or his helper can be classed as extra hazardous, as is that of locomotive engineers, firemen and brakemen; consequently, these people should be especially well paid for their hazardous and dangerous calling. A majority of miners' families," he says, "are left entirely destitute upon the death of the head of the household. Something should be done in a general way to alleviate the distress of this large class in every community throughout the coal regions, as more fatal accidents occur there that are incident to coal mining than in any other industry in the State. He commends the system in effect at the operations of the Lehigh Coal and Navigation Company, in the Panther Creek Valley, in providing for the sick and injured and the relief of the survivors of the dead." He also says, "The past year was the most prosperous for all concerned in the mining of coal of any year for the last quarter of a century. The coal, the report says, was in great demand and brought a fair price, which enabled the operators to pay their employees fair wages and to give them more steady employment than was the case for a number of years."

A request from the sheriff of Carbon Co., Pa., to Gov. Stone for troops to preserve order has been refused on the ground that there is no necessity for it until after the local authorities have been notified. An association in Philadelphia, formed in 1897 to assist the poor by enabling them to cultivate vacant lots in the suburbs of the city, state in a recent report: "The

number of gardens under cultivation has grown from 100 in 1857 to almost 800 in the present year. Last year the weight of the vegetables raised was \$30,000, and the total cost to which the society was put was \$448,940, which included the cost of ploughing, harrowing, seeds, office hire, salary of superintendent, etc. The work is not a charity in the ordinary sense of the word. Its aim is to give a helping hand to the poor who are willing to help themselves. A sample of the gardens contain about a quarter of an acre each.

Secretary Wilson of the Agricultural Department, thus refers to the work now being done to promote agricultural interests: "Four or five years ago we raised 25 per cent. of the rice we used. The Dingley law imposed a heavy tariff, and our rice was not suited to our requirements; it was too soft. A Southern man to China for rice for what we wanted. He found a dainty, cheap rice, and this year we shall supply the home demand. We shall have our own rice this year. We shall be exporters after this. We have been paying \$2,000,000 a year for macaroni from Italy. We will raise 2,000,000 bushels of macaroni wheat this year. We expect to develop this crop until we add \$20,000,000 to our revenue annually to our rainfall. It is particularly suited to the Western States as far west as the 100th meridian. We have just received a consignment of hard wheats from the valley of the Tigris river. We have found an early date palm from the same valley which we have planted in Phoenix, Ariz., by the side of a date palm recently from Northern California. We are now growing the maize crop. There is a great demand for honey corn, as well as for varieties rich in oil. Over \$18,000 worth of corn oil has been sold this year. It promises to become a great industry. We also have several new varieties of sugar corn for canning purposes.

Secretary Davis, of the Pennsylvania Society for the Prevention of Cruelty to Animals, reports the following as the work of the agents for Sixth Month: prosecutions, 36; cases remedied without prosecution, 608; animals ordered from work for various causes, 293; pads adjusted to prevent rubbing of sores, 378; coops of poultry relieved from overcrowding, 113; animals humanely killed, 8.

A seven masted schooner, the first of its kind in the world, has been launched at Quincy, Mass. It is built of steel. Its length over all is 403 feet. When loaded her displacement will be 10,000 tons. She can carry about 8,000 tons.

At the last session of the Maryland Legislature a law was passed making women eligible to admission to the bar in that State. One woman has since passed her examination and become a lawyer.

The directors of the St. Louis Exposition have signed an agreement that this exhibition shall not be opened on the First day of the week. This is done to comply with the law, Congress having made the closing on that day a condition precedent to the enjoyment of any part of the \$5,000,000 appropriated for the Exposition.

In his annual report to the Board of Managers, Dr. Chapin, Chief Physician of the Pennsylvania Hospital for the Insane, comments approvingly on the fact that during the year fourteen patients threatened with mental disease voluntarily sought admittance to the hospital, believing that if such a course was followed more generally the number of deaths from suicide and sudden impulses might be lessened.

In Rockwell, Iowa, a town of about 1,000 inhabitants, the farmers have organized an operative society, the agent of which sells their grain, retaining 1c. per bushel for the expenses and the sinking fund of the society. During 14 years that the plan has been in operation the volume of business done has grown every year.

The right of an employer to discharge a workman because that workman belongs to a labor union is established by a recent decision of the Supreme Court of Wisconsin.

A despatch of the 11th from New York city says: President Haines, of the American Society for the Prevention of Cruelty to Animals, and a group of busy assistants, were engaged for a couple of hours this morning in the occupation of tying fancy sun-bonnets and wide-rimmed straw hats on the heads of sun weary horses. In the two hours thousands of hats were given away, and hundreds of drivers in the still waiting crowd were told that another supply could not be obtained by the society until later. The hats weigh less than three ounces each. The crown is six inches high and seven in diameter, and the rim measures five inches. Made up in large quantities, the hats cost the society between 10 and 12 cents apiece.

President Roosevelt has lately stated publicly in regard to trusts: "Much can be done along the lines of supervision and regulation of the great industrial combinations

which have become so marked a feature in our civilization, but if we recklessly try, without proper thought, without proper caution, to do too much, we shall do nothing, or else we shall work a ruin that will be felt most acutely among those of our citizens who are most helpless. Special legislation is needed. Some of that legislation must come through local legislatures, some through the State, some through the national government; but above and beyond all legislation we need honest and fearless administration of the laws as they are on the statute books—honest and fearless administration of those laws in the interest neither of the rich man as such nor the poor man as such, but in the interest of exact and equal justice to all alike."

There were 45 deaths in this city last week, reported to the Board of Health. This is 168 more than the previous week and 98 less than the corresponding week of 1901. Of the foregoing, 313 were males and 257 females: 45 died of consumption of the lungs; 33 of inflammation of the lungs and surrounding membranes; 8 of diphtheria; 32 of cancer; 11 of apoplexy; 5 of typhoid fever; 3 of scarlet fever and 3 of small pox.

FOREIGN.—A despatch from Washington says: "Secretary Hay's prompt action upon the appeal of the Chinese Government, through Yuan Shi Kai and Minister Wu, relative to the evacuation of Tien Tsin, has met with success. The foreign Generals, who have stood in the way of the evacuation, will receive instructions from their home Governments, and although one or two minor points remain to be adjusted, it is believed that Tien Tsin will soon be turned over to the Chinese authorities. The Powers are now agreed to instruct their generals at Tien Tsin to abandon the contention sought to be imposed as a precedent to evacuation, that, save the small police force of 300 men, the Chinese military forces must be kept at a distance of not less than thirty kilometers from Tien Tsin."

The Marquis of Salisbury has resigned the Premiership of Great Britain, and A. J. Balfour, Government leader in the House of Commons, has been appointed to succeed him.

Descendants of the ancient cave-dwellers have been found by Dr. Lumholtz of the American Museum of Natural History of New York, to be living in inaccessible regions among the Sierra Madre mountains, in the northwestern part of Mexico, at an altitude of 8,000 feet above sea level. Dr. Lumholtz is reported to have learned their language, and states that he found among many of the tribes a higher degree of morality than is common in civilized countries.

A despatch from San Francisco says that near Salina Cruz, on the Pacific side of the Isthmus of Tehuantepec, the great Mexican city, the recent heavy shocks of earthquakes occurring in that section since Fourth Month 18th last. The column of water, rising to a height of about fifty feet, roars and hisses from among the rocks, and is an object of great interest to the people and to passing vessels, being plainly visible from the sea.

It is reported that the volcanoes of Mirad Valley and Rinconada Vieja, in Costa Rica, situated respectively 80 and 90 miles southeast of Lake Nicaragua, are in active eruption.

Reports from the Philippines state the Asiatic cholera prevails there in the violent form it develops in the tropics, where climatic conditions and lack of proper sanitation aggravate it. Among the natives the death rate is said to be 85 per cent.

It is stated that an European international agreement has been concluded at Paris for the protection of forest useful to agriculture. The parties to the agreement are Belgium, France, Greece, Liechtenstein, Luxembourg, Monaco, Austria-Hungary, Portugal, Sweden, Switzerland and Spain. Among the birds accorded useful are certain nocturnal birds of prey, as well as bee eaters, swallows, and several birds of the sparrow species, while ravens, magpies, jays and some others are branded as mischievous. Italy, a country in which the capture of north bound birds is a regular trade, does not appear among the signatories.

King Victor Emmanuel has left Rome for St. Petersburg to visit the Czar of Russia.

A fresh eruption of Mont Pelee, Martinique, occurred during the morning of the 11th. It was quite as violent as the one of the previous day, and was marked by loud detonations, followed by showers of stones and cinders. There was no loss of life.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 76.

Lydia Ann Hendrickson, N. J.; Edw. S. Lowry, Phila.; Wm. H. Treffry Canada, St. John, N. B.; v. 75: Evan Smith, Ia.; Mary C. Satterthwaite, Pa.; Amy S. L. Exton, N. J.; Frank W. Wood, Ill.;

Susanna Kite, Phila.; Joshua T. Ballinger, Josiah A. Roberts and Joseph Roberts, Pa.; Haines, Phila., \$6 for himself, Newbold R. F. N. J., and Hattie L. Carter, Ky.; R. J. Dutt, Jr.; Alice H. Carter, N. J., \$6 for herself, Sarah C. Edwards, Gtn.; N. C. 77; Alice H. Nicholson, Pa.; Ruth Anna Sharpless, N. J.; Waring, N. J.; Mary Ann Wiggins, Pa.; Mary J. White, N. C.; John W. Biddle, Phila.; S. Walton, Pa.; Jacob Cook, Ia.; James W. Linton, O. P.; Ellis DeCoo, N. J.; George B. Biddle, Wm. Biddle, Jr., Pa.; Geo. Forsythe, Pa.; S. M. Gorman, Pa.; Samuel C. Webster, M. D.; W. Wendt, Mass.; Samuel P. Leeds, N. J.; Samuel P. Leeds, Jr.; Henry W. Leeds, Sams Leeds and Edward C. Leeds; John Tatum, Josiah Jefferis, Pa.; Hannah Mickle, N. J.; Roberts, N. J., \$10 for himself, David Reed, Joseph H. Roberts, William H. Roberts; Roberts Ritchie, M. D.; John E. Carter, G. M. Roberts, N. J.; John E. Carter, O. P.; Orphans and L. M. Thornton, Anne E. L. Roberts, for Aubrey Howell, Gtn.; A. F. Hulse, for E. B. Calley, Pa.; Henry B. Leeds, Agt. J., \$60 for Joseph Stokes, M. D., Sally A. Kay, Mary W. Stokes, M. & R. Matlack; Elizabeth Buzby, Edwin R. Bell, Louis Lippincott, Al. Roberts, Howard H. Bell, Henrietta James, N. J.; Wm. S. Linton, N. J.; Allen T. L. Roberts, Uriah Horton, Mary Anna M. Mary W. Roberts, William E. Darnell, Nath. Roberts, Morris Linton, Margaret C. Veb Margaretta W. Satterthwaite, William M. Samuel L. Allen, Ebenezer Roberts, Allen M. well, Ind., Deborah W. Buzby, \$6 for Isaac Newton Stokes, M. D., and for Gideon Cook, Ellen L. Lightfoot, Pa.; R. B. P. H., Phila.; W. Hazard, agent, N. Y., \$14 for himself, Sam. Cook, Samuel G. Cook, Persis Hallcock, Isaac P. Hazard and Jesse M. Otis, Brackin, O., and for Oscar J. Bailey, W. Elwood Hancock, N. J., and for Robert Thomas, N. J.; Wm. S. Linton, N. J.; Allen T. L. Roberts, Thomas Woolman, Phila.; Wm. Stokes, N. J.; Elizabeth Wright, N. J.; M. Bines, Phila.

Remittances received after Third-day noon, 1893, will appear in the Receipts until the following week.

NOTICES.

ERRATA.—In the Extracts from Penelon in THE FRIEND of Seventh Month 12, page 411, second column, it is from bottom, for "while" read *which*, and in third line 27th from bottom, for "this balancing" read *the balancing*.

WANTED.—A matron at a Public Institution. Address "Superintendent, Care of THE FRIEND."

FRIENDS' LIBRARY, 142 N. 16th St., Phila.—Donations for the Seventh and Eighth Months the Library will be open on Second and Fifth-days from 3 to 6 P. M.

WESTWOT BOARDING SCHOOL.—A stated meeting of the Committee on Admission will be held in the Committee Room, 4th and Arch Streets, on Seventh-day, 20th instant, at 10 A. M.

JOHN W. BIDDLE, Secy.

A YOUNG FRIEND desires a position as companion or taker of an invalid or of children. Address B. B. B. Office of THE FRIEND.

The committee having charge of Spring River, desires to engage the services of a suitable young man to serve as principal the coming year.

Address LEVI BOWLES, Clerk of Committee, Galena, Kas.

WESTWOT BOARDING SCHOOL.—The fall term of school begins on Third-day, Ninth Month 29th. Early application should be made for admission, desiring to enter at that time, if the matter has not already received attention.

FIFTY-FIVE YEARS have now elapsed since the publication of THE FRIEND began. There probably few if any households to which its visits have continued uninterrupted its first issue. The valued members who instrumental in establishing it, and coning to its columns in its early days, have passed away, as have also the three Friends successively for many years bore the principal share in its management, Robert L. Charles Evans, M. D., and Joseph Waldman and many others who out of love for the cause of Truth were their fellow laborers—earnest concern for the promotion of the cause is recorded in its pages, and we trust still be fruitful for good, as the course of its history manifests their clearness of view in relation to subjects affecting our beloved Society and the wisdom of their counsels. They went on to their rewards, but a work remains for others to do, even "to display a banner before the Truth." May these not be unfruitful.

Not Transferable.

During a steambath on a recent journey the writer heard a measured tramping of feet and him. He stood aside and let a company of men each man clad in blue garments with buff breeches and a huge roll wrapped in black rubber and hanging in a ring down from one side and about his body. Passing through the opposite gangway they deposited their baggage and made themselves at home about the portion of the deck. Seeing that passengers could talk with them, the writer approached one who was leaning by himself on the railing, as willing to answer questions. The men went on their way to a camp or station near Boston. Where in the world he was going to be

sent from there, it was not for him to know or choose. He hoped it would be Porto Rico. He had been there before, and in Cuba had known a campaign of skirmishing but no pitched battles. He had also served for two years in the Philippines, in considerable hard service. A soldier was but a little machine, or a unit in a drove of cattle, and had the hardest life in the world, and occasionally very good times. Had he ever seen instances of the "water cure" applied by parties in his regiment? "Yes," he had. "Fifty cases?" "Well—I shouldn't think quite up to that number,—but towards it." "Does not filling a man's stomach with water and then pounding or stamping on him usually result in his death?" "It usually kills them," he said. "And soldiers coming to subdue our country would have the same right?" "That's war, I suppose.—But then they killed some of our men." But where is the Christianity of this whole business of war? Didn't General Sherman say, 'War is hell?' "Yes,—I suppose."

We were not inclined to talk further. His low voice bore a tone of gloom, and his aspect that of one whose moral individuality had been made over to the powers in command,—whose conscience with his body must be transferred to the will of other men.

On the same evening of the next week a ticket came by mail bearing the words, "Not Transferable."

It was for the admission of the bearer to the premises of a certain institution on the morrow. A business necessity also leading at that time to the same neighborhood, at the due hour for assembling there he found himself sitting beside some grand military officer or general whose shoulders were overlaid with gilded trappings. Other high military officers sat in a row beside him, presumably the governor's staff accompanying hither the President and Secretary of State. The writer remarked to him, "It is something of an incongruity to have a military officer and a Philadelphia Quaker sitting here side by side." "Not in the least, sir," said he, "I, too, am for Peace. I do not believe that war is a right way of settling differences." "I am glad," was the reply in substance, "that we agree in that. It goes without saying that I believe war to be unchristian." "From my very heart it is revolting to me," said he. "I was much distressed when our war with Spain was declared."

But before the query could be formed, "why could one be so employed, as a contradiction against himself?" some general had stepped to the front of the platform to order the assembly to come to silence, and the thump of his hilted sword upon the floor cut short our conversation. During the invocation which followed, the otherwise solitary situation of the Quaker in testimony for true, as distinguished from conventional prayer, was kept by the military man also, in apparent courtesy for his companion.

Thus from the private soldier to one high in rank seemed to be illustrated the same principle. It finds its way everywhere among men, to excuse the most out-and-out inconsistencies between personal conscience and practice,—the understanding that one's conscience may be treated as a transferable ticket,—that it may be surrendered at will to other men of greater might, and these become authorities of right to us, in place of God and his witness for Truth in each heart. Our conscience may cry out against what they may do, for we have transferred the use of our conscience to them. We have vacated our ordain, but that, we are taught, is no affair of selves of the primal trait of man,—have surrendered to be as "cattle" or "machines." Is a nation thus to gain "moral fibre?"

If God has given us one endowment to be held sacred between us and Him, it is our conscience. Upon that as an untarnished ticket to the premises of his kingdom, He has plainly marked the sign "Not Transferable," as well as "not to be defiled."

No amount of assuming that we have made it over to any other authority lower than Himself will avail us in the day of account. The soul of a conscience lost, surrendered, bartered away or vacated for a period of enlistment, goes with it to its own place. We may, and often should, submit our judgment to others as to what may be wise, but never an authoritative sense of the witness of God in the heart for pure righteousness and Truth, the discharge of his undoubted will, or our conformity with the Spirit of Christ. The authority of the Spirit of all Good in us, will not subside at the command of other men. It stands distinct from the voice of the stranger, though the stranger may harmonize better with our natural desire and self-will. It will be found clearer and clearer as its pure dictates are obeyed. It

will be obscured as the human wish or will is granted the ascendancy over the Divine witness. "Cease from man whose breath is in his nostrils." All human authority ceases at the point where the Divine authority has spoken otherwise.

HUMAN AS SECONDARY TO THE DIVINE GOVERNMENT TO BE OBEYED.—As members one of another we must, indeed, yield much one to another in human society, whether in our religious, civil, business, or family relations,—yield much of self, of opinion, of judgment,—but nothing of Divine principle. In things not forbidden of God, the command of civil government or church order, creates a duty. We must render unto Cæsar the things that are Cæsar's,—unto earthly governments the right of eminent domain, in the things of earth, so only that "in all things Christ should have the pre-eminence." But in his own exclusive field, the direction of the human conscience in things inseparable from his love, law, truth, and immediate Spirit, He as King of kings and Lord of lords authorizes,—and we should admit,—no rival. "We ought to obey God rather than men," said Peter to a government. And we generally obey human and church governments as modes of obeying God. But as it is possible for these in some matters to err from the Divine will, we must in such obvious cases fall back on the Spirit of God as the final rule of faith and practice. The subordinate "powers that be" are "ministers of God," only "for good," and not to accomplish moral wrong.

THE AUTHOR OF PEACE IN CHURCH GOVERNMENT.—It is possible, in religious associations or church life, for a prophet to stand alone in seeing far above his brethren, and he must sacredly keep his conscience void of offence towards God. He stands faithful in testimony, or in a readiness for it, and is clear. Or the church is willing to take the responsibility of his offered service and release him from it. He hath done what he could, and in a sense that the Head of the church releases him will feel clear, and a peace which the world cannot give. He has not transferred his conscience to his brethren but kept it with God. A day might arise, a day altogether exceptional, when the same Witness should give him no peace till he yielded to a call out from his association into a larger or a peculiar service beyond, or a special stand alone. He would not retire as an insubordinate, but in good order, with an eye single to his Leader. Such singling out of men against their own will, have occurred in history, for the greater blessing of man, and might again. But the best safeguard against a vain or a fanatical imitation of them will be an humble abiding in the one Witness to his own headship over the individual, and over all things to

his Church. If we walk in the light as He is in the light we shall have fellowship one with another. A single-eyed devotion to the Divine witness for Truth in any Divinely led heart produces insubordination to no feature that is Divine in any government of church or of state. The law of true individuality of character is the law of every true social fabric.

RIGHTEOUS NON-CONFORMITY A NATIONAL STRENGTH.—Governments have been blind in the recognition of untransferable consciences as their greatest strength in that which exalts a nation. They have placed their premiums and preferments on lack of independent principle and on servile conformity, on machines who would practically, in state affairs, know no God higher than the machinery of state; and they have crucified the element which, did they know it, they could least spare, the non-conformists for conscience sake, the martyrs to godly principle; virtue which worldly inducements could not buy over, nor tortures turn. A government can better afford to be passively resisted at some point of conscience by ten righteous men than served by one knave. But the representatives of a loyal conscience towards God,—always the best loyalty that a nation has,—are judged as weeds to be rooted out, while the fawning vines of compliance exhaust the honor of the land. Pilgrims to a better country, even an heavenly, ought to be the most cherished citizens for a people's good. The patriots of the celestial city are, while they remain with us, the truest patriots of the Divine order of society here below. They are worthy of a better government than any which presumes to protect them here, but of them the world is not worthy.

THE ONE THING NECESSARY.—Purification is the one thing necessary, and nothing will do in the stead of it. But man is not purified till every earthly, wrathful, sensual, selfish, partial, self-willing temper is taken from him. He is not dying to himself till he is dying to these tempers; and he is not alive in God till he is dead to them. For he wants purification only because he has these tempers; and therefore he has not the purification which he wants till they are all separated from him. It is the purity and perfection of the Divine nature that must be brought again into him; because in that purity and perfection he came forth from God, and could have no less, as he was a child of God, that was to be blessed by a life in him, and from him. For nothing impure or imperfect in its will and working can have any union with God; nor are you to think that these words: the purity and perfection of God, are too high to be used on this occasion; for they only mean that the will of the creature, as an offspring of the Divine will, must will and work with the will of God, for then it stands and lives truly and really in the purity and perfection of God; and whatever does not thus, is at enmity with God, and cannot have any union of life and happiness with him, and in him.—*William Law.*

"Priest Larkham" and the Early Friends

The historical student is always glad to penetrate behind the scenes as pictured by actors themselves who figure in them, during any period under study, and to obtain from these scenes from others, some perhaps sympathetic onlookers. The thoughtful reader of the history of the early Friends desires to know what persons of that thought of their proceedings, and his wish is often best gratified, as in the case now before us.

"Priest Larkham," whose steeplehouse at Cockermouth George Fox visited and whom he discoursed, in the year 1653; George Larkham, M.A., son of Thomas Larkham, M.A. (vicar of Tavistock; and founder of Independency in Cumberland). In the church diary which George Larkham kept there are frequent allusions to the Quakers, but no actual mention of his encounter with George Fox. The following are some representative extracts from the diary.

Larkham writes, reviewing the year 1652: "The Lord was thus far very gracious to me, exercising us with any great trials; which came on afterwards in consequence of our breaking forth, especially that sweeper of Quakerism which shook the Church in relation to many members." On "the 5th day of the 3rd month," 1655, a church meeting at Bridekirk "dismissed" Agnes Westra of Cockermouth, Ann Wilson, of Eaglesfield, Jonathan Wilson, of Brigham, "who have become resolved Quakers," and also appointed three of its members "to admonish Elizabeth Juton and Elizabeth Langthwaite for following the sect of Quakers, whose testimonies and opinions are opposed to the faith on which we delivered to the Saints." In the same year they were excommunicated, and the Diarist adds: "Thus, with the fall of five members, the church was pleased to free us from that exceeding great assault from the opinions of Quakers, which, like a mighty torrent, had like to have swept down all the Churches in the Nation."

George Fox tells us in his Journal that he passed on from Cockermouth to "another great steeplehouse of John Wilkinson, called Brigham, where the people . . . were mightily affected," and their minister became an agent to the new teaching. Larkham writes: "John Wilkinson, the pastor of that church, departed with the most of his people the Quakers, to his great shame and infamy. The Lord convince him of his error. Amen. Amen." On March 19th, 1676, we read: "The Church brake bread at Tallantire. The next day a Quaker out of Lancashire came to disturb us. But she (for it was a woman) was quiet soon, and so the work of the day was carried on, the Lord graciously assisting."

We close our extracts from the diary relating to Friends by a notice of the Church register of George Larkham's period of pastoral charge. On "November 19th, 1653, Agnes Wilson, of Eaglesfield, did . . . break off from the Church . . . the first that manifested the infection of Quakerism, the first that that evil sorrow prevailed upon."

* Journal of George Fox, 8th edition, i: 163.

† See "History of the Congregational Church, Cumberland," by W. Lewis, 1870.

‡ i. 164.

is a notice also that Elizabeth Bell, of Boston, married to a Quaker named Pearl, also seceded to the Quakers. But it was still secession, for in the list of baptisms are the names of Mary and Martha Crosthair, "young women who had not been baptized in their infancy, their parents being Quakers" who were baptized February 20th, 1818, and received into the Church. There are also notices of the burial of several members of Larkham's Church in the Friends' Burial-place at Eaglesfield, owing to their "being buried in the common burying place at Larkham."

Historians have noted the difference between the boldness of Friends in continuing to hold the meetings despite the Conventicle Acts, the clandestine and immoral methods resorted to by some other Nonconformists to circumvent them.* Larkham's diary affords evidence of this, as the following extracts will show: On April 20th, 1817, "It was agreed that for the present the meeting did not be so popular or public, because of the Act of Parliament lately made." On May 10th 1817 "The Church met in the morning for the hunters abroad. The meeting was pleased to hide us." On March 9th 1818 "The Church was favored to get into holes in the wall." But there were some among them who had greater courage and they are commended their noble daring" in resisting the operation of the Act by opening their houses for the meetings.

Larkham, Palmer writes in his "Nonconformist's Memorial": "Soon after his ejection he was forced to escape into Yorkshire to his numerous family. While he was there he suffered much, being illegally imprisoned in York for several weeks. In 1668, after many troubles, he returned to his people in the north, and God was pleased to crown his labors among them with abundant success. He died December 26, 1700, aged seventy-one, and he had exercised his ministry in that way for forty-eight years."

NORMAN PENNY.

The number of bicycles manufactured in the United States between the years 1890 and 1900 was 1,182,850.

Mr. Hodgkin, in his "George Fox," refers (p. 173), to "as harmless artifices," but hastens to add, "the worst would stop to no such artifice." (See an account of the methods of the Presbyterians in Fox's Journal, ii: 1.) It is said that in the pulpit of the Broadmead Church, Bristol, there was a trap-door to facilitate escape into the street. With these we may contrast the prudent actions of George Fox, in, apparently, courting arrest and arrest rather than escaping to safety (See Journal, i: 409; ii: 17-18), and the noble words of Mr. Burroughs at the Bar of the House of Commons, who made a law against our religious meetings. I esteem it my duty to exhort our Friends to keep meetings diligently. The "Retired" meetings in London were to be dissolved in times of persecution "lest they should encourage Friends to withdraw from public meetings." Friends' boldness in this matter acted as a stimulus to others who came into contact with them, as stated in the "Short Journal" of G. Fox, which "never printed" (in the Reference Library at Devonshire House), as follows: "When the meeting [at Tenterden] was dispersed, being many of the world there, some of the friends wishing them to go out of the meeting, because the soldiers were coming, but they would not go, but fare as we fared; they said."

second edition, i: 378. In these volumes may be seen the other and brighter side of some men referred to tragically by the early Friends.

Science and Industry.

NATURE STUDY.—There are two books that I would recommend those to get who propose to enter upon "nature study." The very ideal book—the best that I have ever seen has just been published by Ginn & Co., of Boston, the work of Professor Hodge, of Clark University. It is called "Nature Study and Life." It covers botany, entomology, ornithology, forestry, aquaria, and it is ideal in every direction. In fact, the book is exactly what we have been needing and ought to have had long ago. It discusses the insects of the household and insects of the field. It has a chapter on children's animals and pets, and an admirable discussion of school gardens. In every direction the illustrations are just what are wanted—not showy, but illustrative. The domestication of wild birds is a chapter that every one ought to read. I do not see how our writers on science manage to write all around the matters under discussion and not quite give us this book before.

Now, with this book you want "Insect Life," written by Professor Comstock, of Cornell University, and published by Appleton. This is one of the very best volumes ever published on the general field of nature study. It discusses roadside life, and tells you how to collect your specimens. It makes every little brook an interesting library for study and it shows you the secrets of every pool and pond. It is scientific enough, but not too scientific. If you have chosen to study trees, as one of my correspondents has, you will want Apper's "Trees of the Northern United States," published by the American Book Company, and Matthews' "Familiar Trees and Their Leaves." There are some capital little handbooks on elementary geology also, but I think none of them are better than Shaler's little book on elementary geology, published by Houghton, Mifflin & Co., of Boston. I shall be glad if I can give any help by private letters to those who are starting out on this line of nature study. I suggest that you begin with things nearest at hand, and carefully move onward to things more remote.—E. P. Powell, Clinton N. Y., in *Tribune Farmer*.

SALT MINING constitutes one of the staple industries of the little European country, Roumania. There are four mines in all. The most peculiar feature in connection with this industry is that the mineral is mined in three of the principal mines by convicts condemned to life and lengthy sentences of penal servitude. The reason for this is that crime in Roumania is practically unknown, and there is no death penalty. Under these circumstances the compulsory mining of the convicts is beneficial both to the government and the laborers. In the case of the mine in which convict labor is not employed, the quarrying is performed by peasants, the work being assisted as far as possible by the most up-to-date mechanical time and labor-saving appliances, for the employment of which skilled labor is essential. In all there are about one thousand convicts at work in the three mines. The laborers are not provided with any mechanical apparatus whatever, the whole of the work being performed by hand, each convict having to quarry a specific quantity of salt daily. The mines are controlled by a state

official, whose position is similar to that of governor of a prison. The mines are thoroughly well ventilated, and illumined with electric light, so that the lot of the convicts is somewhat alleviated, though to those who are serving life sentences it represents a living grave. The mines are worked in galleries, and the pure white crystal presents a weird and peculiar aspect, especially in reflecting the fitful electric light. The main shaft terminates at the bottom in a huge apartment with a dome-shaped roof, and from which all the working-galleries radiate. The mine contains a chapel and numerous other apartments, all cut out of the salt by the prisoners. The director keeps a record of the name of each convict who enters the mines, his conduct and the efficiency and quantity of his work. Periodically the king of Roumania visits the mines and examines the official record, and in those instances where the results warrant such action, he extends a free pardon to the prisoner, or at any rate reduces the length of his sentence, so that good conduct and efficient work are an incentive to a royal pardon.—*Sc. American*.

TOPOGRAPHIC MAPS OF NEW JERSEY.—Of interest to inhabitants of New Jersey are the four sheets of the topographic map of New Jersey which the United States Geological Survey has recently reissued. They are the Plainfield sheet, which shows the city of Plainfield and the thickly settled suburban country adjoining it, and as specially interesting features, the bluff escarpment of the Watchung Mountains and the confused topography of the terminal moraine of the great glacier: the Lake Hopatcong sheet, which shows the lake of that name, well known as a popular resort, and the rugged mountain country surrounding it; the Lambertville sheet, which covers part of Hunterdon and Mercer counties bordering the Delaware River; and the Atlantic City sheet, which shows Atlantic City and the ocean beach north to New Inlet. The maps are drawn on a scale of one inch to the mile and show in great detail all towns, roads and streams. A feature of these maps, in common with all government topographic maps, is the representation of relief, or the shape, slope, and altitude of the hills and valleys, by contour lines. They may be had for five cents each, on application to the Director of the Geological Survey, Washington.

"SUBSTANTIALLY the world has been uplifted by the faithful services of commonplace people. Do not despise thyself because thou art dull, or slow, or poor, or undistinguished. In the parable it was the man with one talent whom our Lord represents as unfaithful, to teach us that such are under special temptation to undervalue themselves."

A USEFUL AMERICAN PLANT.—The sunflower, although it originated in this country in the region of the great plains, is not used so extensively here as in some other countries, especially Russia. It is a long time since the plant first delighted the eyes of Europeans, being then cultivated in the gardens of Madrid. The early Spanish explorers had found it in this country and taken it home with them. The plant was utilized by the American Indians

long before the days of Columbus. When Champlain visited the Georgian Bay in 1615 he found the natives growing it and using the oil for their hair. It was raised chiefly for the food afforded by the seeds.

In Russia at the present day the seeds are eaten in immense quantities, raw or roasted, as peanuts are in America and the oil obtained by pressing the seeds is an important article of diet. The frequent religious fasts in that country restrict the use of meat, and lead to a large consumption of vegetable oil; and the manufacture of sunflower oil has consequently grown to considerable dimensions. The best seeds yield an oil which compares favorably with olive oil for table purposes. Even the upper classes in Russia eat the seeds, the larger and finer ones being quite equal to most nuts in respect of palatability and wholesomeness. The stalks and dried leaves are highly prized for fuel, being in some parts of the empire almost the only available substitute for wood. An acre of sunflowers will yield many cords of good fuel.

The oil appears to have more of the general properties of olive oil than any other known vegetable oil. It takes about a bushel of seeds to make a gallon of oil, and fifty bushels of seed can be grown on an acre of land. As the oil sells at a dollar a gallon, the profit is large. Of late years purified sunflower oil has been used quite extensively to adulterate olive oil. It is of a pale yellowish color, and decidedly palatable. In a crude state it is used by painters to some extent, but it is inferior to linseed oil for use in paint.

In addition to the oil from the seeds, the stalks when green, and the oil cake make excellent fodder. The fibre of the stalks, which is fine, silky and very strong, also has a value. In China it is woven into beautiful fabrics, and it is believed that by the use of proper machinery, it might be utilized most profitably in this country.—*Youth's Companion*.

Plockhoy's Colony.

In making a report to the British Ministers in 1664, Sir Robert Carr, Governor of New York wrote that he had "destroyed the quaking colony of Plockhoy to a nail." We know that the Dutch and English were then at war; that Carr visited the Delaware river to destroy the Dutch forts, and that it was on this river that he found and destroyed the colony of Plockhoy. But who was this Plockhoy? Who were the colonists? Where was the colony planted? For two hundred years there was absolutely no answer to these queries. Now, through the researches of members of the Pennsylvania Historical Society, and especially of Samuel H. Pennypacker, the archives in Holland have been made to yield their hidden secrets, and we know the purpose and end of Plockhoy's colony, and of the man himself.

In the various Government documents of the New Netherlands, possession of the Delaware or South River is claimed from "primitive times," "ancient times," "for many years," the earliest date for the establishment of any Dutch trading station being given as 1598 by adventurers of the Dutch Greenland Company, who, it is claimed, built forts both on the North (Hudson) and on the South (Delaware) rivers. From this date until finally driven out by the English, the Dutch seem to have maintained

stations on the river, and since there often were married men, with their families, in the stations, they may be considered permanent settlements.

In 1509 Henry Hudson visited the Delaware and in 1610 Lord Delaware. Cornelius Mey, made his settlement in 1624; De Vries founded his first colony in 1630 and the second in 1631. New Albion, by Lord Clowden, was founded (if any settlements were ever made) in 1634. In 1635, and again in 1640, 1641 and 1642 the Connecticut people made determined efforts to found settlements on this river. In 1638 the Swedes made their first settlements. Then there is a mysterious Minesink settlement, which is claimed to have been made "shortly after 1609."

In 1662 Peter Cornelius Plockhoy, a Mennonite, of Zierik Zee, Holland, after unsuccessful applications to Cromwell, Lord Protector of England, 1658, and to the English Parliament in 1659, obtained from the States General of the United Netherlands and the Magistrates of Amsterdam permission and aid to establish a colony, or community in New Netherlands. On Sixth Month 6th, 1662, he entered into an agreement with the Burgomasters of Amsterdam to take twenty-five Mennonites to the South river. One hundred guilders were advanced to each colonist and the colony was to be free from taxes for twenty years.

The settlement was made on the Hoorn Kill, near the town of Lewes, Del., on the same site on which had been planted the first unfortunate colony of De Vries, 1630, which was totally destroyed by the Indians. The place was called Swanendael, or "Valley of the Swans," by the first colony. In Plockhoy's prospectus the place is referred to as "Swanendael, where Osset had his throne." Osset being the Governor of De Vries colony when it was destroyed by the Indians. The prospectus says:

"New Netherland's the flower, the noblest of all lands,
The birds obscure the sky, so numerous in their flight;
The animals roam wild and flatten down the ground,
The fish swarm in the waters and exclude the light,
The oysters there, than which no better can be found,
Are piled up heap upon heap, until islands they attain,
And vegetation clothes the forest, mead and plain."

It was on the bank of the Delaware that the declaration of Independence was promulgated. It was here that the first treaty was made with the Indians which was never broken. It was here that the first united protest against African slavery was made while the English and Dutch were actively engaged in the slave trade. And here only three years after a Massachusetts court decreed that the Quakers, Daniel and Provided Southwick, should be sold into slavery in the Barbadoes, Peter Cornelius Plockhoy established his colony in which "no lordship or servile slavery" should ever burden the people. It endured but two short years, and was then destroyed by Carr, as above stated. Plockhoy's colony was a community settlement and his ideas published in two letters to Cromwell, an address to the English Parliament and in the prospectus for his colony, show him to have been a man far in advance of his age,

the forerunner of Robert Owen, Charles Fourier and Robert Bellers. Two fundamental were at the basis of his community, namely equality and association. He advocated in the Church. "In the Church difference of opinion can be permitted, but brotherhood unity possess them all." He urged commutation of Church and State, and that the common life must again rest upon righteousness, upon love and upon brotherly union.

The title page to Plockhoy's prospectus taken from Samuel W. Pennypacker's history of Germantown, reads:

"Short and clear plan, serving as a model contract to lighten the labor and anxiety and trouble of all kinds of handicrafts men by the establishment of a community or colony on the South river, in New Netherlands, combining agriculturists, seafaring men, all kinds of necessary tradespeople, and masters of arts and sciences, under the protection of the High Mightinesses, the Lords-State-Generals of the United Netherlands, and particularly under the favorable auspices of the Honorable Magistrates of the City of Amsterdam, making upon the privileges of their Honors, as hereinafter set forth, granted for the purpose. Brought together by Peter Cornelius Plockhoy, of Zierik Zee, for himself and other persons of New Netherlands. Amsterdam, 1662. his prospectus provided that members might live in their own homes and improve them as they saw fit; each one was to labor six hours each day in some useful occupation; profits were to be divided to each person over twenty years of age; officers were to be elected by ballot each year, but no officer could succeed himself. The only officers provided for were director and two book-keepers. The funds of the community were to be kept in a strong box, with three different locks, each owner having a key to a single lock, so that the funds could be handled only when all three were present. Only those goods were common which were produced by the six hours of required labor. Children were all required to go to school and the common school half of each day, and to work at some trade the other half of the day; in this school no human formulas of religion, but only the Holy Scriptures, natural sciences and similar instruction enabling them to fully use their reason were to be taught. No foundation of sect or partisanship was to be laid in their hearts. (It would almost seem that Girard drew his rules for his college from Plockhoy.) Those who could not conscientiously bear arms in self-defence were to pay a contribution, in case the same were needed for the defence of the community. In matters of religion there was to be full freedom of conscience. No member of the community should be servant or servant maid, yet strangers could be employed at a wage. No lord or slave was to be tolerated in the community. Members were free to withdraw at any time and receive their share of the profits. Members were permitted to marry in the community or out of it, as they saw fit.

The colony was planted at Swanendael. Two years later it was totally destroyed. There is absolutely no record of what became of the colonists, except the founder and his wife. Of them Judge Pennypacker says: "In the fall of 1664 there came an old blind man and his wife to Germantown. His miserable and

awakened the tender sympathies of the nites there. They gave him the citizenship of charge. They set apart for him a street of the village, by Peter's corner, a lot twelve rods long and one acre, whereon to build a little house and to plant a garden, which should be his, so long as his wife should live. In front of it planted a tree. Jan Daeden and William house were appointed to take up a free offering, and to have the little house.

This is all we know, but it is surely a precious action to see this ray of sunshine thrown on the brow of the hapless old man as he lay in his grave. After thirty years of untold wanderings upon these wild shores, he had come across the sea to give a home to one whose whole life had been devoted to the welfare of others. It was Peter Cor-Plockhoy. What recognition may here be awarded his career cannot be foretold. His efforts resulted in what the world calls failure, and for two hundred years he has remained in the greatest obscurity. Yet when compared with his contemporaries, with the Puritans, Sir Walter Raleigh and Sir Francis Berkeley, with Cotton Mather, intricate magistrates to hang old women for petty crimes, and see him wrestling with the devil, not for his own gain but for the welfare of the down-trodden and the poor, teaching the separation of the Church and the state, denouncing the injuring the minds of men by dogmas, and with so clear a sense of justice that even the vicious, when driven to the community, were to receive their just portion of the possessions, we cannot help but prize his merit and intelligence, and feel that that sympathy that makes us all akin. We find him, first of all the colonizers of America, so long ago as 1662, announcing royal principle that 'no lordship or servitude shall burden our company,' he seems to grow into heroic proportions. Whatever may happen, certain it is that the events of his life of one whose work marks the very beginning of the literature and history of the millions of people who now live in the land along the Zuid river must always be of interest to them and to their descendants.—Dr. George G. Groff, in the *Ledger*.

AN AKERISM BEHIND THE HORSE NEEDED.—Many a man ever noticed that a silent man usually the best broken horses? It may be true, but all the men of my acquaintance who do not talk much have well broken horses. Drive with them and you will wonder they manage their horses. No management is visible. The horse goes where he is led without apparent effort on the part of the driver. One famous turfman at least has been noted for his art in driving a horse to the top of his speed without making a move, and his rivals were lifting and yelling and piping theirs. How did he do it? Don't know, but he was a man of few words.

Probably there is a lesson in this. The average horse understands but a few things roughly, only a few words, signs or commands. The silent man gives only a few, and does not confuse his horse. The horse is able to know them thoroughly. He understands the man who understands him. It is a sure way to drive a horse that understands.

Few pleasures in life can equal it if the horse is a good, cheerful driver. There would be more of this kind if they were made to know a few things thoroughly—the right things.—*National Stockman*.

Nature and Grace.

Mark Guy Pearse in a sermon in the West London pulpit, related this incident: "When I was a student our grand old professor of theology was a man for whom we had a great veneration—simple, childlike, holy—none had ever known him to be anything else, and that gracious and unfeigned sweetness and beauty were to us his natural disposition. To such a man it was no trouble to be always blameless. But one day it chanced that a student came in late to the class, and pushed his way to his seat. The professor stopped to ask gently why he was late. The answer was given somewhat flippantly, an excuse that aggravated the offense. Instantly the professor, who had been sitting, rose up to his full height, until the big, massive man seemed to fill the room, stretching out a trembling and terrible forefinger at the offender. The great shaggy eyebrows were lifted, and the lightnings shot from his eyes. Like thunder rolled the word from his lips: 'Leave the room, sir.' We started in amazement almost in fright. The culprit crouched away from his place and left, while that majestic figure stood there all ablaze with wrath. The door was shut. Then again the professor sat in his chair. But the storm was done. With a trembling voice he read the discourse, seeming almost unable to go on. 'After the lecture we left only to gather in groups and discuss this wonderful thing. Presently came a message that the offender was wanted; and he hastened to the irate professor, expecting an angry reprimand. But there sat the old man in tears.

"My brother," he sobbed, 'will you forgive me?'

"No, sir; indeed, it is I who should apologize," said the student, overwhelmed.

"No, no, I am older. Will you forgive me? I am very, very sorry. Say that you forgive me—"

"The student managed to get out a word or two.

"And you must tell all the students that I have apologized, will you?"

"And again there was a pause for the professor.

"Now," said the noble old man 'I will go and ask God to forgive me.'

"Nothing in all that life, nothing in all his words ever did us so much good as that. We knew then under that gentleness and beauty what fires burned; and every man of us had a new faith, and a new hope, and a new love.

"Go home and tell thy friends what great things the Lord has done for thee. The Lord go with you everyone and keep you true and loving and brave. Amen."

I PRAYED for direction, and saw clearly that plainness of dress and behaviour best became a Christian, and proved it good for a proud heart to wear the plain and modest livery of God's children. For when I appeared like the world in Babylonish garments, I had its esteem, and knew not how to part with it. But when I showed by my appearance that I considered

myself as a stranger and a foreigner, none can know (but by experience) what an influence it has on the whole conduct and what a fence it is to keep us from sinking into the spirit of the world. But there is no medium,—they who are conformed to the maxims and customs and fashions of the world must embrace its spirit also, and they shall find the esteem they seek, for the world will love its own. But let them remember, also, that its friendship is enmity with God.—*Mary Fletcher, a Methodist Preacher*.

FOR "THE FRIEND."

A Scarcity of the Fruit of the Spirit.

The following letters will best introduce, as well as commend themselves:

To the Editor of The Friend:—A year ago last winter thou very kindly put a little notice in THE FRIEND stating the need of a book on Kindness to Animals to be used in Syria.

In response to that notice I received several generous contributions of money to translate the little book selected.

I have copied parts from a letter recently received from Daniel Oliver, thinking if thou would put it in THE FRIEND, it would interest those who so kindly gave the money.

Thy friend sincerely,

ABBY NEWHALL.

RAS-EL-METN, BEYROUT, SYRIA.

Seventh Month 6th, 1902.

My Dear Friend, Abby Newhall:—

I am so glad the needed amount has been received for the translating and printing of "Kindness to Animals" by Jane E. Budge. The matter will be put in the translator's hands at once.

We have been back in our old place about eight weeks now, and we are gradually getting in touch with all the details of our work. We are so happy to be back again, and I can assure thee it is far pleasanter and much easier to be doing the work than talking about it, altho' the latter is necessary at times. . . . I am afraid it will take a long time and much work to get the Syrians to love dogs and be kind to animals in general. A couple of days ago I was going to Hamana, and a man was going on the road—a very rough mule path—with a small donkey carrying a heavy load of branches. The donkey stumbled and fell and was very nearly hanged by the ropes tying the load. With great difficulty the donkey was got from under the load and had its knees badly wounded. The moment it was on its feet the owner began to kick and beat it unmercifully. With difficulty I persuaded him to stop and when his violent anger cooled down, I tried to show him how cruel and wicked his conduct had been. Such a scene is of every day occurrence, and no one takes any notice of it or thinks it wrong. Truly "the whole creation groaneth and travaileth."

One can only sow the little seeds wherever and whenever opportunity presents itself, and trust that the power of the great principles underlying the right will assert themselves, and ultimately produce a very different condition of things from the present.

With kindest regards, I am thy friend

Very sincerely,

DANIEL OLIVER.

"Is my Father at Home?"

What multitudes of weary old men and women there are wandering about in this great world of ours! We touch elbows with them, but know them not. The younger and stronger ones all around them are busy with the duties and pleasures of the living present, and with nerves and muscles, bodies and brains, all ready to be acted upon by the glorious age in which their lot is cast, are, in one way and another working out their own and others' temporal and eternal weal or woe. But these weary old men and women have finished all their earthly tasks, and now in the lengthening shadows of life's eventide they are waiting for the going down of the sun, when they will lay their heads in the lap of mother earth . . .

Some of them no longer live in the present. It has no charms for them. They are in what we call their second childhood, and their thoughts are little more than memories of days and scenes of the long, long ago. A Scotch woman told me about one dear old soul she knew—a friend of hers, who had spent more than four-score years in this work-day world, and whose story, she said, "was a melting one." He bore an honored name and had a comfortable home with his married son in the city of Glasgow. Very tenderly and kindly did they deal in that home with the gray-haired and weary old saint. He often went out alone for a walk in the crowded streets, but only at rare intervals did he see a familiar face. Nearly all whom he knew, or who knew him, had passed on to the other world before him, and he was lonely. Gradually his mental powers seemed to fail him, and those who loved him would not suffer him to go out any more on his daily walks without a companion. But one day when the members of the little household were all busy, here and there, he went out, as he used to go, alone. By and by he was missed, and, though he was searched for in all the streets on which he usually walked, he could not be found. Noon-time came and he had not returned nor had any trace of his whereabouts been discovered. Up and down, through the city, his son drove looking for the old pilgrim and asking this friend, and that friend, if they had seen the wanderer. Night was coming on, and the one anxious, fearful question on the lips of the little children and of the older ones in that Glasgow home was—where has our dear old grandfather gone?

After a long and wearisome search they found him late that night, away down in the country below Dumbarton, eighteen miles from home. He had walked all that distance to the house in which he was born and had spent his boyhood, but in which he had not lived for more than half a century. Strangers who did not know him owned it and occupied it, but he had forgotten all the years that had passed away since he was a boy, and was utterly oblivious to all the changes that had taken place in that time. When he came to the old dwelling place he went in at the little garden gate, up to the old oaken door, and tried to open it, but to his surprise it was locked. He rapped on it with his staff, and when it was opened he asked if his father was at home. They asked him what his father's name was, and he told them, and said that he wanted to see his father, and begged them to say to him, if he was at home, that John had come back and was at the door.

They saw that the old man was wandering and weary and took him in and treated him tenderly, as they would treat a little child, knowing that before long they would, by some means or other, hear from his friends. They told afterwards how touching it was to see the old body, sitting contentedly in the old home of his youth, and to hear him talk of his surroundings, with the simplicity of a child, while he waited for his father, who had been dead many years, to come in.

Ah, you poor, weary old souls! There are many of you in our crowded and bustling cities, and I fear that we sometimes treat you roughly. You are in thought, and word and action, little children again, longing, it may be, for the homes in which you used to live and for the fathers and mothers, now in gloryland, in whose lap you used to sit and in whose bosom you used to nestle. No! No! Your earthly fathers are not at home now as they used to be. The places that knew them once, know them no more. But plod on your pilgrim way a little farther, and very soon you will come to a heavenly home, whose pearly doors are wide open by day and night. There you will find a living, loving Heavenly Father waiting to welcome you. Your pilgrimage will then be ended, and you will need your staves no more. Within that many-mansioned dwelling-place you will sit down among the gathered glories, and out of it you, and the redeemed fathers and mothers and friends whom you now miss, will go no more forever. —John S. Sands.

Goutaudier, The Peace-loving French Conscript.

In Paris I wrote to Goutaudier suggesting that he might be able to come and see us and attend the Friends' meeting there on First-day morning. This he did, and we had considerable conversation.

His conviction as to the unlawfulness of war, he told us, was solely derived from reading the Scriptures. He was brought up a Roman Catholic, but as his parents had already told me, he had as a boy been disgusted with what he had seen of the clergy of that Church. Emigrating to the Argentine Republic, he was there converted through the Salvation Army, from whom he first heard the Gospel in its simplicity. He afterwards joined the Baptists, and was for some time a Bible colporteur in Uruguay, where he saw a good deal of the Vaudois churches in that State. He confirmed what I had been told in the Vaudois Valleys of their activity and earnestness.

On his return to France, having been enrolled in the conscription, he refused to bear arms, though willing to serve in the ambulance corps. For this refusal he was sentenced to two years' imprisonment. The imprisonment seriously affected his health, and he was often unable to do the prescribed daily work, whereupon he was repeatedly sentenced to solitary confinement. Altogether, out of four years spent by him in prison, some fifteen months were passed in the cells. He has no doubt that it was hoped to get rid of him altogether.

At the end of his first two years' imprisonment, his firmness gave way; he yielded to the reasoning that he could go through the required training whilst keeping his resolve

never actually to fight. This procured him a respite from prison of about six months, during which time, however, he was very rarely called on to bear arms—only three or four times altogether. But his conscience was not at ease, and he finally again refused, with the result that he was a second time sentenced to two years' imprisonment. After the second term had expired, when he had again steadily refused to bear arms, and was likely to be more brought before the military court, attention was called to his case. The Minister of War, General André, intervened and Goutaudier received his discharge, based on the ground that he was a *soutien de famille*, his father being over seventy years of age, and his only brother infirm in some way. He had altogether been detained just six years, instead of the usual three years' service. He is a skilled mechanic, and is now earning his living in a bicycle factory.

Goutaudier listened with great interest to the story of William Penn's holy experiment in a State without an army, of which he had not before heard. He was glad to undertake the distribution of one hundred copies of the French translation of "Christianity and War," and said that he would be able to procure its insertion in some of the papers which have interested themselves in his case.

When our mode of holding our meetings was explained to him, he said that he could quite understand it from his experience in the Salvation Army, having sometimes taken part in their meetings, and felt that he was inspired" as he did so. He sat through our meeting in silence, and evidently appreciated it; he expressed his intention of coming again.

Goutaudier expressed the belief that Casselin and the other young man lately condemned to two years' imprisonment at Besancon, for refusal to serve, would be let off more easily than he had been, probably after a few months only.

A very interesting point in connection with Grasselin's case has come out through a correspondence on the subject in the Protestant paper *Le Signal*. Two pastors who had previously known him, travelled to Besancon, on their right across to France, on purpose to persuade him that it was his duty to see, urging that the case fell within our Lord's command to "render to Caesar the things that are Caesar's." He yielded to their arguments; but when, the next day, in the Council of War, the question was put to him whether he would now consent to bear arms, he was constrained to reply in the negative; he explained that his conscience obliged him to revert to his original refusal.

These cases are being much discussed in the French Protestant press and private circles as well as amongst Socialists and others who are outside the Protestant Churches. Such faithfulness on the part of a few cannot but aid many to think seriously of the question whether obedience to Christ is compatible with bearing arms.—Joseph G. Alexander, in the *London Friend*.

"THE creed in essentials is indeed short, at it cannot be shortened by the omission of one."

"HEARING and doing we build on the Rock; hearing alone we build on the sand."

Spring Flowers of Central Iowa.

BY H. S. FAWCETT.

aving closely watched the spring flowers in the vicinity of Stanger Boarding School, Le Grand, Iowa, I thought a short account of them, for comparison with Westtown's flora, to be of interest to many readers of THE FRIEND.

Although several of them were strangers, as a surprise to find how many of our same Westtown Friends were here, though the Agency Mountains and the Mississippi were seen.

The first welcome visitor to greet us through lead leaves, as we searched the woods along Iowa River, was a stranger to me, though well known to my family quite well. It was the little "Trillium" (*Trillium nivale*), found as early as the fourth month 12th, growing abundantly on wooded bluffs along the river bank. About the same time we met three old friends:—Hellebore, Bloodroot and Spring Beauty. The last was rare in this vicinity. The tiny Whitgrass (*Draba Caroliniana*) was found in the soil over a stone quarry; and we are reminded of Tennyson's verse,

"Flower in the crannied wall!

I pluck you from your cranny,
And hold you root and all

In my hand;
And little flow, if I could understand

What you are, root and all, and all in all,
Could understand

What God and man is.

Among the trees the soft maple had been weak or two before, and now we were by the Elm and Box Elder and admired graceful catkins of the Cotton Wood, Ash-hazel Nut and Pussy Willow.

About a week later we again visited the river, as all-wooded land is called, and some more welcome friends:—The Early Creep (*Ranunculus fascicularis*), Dutch Broom (*Dicentra Cucullaria*) and the Blue Violet (*Erythronium Albidum*). By the time the Cow-slips or Marsh Marigolds (*Calypso palustris*) were beginning to beautify the bluffs with their rich yellow blossoms. Some violet friends, Common Blue, and some were with us by the 24th of the Fourth; and another stranger *Isoetes biterminalis*, whom Gray does not honor with a name, was discovered in a secluded under some Red Haw trees. At first we met for the Rue Anemone, which it closely resembles in foliage, but on closer examination found to differ by being branched and more fibrous roots without tubers.

The same date we found the Wild Ginger (*Asarum canadense*), Toothwort (*Dentaria laciniata*) and the Wild Gooseberry.

The first of Fifth Month, on the "unimpaired" along the railroad the "Johnny Up" (*Viola pedatifida*) and the Sheep (*Oxalis violacea*) were both quite common. The Johnny Jump Up, as it is called, closely resembles the Bird's Foot violet of Westtown. Two species of Horsetails (*Equisetum arvense* and *laevigatum*) were also seen in damp places, and the Yellow Puccoon (*Lithospermum canescens*) was seen by roadsides.

In the middle of the month we were almost surrounded by the numbers, and briefly greeting

our former friends, Wild Cranesbill, Solomon's Seal, Jacob's Ladder, Indian Turnip, Yellow Star-grass, etc., we tried to make ourselves more acquainted with some less common at Westtown. Two species of the Wild Phlox were very conspicuous for their numbers. The large lilac colored species (*Phlox divaricata*) was found in the "timber" while the rose-red one (*Phlox pilosa*) was seen everywhere on roadsides and in meadows.

A very beautiful sight on a rocky river bank was the Wild Columbine (*Aquilegia Canadensis*) with its nodding red and yellow blossoms seemingly saying "Pick me if you dare." The air was now filled with fragrance by the delicate pink blossoms of the Western Crab Apple (*Pyrus ioensis*) which is very common on roadsides and thickets. A common companion to the crab-apple among the small trees was the Red Haw (*Crataegus mollis*) whose small red apple-shaped fruit is sought after so much by children in the fall.

By the last of Fifth Month our list has become so long that we can mention only a few of the most common kinds. The ground along the railroads, the roadsides and many uncultivated fields now showed every variety of color. The *Anemone Pennsylvanica* was beginning fairly to whiten the roadsides in damp places while yellow patches of Meadow Parsnips (*Thasium Arvense*) came here and there. The white, blue and rose colored varieties of Spiderwort (*Tradescantia Virginica*) were trying to outnumber the Wild Phlox and these in turn were crowded by the Wild Four O'clock (*Oxybaphus nycaginus*).

Then from among all this beauty a "star" shoots forth and we had the Shooting-Star (*Dodecatheon Meadia*). The origin of this name is very apparent for the partly reflexed petals and slender nodding stems give one the impression of a shooting star.

There were others of interest which might have been mentioned, but it would make the list too long. This first spring in the State was enough to convince me that my former impression, that there were comparatively few flowers in Iowa, was entirely wrong.

AMES, IOWA.

SOCIAL WORSHIP.—The special promise of Christ's presence is to social worship. It matters little where the two or three are gathered together, if they are gathered in his name. But aimless loitering or even quiet hours under green boughs or on wave beaten sands must be classed as rest, not worship. The spirit of worship may enter into them and they may become transformed under the influence of some reverent soul, but they can never take the place of purposed communion and deliberate social expectation of the presence of Christ. Not even meditation, important as it is, can long do this, for the religion of Christ in worship as in ministry, is social in its purposes and belongs among men.—Selected.

Items Concerning the Society.

We note in the Nantucket Inquirer and Mirror that Mary S. Mitchell, widow of Peleg Mitchell, of Nantucket, and a life-long Friend, whom many Friends in Philadelphia have learned to hold in loving esteem for her consistent walk and conversation in the love of the ever-blessed Truth, during her residence for the greater part of each

year at the home of her son-in-law and daughter, Benjamin and Mary Ann Albertson, having returned for the summer to her old home on Nantucket, passed away after a brief illness there on the 8th instant, in the ninety-first year of her age. "An example of the believers, in word, in conversation, in charity, in spirit, in faith, in purity."

We remain uninformed concerning the Yearly Meeting held at Westerly, R. I., except to have heard a remark that Henry T. Outland of North Carolina, Elizabeth C. Stetson of South Yarmouth, Mass., and Ida Channess were in attendance.

[*Quaker Pioneers in Russia*, by Jane Benson; Headley Bros. Price 2s. 6d.]

Our friend, Jane Benson, of Southport, is a daughter of George Edmondson, who went to Russia in 1818 with Daniel Wheeler, and helped him efficiently with his draining and farming operations during the first seven years of his Russian life. She was born in Russia, and though only two years old when her parents left that country, she has heard much concerning her life there, in connection with a number of pictures which she has carefully preserved. Those memories have been reproduced in *Quaker Pioneers in Russia*, with details and telling incidents that make up an extremely life-like and thrilling story. A chapter is devoted to the labors of William Allen and Stephen Grellet, in relation to the Emperor Alexander (who died in 1825), and Thomas Shillito's service in St. Petersburg is also mentioned. But the main part of the book is devoted to the work of Daniel Wheeler and his household. The Emperor appears as a particularly attractive character in this narrative, which we cordially commend to our readers. We are glad that, though in weak and failing health, our friend has been able to give form to these memorials, which without her loving care would probably have passed away without the attention they deserve.—British Friend.

ANOTHER RHYME OF THE MONTHS, this time from England, now comes to us as the form which was in use at Ackworth School full sixty years ago:

"Days twenty-eight in Second Month appear,
And one day more is added each leap year;
The Fourth, Eleventh, Ninth and Sixth Months run
To thirty days: the rest have thirty-one."

SUMMARY OF EVENTS.

UNITED STATES.—Work has been resumed in the Rolling Mill mine at Joncas-up, all the workings being found in safe condition. The death of is placed at 112.

In the United States there are 30,000 Indians who earn their living by farming. Last year they raised 100,000 bushels of wheat, 1,408,805 over and above the expense of living. While these Indians earn their own living by farm work, 55,996 live on allotments, and rent their lands to white people.

Ministry superintendents say that the continuation of the strike in the anthracite region will cause great suffering in Philadelphia and New York during the coming winter on account of the scarcity of hard coal for domestic purposes. Even if the strike is settled within a month from now, the autumn will be far advanced before many of the collieries can be placed in condition for shipping.

The efforts of Governor Taft with the Papal authorities at Rome to induce a withdrawal of the friars from the Philippine islands, have not been successful, and Governor Taft has left Rome. It is expected that further negotiations on the subject may take place at Manila. An official statement from Washington contains the following: "In this matter the United States representatives in the Philippines are merely endeavoring to meet the wishes, as well as the needs, of the Filipino people. It is not the United States Government which objects to the presence of the friars; it is the Catholic population of the Philippine islands, and the parish priests of native and non-Spanish blood are practically a unit in desiring both to expel the friars and to confiscate their lands out of hand. Recognizing the intensity and practical unanimity of this feeling among the Filipinos, and at the

same time desiring to avoid causing loss to the Church, the United States Government representatives proposed to pay for the lands out of the public funds if the friars would retire from the island and give place to other religious of their own nation. It might be able to accomplish for their religion what they themselves had so significantly failed to accomplish. In making this proposal the United States representatives were well aware that financially it was only of benefit to the Church, for the lands are unproductive and held in adverse possession by the natives, who refuse to pay rent, while the former owners, the friars, would not refuse to restore to their parishes by such affirmative governmental action as under our Constitution cannot be taken."

Another strike of freight handlers has occurred in Chicago, resulting in a general suspension of business, and a loss to various interests estimated at \$1,000,000 a day. On the 16th it ended, and the following day a unanimous vote to return to work, leaving the wage scale and other questions for settlement between the men and their respective roads. It is expected the railroad will make some concession in regard to wages.

The wholesale price of a pair of shoes represents about 22 per cent in wages, 65 per cent, material and 13 per cent, minor expenses.

A statement has been prepared at the Immigration Bureau showing the number of immigrants who arrived in the United States by countries during the fiscal year 1902, as compared with 1901. The total arrivals for the last fiscal year were 648,743 immigrants and 82,065 other alien passengers, making a total of 730,808. This is an increase of 158,438 immigrants and 19,108 passengers over the corresponding year of 1901. Following are the countries from which the largest number of immigrants came during the last fiscal year: Italy, including Sicily and Sardinia, 178,375; Austria-Hungary, 171,893; Russian Empire and Finland, 107,347; Sweden, 30,894; Ireland, 29,138; German Empire, 28,304; Norway, 17,484; Japan, 14,270; England, 13,575.

The State factory inspector of Indiana has sent a circular letter to the managers of all the factories, recommending that they provide for bathing facilities for the employees. He cites the beneficial results from such a course in Michigan City, and says a bath after a day's work will do much to remove the desire for stimulants.

Dr. Wiley, of the Department of Agriculture, is desirous of obtaining 50 young and 50 old mice and enter into a contract with the farmer to eat whatever he wishes to feed them, and submit to a careful and systematic course of observation, to see how far it is safe to eat poisons, and how far it is practicable to put poisonous articles in staple articles of food. One of the first tests to be made would be to decide whether the use of borax in the preservation of meat products is deleterious or not.

The special census report on agricultural implements illustrates the time and labor saving value of agricultural machines in practical operation on the farms. Contrasting conditions in 1830 with those of 1896, the report says that the amount of human labor now required to produce a bushel of wheat is on an average 100 minutes. In 1830 the time required was 1000 minutes. In 1896 it was 194 minutes. The cost of the human labor required to produce a bushel of wheat in 1830 was \$1.94. In 1896 it was \$52.866,200; rye, \$1,408,950; barley, \$7,323,480; white potatoes, \$7,366,820; hay, \$10,034,868. The total saving in the cost of human labor for these seven crops in 1896, owing to the possible utilization of the implements, machines and methods of the present time, in place of the old time manner of production, reaches the stupendous amount of \$68,147,820 for the year 1896.

Jacob H. Smith, general in the U. S. army operating in the Philippines who gave orders to "kill and burn" to Major Waller, has been reprimanded by a court-martial, the findings of which have been approved by the President, and he has been "retired from the active list."

A Manila despatch says that cholera is still spreading in the provinces. The totals are 14,567 cases and 10,937 deaths.

Floods in the Mississippi are doing great damage in Iowa, Illinois, and other States along its course. A despatch from Keokuk, Ia., of the 20th says "The Mississippi River is from three to ten miles wide for twenty-seven miles below the Iowa line, and is rising rapidly. The flood is reaching far up, devastating farms, and farmers in the lowlands on the Missouri side have lost everything but their citadels on high knolls and a few

fields behind the highest levees. People at the river cities face accounts of losses aggregating millions of dollars. Hundreds of farmers, rich ten days ago, are penniless and homeless. Careful estimates gathered from the statements of best informed people indicate the loss up to to-night is about \$6,000,000, with every prospect of \$2,000,000 or \$3,000,000 additional by the rise above not yet reaching the lower stretches of the river. Most of this loss is on the Missouri side of the river, between Keokuk and Hannibal.

The convention of United Mine Workers lately held at Indianapolis declared against a general strike, provided for the raising of a fund in aid of the striking anthracite coal miners, and issued an appeal to the public for moral and financial support. In this appeal they say: "The struggle in the anthracite region will be continued until our demands have been granted or a competent Board of Arbitration has declared we are wrong. The care of 150,000 men and their families in a protracted struggle such as this is likely to be, will require the expenditure of a large sum of money in the purchase of food. Our own resources are limited. We have levied a large assessment on those of our members who are at work to assist us in caring for those who are on strike. We need more money for that purpose, and we appeal to every true union and trade body to contribute to the fund. We need money to be raised and to every lover of fair play, to assist us in raising \$1,000,000 per month from outside sources as long as the strike may last."

There were 509 deaths in this city last week, reported to the Board of Health. This is 61 less than the previous week and 127 more than the corresponding week of 1901.

Of the foregoing 264 were male and 245 female; 53 were under the age of 10 years; 28 of inflammation of the lungs and surrounding membranes; 8 of diphtheria; 19 of cancer; 13 of apoplexy; 10 of typhoid fever; 1 of scarlet fever and 4 of small pox.

FOREIGN.—Minister Wu, who has lately represented China, at Washington, says: "There are three important things for China. These are education, railways and newspapers. We would like to have the railways, the newspapers, and we ought to have more schools in China and more young men studying in Europe and the United States. I should like to have such schools in China as are everywhere found in the United States. We ought to have a system of popular education, so that every one can be educated. We want our people educated. Then we want more railroads. Railroads are a means of education also. They are the best way to get the people of the country to come in contact with people of other towns. That is education. The third of the pre-eminently important things is the newspapers. We want high-class newspapers in China. That is another form of education. They must be conducted in a proper way."

A dispatch of the 15th from London, says: With the thermometer at 86 degrees in the shade and 97 in the sun to-day, the hottest day of the year in London, there were many cases of sunstroke treated at the hospitals. The omnibus and street car companies had large forces of men engaged in supplying the horses with oatmeal water.

The Campanile or bell tower connected with the cathedral of Venice, called St. Mark's, lately fell, and is now a mass of ruins. It was founded in the year 888, and was about 320 feet high.

In no country in Europe is the telephone brought to such a pitch of perfection as in Sweden, where the instrument enters into the daily life of the people to a great degree, even in the smaller villages.

Proof was given at a fire in Liverpool recently of the value of the helmet, and the fact that the men who wear one of smoke were so dense that the firemen were beaten back, but, donning the smoke helmets, into which air is pumped as in a diving equipment, they descended into the smoke, bearing the hose in one hand and electric flambeaux in the other, and soon succeeded in putting out the flames.

Tremendous explosions have occurred at the Waimangu geyser at Roturua, New Zealand, a height of 800 to 900 feet being reached.

The oldest piece of writing in the world is said to be on a fragment of a vase found at Nippur. It is an inscription in picture writing and dates 4500 years before Christ. The University of Pennsylvania has obtained it. The Republic of Cuba has been formally recognized by the United States, Great Britain, France, Spain, Switzerland, Hayti, Nicaragua, Costa Rica and Guatemala.

An analysis of the chemical properties of the millions of tons of volcanic dust which now cover the islands adjacent to Martinique has been made to discover the effect which the dust will have upon the soil. The findings of the Government laboratory in Barbados, show that the substance thrown out in the recent eruption is entirely deficient in fertilizing value.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 7.

Stephen W. Post and Henry R. Post, N. Y.; Mary Randolph, Phila.; Mary C. Beardsley, N. Y.; Emily Pusey, Penna.; D. D. Maris, Del.; Miss W. Warner, Penna.; Rebecca E. Haines, Pa.; and for Susan L. Haines; Edmund S. Foster, Agt., O., for B. J. Hobson; Howard A. Miles, N. J.; Elizabeth K. Hutson, Phila.; Joseph P. Linton, Ga. No. 27, vol. 7; Samuel L. Linton, Mass.; W. H. Gibbons, Pa., and for Miller; Samuel Biddle, Phila.; Wm. G. Eng. Nova Scotia; Mary E. Cadwallader, Phila.; S. A. A. Willis, N. J.; Wm. Scattered, Penna., for Chas. C. Scattered; Alva J. Smith, Kans., \$5; for John E. Hinshaw \$2, and for A. W. Smith, M. D. No. 27, vol. 7; Samuel L. Linton, Pa.; Ephraim Smith, Phila., \$12.50; for J. Smith, Morris S. Cope, Elizabeth Hughes, J. J. Lee, Jr., Pa.; L. M. Williams, M. D., and Harriet G. Eber, N. Gause, Kans., \$1; George M. Warner, Phila.; Thos. F. Scattered, Penna., \$8 for himself, T. Walter Scattered, Mary E. Forsyth, Phoebe Spackman, per Mrs. H. Wilson, Jr.; William Trimble, Pa.; Caleb Wood, N. J.; Joseph G. Evans, N. J.; Phoebe S. Gawthrop, R. Rachel E. Bell, Pa.; Charles Darnell, N. J.; J. Lee, Jr., Pa.; Joseph J. Hopkins, Pa.; Joseph B. Bettles and for Susanna G. Bettles, Ill.; Mary Osborne, Ind., \$4, for herself and Mary M. Fraser; Anna H. Tierney, Gtn., \$8 for herself, J. V. Tierney, T. Joseph and Jesse H. Uff, N. Y.; Rebecca A. Cope, and J. E. Negus, Ia., \$16 for Joseph Hawley, Rezin Thompson, Tristram Coggeshall, Ia.; Clarkson T. Penie, Hannah M. Knudson, Lydia B. Oliphant, Archibald Crosbie and Wm. D. Branson; Casper W. Thonson, N. J.; Ruth S. Abbott, Phila.; Thos. H. Vinton, Agt., Pa., for Hannah F. Bell; Jane F. Coo, Phoebe C. Evans, N. J.; Samuel W. Coo, Emma Jones, N. Y.; Samuel W. Coo, William Bettie, N. J.; Hannah H. Ivins, N. Y., for herself, Lewis Taft and Dr. Howard J. Wm. W. Hazard, Agt., for Elizabeth Gardner, V.; Jonathan Chace, R. I.; Phoebe H. Burgess, Anne S. Lippincott, Gtn.; Chas. P. Morland, Ezekiel C. Shoemaker, Calif.; Sarah A. Wright, Jr., for Charles Wright, Jr.; Sarah B. De Coo, Foster, R. I., \$20 for himself, Simeon P. Foy, Charles Perry, Arthur Perry, George C. Foy, Lucy Foster, Mary A. Gardner, Lydia F. Nichols, Eliza F. Browning and Martha B. Sheffield; L. S. Thomas, Phila., and for Sarah V. Willis, N. Y.

Remittances received after Third-day noon will appear in the Receipts until the following week.

NOTICES.

WESTTOWN BOARDING SCHOOL.—The fall term of school begins on Third-day, Ninth Month 9th, 1902. Early application should be made for admission of pupils desiring to enter. When, if the matter has not already received attention.

WM. F. WICKERSHAM,
Principal.

FRIENDS' LIBRARY, 142 N. 16th St., Phila.—During Seventh and Eighth Months the Library will be open on Second and Fifth-days from 3 to 6 P. M.

WESTTOWN BOARDING SCHOOL.—A stated meeting of the Committee on Admission will be held in the Committee Room, 4th and Arch Streets, on Seventh-day 26th instant, at 10 A. M.

JOHN W. BIDDLE, Clerk.

The committee having charge of Spring River Academy desire to engage the services of a suitable young man to serve as principal the coming year.

Address LEVI BOWLES, Clerk of Committee,
Galea, Kansas.

DIED, at her residence in Pottstown, Pa., on the 18th of Fourth Month, 1902, MARGARET E. LEE, an eighty-eight year of age; a beloved member of Pottstown Particular and Philadelphia Monthly Meeting of Friends.

—, on the fifth of Second Month, 1902, HANNAH LEE, wife of James Lee, Jr., in the seventy-eighth year of her age; a member of Exeter Particular and Philadelphia Monthly Meeting of Friends. She was fully attached to the doctrines and customs of Friends. "Blessed are the merciful; for they shall obtain mercy."

THE FRIEND.

Baptismal Teaching.

A recent paper contains a remark applicable to fundamentals in our own religious structure:—"What does the great commission give the Church require of her? It is couched in these terms in the gospel according to Mark: 'Go ye therefore and teach all nations, baptizing them in [that is, into] the name of the Father and of the Son and of the Holy Ghost; teaching them to observe all things whatsoever he has commanded you.' Teaching is the prominent thing in this commission. Those to whom the commission is given, therefore, must be qualified for teaching."

What God hath joined together, let not man divide. Friends put asunder. In what is called the "great commission," the teaching and the baptizing are intimately conjoined. An essential part of one's commission as a teacher in the gospel is the authority to baptize into the Divine Name. The ministry of such teaching we call baptizing ministry. How can Teaching and the Baptism of the Spirit "walk together except they be agreed?" They agree in one, and could not be divorced. Where the teaching has an impressive hold on men's spirits, or baptizes them under a sense of the Divine overshadowing it must be "the anointing that cleaveth."

Modern experiments in giving "the gift of teaching" a liberty to go alone for a little space here and there as intellect among things divine, has resulted in the degenerate, rapid, and cheap-talk ministry,—which is not ministry, because divorced from the Baptism. A fresh baptism for every fresh service has a baptizing effect,—even an immersion of men's living spirits into the living Name, which is the power of the Father, Son and Holy Spirit.

"All power," said Jesus, "is given unto me. Go ye therefore and teach, baptizing" into the power of divinity.

The Apostle Paul enrolls teaching equally with other forms of ministry which are to be worked by the Holy Spirit. "These all worketh that one and the self-same Spirit, dividing to every man severally as he will." When any lower authority for teaching creeps into our solemn assemblies, or gets their ear, how effectually is the solemnity dissipated!

We recognize the gift of teaching, and often with thanksgiving, as we see ministers anointed therein. But because we must recognize it, we must not therefore excuse it from "that one and the self-same spirit" that is needful for the exercise of prophecy, or tongues, or healing, or praise. Some talk as if the presence of the Spirit, or a portion of it, must needs retire to make room for teaching, or there may be a liberty in gospel teaching without his living presence. Yet they are not alternatives, but true yoke-fellows.

On the other hand, because one seems engaged in lucid statements of Christian truth is he therefore not anointed? In the anointed ministry, teaching is indeed largely embraced, and the criterion whether a man does "teach, baptizing,"—or "as having authority and not as the Scribes"—is not always the mere output or what one delivers; but the criterion is inward in us and inward in the speaker,—the anointing in us that should be lively to own or discern the inward exercise and movings of the speaker's spirit. An unspiritual critic can easily make a man an offender for an outward word; but he that is spiritual as a discernor of thoughts and intents of the heart would prefer to judge a laborer from the standpoint of the laborer's heart. Nothing is cheaper than criticism of a product after its language has been delivered; nothing dearer than a baptized sense of the inward exercise which the delivery has cost and is costing the speaker.

The Speech of Character.

It has been said recently that the best part of our speaking must be done before we open our mouths. Much the same was said when it was written of "the preparation of the heart in man," preceding the "Answer of the tongue," being of the Lord. The living ex-

periences of this state of being, honestly met and discharged or suffered, build up that abundance of the heart out of which the mouth may speak with the weight of reality and authority. So it is said, that "the weight of a speaker's character must be about a hundred times that of the speaker's word, in order to make his speech effective." Sometimes such authority of character may so outweigh words as to make them unnecessary. Some men have been reported of, whose "characters spoke so loud that one could not hear their words."

So in the deliberative assemblies of our religious Society, not the multitude of voices heard, but solid spiritual judgment rather, in old or in young, is expected to turn the decision. "The Head of the Church is majority enough, though He find expression in but one voice." The discerning of spirits is a gift for the church, whereof there is especial need in a clerk who sits to gather the sense of the meeting, that he may discern "the spirit of judgment in them that sit in judgment."

NOTE.—A paragraph was turned into a puzzle in last week's editorial, middle of third column, by two lines getting out of place. Restored to their original order, they make the passage as it was written, thus:—

"Our conscience may cry out against what they may ordain, but that, we are taught, is no affair of ours; for we have transferred the use of our conscience to them. We have vacated ourselves of the primal trait of man, have surrendered to be as "cattle" or "machines." Is a nation thus to gain "moral fibre?"

Furthermore, early in the article on "Truth Bidding its Time," page first of No. 1, it was written:—"The Quaker disciple standing on his rock of revelation can view calmly, and without dismay for his position, the surging of the modern waves, and the tumult of the people." It was by no error of the printer that the word "for" appears as "from."

SOME of you I want to encourage to read more of Friends' writings, and see how they were made willing to give up to follow their Master, for the peace of their own minds, rather than to go on in the way their own natural inclinations would have led them into; and thus as you are willing to read, you may be strengthened by the aid of the Holy One for the good word and work, who will not be lacking on his part, as you are willing to do yours.—Late Letter.

FOR "THE FRIEND."

The Mid-Week Meeting.

When accepted in their full significance as a soul restorer—a means whereby we may discover ourselves of some of those things which if allowed to grow upon us will more and more tend to hinder our spiritual progress as a religious body, our mid-week meetings for worship should by no means be allowed to decay through indifference on the part of their membership. They should not be suffered to lose their valued place as conservers of the important principle, of our profession, that our dependence should rest upon that Supreme Being, by whom, and to whom, and through whom belong all things forever. Like the Cities of Refuge in ancient times, stand our meeting houses, as they open their doors for the mid-week meeting for worship, and offer to the sin-driven, it may be, and overworked members of our Society the opportunity of an hour's communion, in Christian fellowship, with the only One who knows all our secret trials, but who may not be expected to be found of them that seek Him not in prosperity as well as in adversity.

In thus breaking away from our business engagements, and passing through the din and bustle of the busy world, for an hour's abiding with the Master in the quiet seclusion of our meeting houses, we retain in the very act the most valuable element in the rite of sacrifice as developed in the Old Dispensation, and borrow from the New its cardinal principles of Love, that regenerating power that thrills us, and impels us to seek, and pray, and wait, as regards our attitude towards the Supreme Being; which leads us to forgive, and to bless, and to desire to judge not, as regards our fellow-men. All that Christ lived and taught, and suffered, we each in our individual measure should long to carry out in our daily living. Hence we need these special seasons of retirement the better to acquaint ourselves with Him.

And so, when the overworked business man, the tired mother, or even the child aglow with life and as yet unwearied with its disappointments, gather within the quiet precincts of the dear old meeting house, they do by the very act attest to the world without their sense of dependence, in a way that can but prove itself wholesome to that world, if they are truly sincere in their purpose. For surely there is a peace and satisfaction, a sense of renewed strength, in store for those who partake of the true spiritual manna and drink of the true spiritual rock—Christ Jesus.

The dear old meeting house, we often call it, and we have very many such, sacred with the memory of generations who realized and valued the renewal of soul that came from the silent communion, and from the fervid exhortations of the Lord's messengers as they spoke words of comfort and peace, or of warning, until the whole assembly was knit into the oneness of feeling which bespoke the baptizing presence of the Holy Spirit.

But these meetings, though often signally blessed to the sincere hearted, are often, too, seasons of soul-wrestling almost throughout. And it is the necessity of our expecting such seasons as these that we would have impressed upon our dear younger Friends. They must learn to wrestle for the blessing, even as did Jacob of old at Peniel. Not long since, it was

the writer's privilege to attend one of our mid-week meetings which seemed to be signally blessed near its close with the overshadowing of the Divine Presence after there had seemed an evidence of soul struggle on the part of the little company assembled. Then a minister arose and expressed the feeling that had rested with him, that we might not seek to become unclothed of the things that would seem to hinder our progress heavenward, but to be clothed upon, with those virtues which would enable us to overcome them, by patiently submitting to the commands of our dear Master. Another minister followed with an expression of tender love and encouragement for those who might have been seeking long for a blessing to reward their patience in the struggle for an acceptable performance of the act of worship, assuring them that if they held out until the appointed time of their trial was ended, they would be given a sense of their acceptance, and be made to rejoice in God their Saviour. Still another minister was called into the line of service thus so orderly and beautifully opened, by feeling led to express the words of the Saviour,—“What I say unto you I say unto all, watch.” “Watch and pray, lest ye enter into temptation; for the spirit is willing, but the flesh is weak.” Reminding us of the great importance of dwelling near the Saviour, that we might be favored with his constant protection in our times of need; and quoting an experience of David Sands, as related in his journal, where he speaks of a particular morning when he felt the Lord to be nearer than usual, and much sweetness to cover his mind. This favor he took as a morsel intended to strengthen him against a trial near at hand; which indeed came later on in the day, and was of a nature particularly proving. The three communications above alluded to were all brief, but being delivered in great tenderness, they seemed to unite the meeting into oneness of feeling, and cover it with an unusual solemnity.

While it is true that we cannot command one of the days of the Son of Man, it behooves us all to be found daily and hourly in our places, whether about our lawful engagements, or in the house of prayer, that when He does come He may find us ready; whether it be to act in his service, or to suffer for his sake, or to part with time for eternity.

W. L. M.

MOORESTOWN, N. J., Seventh Month 22, 1902.

ANGER.—A storm of passion will disorder one's nervous system about as soon as a thunder-storm the wires of a telegraph line. A few such storms will destroy it altogether.

You will die soon enough without calling in anger to help you off the stage. The Christian should not allow the devil to kindle the fire of anger in his soul.

Suppose the basement of the house in which you live, takes fire, you soon extinguish the flames, and thank God that the fire is out. But on going up in the apartments above you will find the walls and ceilings dingy and the room offensive with the odor of smoke.

Many a soul-house is in bad condition to-day because of the fire of anger that recently burned there. Let love reign in your soul, and the demon of anger will find no place.—*Guide to Holiness.*

Midget.

A little incident occurred in the village of P— in 1883 which may be of use if given to the public. About that time a heterogeneous population had been suddenly drawn together from different parts of the country, influenced by the spirit of gain and the hope of sudden wealth. At the right moment the Methodists took steps for the erection of a new meeting house, and met with complete success. A good society, a large congregation, and a flourishing First-day School were present at the dedication.

A young woman, small and reed like in form, whom we may call Lida, had noticed the streets some ragged, rough, and roistering boys, and it seemed a pity that they were in the building and its school enjoying the advantages there afforded. She was not loth in determining to know what could be done with them. When first spoken to on the subject they stared with surprise that one so delicate, so refined, and standing so high in a social scale, should ever have had a thought for their interest—not much of a compliment to her class. As might have been expected, the boys became Lida's willing captives. After a few kind words in regard to cleanliness and combing their hair, she accepted their pledge to meet her at the meeting house the next First-day morning. In this preliminary work she spent two days.

At the appointed time she was greeted by a large class, and seldom has rudeness meted ever been seen together in a First-day school. But everything moved along pleasantly, the boys became interested in their work, and Christmas approached Lida said to her mother: “I think it will do good for me to invite school class here to supper on Christmas. I shall have to do much cooking for dinner, and I want to give the boys for once what they can eat. Anna will help me get ready, and you need have no care nor trouble about it.”

“How many do you expect will be present?” inquired the mother.

“I can't say, said Lida,” “some of the boys have brothers and sisters, and I think will be well to invite them also. I shall have to make arrangements for at least thirty, possibly thirty-five.”

With a quizzical look and a hearty laugh, her mother said, “Well, Lida, go ahead.”

As no time could be lost, the teacher was soon in the street hunting up her pupils and surprising them with an invitation to a Christmas supper. Entering a low shanty, where lived two of her motherless boys, she noticed an attempt they made to put out of sight a little sister, making the remark, “She ain't to be seen.”

“That is,” said Lida, “the very reason why I must see her.”

Gently pulling the little thing from its hiding place, it was found that she was half-naked, had been badly burned, carried on her by many bruises, and was really such a specimen of squalor and wretchedness as never before had met the eyes of this young lady. In spite of their rude plays the boys had found it necessary to have her take a part, and such was the role she was to act—that of a new clown; that face, neck, shoulders, and arms had been blackened with soot from the chimney.

The usually tranquil Lida was shocked out of control. For a few moments agitation alternated with the flow of tears. She was impatient because something could be done on the instant. Taking the child by her arms, and covering her with her shawl, she said to the boys, "Go tell your father that I have taken this girl home that my mother may care for her."

"Well, do so; we're willin'. She's a girl now, and we can't do anything with her," said the eldest boy.

Lida hurried home with the two-year-old child in her arms, a distance of about one-third of a mile. The mother was at her desk writing when her daughter rushed into the house, almost screaming: "Mother, mother, did you suppose it possible that this town could contain such a wretched human being as I have here?" The mother knew that something very unusual was on hand, and gave immediate attention. "Where on earth did you find that child?" she asked.

With a mingling of pity, tears, and indignation the history of the case was quickly given. In a few moments the child was receiving the benefit of a warm bath. Tenderships and time with frequent changes of water, brought wonders in her appearance and in the meantime Lida had gone through a number of trunks and drawers in search of suitable clothes with which to dress her. When this was done and her knotted hair was tastefully brushed the family found in its midst a little and peculiarly sweet and attractive.

Leaving the child in her father's care who was delighted with the little stranger, Lida hastened out into the street again in search of pupils and to see the father of the little girl which she had so unceremoniously kidnapped. Finding him at the forge in his shop introduced herself and said:

"Have your boys told you of my taking to house your little girl?"

"Yes, madam," he said. "I hope you will forgive me," she said, "but child appeared to be so wretched I couldn't let it, and now we all want to keep her, and will assure you that she shall be just as well cared for as if she were our own."

A spell had seized all in the blacksmith shop, and for a few moments there was deep silence. As soon as the father could speak, he said:

"I thank you, lady; I have no doubt you will be kind to the child; for the present I will very gladly have you keep the Midget." In a playful way he called her Midget to get up from breaking down.

Soon the burns and bruises which marred the fair form of the girl were healed, and she became the pet and the queen of the household. Lida's father was very fond of her, and sought her everything which she could enjoy, and in if in any respect she was not exactly well, away he posted for the doctor.

Finally Christmas came and the C. mansion was the center of many attractions. The others of the child, which we may continue to call Midget, had not seen her since the day she so readily consented to have her taken from them, because "she was nothing but a little girl." It was with difficulty that they could recognize her as their sister, but she labored under no such embarrassment, and was very

glad to see them. Bob blushed a little when she reproached him "for putting that black on her." The brothers thought she was a little beauty and could not keep their eyes off from her. As she flitted about the house, now teasing one, then another, there would occasionally crop out some of the rude antics the brothers had taught her at home, and these they quickly recognized with bursts of boyish laughter.

The supper table reached quite across the long dining hall, and on all sides was thickly studded by human heads. It was loaded with everything edible, from pork and beans to the daintiest knickknacks. Every boy put himself on his best behavior, and the stiffest propriety characterized everything said or done by them. Lida made herself very agreeable, everyone receiving from her especial attention.

All the boys knew little Midget, or rather they had known her with her dirt and rags, burns and bruises, and often she had been a bother to them in their jaunts and plays. How she had suddenly become so beautiful was a marvel and a mystery. The transformation they were inclined to ascribe to the magic touch of their teacher, and her influence over them was finally established. Her brothers felt for the first time that a girl was somebody. They saw that in that crowd she was of more consequence than a squadron like themselves.

At last supper is over, the boys are gone, and the C. mansion is quiet once more. Time passes on and the day is set on which Lida will leave home, school class, and her little protegee, for a home of her own in a distant city. A well-known neighbor asks for the child; in her warm heart there is room for the little one in abundance, the father is consulted, and all parties acquiesce in the arrangement. To-day Midget is a little girl greatly beloved in her new home, and promises a worthy womanhood.—H. H. Moore.

"LET EVERY MAN TAKE HEED HOW HE BUILDETH THEREON"—General Miles, in his speech in Philadelphia, in one sentence expressed a much applauded truth: "Our national grandeur depends not so much on power, wealth or military glory, as upon the fidelity with which we adhere to the principles upon which the builders laid the foundation of the Republic." The Christian Instructor declares that "The sentiment holds true also of Church obligations. No more is it true of the nation than of the Church, that the chief glory lies in the fidelity with which she adheres to the principles upon which the builders laid the foundation of the Church. It is no glory to the Church, or any member thereof, to forget or disregard the public and oft repeated pledges of fealty to the principles upon which our Church was founded, and to which she has all along required adherence. For those who have in recent years entered our fold from other denominations to lead in the annulling of her principles, is like a man admitted into a hospitable home for shelter and nourishment, proceeding to remodel the whole establishment."

It is said that when a Breton sailor puts to sea, his prayer is, "Keep me, my God, my boat is so small, and the ocean is so wide."

An Exercise of John Barclay.

Second Month, 1817. I have long mourned, day and night, and have been grievously affected with the rapid advances which the enemy of souls is making, on the earth at large, on professing Christians generally. Under this impression my soul has been weighed down, more or less, for the space of above two years, with little intermission, even before I came into an acquaintance with that Society of which I was born a nominal member. My very health, I believe, has been at times injured by this constant anxiety, which was not to be erased or smothered by close application to business, or by society, or recreation. My concern has been much increased by a review of the depth of perdition from which I have been plucked even as a brand from the burning, and by the deplorable effects of sin on those with whom, in my vile courses, I kept company. Now I believe I may not with impunity or impunity quench, or reject, or make light of, such concerns and impressions as have their foundation in truth, and the end of which is the advancement of truth; nor am I at liberty to treat such thoughts as he did, who said, "Go thy way for this time; when I have a convenient season I will call for thee;" forasmuch as I know not that another opportunity may be afforded me. I therefore feel bound to encourage and cherish good impressions by all means and at all times. The oftener I have considered this important and extensive subject, the more strongly have I been induced to believe that sacrifices will be called for at my hand, and that I shall be constrained to take up my daily cross in a peculiar manner, not only to things which are wrong in themselves, but as to those that have a tendency to evil, and even in many things which religious people account innocent and allowable. Oh, when I read in the Scriptures the very excellent precepts and instructions given for us to follow, and when I examine closely the conformity of the lives of those by whom the precepts were delivered, my admiration of the coincidence in every minute particular is, as it were, swallowed up in mourning at the declension of the present professors of the same religious duties. By such considerations and reflections, my soul is stimulated very fervently and frequently to petition Him, who is the fountain of all good, that He would, in his own time and way, aid his own cause: that He would be pleased to regard the sighs, the cries and the tears of his exercised people.—"His own elect, which cry day and night unto Him" for the advancement, extension, and prosperity of everything that is good.

Third Month.—The subject of dress has very frequently come under my serious consideration. It has of late been still more often and more deeply impressed on my mind; and as I have kept quiet and calm, singly desirous to know and to do whatever may be required, the matter has opened more and more clearly before my view; and some things with regard to it which had been hitherto hid from me, whilst in a disposition to follow my own reasonings and fleshly wisdom, or concerning which I seemed then to be uncertain and undecided, now brighten up into clearness, so as to make me conclude that they are indisputably right for me to adopt. And surely I may add,

no sooner is a truth clearly manifested, a duty distinctly marked out, than it should, without hesitation, be obeyed. With regard to my present dress and outward appearance, it is evident there is much to alter. That dress from which my forefathers have, without good reason and from improper motives departed, to that dress I must return, that simple appearance, now become singular, which occasionally, and still continues to occasion, the professor of the truth suffering and contempt, the same must I also take up and submit to the consequences thereof. Some may object to this, as if it were improperly "taking thought;" but I differ from them, not in the rule itself about the anxiety bestowed on clothing, but about the application of that rule. It is right, if the vain customs, folly, and fashion of this world have insinuated themselves into any branch of our daily conduct, to eradicate them, with every one of their useless innovations, whatever trouble, anxiety, or persecution it may cost us. But after we have once broken our bonds, we shall find a freedom from anxiety, trouble, or thought about our apparel far surpassing the unconcern and forgetfulness which seem to deaden the spiritual eye and apprehension of the slave of custom.

ERRORS IN PRINTING.—It may be well to explain, for the benefit of those who are not familiar with the workings of a printing office, that when type is set an impression is first taken on a sheet of paper somewhat wider than a column of print. This is then examined for errors, and the latter are marked on the margin of the paper for correction. The strip of paper is called a "proof" or "proof sheet," the inspection is a "proof-reading" and the man who reads it is a "proof-reader." In some offices proof-reading is entrusted to men who have other duties, and who go over any given article but once. In large newspaper offices a second proof, or revise, is taken after the first one has gone to the printer. Thus the proof-reader has a chance both to see if the blunders previously discovered have been corrected, and also to detect others which may have been overlooked at first. Sometimes a second revise or third proof, is taken. It is not uncommon to read the same proof twice. Moreover, in all large offices, there is an assistant who holds the original manuscript and reads it aloud to the proof-reader, the latter thus catching any departure from the text, a class of errors not otherwise discovered. To be sure, if a first-class proof-reader sees anything which seems inaccurate—for he is sure to be a man of wide information, high intelligence and scrupulous watchfulness—and he finds that the proof nevertheless conforms to the copy, he refers his doubt to the editorial department, putting a "query" mark opposite the questionable statement. The writer, or some one else, then investigates the matter, and either verifies or alters the original statement.

Yet in spite of all these precautions an error will sometimes occur. A word, or a form of spelling, will appear in print which was not in the manuscript, and which was not on the proof sheets. If it had been in either place it would have been caught by the vigilant proof-reader.—*Tribune Farmer.*

FOR "THE FRIEND."

NIGHT.

I climb the starry stairs to watch afar,
Seeking the margin of the great unseen,
How bright the watch-fires of the Ebon-car,
What stored-up strength is found behind the screen.

On wonder's wings I soar with searching eye,
Seeking relief for deepest human need,
What flash-lights stream along the silent sky,
Impelling impulse to my fervent need.

Alone I seek with awe the Great Alone!
How warm the welcome of the covering wing,
Here only may I find the spirit's home,
Here only learn the song the angels sing.

No taint of sin infests this upper air,
Ethereal currents flow not to impede,
Clouds are beneath, I breathe a life most rare,
Of heights sublime where souls immortal feed.

Full freighted, gladly I return,
Bearing my message to the men in thrall,
Charged with a zeal whose potent forces burn,
In silent might to bear with men withal;

A little while to hold aloft the flame,
The torch of truth, and stand in strength of God,
To stamp on life the one enduring name,
And cheer the pilgrims in the upward road.

BEAMSVILLE, ONT.

H. T. M.

The Zuni Indians.

BY LETTIE MOON CONARD.

Shawanaque, the chief village of the Zuni Indians, stands on a little hill in the midst of a broad arroyo valley, forty-five miles from Gallup, on the Santa Fe Railroad. Beside it runs the Zuni River, when favored with rain; this month the river is only a dry arroyo; the water gushing from the mountains five miles away spends itself and sinks out of sight within two miles of the town.

Our party of four—artist, botanist, photographer and Indian student—started out from Gallup, New Mexico, in a buggy driven by a trader from Zuni, for whom the saloons of Gallup had proved too attractive. We found ourselves on the way bumping over chuck holes and through little arroyos so violently that we feared a breakdown. The leader of the party expostulated from the back seat, but the driver hurried on, assuring us that he would certainly get us to Zuni. Finally and fortunately the driver keeled over and surrendered the reins to the photographer who deftly managed them in spite of the drunken man reeling over against him. But how should we work the break under the trader's feet. We finally persuaded the man to sit behind, leaning on our leader, while the front seat was occupied by the two women of the party and the photographer-driver. All safe now, we drove on towards Zuni, only once getting off the road and rousing the trader to show us the way.

There are four dwellings visible in this forty-five mile drive—the adobe house of a rich Navajo herder, the hogan of another Navajo and the houses of two white men who trade with the Indians and keep supplies for passers-by. As we drove beside a deep arroyo we came up with a close packed flock of some twelve hundred bleating sheep and goats, driven from their watering place by a brilliantly attired

Navajo, who rode his steed here and there forcing into the centre those that straggled at the sides. In the midst of our interest the scene we had passed we saw on a mound on the other bank of the arroyo a beautiful animal standing and looking at us with graceful pose. One of our party recognized it as a coyote, watching for the lambs that come there for water. Unmindful of the beauty placed on his life or knowing that we were no fire-arms, he quietly lay down on the bank and gazed at us as we went by.

For forty miles we drove on amid scrub spruce and pine, sage brush and yucca, white skeletons of the dead spruce trees, well as those of animals, reminding us of the loneliness of the place. For some miles a land looked more home-like while we drove through pine woods, which might have been those of New Jersey, except for the richness of the pine bark and the accompaniment of yucca shoots and prairie dog holes. Reddish cliffs, too, appeared now and then distant mountains and rugged, dry stream beds made us realize that we were in New Mexico. We drove close to deep washouts and down into the arroyos and out again, listening to the stories of the half conscious trader telling of the fury of the waters rushing down stream beds in the rainy season. Here he had been compelled to wait twenty-four hours for the water to subside; there he had built a bridge; at another place he had an upset. We were left to us to guess the cause of the upset. Our delight reached its culmination as we came in sight of the brightly colored meanderings of Zuni. The valley was very beautiful in spite of the fact that the bare clay sand was merely dotted here and there with plants struggling to grow. We knew that the place would be brightly green if it only had water. Sheep were pasturing where the blades of grass were an inch apart. The cows looked fat, even though we could not see what they lived on.

We scanned the plain for some minutes before we could distinguish the Zuni village, dark looking group of houses, the color of whose adobe walls matched the sand and clay of the plain. As we neared the village we caught sight of the ladders leading to the house-tops. The Zuni houses are two to three tiers high, one man building his house a conical oven on the roof of another. Everywhere dogs run at us. Each Zuni family has from one to several dogs continually snarling about. Through the narrow passage ways between the houses walked naked and half-clothed children, and women with red or black wool blankets over their heads and shoulders, as to keep off the summer heat. From the hole dug in the bed of the Zuni river women are mounting the hillside carrying jars of water on their heads to irrigate the little gardens and supply the household.

The narrow streets and adobe houses, the ladders leading to the roof, the women carrying water jars, the miniature gardens, the brilliant costumes of red blankets and their bands and belts and necklaces, and many unnamable things, make us forget that we are in the borders of the United States; we wonder that tourists generally do not visit Zuni, at the same time that we are selfishly glad that they do not. On we passed across the bed of the

over to the missionary's house, just beneath the site of the old village. The Zunis built around "the centre of the earth" a spot now marked by a little stone altar, inside of which are placed, as offerings, corn and some plum sticks. The legend is that the Zuni gods and ancestors were always trying to find the centre, until after a long debate one of them called forth the earth-skate, who grew larger and larger, and he led out his legs to the six regions, declaring that where his navel rested there was the earth's centre. The Zunis have moved down a quarter of a mile away from the centre of the earth, but the spot is visited and celebrated with special ceremony every year. After a good supper with the hospitable missionary, we roamed to the outskirts of the village and watched the Indian farmers coming from their cornfields and the shepherds tending their sheep and goats. The bright colors of the Indian costume shone conspicuously against the dull adobe village and the flat plain; the sacred mountain Toyallani, with an impressive background to the scene. Toyallani is a mesa—that is, a flat-topped mountain with abrupt sides, rising nine hundred feet from the plain. Its bare sides are richly colored with strata of red and gray sandstone; standing out in front are two tall red rocks called the brother and sister rocks. There was once a great flood, the story tells of the brother and sister stepped out into the water and made the flood subside and save the people.

The photographer, the botanist and the student, with the interesting missionary guide, rode over to the mountain on a warm and beautiful day. We passed through the peach orchards and followed the windmill up the mountain, watching two Indians with a burro, creeping up above us. The steep rocks and loose stones made us realize that we were traveling on our own feet, not on a burro's back. Our Indian friends seemed to be an old man and woman, who had led to the mountain top to dig clay for pottery for all the clay used in Zuni pottery has been carried from the top of this steep mountain.

The old man delighted us with his gentleness, as he shouted out an invitation to the water he had carried up, but we realized that his gift was meant to bring a return when he chided us with being stinck because we had no food to give him. We went on to the sacred shrines, somewhat awed by fear lest the grumbling Indian would be displeased with our visit to the shrines said to him, but a mere curiosity to the white people.

The shrines of the war gods and the gods, with their rudely carved images, are reminders that this mountain was the home of the Zunis in the days when they were pressed by their constant enemies, the Spaniards and Navajos. The stones of the old village are still scattered around, but nowadays the United States Government protects the Zunis on their reservation, and as a result of continued safety as long as they obey the demands made upon them, and so send their children to school and let go of their ways they want to kill, not from love of civilization, but from fear of displeasing the United States Government, for they use the name Wash-

ington as a personification of the United States Government.

The day of our trip to Toyallani was one of the four days spent by our party at Zuni, and the most eventful of the four. In the early morning sounds of wailing reached us from a neighboring house. The daughter of the silver-smith had died in the night and the family had been wailing for five hours, and continued some three hours longer, with broken sobs and mournful exclamations of "a-na! a-na!" (too bad! too bad!) The corpse, attired in its best garments, was wrapped in a black blanket, on which meal was spread, and placed on the floor by the fireplace. The husband and mother of the dead sat beside the corpse. About twenty others, mostly women, sat around the room joining in the lamentation, which was continued from early hours of the morning to ten o'clock, when the men who dug the grave carried the body to its burial, amid wailing from houses by which the procession passed. The departed was one of the more intelligent Indians, a girl who had been at school, but who retained full allegiance to the customs and religion of her people. She lived, as do all young married women of the Zunis, in her parents' house, whither the husband comes at marriage.

It seemed a little heartless that on the very day of this funeral the picked young men of the tribe started out for a great foot race from a point very near the adobe of the deceased. It was a ceremonial race, designed to bring rain, but accompanied by betting and merriment. About twenty young men took part, ten on each side; they circled far around along the sky line and over some of the mesas followed by interested people. The cloud of dust moved along the horizon with wonderful rapidity, and the race of twenty-five miles was completed by the first man in less than two and a half hours. It was a stirring sight; couriers on horses kept running in from the plain to bring the news of the success or failure of their side; the housetops were crowded with men and women gazing off to the horizon. Clouds hung around the sun at sunset; a little sprinkle came the next day; a larger one the following day, but no rain of any account has yet fallen to prove the value of the race. The Zunis will probably explain the partial failure of the ceremony by saying that some witch was around disturbing things.

The race caused some trouble. Last night the Governor's herald was scolding from the housetop in a voice that could be heard by all the sixteen hundred people of the village about the carelessness of those who had let the burros run over the corn. It is well to race for rain, said he, but it does no good if while you do so the burros eat the corn. The man sounded like a maniac, so loudly and angrily and profusely did he scold the people.

We carry away beautiful Zuni pottery and blankets, partly made in our own sight; but, still better, a most delightful recollection of an intensely interesting people, very crude and dirty, but with an ancient civilization that dates back far beyond the time when Columbus discovered America. Travellers tell us that the broad Zuni valley used to be very fertile, and some hope that the Zuni river will be dammed up in the mountains, so that the rain of the wet season may be gradually let out to

irrigate the land when no rain falls. Then the people will flourish better than ever before. With rich fields to cultivate without danger from Navajo and Mexican, they may develop their farming and their arts to continually better things. The interesting old savage dances, the witchcraft proceedings and the rain races will soon be things of the past. While they remain it is well worth our while to learn all we can about them as representing a stage of thought through which the human race everywhere has passed, but which shows particularly picturesque forms here in Zuni, as picturesque as the country itself.—*From Public Ledger.*

Science and Industry.

THIRTY MILLION DOLLARS IN WASTES.—Chicago, with a capital of \$67,137,000 invested in meat packing establishments turns out an annual product of \$256,527,000. Of this total the fresh beef sold is valued at \$61,964,000; cured beef, \$5,062,000; canned beef, \$6,446,000; fresh mutton, \$11,053,000; fresh pork, \$24,416,000; salt pork, \$32,293,000; hams, \$21,562,000; smoked bacon, sides and shoulders, \$12,688,000; sausage, \$7,588,000; refined lard, \$18,124,000; oleo oil, \$5,227,000; other oils, \$1,990,000; fertilizers, \$858,000; hides, \$10,773,000; wool, \$1,935,000; and other products to the value of \$30,966,862.

In this last group are all of what are known as by-products. The bones and, in fact, all parts of slaughtered animals are now utilized. The bones from the feet of cattle are used in the manufacture of tooth-brush handles, knife handles; and for whatever purpose ivory was used years ago. These bones are hard and take a very high polish.

The knuckles from the bones are cut off and used in the manufacture of glue and for fertilizers. The tips of horns are sawed off, split and pressed into flat plates used in the manufacture of combs, backs of brushes, large buttons, etc. The tip of the horn is also made into mouthpieces for pipes.

Hoofs, which some years ago were thrown away, are now sorted into three grades. White hoofs are sent to Japan, and there used in the manufacture of various ornaments; striped hoofs are worked up into buttons and horn ornaments; black hoofs are used in the manufacture of cyanide of potassium for gold extraction, and are also ground up to make a fertilizer for the use of florists, grape growers and others.

Glycerin, once a waste article, was allowed to flow off into the drains or rivers, and the loss per week at some factories in the old time was two thousand dollars. It is now one of the most valuable of by-products. Red bone marrow, gelatin, neat-foot oil, soap and glue are among the by-products that have great money value. The waste of the Chicago slaughter houses which it was so hard to dispose of thirty years ago is now worth millions of dollars annually.—*Chicago Inter-Ocean.*

SUGAR BEET ACREAGE.—The last issue of the *Crop Reporter*, published by the authority of the Secretary of Agriculture, gives the acreage sown to sugar beets for this country for the current year. According to this return, eleven states are interested in this industry, there being in the eleven about two hundred and

sixty thousand acres sown to sugar beets. The size of this industry may be judged by the statement that this is about the same acreage as is devoted to corn in the single State of New Jersey. According to this table, Michigan has the largest acreage, with California second and Colorado third. These three States represent over two hundred and eight thousand acres of the total acreage of less than two hundred and sixty thousand. The figures run as follows: Michigan ninety-eight thousand; California seventy-one thousand two hundred and thirty-four; Colorado, thirty-nine thousand four hundred and forty-nine. The fourth state is Utah, with eighteen thousand six hundred; the fifth Nebraska, with nine thousand nine hundred and eighty, and the sixth New York, with sixty-five hundred; no other State has an acreage of over five thousand. These figures prove that the beet sugar industry has been given an importance by Congress which it does not deserve. As we have shown, only eleven States are now growing beets for sugar and in only two of these is the acreage sown to sugar beets equal to the acreage sown for corn in Massachusetts, and yet Massachusetts would hardly be called a great corn growing State. —*Boston Herald.*

SERICULTURE, the raising of silk worms, does not appear to increase in France. The official returns for last year show that one hundred and thirty-two thousand six hundred and thirty-four persons were engaged in the industry, as compared with one hundred and thirty-six thousand two hundred and fourteen in 1900. In 1897 the number was one hundred and thirty-three thousand two hundred and fifty-two. The yield of cocoons varies with the seasons. In the last five years it has ranged from six million eight hundred and ninety-eight thousand and thirty-three to nine million one hundred and eighty thousand four hundred and four kilos.

A PORTABLE street light of great illuminating power is the device of the Westminster County Council for lessening accidents from London fogs. A cylindrical tank eighteen inches in diameter and two feet high is charged with twenty-five gallons of petroleum, and compressed air forces vapor from the oil into a standpipe provided with a burner. On igniting the torch flares up eighteen inches to two feet, with a power of one thousand candles.

THE government of the Malay Peninsula, is planting gutta-percha trees on a large scale, and it will not be necessary to cut them down, as gutta-percha can now be extracted from the leaves and twigs without injury to the trees.

CONCERNING THUMBS.—Notwithstanding the belief, which is general among all civilized nations, that the fourth finger (in England commonly called the third) of the left hand is and always has been considered the most important one, and, therefore, that on which the wedding or alliance ring is placed, a knowledge of the ancient writers will show the thumb to have been the one which was held in highest esteem by the earliest people. By the Jews in the olden time the right hand thumb, because it was significant of power, was considered sacred. In the consecration of Aaron and his sons to the priesthood it was ordered by Moses, and by him first done in the consecration of his brother and his brother's sons, that the thumb of their right hand and the great toe

(or thumb) of the right foot should be anointed with the blood of the sacrificial ram. It was also enjoined by the Levitical law that in the cleansing of lepers the priests should anoint them with the blood of the trespass offering and oil on the tip of the right ear and upon the thumb of the right hand and the great toe of the right foot, and that he should use his thumb in performing this therapeutic ceremony.

Amongst the Chinese Tartars, Nieuhoff, in his "Embassy to China," states that the reward for undaunted courage was the permission to wear an ivory ring on the thumb, and was only bestowed on the most distinguished warriors by the Emperor himself. So important was the thumb considered by the Greeks that it was called the Anticheir, or opposite hand, on account of its strength and usefulness, whilst amongst the Romans in the theatres and gladiatorial combats it was used to demonstrate applause or disapprobation. Every classical scholar knows—although the contrary is the vulgar opinion, and which error may be seen depicted in Gerome's celebrated picture—that when in the amphitheatre the excited people turned down their thumbs, it indicated that the life of the vanquished combatant, because of his heroic attack and defense, was to be spared the fatal blow, whereas if they were turned upwards death was to be his doom. —*Pall Mall Gazette.*

THE HARP OF THE MOSQUITO.—The members of the Royal Society of Edinburgh were interested, at a recent meeting, in the announcement by A. E. Shipley and Edwin Wilson of the discovery of an apparatus, heretofore overlooked or neglected, at the base of the mosquito's wings, whereby the characteristic humming of that insect may be produced. The species examined was the anopheles maculipennis, and the apparatus consists of a slightly movable bar provided with a series of well-marked teeth which, as the wings are raised and lowered, rasp across a series of ridges. The structure of the apparatus is described as very complex, but the music produced, as everybody knows, is extremely effective. —*Youth's Companion.*

THE NEGLECTED LETTER.—The importance of present hours and present opportunities is often but little felt. "To-morrow shall be as this day, and more abundant," is the fond dream of the idle, the indifferent and the pleasure seeking soul. But how often sad surprises break in upon our mirth and ease and blast our cherished hopes.

Many years ago, a Greek nobleman made a feast for his friends. In the midst of the festivities, a messenger entered in great haste with a letter. It was from a distance, and was sent to inform him that a plot had been formed by his enemies to kill him that night.

"My Lord," said the messenger, "my master desired me to say, that you must read the letter without delay; for it is about serious things."

"Serious things to-morrow," said the nobleman, as he threw the letter aside, and took up his cup of wine. The delay was fatal. Before the feast was at an end his enemies rushed into the hall and slew him.

He neglected his last chance, and perished through his own folly. And are there not

thousands who to-day are neglecting opportunities and disregarding warnings, who mourn at last, when they are lost beyond recovery? To-day God sends his message. Ob, read the letter to-day, for "How shall we escape if we neglect so great salvation?" —*The Christian.*

Items Concerning the Society.

EASTERN QUARTERLY MEETING, N. C.—H. Stratton, accompanied by her son Joseph, arrived at Windfall in Perquimans Co., N. C., on the twenty-third of Fifth Month last with a letter from New Garden Monthly Meeting of Eastern Ohio, endorsed by Salem Quarterly Meeting, stating her for religious service within the limits of North Carolina Yearly Meeting. During the week prior to Eastern Quarterly Meeting they were greatly engaged in attending the regular meetings of visiting families, more particularly the aged and infirm, and had one or two appointed meetings for the colored people, much to the relief of their mind.

On Sixth-day, the 30th they attended the meetings of ministers, elders and overseers at Piney Woods, near Belvidere; also the Quarterly Meeting on Seventh-day, and the public meeting on First-day; all of which were well attended, and proved to be highly favored seasons in which the gospel was preached with power, and many who came hungering and thirsting were satisfied. Minutes were read for Hannah H. Stratton and her son Joseph, A. Evans, and Mary C. Woody, to whom were kindly received, and the clerk was directed to sign and give them returning certificates on behalf of the meeting. Also two young ladies from Baltimore Yearly Meeting and one from Philadelphia were present, and their attendance was appreciated.

On Second-day Sixth Month 2nd, Hannah Stratton and her son came to Woodland, within the limits of Rich Square Monthly Meeting, and were met and kindly entertained at the home of B. P. Brown. During the few days they were in this neighborhood they attended both mixed meetings at Rich Square and Cedar Grove, which were largely attended, visited about thirty families, had an appointed meeting at Manola in Bertie County, where a few families of Friends reside, and one appointed meeting in the town of Woodland for the colored people, which was well attended and highly appreciated.

On First-day they were at the regular meeting at Cedar Grove, which was the last public meeting they attended in this vicinity. This proved to be a highly favored season held to the honor of God to which many came, both members and seekers. Now feeling clear of any further service in North Carolina, they were easy to turn their faces towards home on Second-day, feeling the reward of peace.

THE YEARLY MEETING HELD AT WESTERLY, I. L.—By a copy of the "Minutes of New England Yearly Meeting of Friends held at Westerly, I. L., Sixth Month 15th to 18th, it appears that the former clerk, John W. Foster, having died, Charles Perry, the clerk of the Meeting to Suffernings, acted during the first of the session for business, and that Job S. Gidley and Amos O. Foster were appointed as clerks for the remainder and in the Women's Meeting Mary A. Gardner and Anna H. Chace were continued as clerks.

The company and gospel labors of Henry T. Outland of North Carolina were recorded as encouraging and comforting. Those of Ida R. Amness, from Iowa Yearly Meeting, were recorded as "very satisfactory to us." We learn that a man Friend in the station of minister, a member of the larger body in New England, was usual, acceptable attendance. "A letter of gospel harvest received from our dear friend Elizabeth C. Oyer

st Grove, Pa.), brings much comfort to us," a letter from our dear friend Benjamin P. of North Carolina, has been read to our union and comfort." Both letters are printed Appendix to the Minutes; also the epistles from Ohio, Kansas, Iowa, Western and, both men's and women's Yearly Meetings. Itees were appointed on epistles in response, who, preferred the sending of a separate to each, rather than one general letter, and says were approved, also replies to the two from individuals.

While considering the State of Society as by the Answers to the Queries, Friends brought under a living concern to exercise a watchful care in regard to faithfulness in attendance of all our meetings, both for world and discipline, thereby in a measure encourage another in the maintenance of all the as principles which we profess.

As we were exhorted to let nothing pertaining to life come between us and our love to God, we all the tithes into the store-house and me now herewith saith the Lord of hosts if not open you the windows of heaven, and you out a blessing that there shall not be to receive it."

Several answers to the Queries show very the usual faithfulness and deficiencies. The scriptures are frequently read in the families. An exception was named in regard to the use of liquors except for medicine; and as to "pliancy at funerals and in the of houses. The testimony against a paid y maintained, except a few instances of atice, where such is sanctioned. But in all the, exceptions are noticeable it is rather ir infrequency."

It is not often that a Yearly Meeting has its reading of an epistle after the writer through the hearers are addressed has passed into ur state of existence. The reading of the ear's New England epistle in the Yearly g of Iowa Friends, written, as it was ndered to be, by our late valued friend John W., appears to have been peculiarly impressive r feelings.

At this year's session meant to its members gathered from the following acknowledg- of the men's and the women's meeting, on succession:

The business claiming our attention has been ted in harmony, and we trust that we are umindful that the strength to do this was by Him who is able to make all see eye to o look to Him alone for help; and may we hanks unto Him for the unmerited bless- hich He has poured out upon us at this time, such as He has, poor, weak and unworthy as e, sent his messengers amongst us to proclaim earchable riches of his love."

It was in much weakness that we gathered as ely Meeting, feeling poor and stripped, and t to acknowledge with humble thankfulness e have not been left comfortless or en- forsaken. In unmerited mercy the Lord hath eleased to manifest his loving care over the anship of his hands, by sending his anointed ts to labor amongst us, dispensing the Bread ater of Life freely, which we crave may not t gotten or lightly esteemed, but, when we ate and go to our homes, may be treasured hearts as precious favors."

Wm. H. Haight, of Canada, has a minute to at- orth Carolina Yearly Meeting and the meet- composing it; also Ohio Yearly Meeting held at Water, near Barnesville.

We hope and trust that there will be a Yearly g of sound Friends held up in New England, where there were so many dear Friends who were willing to suffer and some even to death for

those precious truths which many in this day, who bear the name of Friend, are trampling under their feet.—Recent Letter.

Notes From Others.

AN INDIAN TRIBE OF PEACE.—The Hopi tribe of Indians are at home in the northeastern part of Arizona. The name of the tribe signifies "people of peace," and the manner of the Hopi's life shows that the name was properly bestowed. Their homes and habits are described in the *Four Track News* by a writer, who says:

"These peculiar people are not only peaceable among themselves, but have sought their present isolated abodes, among the cliffs and peaks in that comparatively barren section, in their persistent efforts to get beyond the range of their warlike neighbors, that they might dwell in peace, asking only to be let alone.

Nearly all other Indians exclude whites from their villages and settlements when they practice their peculiar religious rites, but the Hopi invite the white people to witness their snake and antelope dances. They do not drink "fire water," but are very fond of sweets and tobacco.

The homes of these Indians are made of mud and stone, with large cottonwood beams. The ceilings are formed of willow and a top layer of mud. From the centre of the ceiling a feather is suspended by a string, and this is regarded as the soul of the house. All Indians are looked upon as deficient as to sense of humor, and many of them never laugh. The Hopi differ from all other Indians in their fondness for and appreciation of a good joke, and their habit of singing while at work.

COMBINATION CULTURE.—No gymnasium is so good for a boy as hard, steady work in the open air.

The gymnasium is only an artificial substitute for the country lad's exercise as he weeds, or hoes, or drives the plough.

No school of character, no effort to improve ourselves by set exercises, is so good for us as the school of plain, everyday work.

We may call labor drudgery, yet it teaches patience, obedience, endurance, controlled energy, order, system, and many other necessary things.

The boy who never worked for his living always has something to learn from the boy who has been through the school that labor keeps.—S. S. Visitor.

Elwood Worcester, in addressing the students of Pennsylvania University said: "I do not dread for you or for our religion the deepest thought, the largest study, the most searching comparison, for all knowledge enlarged far enough is knowledge of God, and all comparisons conducted in a fair and honorable spirit reveal the incomparable character of Jesus Christ."

CONCLUSION OF PEACE.—This Committee of the Peace Society (London), desires to place on record its deep thankfulness at the conclusion of peace in South Africa; it fervently hopes that all interested in the future of that country will devote themselves to the task of promoting just and friendly relations between its inhabitants, thus promoting unity and prosperity and rendering any recurrence of such conflicts impossible; and it also fervently desires that the British nation, gathering wisdom from the bitter experiences of this unhappy war, and rectifying the evil tendencies which have arisen out of it and which threaten ultimate disaster, may set itself to the high task of serving humanity and leading anew the van of liberty, progress and international amity, and may so establish its own greatness, prosperity and permanence.

The Anglo-Saxon has many good qualities; but his utter disrespect for the yellow, brown and black races causes him to shock the finer sensibili-

ties of the other races. His coarse feeling on this subject has caused the darker races to question his Christianity, which he is trying to force upon the world. We do not question the Christianity taught by the great teacher; but what he calls Christianity is only Anglo-Saxonism.

BLUNDERS OF FOLK ETYMOLOGY.—A peculiar kind of blundering known as "folk-etymology" is responsible for some of the queerest freaks of language. An easy example will make this clear. Our American word *carrrail*, for a kind of vehicle, is not a compound of carry and all, but a slight distortion of the French *carriole*, a diminutive of car. The change was made in obedience to the universal tendency to assimilate the unknown to the known—to make words mean something by associating them with others which they resemble in sound. Often there is no etymological relation between the words associated—as when sparrow grass is made out of asparagus. This particular corruption was once in such good colloquial use that Walker, the lexicographer, wrote: "Sparrow-grass is so general that asparagus has an air of stiffness and pedantry."—Harper's.

DENOMINATIONAL LITERATURE.—A denomination should have a literature of its own; not that it is to know nothing of what others think, say and do, or to be limited in its scope of thought, knowledge, inspiration and accomplishment, but that it should have its own constructive and defensive lines of information and operation. It has its own peculiar polity, doctrine, agency, history, life and activity, and it should keep its people as well as others informed on all these phases of its existence. It has its own thinkers, scholars and institutions, and out of them should emerge those who are able to enlighten the public in regard to what it has been, is, and proposes to be. It has its special mission in the world, and the pen is one of the greatest and most telling agents of the day for making known what it stands for and what it is doing. It holds a vital relation to the advancement of Christ's Kingdom at home and abroad, and it should be giving out instruction and help in all directions whereby this end may be accomplished.—Presbyterian.

Wherever sin is unknown the salvation of Christ is repudiated. A man who thinks he is not sick will turn away from a soliciting physician. If you find a person claiming that Jesus Christ was not a sin-bearer for condemned men you have one who does not feel himself weighed with iniquity. A Unitarian does not believe in the Cross because he does not see his need of it. And he does not see that he is a great sinner. A self-compunct age is always a half-believing age. Disbelief in the exceeding unfulness of sin and in the atonement for sin on Calvary go together. And no people can be kept from making light of sin if they do not conceive that Christ had to die to provide pardon. The reason our Christians are becoming so sadly careless about their doings is because they are losing sight of "the Lamb of God."—J. Malcolm Smith.

SUMMARY OF EVENTS.

UNITED STATES.—A plan has been prepared to assist the striking miners in the anthracite coal region, which it is said will include the establishment of large provision depots in every town in the anthracite region, where food will be purchased in large quantities at first cost and distributed weekly to the people who hold regularly certified orders from the local assemblies of United Mine Workers. Only members in good standing will receive relief. The Illinois miners have within four weeks given the national organization \$100,000 for strike funds, and are reported to have nearly \$500,000 in reserve.

The Grand of Aldermen in New York City have refused to grant the franchises asked for by the Penna. Rail Road Co., to allow it to make contemplated im-

provements there, which include a tunnel under the Hudson River, and an underground railway connecting with it. It is expected that the application for these franchises will be successful.

The Census Bureau has issued a bulletin giving the statistics of agriculture in the United States for the year 1900. It shows that there were at that time 5,739,667 farms in the entire country, which were valued at \$16,674,694,247. Of this amount about 21 per cent. represented the value of buildings and 78 per cent. the value of land and improvements other than buildings. The bulletin places the average size of farms in the United States at 144 acres, and it is stated that 43 per cent. of the land is improved. The total acreage for the entire country was \$41,201,546. A comparison by States indicates that the most important States in the agriculture of the country are, beginning at the West, Missouri, Iowa, Illinois, Indiana, Ohio, Pennsylvania and New York. Together, they contribute 44 per cent. of the total value of farm property and 38 per cent. of the total value of farm products.

Statistics of deaths of U. S. soldiers in the Philippines since the commencement of the war show a total of 4155 deaths, more than half of whom died from disease.

It is said that steps have been taken to enforce more rigidly the provisions of the Chinese Exclusion act, and 3000 Chinamen are now under arrest along the Canadian frontier awaiting trial on the charge of having illegally entered the country, the greater portion of whom, it is expected, will be convicted and deported.

The Secretary of the Interior has approved a recommendation made by Forest Superintendent Ormsby, of Oregon, for the withdrawal of a large part of the Blue Mountains, in Oregon, known as the Strawberry Mountain region, with a view to the establishment of the "Blue Mountain Forest Reserve." The area involved is about 145 townships, aggregating approximately 3,341,200 acres. The action takes effect immediately.

Wireless telegraphy is in successful operation between Cape May, Atlantic City, and Lewes, Del.

The average longevity in the United States is it is stated, 35.2 in 1900.

The camera is now being used in the reproduction of documents, statistical tables, and other papers, whose duplication by hand would be laborious and expensive. In a very brief period the camera reproduces these things with absolute correctness and with much labor saved.

A fire which had been raging for a week in oil wells near Jennings, La., was lately extinguished by forcing steam into the fire from 9 steam boilers of large capacity at a pressure of 125 pounds.

There is now a considerable tendency on the part of the foreign population to distribute themselves by nationalities: Two-thirds of the Irish remain in the East. Two-thirds of the Germans go West. Of 1,000,000 Scandinavians 870,000 are in the West and northwest. The Russians, Poles, Hungarians and Italians are chiefly found in New England, New York and Pennsylvania. The Bohemians and Hollanders settle in the Central West.

The chief source of the importation of asphaltum in the United States is the lake of pitch filling the crater of an extinct volcano in the island of Trinidad, off the coast of Venezuela. In addition, imports of asphalt are made from Bermudez, Venezuela.

Egyptian cotton is being introduced in Texas. It is said to be much more desirable than the cotton raised in the United States now, and is even better than the sea island cotton. The Egyptian cotton has much longer fibers than other cottons, and its seed can be removed easily.

Workmen lately excavating in a gravel pit two miles south of Dallas, Texas, unearthed the remains of a mastodon. The jawbones were in perfect shape and eight feet in length, but crumbled when exposed to air. The teeth remained perfect.

The growth of schools in this country, where instruction is given to pupils by correspondence, is illustrated by the statement that one of these schools alone has an enrollment of 415,000 pupils, and expends \$100,000 a year for postage. Its curriculum includes nearly all the arts and sciences taught in the ordinary professional and technical institutions.

There were 474 deaths in this city last week, reported to the health officer. This is 35 less than the previous week and 13 more than the corresponding week of 1901. Of the foregoing, 267 were males and 207 females; 54 died of consumption of the lungs; 23 of inflammation of the lungs and surrounding membranes; 8 of diphtheria; 13 of cancer; 16 of apoplexy; 10 of typhoid fever; 2 of scarlet fever and 1 of small pox.

FOREIGN.—The Shanghai correspondent of the *Times* recommends the formal abolition by the Chinese Government of the tikin tax throughout the empire. The free

transit of native and foreign merchandise through China is now secured.

The enforcement by the French Government of the law authorizing religious congregations has been attended with riotous demonstrations in Paris and some other parts of France. The unauthorized congregations are chiefly Roman Catholic. It is said the Government is applying the law with all possible moderation, and, with the country behind it, will, it is believed, accomplish the task undertaken before Parliament reassembles. President Loubet has signed a decree ordering the forcible closing of unauthorized schools under the Law of Associations. There is great opposition to the Government's policy, especially in the provinces, where the peasantry threaten to resist the enforcement of the law.

A despatch from Johannesburg says that the British Government has decided to select a number of prominent Boer farmers and to send them to Canada, Australia and New Zealand, in order to study modern scientific methods of agriculture.

Efforts are being made to bring home as quickly as possible the prisoners still at St. Helena, Bermuda and Ceylon. So it is hoped that all will be brought back by the Eleventh Month.

The Emperor of Germany is much interested in obtaining information respecting industrial methods employed in the United States and has selected several distinguished statisticians for the purpose of observation in this country, with the view of collecting statistics, etc., and reporting to him.

In a recent report the British Iron Trade Commission give details of the mineral resources of the United States as affecting that fundamental industry, the manufacture of iron and steel; show the extraordinary richness of the principal fields of coal, iron ore and kindred minerals, and demonstrate by concrete examples how the natural inventiveness of the American has enabled him to apply to the operations of production and distribution a wealth of original ideas and methods that are as yet little known in Europe. It is also made manifest how on land, on lake, on river and on canal the American people have applied their minds to the solution of the conditions and problems of cheap transport, until they have at last attained a level of rates and charges such as they say we have hardly had any experience on this side of the Atlantic. The American people have labored strenuously for many years, until labor, ingenuity and enterprise have become their most distinguishing characteristics. When one has appreciated all that the Americans have done for themselves, it is neither natural nor reasonable to grudge them the success which has attended their labors.

There is in Austria an instrument for recording earthquakes. In 1898, 209 shocks were noticed; in 1899, 190, and in 1900, 169.

A dispatch from Winnipeg, says: It is estimated that from 20,000 to 25,000 harvesters will be required in this part of the West. The Canadian Pacific Railway Company is arranging with the Allan and Beaver Steamship Company to bring laborers from England at exceptionally cheap rates.

The largest library in the world is said to be the National Library of Paris, which contains forty miles of shelves, holding 1,400,000 books. There are also 175,000 manuscripts, 300,000 maps and charts.

Another severe earthquake occurred on the island of St. Vincent on the 21st ult.

Frequent earthquake shocks have been felt recently between Santander, capital of the province of that name, and the province of Asturias, in Spain. The shocks were accompanied by subterranean noises.

An arrival is reported at Boston of 400 boys and girls, who are on their way to various parts of Canada and the Northwest: forwarded from Dr. Barnardo's homes for homeless children in London.

It is stated that more than 6,300,000 French women were employed in the living. More than 2,700,000 are employed in forestry or agriculture, including women land owners. Industrial occupations claim nearly 2,000,000 more, the cloister 120,000 and the liberal professions 138,160.

Earthquakes are reported to have occurred daily at Bunder Abbas, Persia, since the 9th ult. to the 25th. Other towns in the vicinity were damaged. The loss of life has not been reported.

A despatch from San Jose, Costa Rica, of the 27th ult. says that unusual activity has been shown lately by Poas volcano, in that neighborhood.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person named for vol. 7.
Wm. B. Moore, Pa., and 65 cts. for Jacob Moore, Mich.; R. C. Shoemaker, Pa., \$8 for himself, Eliza

beth L. Ireddell, Jonathan L. Lukens and Con. B. Shoemaker, Jr.; Sarah L. Price, Pa.; G. L. Smedley, Phila.; Susan J. Paston, Pa.; E. S. Barton, Phila.; J. Hervey Biers, O.; George Allen, Pa.; Comly B. Shoemaker, Phila.; for himself, Anna W. Bailey and Edward L. Rice, N. J.; John Carey, Agt., O., \$10 for Jacob Bay, Wm. Haworth, I. M. Haworth, Ruth B. Mearns and Catharine Ann Stanton; Wm. Berry, G. Caroline Thomson for Peter Thomson, G. Samuel S. Cowgill, Agt., for Charles Bass, E. Melrose, Pa.; J. F. Gold, E. Charles Lee, Beulah Palmer, Pa., and for T. Chalkley Pa. Rebecca J. Allen, Pa.; Harriet B. Fox for Sarah L. Fox, Pa.; Sarah T. E. Cope, O., per I. Heston; Laura A. Osborn, Conn.; Eliza E. Fox, Pa.; Phebe Ann Hazard, Pa.; Charles P. C. Hesters, Pa.; Joshua S. Willis and for Joseph H. Haines, N. J.; Jonathan E. Rhoads, O.; for himself, Joseph Rhoads, G. Rhoads, O.; Robert R. Tattall; Annie J. Jones, Del.; Wm. Hutchins, Mo.; Henry B. Leeds, Agt., N. J. for Beulah S. Leeds, Elizabeth H. Bromley, Edward S. Harmer and Anne W. Leeds; George Abbott, N. J., \$6 for himself, George Abbott, and Henry A. Lippincott; Abel H. Blackburn, Ind., \$7 for himself, Ezra Barker, Ann Haines, Wm. Wendenhall and Charles W. Haines, G. W. Woodward, Agt., \$8 for Wm. H. C. Almedia R. Wroe, George Standing and J. Williams; Martha R. Newkirk and for Anne Hesters, Phila.; Esther K. Alsop, N. Y.; James L. Moon, Pa.; M. and S. Doudna, O., for Key Lowmes Lewis, Pa.; Sarah A. Wilkins, N. J.; in Kirkbride, Phila.; David H. Forsythe for J. Forsythe, Pa.; Barclay Penrose, O.; John R. C. Del., Mary Ann Sharpless and for Lewis F. Sharpless, Pa.; W. C. Reeve, N. J.; Elizabeth C. D. N. J.; John E. Darnell, N. J.; M. Eleanor M. Phila.; Edward Lippincott, G't'n.; Ann S. maker, G't'n.; Caroline Wood Bacon, N. J.; G. McCollin, Phila., \$5 for himself, Frances McColin and Benja. H. Hornah W. South, Phila., \$5 for herself, Edward L. South and W. South; Joshua L. Bailly, Phila.; Thos. H. White, Agt., Pa., \$5 for Charles S. Carter and Wm. Townsend and for Margaret Thorp, Del.; Mah. Johnson, Ind., \$8 for herself, Nancy T. Hacy, Ruth Ann Stanton and Ashley Johnson; Walter Buzby, N. J.; Thos. D. Hoopes, Pa.; Mary E. A. M. D., Phila.; Addison Hutton for Rebecca Savery, G't'n., and Anne Hutton, O.; Mary Glover, N. J., \$5 for herself, Virginia Nicholson and Eliza C. N. Browning; Edith Sharpless, Agt.; Anna Oleson for Sam. Norland, Minn.; J. Haines, G't'n.; Jane D. Engle, N. J.; Mary Foster, R. I.; Wm. Smallwood, Pa.; Mary T. E. O.; E. Hayes, O.; Jesse Dewees, Agt., O., \$5 for Paucence Fawcett, David Masters and Jason H. Rose; Thos. K. Wilbur, Agt., Mass., \$14 for herself, Jesse Tucker, James H. Tucker, Job S. Gidley, Sarah E. Mitchell, Isabel L. Gifford and John S. Wright.

1227 Remittances received after Third-day noon will appear in the Receipts until the following week.

NOTICES.

The hour at which the meeting is held at Langhams, Pa., has been changed from 10 to 10.30 o'clock.

FRIENDS' LIBRARY, 142 N. 16th St., Phila.—During the Seventh and Eighth Months the Library will be open on Second and Fifth-days from 3 to 6 P. M.

The committee having charge of Spring River Academy desires to engage the services of a suitable young friend to serve as principal the coming year.

Address LEVI BOWLES, Clerk of Committee, Galena, Kansas.

WESTWON BOARDING SCHOOL.—The fall term of school begins on Third-day, Ninth Month 9th, 12. Early application should be made for admission of pupils desiring to enter at that time, if the matter has not already received attention.

WM. F. WICKERSHAM,

Principal.

The Ministry of Hearing.

The vocal speaker can send his voice only to the entrance of the hearer's ear. Beyond that point, if it is to mean anything, the listener must take up the sound and carry it on to an actual hearing through his finer sensibilities of discernment. These must be engaged by distinguishing hundreds of particulars whereby the intelligence rightly divides the spoken word, distributes its tokens throughout understanding, and interprets the designed meaning of the many delicate signs of voice in language.

The bringing of an exercise of heart and mind into speech is a wonderful process, and which can only convey it to the ear and leave it there. The laying hold on the spoken word by hearing and carrying it on to brain and mind and let it be equally wonderful. So it takes at least two ministers to deliver the ministry of sermon,—the speaker to deliver it part way, and the hearer to take it up from there and carry on the message, so far as in him lies, to his own place in his understanding. This is the office of the second, or receptive ministry, to call attention. And if the first agent in the message is solemnly responsible for the use of his lips, the second is solemnly responsible for the faithfulness of anointed ears, which by inattention he frustrate the grace of God. Of the hearing ear, and of the seeing eye, it is declared, "God hath made both of one."

Let not one sit in a meeting for worship on an unworthy expectation as to think, "The minister must do it all," or imagine that the ministry can in effect minister, without the cooperation of the hearer's attention in directing to the right place of the inner man

the offering laid at his door. Let every man take heed how he hears. And the cultivation of the gift of attention will save many a man or woman from missing much treasure thrown in his pathway, will rescue him from much misunderstanding of neighbor or of stranger, will serve to enlighten him everywhere with each turn of an expression as it was meant. A habit of half-hearing is loading many a mind with half-truths which are practically as damaging as untruths.

On the other hand, as members one of another in social life, some are accounted as delightfully entertaining, because they are felt to be "most delightful listeners." Such delightfulness springs from a sense of sympathy, in which one loves to enter into another's thought and meaning. This grace can be, without uniting with every thought and meaning spoken; and disunity with sentiments need not prejudice a candid hearing, nor love for the erring one's soul. Love is the fulfilling of the law of true judgment in hearing, and the grace of hearing is best enhanced by the true hearing of grace.

Let every man take heed what he hears. This is impossible without watchfulness to hear it fully, as well as to select the good. The discernment what to accept and what to reject of the much which we ought to hear correctly, must be by the witness for truth in each one's heart. This training also we need for our everlasting good, to increase our discernment by the witness of the Spirit in the multitude of thoughts daily presented, so as to own the good and cast the bad away,—thus being continually enlarged in the wisdom which is from above,—that word of God, living and powerful, "which is able to build us up," and "is a discerner of the thoughts and intents of the heart." A godly exercise to take heed what we hear, will learn to discern that in us "which serveth God, and that which serveth Him not," so that in the many voices which are gone forth into all the world, we may know, in spiritual things, our right hand from our left.

A corresponding care is incumbent on the vocal minister lest he overload the listening ear with rubbish to be cast aside,—lest he tax too much the hearer's attention with habits of his own constitution, offered in too trying a mixture with the pure word of life. We may

preach loudly against diversions, while being ourselves, in our manner or tones, a diversion from the word preached. And then, all language beyond the mere Divine message for the time, is rubbish, however much a message it was on some former occasion, or may be again in some opening under living necessity. In the discouragement of the ministry the minister himself has a part, when he discourages the ministry of the hearing ear.

"Faith cometh by hearing, and hearing by the Word of God," which is gone out into all the earth, and the gospel voice unto the ends of the world. But all have not believed, nor all hearers or believers obeyed. But even into their spiritual graves the voice of the Son of God may reach, and they that hear unto hearkening shall live, while they that hear unto hardening in disobedience shall die. "To-day, if ye will hear his voice, harden not your hearts."

Andrew Jaffray.

Selected.

Andrew Jaffray, of Kingswell, in Scotland, was born in 1650; being the son of Alexander Jaffray, of the same place. He gave his son a liberal education; who becoming convinced of the truth about the time of his father's death, quickly came to esteem learning but as dross, compared with the learning and knowing Jesus Christ, in his inward and spiritual appearance in the heart, and being thereby purified from dead works, to serve the living God; of which learning he soon became a zealous, faithful and able teacher. He cheerfully underwent great sufferings on account of Truth; and was a constant fellow-prisoner in Aberdeen, with David and Robert Barclay, Alexander Forbes, Patrick Livingstone, and other early Friends, in the long sufferings they underwent for the Truth. He was cheerfully given up to any service to which he found himself called; particularly going through the streets of Aberdeen, and to many places of worship therein, exhorting the people to repentance; and it was particularly remarked, that in the same streets where he had been reproachfully pointed at for the Truth, and his testimony's sake; he in his latter years was looked upon with affection, and blessed as he passed along. He went through many deep, bitter, and severe exercises of spirit, by being made the butt and mock of people, because of his zeal against a man-made ministry; yet the Lord supported him through all, and he was preserved to bear a clear and faithful testimony for the Truth in the meeting of Friends in Aberdeen, the very day before his illness. He was confined to his bed for months, under the

26

infirmity of old age, weakness, and distress of body.

In the course of his illness he bore a very clear testimony to the goodness of God to his soul, and mentioned the satisfactory remembrance he had, of his being separated for the work of the gospel; and that he had dedicated himself for that service, ever since his being called thereto.

He departed this life the first of the Second Month, 1726, aged seventy-six years.

FOR "THE FRIEND."

A Visit to Tunasassa.

Three members of the "Indian Committee" arrived at Tunasassa on Sixth Month, twentieth, and were cordially welcomed by Aaron and Eva S. Edkin, the superintendent and matron, and other members of the family. Visits to the school rooms were soon made, where were forty-six boys and girls under the care of our teachers who are earnest in their efforts to help the children, many of whom seem anxious to learn and are making commendable progress, although their diffidence in speaking English makes it difficult for them at first.

The work on the farm and in the house is almost all done by the children and their faithful caretakers. Butter-making is carried on very successfully; the boys have almost all the charge of the cows, whose handsome appearance proves that they are well cared for. At the time of our visit from three hundred and fifty to three hundred and seventy-five pounds of butter of excellent quality were being made each week, which excepting that needed for use in the family were shipped to market.

The boys are said to be good workers on the farm as well as at the dairy, and are interested in taking charge of the calves, etc.

The girls are taught housework; they wash and iron, cook and bake, sweep and scrub, and these duties are performed cheerfully and skillfully; so, when they go from our care, they are fitted to keep their own homes creditably. Sewing is taught, and some of them show considerable ability in cutting and fitting garments.

On First-day morning a meeting for Divine worship was held as usual in the meeting room, which is a spacious room, comfortably furnished. All the family attended, and the children's behavior was reverent, and less restless than that of the children in our own meetings at home.

In the afternoon they had Bible lessons in the school rooms, after which they went, with some of their caretakers, for a good, long walk. About 7.30 in the evening all collected again in the meeting-room for Bible reading, after which they quietly retired for the night. Each morning a portion of Scripture was read aloud in the dining-room, after breakfast, and we thought the selections made were suitable and helpful. Some visits were made to Indian homes in the neighborhood, and it was pleasant to receive the cheery greeting given by former pupils at the school, and to notice evidences of thrift and good housekeeping.

We came away feeling that good work is being done, and wishing that more of the members of our Yearly Meeting could visit the school, and see, for themselves, these healthy, happy children who are being taught so carefully.

HANNAH F. CARTER.

THE FRIEND.

Ministry.

FOR "THE FRIEND."

What is it? "The testimony of Jesus is the spirit of prophecy."

"What the Lord sayeth, that will I speak."

"For if I do this thing willingly, I have my reward; but if against my will, a dispensation of the gospel is committed unto me."

I have been much instructed in the full and beautiful definitions the Scriptures give of the truths and testimonies of the gospel, which we will find to every question as it is really needed, and wisdom sees best, not by searching, but by the good Remembrancer.

So is it as to ministry, and every feature of it, as it so instructively occurred to me this morning with an exercise to put in writing.

As to the willingness and constraint Paul further says, It is of necessity, "yea, woe is unto me if I preach not the gospel."

Here lies the key of our safety, Necessity; cannot be avoided. A fear of outward persecution, a knowledge of standing alone in the exercise of what we feel, a realizing sense almost of losing life in our faithfulness, none of these is to hinder, there is only one thing that may, the willingness of another to bear the burden for the time, which if a right one cannot long be done, if we abide in the patience until the Heavenly Minister makes the way.

Then still further than the necessity is the woe, "Woe is me if I do not." "He that seeketh to save his life shall lose it." Peace of spirit is at stake, condemnation is before us. God's displeasure at hand. We are to be governed by no idea of present needs in the Truth, how urgent soever they may appear, or the likelihood of the Ark falling, or any danger, so much as the evidence within us, in the mount before the Lord, of his Divine will, the will of God being the rule of faith and practice, which so often brings us into unlooked for places, and to us the most unlooked for openings. Thus bearing witness to the Truth, "man looketh on the outward, but God looketh on the heart." "He seeth not as man seeth."

Then it must be out of emptiness, and a feeling of knowing nothing, that the true gospel can arise or be brought forth.

"It is not ye that speak, but my Father that speaketh in you." "Who is so blind as my servant or so deaf as the messenger whom I send." "But tarry ye at Jerusalem until ye be ended with power from on high." All illustrating it is not we, but the absence of ourselves in ourselves, of wisdom, former knowledge, experience, etc., all, but that which is for the present, and furnished, though in human wisdom not understood. Then as to the time:—

"When I bid you shout, then shout." "What He saith unto you to do, do it." It has seemed to me, this is the most necessary point, and on which lies our continuing at any length on the right ground, in the Life. The exercise may be ours, the material, the need for it very evident, weary in withholding, and yet the bidding to do lacking, the time not fully come; or it is for ourselves, or just merely to be borne in secret, or to try us to see if we are not willing to move in a matter however urgent, until the true Prophet comes; which provings if we abide greater gifts are bestowed; for to this end is the proving.

"My time is not yet come." He could go, even if it was right for the disciples.

Then when the silence is rightly broken, cross taken up, the command received, He has commanded still requires obedience, every subject that presents is not to be carried out to the full, and viewed from all sides, enlarged upon indiscriminately. The Commander knows the needs, the woe and the necessity still being the watchword at every turn. There may be another that sitteth by, and the first hold his peace, which the true seer must be very alive to, and even also to suffering for a brother or sister to go before.

True gospel order how precious, how beautiful! Jonathan loved David, so he preferred him, evidently knowing he was chosen, and he loved the real chosen whoever he might be. For Jonathan was a true servant, not parking of the sins of his father, but in the same way could not David prefer Jonathan, if the Lord had not.

What does it matter to the true disciple? When rightly concerned, he desires simply this, "The Lord's will, may that be done?" "Here am I do with me whatsoever seeth unto thee good;" swallowed up in this his submissiveness. But when his will is crossed no matter how good it may seem, then there is grievous cause for mourning. Then the experience, "Every man to his tent, oh Israel!" King David himself hiding as it were in mourning, when seemingly for him and the cause a righteous man was slain.

I have felt deeply exercised on this subject, and feel now to repeat the testimony proclaimed of dear departed Caleb Pennoek, with searching query directed to each one of all times. "Is it I?" This will not frustrate the real call. The enemy has gotten to a counterfeit, and not only got it up, but got it to pass. Now, a counterfeit to pass, it nearly resemble the genuine, but it will not bear close inspection. But, Friends, the all being will. "How original, how true!"

Those nearer the Truth are more apt, but more continually concerned to examine, and feel the searches of the candle of the Lord most. But there is a ministry, which has come through the river of judgment to a very bottom; not once, but again and again; and bears witness to itself, and does not stop propping. This does not call forth praise so much as to beget thoughtfulness, closing the mouth in the dust. "The Lord is in his temple, let the earth keep silence."

As we live as though we were as we rely are, continually in the presence of an Almighty One, watching Him at each step, He will help and preserve, as there has been an entering in at the narrow way, which always begins at the garden of Gethsemane, and is characterized with watching and waiting at the feet of the lowly One. I have felt concerned toward a life exercise of this kind for THE FRIEND for some time; and though we might feel a concern to come under judgment ourselves, and shrink from that view or fear, yet atop of this comes the necessity, the woe, which causes the other to disappear. With the fervent desire that he who can will take care of that which has been committed, and which will be to every one watchfulness unto prayer. CYRUS COOPER, SALEM, OHIO.

The Happy Negro.

By AMBROSE SERLE, ENGLAND.

Every day's observation convinces me that the children of God are made so by his own special grace, and that all means are equally effectual with Him, whenever He is pleased to employ them for conversion.

Being called some years ago to visit the United States, I was walking by myself over a considerable plantation, amused with its husbandry, and comparing it with that of my own country, when I came within a little distance of a middle-aged negro who was tilling the ground. He had a strong inclination, unusual with me, to converse with him. After asking him some little questions about his work, which he answered very sensibly, I wished him to tell me whether he was contented and happy. "Massa," said he, looking seriously upon me, "I have a wife and children; my massa take care of them; I have a good massa, who teach me to read; and I read good book that makes me happy." I am glad, replied I, to hear you say so; and pray what is the good book you read? "The Bible, massa, God's own book." "Do you understand, friend, as well as read this book?" for many can read the words well who cannot get hold of the true and good sense." "Massa," says he, "I read the book much more I understand; but at last I felt pain in my heart; I found things in the book that cut into my pieces." "Ah," said I, "and what things were they?" "Why, massa, I found that I had no heart, massa, a very bad heart, indeed; it pain that God would destroy me because I was wicked, and done nothing as I should do. My massa was holy, and I was very vile and naughty; I could have nothing from Him but fire and punishment in hell." In short, he entered into all account of his convictions of sin—which increased as deep and piercing as almost any I have ever heard of—and what Scriptures came into his mind which he had read, that both probed the bottom of his sinful heart, and were the means of light and comfort to his soul.

He then inquired of him what ministry or means he made use of, and found that his massa was an honest, plain sort of man, who had taught his servants to read, but who had not, however, conversed with this negro upon the state of his soul. I asked him likewise how got comfort under all this trial. "O, massa," said he, "it was Christ gave me comfort in his dear word. He bade me come unto Him."

He would give me rest, for I was very weary and heavy laden." And here he went through a line of precious texts, showing, without any needless comment upon them as he went along, what great things God had done in the course of some years for his soul.

Being rather more acquainted with doctrinal texts and the analogy of the Bible than he had been, or in his situation could easily be, I had time to try how far a simple, untutored experience, graciously given without the usual aids, could carry a man from some speculative errors. I therefore asked him some questions about the merit of works, the justification of a sinner, the power of grace, and the like. I own I was as much astonished as I was delighted with the sweet spirit and simplicity of his answers, with the heavenly wisdom that I had put into the mind of this negro. His

discourse, flowing merely from the richness of grace with a tenderness and expression far "beyond the reach of art," perfectly charmed me. On the other hand my entering into all his feelings, together with an account to him that thus and thus the Lord in his mercy dealt with all his children, and had dealt with me, drew streams of joyful tears down his black face, so that we looked upon each other and talked with that inexpressible glow of Christian affection that made me more than ever believe, what I have often too thoughtlessly professed to believe, the communion of saints. I shall never forget how the poor, excellent creature seemed to hang upon my lips, and to eat my very words, when I enlarged upon the love of Christ to poor sinners, the free bounty and tender mercy of God, the frequent and delightful sense he gives of his presence, the faith He bestows in his promises, the victories this faith is enabled to get over trials and temptations, the joy and peace in believing, the hope in life and death, and the glorious expectation of immortality. To take off his eager, delighted, animated air and manner, would have been a masterpiece for a Reynolds.

Though my conversation lasted at least two or three hours, I scarcely ever enjoyed the happy swiftness of time so sweetly in all my life. We knew not how to part. He would accompany me as far as he might; and I felt, on my side, such a delight in the artless, savory, solid, unaffected experience of this dear soul, that I could have been glad to see him often then, or to see his like at any time now; but my situation rendered it impossible. I therefore took an affectionate adieu with an ardor equal to the warmest and the most ancient friendship; telling him that neither the color of his body, nor the condition of his present life, could prevent him from being my dear brother in our dear Saviour; and that though we must part now, never to see each other again in this world, I had no doubt of our having another joyful meeting in our Father's house, where we should live together, and love one another throughout a long and happy eternity. "Amen, Amen, my dear massa; God bless you, and poor me too, forever and ever." If I had been an angel from heaven he could not have received me with more evident delight than he did; nor could I have considered him with a more sympathetic regard if he had been a long-known Christian of the good old sort, grown up into my affections in the course of many years.

Happy world, if all were Christians; or at least happy Christians, if they showed more of this brotherly love to each other in the world. None can deny that so it ought to be. O that every one who names the name of Christ, and believes himself to be a member of his undivided body, would pray for faith and love to make him a consistent follower of Jesus.

Blessed Lord, fountain of life and love, send forth the Spirit of thy Son into my heart, and into the hearts of all my brethren; that, waiving all mean and selfish distinctions, we may first love thee above all things, and then each other for thy sake, with a pure heart, fervently. Subdue animosities and all the separating corruptions of the flesh, and let us consider ourselves as brethren, fellow-heirs of the grace of life, persons who shall pass an eternity together; as parts of each other and

members, holy Jesus, of thy body, thy flesh, and thy bones. Even so let it be, for thy glory, and for our present and eternal consolation through thy grace.

How happily does this narrative illustrate the blessed reality of vital religion. Christians of every age and nation have all spoken, in spite of their several peculiarities, one common language of the heart about God and Christ, sin and holiness, time and eternity; their religious hopes and fears, their joys and their sorrows have been the same. As on the day of Pentecost, the truth of the gospel was proved by the fact that one person spoke many languages, so has it been verified in all ages since by the fact that many persons of every kindred, nation, tongue and people, to whom the gospel has come, have spoken one language.

Conflicting Duties.

It is right for children to obey their parents, in the Lord; but when parents command their children to do things which are plainly wrong, then it is right rather to obey God, for his requirements override and nullify all opposing obligations. It is right in the church for persons to obey them that have the rule over them whom the Holy Ghost hath made overseers, to feed the flock of God; but when rulers in the church rule wrongfully, when they oppress or deceive, when like Diotrephes they love to have the pre-eminence, reject the apostles, and cast out the servants of the Lord, then it may be duty to resist and protest against such usurpation, and, in the presence of overmastering and predominating evil, to throw off their burdensome yoke, and stand free in Jesus Christ, even though we be obliged to stand alone.

It is the duty of the wife to be loyal to her husband, to be a little blind to his faults and patient with his infirmities; yet if she knows that husband to be a hypocrite and a deceiver her duty to God and the truth may be more imperative than any obligation to her husband.

A man who travelled about professing to preach a gospel which he neither believed nor practised, once came to a little church among whom he had lived when at home, and asked them for a letter of recommendation, that he might still go out and preach. The members of the church either had not sufficient knowledge or courage to refuse his request, and were about to grant the desired recommendation, when his wife, a calm, intelligent, conscientious woman, arose and said, "I object. I do not think he is a fit man to preach the gospel." That settled the question, and left the deceiver to his own devices. It is hard to imagine the struggle in the heart of a noble and loyal Christian woman when called to perform such a duty as this, but who will say that its performance may not sometimes be demanded by solemn and imperative obligation to God? Who shall say that a failure to do such a duty might not under some circumstances make one a partaker of another's sins. Of one woman who had endured and suffered and finally had separated herself from complicity with such evils, it was said, she is overwhelmed with joy that she no longer lives the life of a hypocrite in covering the faults of one whose life is a succession of dodges and escapes from one subterfuge to another.

Doubtless there are not a few men and wo-

men whose lives are made insincere through their concealment of the hypocrisy of others, and who cannot be their honest and true and noble selves until liberated from the thralldom of the deception and hypocrisy of others.

Duty often requires that we should bear, endure, and sacrifice much, but there are limits even here. Every one must personally give account to God, and when the sins of others involve us in falsehood, deception and hypocrisy, it is time to stop, and warn the offenders of their sin and danger, and be true to God at whatever cost. We are to lie for no one. We are to deceive for no one. We are servants of a God of truth, who has bid us to put away lying, speak every man truth with his neighbor. Of course we must face unpleasant consequences if we meet such issues in the right spirit, but we must not suffer ourselves to be made partakers of other's sins, or bear the guilt of other's deceptions. Earthly obligations are transient; earthly relationships are temporary. Our obligations to God are supreme, changeless and eternal.—*The Safe-guard*.

Doukhobor Notes.

Extract of a letter from Peter Verigin under date of Second Month 20th, 1902.

VILLAGE ODOESK, Siberia, Russia.

I received your letter, dear brother Vania, and also all the brethren and sisters in Christ.

I heartily thank you for your greetings and in return send you hearty greetings also. You are informing me that the land on which you settled has now been opened by the Government for settlement. Is it possible that you are wanting to move from that place to another? I think if the land is good and convenient for raising grain, you could hold it for yourselves and with energy try to work it, leaving aside all disturbers. Such conditions as ten dollars for fifty dissittins (one hundred and sixty acres) is not at all hard. Such a sum in five or ten years can be worked out with profit from the land, if only the land is fruitful,—and that question should have been settled when you first arrived on the land, whether you were to remain in those parts or not. If to remain, you have to accept the conditions that exist there. I am fully assured that in England or in Canada there is no conscription, but you for some reason are afraid everywhere,—as though you lose anything by a simple registration; for statistics of your numbers would not cause you to lose anything.

One should be afraid of an evil life and not of people. If you did not want to receive the land that was offered you why did you stay on it until now and even surround yourselves with buildings? It is only babies that act like that, or a real Russian peasant, who lives his whole thousand years on "may be" and "perhaps."

I have told you my opinion before that in choosing land, one has to take notice chiefly of its quality as to its fertility and worth in grain raising; and certainly you might have had the Government to allow you a trial of its productiveness for two or three years, and then you could have surrounded yourselves as necessary, and not to play off yourselves as little children, and in the end to be driven out by force.

For "THE FRIEND."

THE GULF-STREAM OF PRAYER.

Mystic stream which man may not explore,
We touch the margin on the welcome shore,
Where tidal currents bring the treasures vast,
And nimble fingers make the moorings fast.

Mysterious bond that bindeth all in one,
Flowing to bless, and save the wretch undone,
Cheering the saint with high unlooked-for life,
Bringing the calm that ends distressing strife.

What power is this that holds our souls in one,
That gathers every prayer in holy sun?
One mighty stream, no particle disdained,
Nor lost, as thou the volume pre-ordained.

Press on thou mighty mystic power!
With warmth of life to cheer in danger's hour,
Put on thy strength till all thy pulses cease,
And bring the era of eternal peace.

H. T. M.

BEAMSVILLE, Ont.

Chances for the Inventor.

A few months ago a corporation paid to Professor M. I. Pupin, of Columbia University, a fortune for his invention of ocean telephony. This transaction typifies the new conditions in the world of invention.

Many of the ablest inventors of past years have enriched other men, but have amassed for themselves little except fame—and that mostly posthumous. Henceforth the inventor's profit will be great and sure, and not he but the capitalist will assume the chances of failure.

It is significant that the greatest optimists as to the future of inventions are to be found among the men who have the best opportunities of judging the future along this line—the officials of the United States Patent Office. In discussing the subject the other day, Frederick Allen, United States Commissioner of Patents, said:

"I certainly do not agree with those persons who consider that we are approaching the end of invention. I believe that the whole creative realm will go on developing and expanding in proportion to the growth of the nation.

"The business of this office shows it. During the past quarter of a century there have been issued in this country more than half a million of patents, or over three times as many as had been issued in the three-quarters of a century preceding it.

"It is difficult to predict along what lines inventive genius will be most active. Certain it is that the evolution of new things will go on in constantly increasing proportions."

The imaginative mind naturally foresees the greatest possibilities in the fields of electricity, aerial navigation and the harnessing of the great power forces in nature. It is interesting to note that this view has the support of Charles H. Duell, lately Commissioner of Patents. In discussing the matter, he said:

"In my opinion, all previous advances in the various lines of invention will appear totally insignificant when compared with those which the present century will witness. I almost wish that I might live my life over again to see the new wonders which are at the threshold.

"It will be but a few years until the residents of all our larger cities will be consulting the time tables of aerial bee lines to New York, allured by such advantages as 'no smoke, no dust, no heat,' each private residence will be provided with its own cooling room, and

cooling devices for houses will make but any climate under the Stars and Stripes sun and the wind will be completely harnessed and possibly the waves as well; autom will be in universal use, and quadruple rats should bring the telephone service, to about ten cents a month."

Probably the field which will give for most wonderful inventions in the next quarter of a century is that of electrical science. Within the past few months devices have patented which will enable Americans to communicate with their cousins across the sea; which will telephone messages and signals of various kinds to be transmitted through the air, below or above the surface of the ocean, without wires; which cause telephone messages to be recorded automatically and repeatedly hundreds of times; which make it possible to transmit colored pictures by wire between distant points and enable the delivery of sixteen telegraph messages over a single wire.

The future of electricity and of the transportation world waits upon the discovery of some means to harness the magic current and house it in light and compact form. For nearly a third of a century inventors have been seeking to devise a storage battery that will answer all requirements, and the inventor who first produces it will obtain wealth and fame. A cheap, compact and durable storage battery will make possible electric airships, steamer locomotives and horseless carriages of a character more nearly perfect than has heretofore been dreamed of. Automobiles, the polar vehicle of the dawning century, have within a few months declined in price, owing to the improvement of equipments, but the discovery of the sorely needed storage battery will eventually make them within reach of all.

The discovery of a practical storage battery will open a new era for the electric ray and hasten the day of electric propulsion for long distance express trains for mail and passengers.

Even the subject of electric lighting has not been exhausted by any means. Greater efficiency and the saving of the electrical energy now wasted in lighting systems are the jobs to be reached, and a beginning has been made by the recent introduction of a modification of the old kaelin light, whereby the mixture of oxides as a light emitting element as served to produce a glow which is more efficient than an incandescent light and yet not so dazzling as an arc.

Supplementary to electrical inventions open will be the discoveries which may be expected in the field of electro-chemistry, the new science. Already this new sphere has pointed a way to fitch gold from ores which no other process could induce to release it, and the newcomer among the sciences has limitless possibilities for usefulness in the purification of water.

For photography and printing, the great twin educational factors, it is not difficult to foresee marvellous achievement. Color photography and motion pictures have only just begun to unfold their possibilities.

Printing without ink is an accomplished fact, and it is only reasonable to expect the substitution for the tricolor printing process of today the multicolor printing process of to-morrow.

ow—in other words, whereas the best printing presses yet invented have ability to print in three distinct colors at one impression, the presses of the future will transfer to paper imprints identical perhaps a dozen different colors.

Every citizen is bound to benefit by the goods to be brought by the area of invention embraced in the next quarter of a century, for the reason that many of the luxuries of the present day will be brought within the reach of a vast proportion of the population. The members of the gentler sex will be enabled to wear fabrics with absolute certainty that the stuffs can be faded by neither sun nor rain; they may purchase at moderate prices cotton and wool garments which by means of the perfection of the mercerizing process will be un-distinguishable from silk.

Similarly, too, the family of moderate means will fare better on the same income than is possible to-day, for the reason that quicker and cheaper transportation will bring a wider range of delicacies within their reach, while improved methods of canning fruits and vegetables will enable the preserved products to vie with those of the hothouse.

There is every reason to believe that in the future, as in the past, fortunes will be the reward of many inventors of seemingly the most simple devices—the ideas which might have occurred to anybody. The profits of the inventors who evolved the popular dime bank and that universal toy, the bounding ball, stand out prominently to attract the inventive genius into this field, which has proved so productive in the past.

That a demand of this class exists is evidenced by the constant cry of many interests for a non-refillable bottle. Wine manufacturers, distillers, manufacturers of medicine and perfumery have all suffered for the lack of some receptacle which, when once its contents have been poured out, could not be refilled with an inferior article and sold as the original.

The inventor who can produce a practicable non-refillable bottle that can be manufactured at a reasonable price, can set himself down as a millionaire the moment he gets a patent.

For years various inventors have been attempting to secure a substitute for the razor. Recently a Frenchman thought he had solved the problem, but after his device and electro-chemical combination had been in use in the Parisian barber shop a few days the customers discovered that the instrument burned and slackened their chins, and the inventor was obliged to flee before their rage. Nevertheless, there is a fortune for him who can discover a harmless substitute for shaving.

It is incumbent upon the race to turn out a genius who shall discover or invent a new and practical fuel. There is a chance that some White Knight of the coming years may contrive to store and distribute the heat contributed gratis by the solar furnace that keeps all alive, so as to obviate the necessity of lesser fires. Many are at work at this; others are experimenting along the line of fuels.

The one that attains definite results first will be able to warm his hands at a golden grate filled with the form of carbon which we call diamonds, if his taste in extravagance runs to that sort of thing.

Right here comes the need of a perfect

smoke consumer, a stove in which soft coal may be burned without the attending evils until the new fuel—which, of course, will have to be cheaper—is produced or until solar heat storage may be practicable.—*New York Sun.*

A Testimony of a Good Conscience.

The *Literary Digest* calls attention to a strange issue which has been raised in connection with Count Tolstoy's latest novel, the English translation of which was made by the wife of Aylmer Maude. Tolstoy, as is well known, stipulated that the profits on the books were to be used to assist the Doukhobors, and with this end in view a check for £150 was sent by Aylmer and Louise Maude to the Friends' Doukhobor Committee in England. The money, however, was returned some months later by John Bellows, the secretary of the committee, with the following letter:

"While I fully recognize the kind intentions of Louise Maude and myself in sending to our committee that £150 for the Doukhobors, yet on carefully thinking it over I am convinced that we ought not to have taken it.

"Count Tolstoy, in writing the book, intended two things: first to help the Doukhobors by raising money for them; and next to promote the cause of morality by the denouement of the story. And his friends in England who translated and helped to publish the book fully intended the same things. . . .

"When I read the MS. however, it became clear to me that the moral, which was meant to make the greatest impression on the reader, would not do so; but that an enormously more powerful and more immediate effect would be produced by the scene of the seduction itself, giving, as it does, details that force the reader to realize, that is to share more or less, the sensations of the parties who are chief to the narrative.

"That is, the reader is brought so close to the transaction that the effect of the narration is such as would be produced—and is produced—by the close study of obscene photographs. In other words it arouses lust. . . .

"I quite understand that this did not strike Count Tolstoy in writing it, the end being so present in his mind at the time; but the end is not present to the mind of the average reader, who is simply egged on to indulge in unlawful desire by the suggestion of how easy it would be under similar circumstances to accomplish his purpose. . . .

"The high character—the name of the writer—carries it into homes where it brings contamination for the first time.

"But I cannot rest with the matter left thus. It is a stain on the Society of Friends to use money coming from the sale of a smutty book, as it would be if the money came from the sale of indecent photographs; and after a careful thinking it over. . . I must refund the money out of my own pocket, rather than let it remain as it is. Whether the committee will think it right to repay me, I cannot tell."

The Friends' committee later indorsed the action of its secretary, and Aylmer Maude and others in their published comments speak with respect of the conscientious stand thus taken, but treat it as an error of judgment. The derisive spirit of one journal illustrates the truth of the Saviour's language, "If ye were of the world, the world would love its own."

Pemmican.

Fifty years ago pemmican was to the shifting and scant population of the Northwest what flour is in the present day to English speaking peoples in most civilized portions of the globe—the staple and most common food of the country. Then it was always made from the buffalo, which covered the Western plains. The great fur corporation, known as the Hudson Bay Company, bought hundreds of bags of the dark, nutritious compound annually from the Indians for use at its trading posts scattered over the vast wilderness stretching from the Red River and Hudson Bay to the Rocky Mountains, and from the two Saskatchewan to the Arctic Sea, a region then designated "Prince Rupert's Land."

Pemmican (or, more properly, pineekon) is a Cree word meaning a mixture or something made with fat. It was composed of buffalo meat dried in the sun and pounded fine, mixed with melted fat, and was sown up in sacks made from the raw hide of the buffalo, with the hair outside. It did not look inviting, but was, in fact wholesome, strong food, which would keep for years. If the buffalo was important to the fur trader, the ungainly animal was life itself to the red man, for it furnished him with everything his heart could desire, or with the means of procuring it. And as, owing to the migratory instincts of the herds, which took them first into the recognized territory of one tribe and next into that of an enemy, fresh meat was not always obtainable, pemmican was the form in which the Indian preserved and laid away his store of provisions against the day of scarcity.

Omitting the excitement of the hunt and substituting domestic herds for the wild ones of the plains, a description of pemmican making by the Indians a quarter of a century ago, will give an idea of what might have been witnessed at Duck Lake in the summer of 1879. Intelligence that a band of buffaloes was in the vicinity threw the Indian camp at once into a state of violent excitement. Men rushed from the lodges buckling on quivers of arrows and belts of cartridges, women talked and gesticulated, boys raced wildly about shouting shrilly to one another, the horse herd was driven in, and in a few minutes the men, mounted on their "buffalo runners" and under the direction of the chief of the hunt, moved in a silent body out of the camp. On nearing the herd, advantage was taken of each slight rise or dip to cover the approach, which was always up wind, so that the wary brutes should not catch the scent. Stealthily they rode, one behind another, until concealment was no longer possible. Then, at a signal from their chief, they burst upon the open plain and dashed yelling at the top speed of their trained horses at the startled herd.

Usually it was some distance away, perhaps half a mile, and it took a good horse to overhaul a buffalo. Once up with the straining animals, however, their pace slackened, and the rest was comparatively easy. Onward galloped the hunters between the long, undulating files of shaggy brown backs, picking out the fat cows and the young bulls at their leisure. And as a feathered shaft left the snapping bowstring and a stricken beast tottered and went down, the loud, triumphant cry of the hunter rang out, and he tossed a mocca-

sin or a beaded fire bag beside it, to mark his kill, and then flew on.

The chase might last as long as the horses' wind. When it was over the women came with the ponies and the trailing travoys upon the field of slaughter. The carcasses were soon stripped of their hairy coats, the meat packed on the travoys, the bones broken and the marrow extracted, and, loaded with the red spoil, the whole party returned to camp. Here, in an incredibly short time, the meat was cut into wide, thin sheets and hung upon pole frames in the sun and wind to dry. After a day or two these sheets were removed and spread upon the clean prairie grass, where, if the weather continued fair, they soon became as hard as shingles. They were then placed upon a hide threshing floor with the sides elevated on short pegs to form a sort of basin, and beaten with flails or between stones until the meat was reduced almost to a powder. The strange thing was that, if properly handled the flesh seldom, if ever, became at all tainted, though in any other than the dry, pure atmosphere of the Northwest such a method of preparing it would doubtless be impossible.

Meanwhile the marrow and other choice fat had been rendered, and bags, some two by one and a-half feet wide, of raw buffalo hide, doubled over at the bottom and sewn up at the sides with the sinews of the animal, made for the reception of the pemmican. The melted fat was next poured over the shredded meat in the threshing basin, and the whole mixed to the consistency of paste. That was the pemmican. It was shoveled into the sacks, pounded down, and after the tops had been sewn up, and the bags jumped to make them flat, the cooled pemmican packages were solid and almost as hard as so many boulders. When you desired to eat pemmican you chopped a piece off with an axe, sack and all. The meat was already cooked in a measure by sun, wind and hot fat, but if you preferred, after tearing off the adhering hide, you could fry it in a pan or boil it in a pot.—*Canadian Magazine*.

A BADGE OF THE PARTY.—Though it be objected that we seek to set up outward forms and preciseness, and that the plainness is but a badge of the party, the better to be known, I do declare, in the fear of Almighty God, that these are but the imaginations and constructions of insensible men, who have not had that sense which the Lord hath given us of what ariseth from the right and wrong root in man. And when such censurers of our simplicity shall be inwardly touched and awakened by the mighty power of God, and see things as they are in their proper natures and seeds, they will then know their own burden and easily acquit us, without the imputation of folly or hypocrisy herein.

To such as say that we strain at small things, which become not a people of such fair pretensions to liberty and freedom of spirit, I answer with meekness, truth, and sobriety, that nothing is small that God makes matter of conscience to do or leave undone; and that as inconsiderable as they are made by those who raise this objection, yet they are much set by.—*Wm. Penn.*

MENTAL SLANDER—It is otherwise called suspicion.

Factory Religion.

"No, sir," said Scofield, the factory engineer, emphatically, "there is no such thing as factory religion! It's a contradiction. Why, my engine won't run if I don't swear at times."

"How do you know?" asked the listener.

The fireman laughed.

Scofield turned upon him like a flash:

"Tom," said he, with an oath, "wheel in ten or twelve more barrowfuls of that Nova Scotia coal. There isn't half enough to last until six o'clock."

The fireman departed without a word, and the engineer bustled around the room, oiling the slides, testing the water, opening and shutting valves.

"Well, I suppose I must leave you," said the visitor, rising from his chair and holding out his hand. "Will you not give the subject a thought?"

The engineer shook his head. "It's no place for religion, I tell you," he said. "To my mind, factories ought never to have been built. God intended man to live out in the free air and enjoy nature. There is plenty of room for religion out-of-doors; but here, where the very pulleys swear at their work—where steam shrieks and curses—here is no place for religion."

"Tom!" cried Scofield, after the minister had left, "don't bother about any more coal, my boy. I was out of sorts when I spoke. There is enough in now to last a week."

"I couldn't help laughing though," said Tom, wiping the grimy sweat from his brow, "you know that you never did try to do anything without swearing."

The engineer made no reply, but opened a paper and seemed to read. The printed words, however, did not engage his attention, but most vividly what the fireman said came before him again and again.

Was it as bad as that? Could he do nothing without swearing? He resolved to test himself. He would begin early the next morning, and for every oath uttered he would drop a small brass nail into a tumbler that was in the window. He rather thought that the tumbler would be empty at night—now that he had got his will up.

The next day came—Scofield rose at five as usual, and going downstairs in his stocking feet, stepped upon a tack. The volley of oaths that followed counted out seven nails for the tumbler. The buckwheat cakes, a collar button, the cat, a slow clock, and the remembrance of his purpose, scored five more. Then with grim determination he shut his teeth and said not a word more until he reached the engine room, where he counted out the twelve nails and threw them into the tumbler with an oath—yes an oath of relief. He was half across the room before the last one dawned upon him, but true to his purpose he walked back, and put another nail into the glass.

All day long he struggled, and at night the tumbler held thirty nails. Scofield was startled. He had never dreamed that he was so profane, and the habit had such a "grip" upon him. At last he went to "Christian Tim," an old man in the steel works, and told him the whole affair. Tim pondered a while, and then said:

"You may be able to leave off in time by your will power, but I know a better way."

"What is it?" inquired the other.

"Ask the help of the Lord Jesus Christ, said Tim, earnestly. 'Has He not heard every oath? Isn't it against Him that you have sinned? I had the same experience myself years ago, but with his help I never feel the least inclination to swear. And as for being happy—the hours are so swift-winged that I can hardly tell where the days go.'"

The minister called again upon Scofield.

"There is a factory religion, sir," said the engineer. "My fireman, Tom, and myself are trying to live up to it. There is a Bible in that desk, and we find time to read some in every day. And, to tell the truth, I believe the work is less hard, the wheels run smoother and the valves are tighter, and the whole place is lighter, cleaner, and better, for this same factory religion."—*H. C. Pearson in Illustrated Christian Weekly*.

The Cost of a Blue Ribbon.

"Doth God serve God for naught?" was the devil's question, and the devil's children are continually asking similar questions concerning the people of God. Judging other folks by themselves, they have no idea of doing things simply because it is right to do them; and the belief that men who do right usually do it with some selfish end or aim in view. Not and then one of these questioners gets his answer.

"How much do you get for wearing that?" said a young gentleman in an omnibus to one on whose coat was displayed the total abstinence badge of blue ribbon.

"Really, I can't say exactly," replied the wearer. "The ribbon, 'but I think it costs me about twenty thousand pounds a year,' was the prompt and unexpected reply of — Charrington. And his statement was literally true. He was the son of a great brewer whose name stands on the public houses all over the kingdom. When he died he designed his brewer, for his oldest son, Frederick, if he were willing to carry on the business; if not, the brewer was to go to his younger son, and Frederick was to receive a much smaller property instead of it. The elder son had not long before consecrated himself to the service of God and had begun to work among the poor and sinful and degraded in the east of London. In trying to turn them from their evil ways, and rescue them from their terrible condition, he speedily became acquainted with the fact that the great obstacle in the way of Gospel work in the east of London was the drink, and that the Charrington brewery was doing ten times more harm than his mission was likely to do good. Accordingly he quit the brewery business sacrificing an income of nearly one hundred thousand dollars a year, and went to work to undo so far as he could the mischief that was being done by the drink.

The Profane Doctor.

Some years ago soon after beginning my pastorate in a certain church, I preached a sermon on profane swearing. It was a very plain discourse, aiming to show that the habit of profanity was useless, vulgar, shocking to the minds of decent people, and an insult to God. At the head of his pew in the middle aisle, and near the pulpit, where all the congregation could see him, sat an old physician.

noticed that he was very uneasy, turning now on this side, then on that, like a caged lion; but did not know at the time what was the cause. "You gave the doctor some blows to-day," said one of the deacons, after service was over. "How so?" I inquired.

"Why, don't you know he is the most prone man in town?" he replied.

One of the elders shook his head and gravely remarked: "I think that pew will be vacated. There is no idea the doctor will stand such a shot as you gave him this morning."

This was a new experience for me, and not very pleasant. The aged physician was wealthy, and a very popular man in the community. He had but recently retired from his practice in the large city, and had come to spend the evenings of his life with us. He was social and generous, and we felt we were favored in securing him as a church attendant and supporter. How unfortunate that anything should be said to displease him, and perhaps drive him away from the service of the sanctuary! What could I do but leave it with God! I was his servant, and had spoken his message, and felt convinced that He would take care of me and the church and the truth.

But what was the result?

The next morning the old doctor was seen rising up to the parsonage. The minister was at home, but his wife was and she warmly welcomed the visitor in the parlor. Great was my surprise when he exclaimed, somewhat abruptly: "I like your husband. He is a purgative young man, who is not afraid to speak the truth, even if it does convict some d sinner like me. I have brought ten dollars as a contribution to the Bible Society, the sums of which were presented in our church week ago yesterday; and in addition to this beg you to accept this five dollars for yourself as a token of my esteem for your husband and my pastor."

I do not know that the old doctor at once ceased his profanity; but he continued to wait in my ministry. Although living four miles from the sanctuary, he was every Sabbath morning in his place as long as I continued that pastorate, and a very attentive hearer was.

Some years after, when settled in another parish, I came back to visit my old charge. The physician, then very aged, was sick. I called on him and found him physically feeble, but his mind was clear and composed, and his heart seemed changed. Gladly he listened as I talked to him concerning the heavenly kingdom. He said he was a sinner, but he believed he was saved by grace. Evidently he was standing on the border-land, and I was not surprised to learn that a few weeks after he stepped quietly over. The profane swearer had become a humble Christian. The aged pilgrim is gone home. He was one of the many wonderful trophies of grace called at the eleventh hour to work in the vineyard, and paid just as he had toiled all day.

That was a wholesome lesson to me. I have always tried to be prudent in the enunciation of truth, so as not needlessly to offend people. But never since then have I been afraid to speak of sin and warn men to flee from the wrath to come.

In the pulpit, the preacher stands between God and men. Even sinners will respect him

while he speaks the word of condemnation in their ears, and as he humbly wields the sword of the Spirit God will bless him—*Christian Intelligencer*.

Restored.

The Lowton's are the happiest family in the metropolis. Not the Vanderbilts and the Astors with all their millions and their town houses, their country places and their cottages by the sea, are happier than this family of four living in a three-roomed flat on the seventh floor of a tenement house on an income of twelve dollars a week. It is chiefly by contrast that we are happy or miserable, and, lowly as the Lowton's condition may appear, they have just escaped from a destitution that was so miserable that their present lot seems almost that of Paradise itself. For nearly two years the husband, strong and temperate though he is, has been out of steady employment, being able to pick up only occasional jobs on the docks or in the streets. All this time the family have been sinking lower and lower in the mire of poverty. Behind in their rent, with a landlord pressing for his money, suffering from actual lack of food, the children in rags and without shoes on their feet, sick and unable to buy proper medical attendance, too proud to beg, yet in need of charity—such was the condition of the Lowton's up to a few days ago. Then the crisis came. They were served with a writ of dispossession. "You must get out or you will be put out." They had no money to buy food and now they were told to move and confronted with the necessity of procuring shelter without a dollar in their pocket. The wife wept and wrung her hands in despair. The husband thought of suicide. At this hour charity opened the door. Food, some articles of clothing, money to pay for new shelter were offered. Then the man did what I think was the proper thing. "I cannot accept this charity"—this was the substance of what he said—"until you hear my story. Then, if you still offer me help, I will gladly accept it. God knows I need it. I am the victim, not of misfortune, but of my own fault. I alone am to blame for my wife's distress, my children's destitution, my inability to obtain work. Three years ago I had a good position and was earning fair wages in the service of a kind employer. I was never a drinking man, but in an evil hour began to attend the races and to bet on the horses. Of course I lost and bet again to retrieve my losses only to increase them. This continued for a year. During that time I took money which belonged to my employer. I hoped that I would be able to win enough to pay him back, but I only sunk deeper into the quicksands. What a year I spent! I suffered untold agonies. Every hour I feared that I would be discovered. I did not dare to tell my wife even. I passed sleepless nights. Finally I could endure the torture no longer, and I went to my employer and confessed. Of course he discharged me. I do not blame him for that. I would have done the same if I had been in his place. Now you know why I could get no steady work. I am a man without a reference. I was ashamed to go to my friends; I cannot go to strangers." This story for a moment cooled the ardor of those who were seeking to aid his destitute family. Dishonesty in a man is like unchastity

in a woman. The world regards it almost an unpardonable sin, and it seems to shut against him every door of sympathy. But there was the destitution; that was a fact, whatever the cause, and it called for aid. It was given, and from that moment the star of the family began to rise again, and a few days ago the husband found employment, steady work at wages that will keep the wolf from the door. He seems thoroughly repentant. His confession is a proof of his sincerity. The experience of the past two years has taught him what are the wages of sin. He will now probably be an honest man. There is a little drama in this simple story—a drama with a moral which needs no exposition.—*Ledger*.

DEAR FRIENDS, let us not entertain any hopes that war will be banished from the earth in any other manner than by submission of individual hearts to the golden rule of the spirit of life in Christ Jesus: for without this they would prove a mere delusion.—*Late Epistle*.

The great effort there is among many of the nations of the earth for supremacy of power and the extension of territory is by means which we believe are entirely repugnant to the doctrines and precepts of Christ.—*Canada Epistle*.

SUMMARY OF EVENTS.

UNITED STATES.—A riot has occurred in Shenandoah, Pa., in which several thousand anthracite miners were involved, in which two persons were killed and many wounded. Troops were sent to the neighborhood.

The use of coal strikers in Virginia have been forbidden by a court injunction to hold meetings to induce men to quit work. A number of the strike agitators defied the injunction, held meetings of the prohibited kind, and were imprisoned for contempt of court. In passing upon the case, Judge Jackson defended the injunction as a well established right in law, and as "the most efficient, if not the only, remedy to stay irreparable injury." He continued: "I do not question the right of the employees of this company to quit work at any time they desire to do so, unless there is a contract relation between them and the employer, which should control their right to quit. At the same time I do not recognize the right of an employer to coerce the employees to continue their work when they desire to quit. While I recognize the right of all laborers to combine for the purpose of protecting all their lawful rights, I do not recognize the right of laborers to conspire together to compel employers, who are not dissatisfied with their work in the mines, to lay down their picks and quit their work without a just or proper reason therefor. The strong arm of the court of equity is invoked in this case, not to suppress the right of free speech, but to restrain and inhibit these defendants, whose only purpose is to bring about strikes by trying to coerce people who are dissatisfied with the terms of their employment, which results in inflicting injury and damages to their employers as well as the employees."

On the 27th and 31st ult., earthquake shocks in Southern California occasioned much alarm in Los Angeles, about 45 miles north of Santa Barbara, and in other places nearby. Some damage is reported to have been done to buildings.

On the 28th an earthquake shock which was general over portions of Nebraska, Western Iowa and South Dakota occurred shortly afternoon, and was felt at a large number of towns in the three States. It lasted from ten to fifteen seconds.

Statistics of the Weather Bureau state that during the year 1900, 713 persons were killed by lightning; of this number 291 persons were killed in the open, 168 in houses, 57 under trees and 56 in barns. The circumstances of 151 deaths are not known. During the same year 973 persons were more or less injured by lightning strokes. The greatest number of injuries occur in the Middle Atlantic States, the fewest in the Pacific States.

The American whaling fleet in the Atlantic is now said to number but 23 vessels, of which 25 are from New Bedford, Mass. In 1854 there were 693 vessels thus en-

gaged. Whaling declined partly because of the scarcity of whales, but chiefly because of the general use of petroleum and its products, and the increasing use of gas and electricity for illumination purposes.

A despatch from Fresno, Cal., says: "What undoubtedly is the largest known tree in the world has been discovered on the Government reservation far up in the Sierras, in this county. Six feet from the ground it took a line 154 feet 8 inches long to encircle the tree, making it over 51 feet in diameter."

The Immigration Bureau has issued a circular providing that residents and natives of Porto Rico and the Philippines coming to the United States must undergo the same examination as is enforced against other alien immigrants.

The Treasury Bureau of Statistics shows that during the year 1901, 52 per cent. of the manufactures exported went to Europe, 23 per cent. to North America, 6.6 per cent. to South America, 8.2 per cent. to Asia, 7 per cent. to Oceania, and a little less than 3 per cent. to Africa. The total value of manufactures exported to Europe was \$21,600,000.

A congestion of freight, unparalleled in the history of the road, has lately ensued on the West Penn division of the Pennsylvania Railroad. Fifty miles of loaded cars were sidetracked along that line. For fifteen miles north of Allegheny the south bound track was a continuous string of freight cars, and could no longer be used for regular passenger service.

Figures given out by the Statistical Bureau of the Treasury Department, showing in detail the imports and exports of the United States for the fiscal year ending Sixth Month 30th, 1902, indicate that America's commercial invasion of Europe has ceased, and the balance has once more begun to run against the United States. The exports of the United States decreased during last year more than \$106,000,000, as compared with the year previous, while the goods imported from foreign countries show an increase in value more than \$80,000,000.

The agricultural book of the Northwest Territories shows that in four years the production of wheat has increased from 5,542,478 bushels to 12,808,447 bushels, and of oats from 3,040,307 bushels to 9,716,132 bushels. It is said that saccharine and other coal tar products and the products of the chemical industry for sweetening jams, syrups, beverages, pastry and other food substances. Saccharine, one of these substitutes, is credited with 700 times the sweetening power of cane sugar.

There were 457 deaths in this city last week, reported to the Board of Health. This is 17 less than the previous week and 17 less than the corresponding week of 1901. Of the foregoing, 221 were males and 236 females; 42 died of consumption of the lungs; 31 of inflammation of the lungs and surrounding membranes; 21 of cancer; 16 of apoplexy; 11 of typhoid fever and 1 of scarlet fever.

FOREIGN.—It is officially announced that the coronation of King Edward VII of England will take place on Eighth Month 9th.

A despatch from Paris of the 1st says: "A Cabinet Council was held to-day. The Premier, M. Combes, explained that 6,900 religious establishments had not applied for authorization as required by the Law of Associations. Half of the number acted in good faith, belonging to the category of charitable institutions which were exempt from the operations of the law. All save 400 of the remaining half had closed voluntarily. The others had decided to wait for the decrees of closure. These decrees were submitted to President Loubet to-day, and he signed them. The government has been taken in by the law to order to regulate the 'religious' orders which had acquired great wealth and were using it to exercise political power. The restrictions which are imposed upon them by this law are expected to reduce their influence in this direction."

A despatch from St. Petersburg of the 31st says: "Official reports show that cholera is spreading with terrible rapidity through the Hammaria. The epidemic has claims hundreds of victims daily, mostly Chinese, but Russians and other Europeans are dying of the disease."

In order to test the correctness of the statement that tuberculosis cannot be communicated from cattle to human beings, Dr. Garnault, a French physician, voluntarily submitted himself to inoculation with bovine tuberculosis. He is now reported to have the disease in a virulent form.

The dairy schools of Russia, it is said have brought that country to the front as one of the foremost producers of butter, cheese and milk in the world.

A French explorer has discovered that the Niger River, commonly supposed to be unnavigable on account of rapids, is, on the contrary, usable for freight traffic for 1,700 miles from the sea into the interior of Africa.

A portable street light of great illuminating power has been devised by the Westminster County Council for

lessening accidents from fogs in London. The torch, a cylindrical tank, eighteen inches in diameter and two feet high, is charged with petroleum and compressed air. When it is lighted the torch flares up two feet with a power of 1,000 candles.

A despatch from Berlin of the 28th ult. says: Ernst Rohmer, an electrical inventor, has succeeded in telephoning seven kilometers away by his wireless method. The speaking voice was perfectly audibly continuously during the experiments. It is stated that Rohmer's invention acts on the principle of the transformation of light waves to sound waves by using a searchlight and a microphone.

A writer describing the late eruptions of the Soufriere volcano on the island of St. Vincent, says: "The whole country for a radius of eight miles is subjected to a seething mass of fire, into which no living creature could hope to penetrate, and at a distance the noxious vapors that have risen from the belching crater have been such as to menace the health, if not actually the lives, of those who inhale them." During the latter part of the Seventh Month at least two slight eruptions occurred. A despatch of the 28th says: "Many people, both of the wealthier classes and laborers, are leaving the island, the disaster. The Government is still feeding 6,000 persons."

A regular system of forwarding letters by carrier pigeons has been established between some of the islands of the New Zealand group. Each letter thus sent is to be stamped, the cost of the stamps varying with the distance.

It is said that English is more and more taking the place of French as the language of Russian Court circles. The Czarina speaks English constantly, and the Czar also likes to express himself in the same tongue.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 76.

Edward Kichie, Phila.; and for Hannah D. White, O.; Elizabeth Allen, Phila.; Joseph Warner Jones, Pa.; Jacob R. Elfreth, Pa.; Frances E. Jones for Margaret H. Jones, Oak Lane; Jane E. Mason, G't'n; and for Jonas Edge, Kans.; Mary Ann Jones for Isaac Morgan, Fla., and Margaret Outland, N. C.; R. Mott, agt., la., \$12.00, for John W. Mott, Joseph Dewees, Morris C. Smith, James Mott, Chester Mott, and John Mott, agt., la.; Boonville, Canada; Ellen McCarty, Pa., for Albert F. Heess; Albertus L. Hoyle, N. J., and for Wm. Hoyle, O.; Truman C. Moore, Pa.; J. Adrian Moore, Pa.; Sarah A. Gilbert, Pa., \$10 for Andrew Ann Case, Albert Cope, Eliza G. Cope and Chas. Gibbons; Wm. J. Evans, N. J., and for Wm. Evans; Sarah T. Smith, agt., O., \$24 for herself, Lydia J. Bve, Elizabeth Bowman, Edna F. Dean, Jason Fawcett, Carl Patterson, Belinda H. Schofield, David Smith, Hannah P. Smith, Hannah A. Vanlaw and Susan Worstell; Albert Emmons, la.; Benjamin L. Bates, la.; Cyrus Cope, la., \$5, to No. 39, Vol. 77; J. Beni, Glavin, Phila.; Abram Stratton, Phila.; Jacob V. Edge, Pa.; Mercy A. Roberts and for Elizabeth L. Roberts, Pa.; Joseph Henderson, agt., la., \$26, for Lorenzo Rockwell, Lewis L. Rockwell, Roy W. Rockwell, Archibald Henderson, Daniel J. Peckham, Christian Thompson, Oman K. Tow, Severn Tow, Ole P. Tjossem, Walter Clayton, Leah J. Paxson, Lars Stangeland and Hugh L. Knowles, N. Y.; Jane S. Warner, Pa., \$8, for herself, Electa J. Warner, Mo., Jos. E. Meyers, la., and Martha Price, Pa.; Susan R. Williams, Phila., and for James Hunt, England; David E. Cooper, N. J.; Samuel R. Cooper, N. J.; Sarah T. House and for Lena H. Sharpless, Pa.; Joseph L. Bailey for Anna S. Bailey, N. Y.; H. V. Pennell, M. J., Pa., to 14 Vol. 77; Joseph K. Evans, N. J.; Ellen Bromley, Phila.; John Letchworth, G't'n; Joseph T. Whitson, Pa.; Priscilla M. Lippincott; N. J.; Susanna S. Kite, G't'n; B. V. Stanley, Phila., and for James Hunt, England; Samuel Embree, Deltha Emmons, John E. Hodgins, Eliza Hodgins, Wm. G. Hoyle, Jos. L. Hoyle, Robert W. Hampton, Pearson Hall, Joseph S. Heald, Edwin T. Heald, James McGrew, Thos. E. Mott, Abigail B. Mott, Frances Jackson, Thos. E. Stanley, Morris Stanley, Elwood Spencer, Barclay Smith, E. S. Smith, Mon J. Shaw, B. D. Sidwell, Joseph Patterson, Wm. B. Stanley, Wm. J. Stanley, Zachus Test, Thomas Thompson, Russel Z. Taber, Thos. D. Yocum, Geo. E. Young, Aaron K. Williams, Barclay C. Dewees, \$3, and Rhoda M. Engle, sc.; Ellis Smedley and for Mary S. Ward, Pa.; Dallas Reeve, N. J.; George W. Thorp, Phila.; George A. Keely, Del.; Charles Ballinger, N. J.; J. B. Wals, N. J.; Lydia C. Cadbury, Phila.; Ellwood Cooper, Phila.; Wm.

B. Harvey, Pa.; Edward G. Smedley, Pa.; Elizabeth L. Thomas, Pa.; per G. Eldaah Wilcox, E. P. \$8, for George Schill, Abel McCarty, Job McCarty and John S. Brown; John H. Ballinger, N. J., for himself, Charles D. Ballinger and Edward J. Jones; Joseph S. Middleton and Deborah B. Parr, N. J.; Samuel Haines, N. J.; Wm. Bishop, N. J. Ruth Anna Harned, N. J.; F. Lee Haines, N. J.; Phebe P. Stokely, N. J.; M. D. Del.; Elminah Sarah P. Darnell, N. J.; Alfred C. Haines, N. J.; Barclay R. Leeds, Phila., \$10, for himself \$4, and for Wm. E. Tatum, Daniel L. Leeds and Wm. F. Leeds; Geo. S. Hutton, Pa., \$8, for himself, Phel Hutton, Geo. Pandrich and Anne W. Thompson Sidley Garrigues, Pa.; Jane G. Smedley, Pa. Mullan & Co., Gloucestershire, England; Mary I. Ogden, Pa. W. K. Bullock, M. D. Del.; Elminah S. Deats, N. J.; Henry W. Satterthwaite, Pa. Ann Elfreth, Pa.; Wm. H. Moon, Pa.; Eley M. Chace per R. P. Gifford, R. I.; James W. Olive, Mass.; George Blackburn, agt., O., \$36, for himself, Sarah J. Bonsall, Annie C. Bonsall, Wm. Blackburn, M. D.; Martha J. Cook, Miriam French, Martha H. French, Clarkson French, Catharine Fawcett, Ardella French, Rebecca S. Hodgins, Finley Hutton, Elma Hayes, Amy J. Morlan, Edward Stratton, Joseph R. Stratton, Catharine M. Thomas and John M. Stratton; Sallie A. Armon, Del.

Remittances received after Third-day noon will appear in the Receipts until the following week.

NOTICES.

The hour at which the meeting is held at Langhorn's Pa., has been changed from 10 to 10:30 o'clock.

FRIENDS' LIBRARY, 142 N. 16th St., Phila.—During the Seventh and Eighth Months the Library will be open only on Second and Fifth-days from 3 to 6 P. M.

A MAN and eight year old son wish room and board with a private family, near Friends' Select School, 16th and Cherry streets. Terms must be moderate.

Address "W," care of THE FRIEND.

SITUATION wanted by a woman Friend as matron, managing housekeeper, either public or private, or any position of trust.

Address "R," office of THE FRIEND.

The committee having charge of Spring River Academy desires to engage the services of a suitable young Friend to serve as the principal the coming year.

Address LEVI BOWLES, Clerk of Committee, Mooreville, Ind. Galena, Kansas.

WANTED.—A teacher to take charge, for next term, of the Monthly Meeting School at Sugar Grove, Indiana. Application may be made to CALVIN NEWLIN, Mooreville, Ind.

or SARAH T. MAXWELL, Plainfield, Ind.

WESTTOWN BOARDING SCHOOL.—The fall term of this school begins on Third-day, Ninth Month 9th, 1902. Early application should be made for admission of pupils desiring to enter at that time, if the matter has not already received attention.

WM. F. WICKERSHAM, Principal.

WESTERN QUARTERLY MEETING OF FRIENDS.—The trial evening Broad Street Meeting, Philadelphia, 7.17 A. M., of the 22nd instant, will be met at West Grove, to converse (free of charge), those desiring to attend the Western Quarterly Meeting of Friends, to be held at London Grove, Chester County, Pa., and directed that the committee on those intending to come would inform by postal in advance.

TRUMAN C. MOORE, GEORGE R. CHAMBERS, Committee.

DIED, Tenth Month 19, 1900, MILTON CHAMNESS, age seventy-four years, one month, one day; a member of Cottonwood Monthly Meeting of Friends, Kansas. He was a firm believer in the ancient doctrines and principle of Friends, and directed that his remains should be interred in a plain coffin.

A Shining Success.

Some would call Success the accomplishment of what one undertakes to accomplish. One would call him a man of success, though off by death or accident, who was by some steps approaching the attainment of his endeavor. Not that he had already attained or was already complete, but that he followed after, so that he might lay hold on that for which he was laid hold on by a higher Power. A steadfast going on unto perfection was such success in character as reaching the end, —the will which morally contained the end was of the same spiritual virtue as the end had it been developed.

A man bent on righteousness of life will regard character as his goal, and would view attainment as his success, were it not that every attainment in true righteousness serves to breed a noble discontent with that whereunto he has already attained; and he would pass on to higher and higher standards of character.

I am happy for him if this following after righteousness prove as a schoolmaster leading unto Christ, who alone is found to be that standard truth in character which will satisfy the soul of the searcher after the righteousness of God.

Among the multitudinous standards of success in life among men, the image of Christ is set up in the gospel as the one standard of success whereunto a man shall aim, if he would fulfill the law of his being. Conformity to the likeness of Christ, who is the image of the invisible God,—in short, a being made like, is the one success for every human character, which is his business for life to reach. It is the Divine reason for all our relations and all our appointed works. For we are to do in order that we may be, and to

suffer in order that we may be, more and more conformed unto the image of Him who calleth us unto glory and virtue. If we obediently keep his words we shall be growing like Him, or "if we suffer we shall reign with Him." Every dispensation in life under the sanctifying turning and overturning of his Holy Spirit has this end in view that his image may be formed in us and our characters conformed to his image. What men call failures in life may be truest conditions of success. For if we were successful in works we might boast, but in successful suffering we are preserved in the humility essential to the holiness of Christ's spirit. "And if any man have not the Spirit of Christ he is none of his." So there are many turnings and overturnings in order that we all may come "in the unity of the faith and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Herein there can be no rivalry among the successful, except to rejoice when another passes on nearer than we do to the mark of the prize of the high calling. But no competitor can displace us. No differences in worldly success, no superiority of others in intellect or culture or wealth can crowd out the way-faring man though a fool, if his way is Christ, from approaching where all may receive the prize, where all may be crowned with the fruits of his Spirit. This success is open to all conditions; and worldly failures and disadvantages may serve only to promote it. As silver is tried, so acceptable men are tried, in the furnace of affliction, till the silver is cleared of its dross. And He who sits as a Refiner and a Purifier sees the purified silver made a mirror of his own face;—so we all, with un tarnished face "reflecting as in a mirror the glory of the Lord, are changed into the same image from glory to glory,"—from character to character,—"even by the spirit of the Lord." An important part of the process of being "changed into the same image" with Christ, is that of faithfully reflecting the graces of his character and the behests of his word and light, that may come upon us as mirrors made to reflect his features. If we will not reflect these unto the welfare and enlightening of others our usefulness as Christ's mirrors or reflectors will cease and unfaithfulness to be responsive to the light of his counte-

nance will turn us again into the dullness of dross and tin and reprobate silver. "Arise and shine" when thy light is come "and glory of the Lord hath revealed it unto thee."

The Work of the Yearly Meeting's Committees.

Tokens of the faithful diligence with which the Yearly Meeting's Committee is pursuing the service of its appointment in many quarters incidentally and occasionally reach us. It may be disappointing to some readers that no systematic account of the Committee's doings and of the meetings appointed or visited is kept current or heralded in our columns. We have been aware this would gratify both a pardonable curiosity and a not unworthy interest. Yet, without asking counsel of advisers, the editor has recognized in himself for the present a secret check against regularly advertising the individual details of this spiritual concern and movement. We might gain public credit as a Yearly Meeting by exploiting our activities, but we prefer for them the honor which comes from God only. We believe He is working his own work through servants and handmaids all the more deeply and lovingly in the hearts of our members, than if they were turned outward from week to week, to have a news-loving appetite over a Divine movement so served as to promote a feeding on the surface. Let us all rather dwell deep in living exercise for the inward prosperity of Zion, and leave the manifestation of it unto the Lord for his due time.

From a member of the Yearly Meeting's Committee we have received these words:—"I find myself desiring that we may not be found depending too much upon outward means, or a spirit of creaturely activity, in this important work to which the Yearly Meeting has called us as a Committee, but that each mind the gift that is in him endeavoring through Divine help to become more and more sanctified for rendering that measure of service towards the building up of the walls of our Zion which all who are truly interested are called upon to offer."

It had been my general practice to buy and sell things really useful. Things that served chiefly to please the vain mind in people I was not easy to trade in. Seldom did it. And whenever I did, I found it to weaken me as a Christian.—John Woolman.

A REMARKABLE INSCRIPTION.—One of the most beautiful prayers yet found on Egyptian monuments, is the following—one which shows how deeply imbedded in the hearts of the people was the belief in immortal life—that life finding its most full expression in the never-dying sun:

"Ta-hebt prayeth to her lord of Eternity saying: Hail to the Horns on the Horizon the Self-Created one. Thou art indeed doubly beautiful when thou shinest on the horizon, thou makest bright the earth with thy beams, and the gods shout with joy when they behold thy beams. Let me come forth to meet thee; let me behold thy beams and gaze upon thy beautiful beams. I have come to thee, for I would be with thee, and I would gaze on thee each every day. I am one of those who worshipped thee on earth. O, let me pass to the land of eternity and to region of everlastingness. Guide thou me, O Ra, and do thou give me the sweet breath of life."

A series of passages are then given as expressing this woman's mind:

"All my life since childhood I have walked on the path of God. I have praised and adored Him and ministered to the priests, his servants. My heart was true. I have not thrust myself forward. I gave bread to the hungry, drink to the thirsty, clothes to the naked. My hand was open to all men. I honored my father and loved my mother; and my heart was at one with my townsmen. I kept the hungry alive when the Nile was low." Thus stating the doctrine on which this woman based her hope of eternity.—*London Daily News.*

FAR be it from us to place undue importance upon any outward observances or conformity.

We know that religion does not consist in these but in doing the will of God from the heart, under the sanctifying power of that living faith in our Lord Jesus Christ "which is of the operation of God," and which nothing else can give to the soul. But we also know that it is the Divine will that our religious Society should be separated from the spirit and the customs of the vain world in the particulars of which we have been treating; and it is not for us to choose out such requirements as we please, or to say this is a small and unimportant matter, and I need not conform to it. We must take his commandments as a whole, or we shall practically reject his government. We may try to excuse our deficiency by charging others with tithing the mint and rue and anise and cummin, and neglecting the weightier matters of the law; but if we refuse obedience in rendering the tithe in what, from its seeming littleness, is the nearest and closest test of the entireness of our love and allegiance, we may soon come to disregard justice, mercy and truth; for he that is unfaithful in the least is unfaithful also in much, and if we wilfully reject one point of the Divine law we may incur the guilt of the whole.—*Thomas Evans.*

Thought is deeper than all speech,
Feeling deeper than all thought;
Souls to souls can never teach
What unto themselves was taught.
We are spirits clad in veils;
Man by man was never seen.
All our deep communion fails
To remove the shadowy screen.
—*Christopher Pease Cranch, in The Estuary.*

For "THE FRIEND."

The Yearly Meeting's Committee of 1833.

To the Yearly Meeting:

The committee appointed to visit the subordinate meetings report,—That dividing themselves into three parts, to one of which were allotted the meetings in New Jersey, and to the other two, those on the west side of the Delaware, they visited the Quarterly, Monthly and nearly all the Preparative meetings, and also many meetings for worship within the limits of this Yearly Meeting.

From inquiry and our own observation, it appears that many of them have increased in size since an early period after the Separation, some remain nearly stationary, and a few have become very small and weak. The situation of this class, the committee believe, calls for the serious attention of the superior meetings, to consider whether their continuance is likely to promote the welfare of the members or the cause of Truth.

In the course of our visit we found that a want of faithfulness in diligently attending our religious assemblies is very generally admitted.

Many still in membership with us, not being sufficiently impressed with the indispensable duty of offering acceptable worship to our Almighty Creator, frequently absent themselves, especially in the middle of the week. This neglect prevails in some places to an extent we had not anticipated, after the sifting we had so recently passed through:—As the vital interests of our religious society are intimately connected with the constant and humble discharge of this sacred duty, the committee believe that such lamentable failure requires the close attention of Monthly and Quarterly Meetings to labor with the delinquents for their reformation in that respect.

The love of the world and the eager pursuits of business in town, and country are obvious sources of weakness to which are attributable in great degree this defection and the want of a fervent engagement of spirit when assembled which often renders our meetings seasons of painful labor to the rightly exercised, instead of being heartily devoted to the cause of Christ. Such are burdens to the living members, and greatly hinder the circulation of a proper exercise in our meetings. Thus the exaltation of truth is obstructed, and the seeking minds of the youth, and others are in danger of being discouraged by their not obtaining that spiritual consolation and strength which might otherwise be experienced in our religious meetings.

We found very little exception to the prevalence of love and harmony; many Friends being closely united in a sincere engagement of mind for the preservation of our Society on its original foundation, the support of its testimonies and the administration of its discipline conformably to the spirit in which it was instituted. Yet the necessity of pressing after an increase of that fellowship which stands in Christ Jesus, our holy Head, and which only can qualify for united travail and labor in his cause, has been much impressed on our minds, especially as we have witnessed the languor of those who seem disposed to take their ease, now the perturbations produced by discontent, and insubordination have subsided.

The education of the youth in a manner con-

sistent with our profession appeared to the committee to need more deep religious concern restraining them from things which unfit their minds for receiving the visitations of Divine love, and taking the yoke of Christ upon the To the want of an experimental acquaintance in many parents with the regulating power the cross may often be traced the alienation of the children from the ways of Truth, and the little hope which some give that they will conform to its testimonies.

It was a satisfaction however, to observe that in most meetings there are children who become behaviour and plainness evince their endeavours of their caretakers to discharge their duty faithfully; and we believe, among the members generally the practice of reading the Holy Scriptures is increasing.

Some inquiry was made into the present state of our testimony against the unnecessary use of ardent spirits; although it appears that the practice of using it as a drink is almost abandoned by Friends, yet in many of the meetings there remain some members who still give to their workmen on particular occasions. Even this custom however, is declining, and the opinion was expressed in a few meetings that in another season for labor it would further lessen.

Friends were encouraged to persuade those who give it, to make the attempt to gather their crops and perform other labor without it, and to clear their hands effectually of its baneful consequences arising from the use of this pernicious article.

It appeared to the committee that a most strict investigation into this matter involved as it does the dearest interests of families, and of society, would be attended with beneficial results both to individuals, and to the advancement of this testimony.

The support of the discipline against those who have seceded from us, and other offenses, appears to have been generally entered upon in most parts, with a zeal becoming its importance. Yet we apprehend there is need of greater faithfulness in some meetings to enforce the discipline. The exertions of Friends have been laborious and indefatigable, and we hope that the spirit of meekness attended, enabling them to endure patiently the reproaches which have been freely cast upon them. From the unprecedented number of cases and disownments there is however reason to apprehend, in some meetings a danger of falling into a formal manner of transacting the concerns of the discipline, tending to the honor of Truth or the real welfare of the body, for want of dwelling upon a proper sense that it is the Lord's work; and can only be rightly conducted as Friends engaged to apply for the aid and direction of his Holy Spirit, which gives wisdom, and authority, and is to be waited for in all our religious meetings.

The small number of members who attend some meetings, where there is a large share of labour to be performed has induced Friends to appoint those to services who do not maintain all our testimonies in their conduct; and appearance, which we believe to be a source of weakness injurious to the individuals themselves, lessening the dignity of our profession, and the obligations of the discipline, and it calls for increased caution and care.

The practice of some of our members attending the meetings of the Separatists at the time marriages has claimed the consideration of the committee, and we believe it proper to call the attention of the Yearly Meeting to the object.

The general activity now prevailing on religious subjects by which the spiritual strength of young convinced Friends may be dissipated, and their growth obstructed:—the union of friends with others in works of benevolence:—the temptations held out by popular lecturers to draw the young people to assemblies professedly for religious or moral purposes, by which our testimony against a hired or man-made ministry may be laid waste:—the practice of Friends engaging in employments which draw them from regularly attending their religious meetings:—the departure from Christian moderation, in the extensive pursuit of worldly business, in the great increase of luxury and splendor in living, and entertainments, and the various allurements to vice, and to scenes of diversion;—are subjects which appear to the committee to demand the very serious and heartfelt concern of every member of the Society, that we may be preserved a people holding up a consistent testimony to the purity and simplicity of the truth as it is in us. As a means of counteracting the stream of degenerating from Christian principle and practice, we believe a more familiar acquaintance than many possess with the history, and writings of our Society which set forth the nature and ground of our religious testimonies would be found highly advantageous.

Our minds were introduced into tender sympathy with the faithful burden-bearers whose number in many places is small, and the weight of concern and labor which devolves upon them great, both as regards the due support of the discipline and the holding of their meetings for Divine worship in a manner becoming believers in the spirituality of the gospel dispensation.

Where few experienced Friends are left to lead forward the younger members in the affairs of the church, the committee believe that if the advice was properly regarded, "that Friends stand open to the leadings of the love of God, through Jesus Christ our Lord, and when in that they feel their minds drawn to sit with any of their neighboring Monthly or Quarterly meetings, that they attend thereto," such advantage would accrue to some, who though desirous to see the cause prosper, require the help of those who are skilled in the discipline, and usages of the Society.

Notwithstanding the ravages of the spirit of indolence and the numerous imperfections we have still to lament among us, there are evidences that the Lord continues to be gracious to the remnant of his heritage in that he is not pleased to regard the poor and the needy in their distress, and to lay his Divine hand upon sons, and upon daughters.

It afforded much satisfaction to find that there is a large number of middle aged, and young members, of both sexes, within the compass of this Yearly Meeting whose appearance and conduct give proof of their love to their Divine Lord and Master. To these, the testimonies of Truth, and the welfare of the Society are precious; and they furnish a

hopeful prospect of a succession of laborers, who, if they keep their places in all humility will be instrumental in the Lord's hand in repairing the desolation produced by an evil heart of unbelief, and in carrying forward the work of reformation in the earth.

In compliance with our appointments we have endeavored to discharge the duties, by communicating our sense of the states of meetings, laboring for the removal of such things as are prejudicial, and promoting an individual concern for the restoration of primitive purity and spirituality amongst us; and we may thankfully acknowledge that ability was also furnished at times to offer the language of comfort and encouragement. The labors of the committee were kindly received, and we believe the concern of the Yearly Meeting was seasonable.

PHILADELPHIA, Fourth Month 13th, 1833.

Thomas Wilson.

Selected.

Thomas Wilson, of Ireland, was born in Cumberland and educated in the profession of the Church of England. While a youth he had great hungerings after righteousness, and the true knowledge of the living God, and his son, Jesus Christ; and went with great diligence to hear the priests, and carefully minded what was spoken. If he heard of a priest that was noted for a good man, and preached two sermons in one day, he would go sometimes eight miles on foot after hearing the morning sermon, to hear another in the afternoon; and the more he sought to hear, the more his hunger and thirst increased, so that he was sensible of great poverty of spirit. In the time of singing psalms a thoughtfulness came over him, that men should be made holy before they could rightly sing to the praise and glory of God; and he was stopped from singing them, through a godly sorrow which was in his heart, with secret cries and humble prayers to the living God of heaven and earth, for the knowledge of the way of salvation. In this state he travailed in great godly sorrow, weary of the heavy load of sin, as also of the doctrines and worship of men's making; and many texts of Scripture being opened to his understanding, he began to see that which was not of faith was sin, even in points of worship, and the pretended service to the great God. Being thus made sensible that too many of the doctrines of the Church in which he was educated, were precepts of men's making; and that "God is a Spirit, and that they worship Him must worship Him in spirit and in truth;" this worship he greatly longed to know; and conversed with priests thereon, but they could not direct him where to find it. But after long travail of spirit, and great concern of soul, the Lord was graciously pleased to make him sensible, that what it was to be known of God, was manifested in man.

About this time he went into an evening meeting of the people called Quakers, with strong desires in his mind to the Lord, that if it was the true way of salvation which this people preached, he might have some inward feeling and testimony thereof in his own heart.

After sitting some time in silence a Friend began to speak, directing and exhorting to an inward waiting upon the Lord in faith to receive power from Him over every unclean thought, by which heavenly power, they might glorify and praise the name of the Lord, through the ability of his own free gift. This Thomas understood to be the holy word of grace, which the apostle preached, and to which he turned the minds of the people; and he felt his soul much in love therewith, saying in his heart, "This is what I greatly wanted." The Lord's power arose in the meeting to the breaking and tendering of his heart; and inward cries were raised in him to this effect, "O Lord, create in me a clean heart." Now his heart was opened, and he felt the Lord's fierce anger because of sin; and he was made willing to love, and dwell under, his righteous judgments, being truly convinced that was the way to come to the mercy seat. He saw he was to cease from the doctrines of men, and mind the gift which was in him, and sit down among Friends in their silent meetings, to wait on the Lord in retiredness of mind, for his heavenly teachings and holy leadings; in the performance of which inward, Divine, and heavenly worship, he, with many more young people, was convinced of the inward work of God, and turned to the Lord with all their hearts.

Those who attended this meeting from time to time, became very tender and heavenly-minded, and in great love with each other; the heart-tendering power of the Lord being renewedly felt, inwardly revealed, when no words were spoken.

This our friend being thus raised up and qualified, came forth in a public testimony; and was concerned not only to travel and visit many parts of this nation, Scotland and Ireland, but also America; which he visited twice, in company with James Dickinson. He left there many seals of his ministry, which was sound, plain, and powerful, frequently attended with a heavenly sweetness, as he was Divinely enabled to open the mysteries of life and salvation. He was also richly endowed with the spirit of supplication, in which he was drawn forth in great tenderness and fervency of spirit; not only on behalf of Christ's church and people, but for mankind in general.

After more than forty years of labor, his natural strength decayed, and towards the close of his time, having not long been returned from a journey of ten months through many parts of England, he expressed himself thus:—"Now I rejoice in that I have served the Lord in my day; and as I have labored to promote the truth in my generation, I feel great peace from the Lord flowing in my soul, and am thankful that I have been made willing to serve Him."

He was taken ill about the Eleventh Month, 1724, and continued weakly for several months; in which time he uttered many weighty expressions and at several times was concerned in fervent prayer for the young and rising generation that they might be faithful wit-

Nathaniel S. Shaler on Valor.

The interest in which N. S. Shaler's poem "Valor" was in part quoted in our recent No. 1, appears shared by the *Hartford Times* in the following remarks:

In these times when political orators' mouths are ceaselessly sounding the praise of military performance in the time of the Civil War, in Cuba and in the Philippines, and when not a week passes without some public discourse of that sort from the President of the United States, it is good to have a public reminder that, after all, the man with a gun is not necessarily the greatest of heroes.

One of the ablest scientific men of the country is Professor Nathaniel S. Shaler of Harvard University. In zoology and geology American outranks him; but he is a broad-minded and philosophic thinker, who has written books with such titles as "The Nature of Intellectual Property," "The Interpretation of Nature," "A Study of the American Commonwealth," and "Study of Life and Death." Professor Shaler has no public reputation as a poet, but recently he appeared as a poet of an occasion at the Phi Beta Kappa exercises at Cambridge, and the title of his poem was "Valor." It is not a composition of the Kipling variety.

Professor Shaler is one of many millions of sensible Americans who are weary of all this talk about the glory of having some time worn uniform on a battlefield. He is ready to give proper praise to men who have risked their lives to save the life of their country—an opportunity which has come to no American, by way, in the last thirty-seven years. It is good to clasp the hands with such heroes, but there is a finer thing than that.

Professor Shaler recounts in his fine verses of what seems to him the noblest heroism. One of that of a surgeon in the Confederate army, who, after the most faithful service, was falsely accused of having sought to spread yellow fever contagion in the Northern States. Accused and reviled through long years, he held his peace—refusing even to defend his base charge.

Professor Shaler is a Southern man by birth, the physician of whom he speaks did his work when Memphis was scourged by the yellow fever. The other examples of true valour which he mentions are equally impressive. For all point to the admonition near the end of the poem:

"Let not our eyes
be blinded by war's flame, nor be our ears
filled by its drums and trumpets till forgot
the plain lesson of our peaceful days,
that what is fellow-man who knows not war,
no faithful does his tasks with faithful heart,
and so gains valor for all fields we win."

In these days, when mere glory-grabbing too often passes for the noblest sacrifice and the best public service Professor Shaler's lesson should be heeded. It is not the man who knew what it is to be in absolute want of a dollar who should preach to us unceasingly of "the strenuous life," nor does achievement of any sort become more meritorious because attention is called to it by drums, trumpet or any other form of advertising.

Every duty we omit ourselves some truth should have known.—*Ruskin.*

A Remedy for Moths.

We were examining our wardrobe after the summer and found, to our surprise and grief, many of our choicest articles of apparel sadly damaged by the moths. In the midst of our trouble, and the discussion as to the modes of protection against moths, which had been handed down by tradition, Aunt Julia came in.

"Aunt Julia, how do you keep your winter clothing from the moths?" we both asked eagerly, as that good lady proceeded to lay aside her handsome shawl, which looked as fresh as ever after seven years' wear.

"I used to suffer from moths as much as any one, once," replied Aunt Julia, taking her knitting from her little basket, and sitting down; "but I found a recipe in an old-fashioned book which has relieved me of much solicitude on the subject. It was many years before I could be persuaded to try it. In my young days money was not quite as plenty as now, but provisions were cheap, and a farmer's daughter began her married life better supplied with linen, blankets and bed quilts, than many a jewel-decked city belle. As I was an only daughter, and was not married too young, a noble pile of blankets, feather beds, bed-quilts, etc., became my portion. For many years after we removed to the city, I used to dread my summer work of airing beds, and packing very fine home-made blankets and quilts stuffed with the softest down. I tried snuff, tobacco, camphor, pepper, and cedar chips, and yet, as we changed our place of residence several times, some colony of moths, old squatters among the beams of the garret, or in some unobserved scrap of woolen cloth, would perforate tiny holes in my choicest possessions."

"Why, Aunt Julia, I thought you had a cedar closet."

"Yes, when we moved into our new house; but by that time my closet was too small for my increased wealth, and till I used this recipe, I seldom passed a year without some moth holes, but now I have not seen one in nine years."

"What was it, Aunt? Have you the book? or can you repeat it from memory? It is too late to save these things, but I will write it down, and try it next spring." So saying, Anna took out her little recipe book and pencil, while Aunt Julia prepared to recall the moth preventive.

"The book was an old one with the title obliterated, and title-page torn out by some careless child, but the directions were these:

"Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt

"But lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal."

"O! Aunt Julia, is that all? How does that help the matter?"

"Wait, Anna, and hear my story out. One day, as I was mourning over my choicest blankets, eaten by the moths, and airing my down bed-quilts, and feather-beds, which have been rendered obsolete by the introduction of spring mattresses, as I stood ready to cry with vexation to see my choicest articles eaten in the most conspicuous places, as you have experienced to-day, my eye rested on an old Bible, which lay on the top of a barrel of pamphlets in the garret. I opened it, and almost un-

consciously read the recipe for avoiding moths which I have given you to-day. I then recollected that they seldom troubled the clothing in frequent use, and the articles which caused me so much care were not needed twice a year. Then I thought of Sophy Baker, with her large family and sick husband. They had been burned out the spring before, and were just entering upon a cold, long winter of poverty. I sat down and writing her a note, sent two feather beds and four blankets, and an 'old-fashioned coverlid,' that very day; and two more blankets I dispatched to a poor old rheumatic neighbor, whose destitution had never occurred to me before. I then began to breathe freely; and before another week, two more blankets were gone to comfort tired limbs and aching hearts. The cast-off coats, cloaks, and old pieces of carpeting which had long lain in my garret, were given to the deserving poor. A bag of woolen stockings and socks, which had been kept for cleaning brass, were sent to a charity institution, never again to become a temptation to the moths. I inquired particularly the next year, and found the beds and blankets were in such excellent preservation, that I cheerfully laid up more of my surplus property 'in heaven,' and out of the way of moth and mould. My cedar closet and trunks hold all I wish to preserve, and when they begin to run over I commit more articles to the keeping of my widowed and fatherless acquaintances."

"But, Aunt Julia, yours is a peculiar case. You had the home-made outfit of a rich farmer's daughter, and could not expect to make use of it; besides, the Bible don't encourage wasting our goods extravagantly."

"I do not think the Bible leans to what is called the extravagant side. The rest of the chapter following the verse I have quoted gives little encouragement to much forethought, either in food or raiment, and in another place says, 'He that hath two coats, let him impart to him that hath none.' This rule leaves little to pack away in a cedar closet. In my opinion God's providence is far from encouraging extensive accumulation either of money or possessions, especially among Christians. Fire and flood, drought, mildew and moth, stand ready to rebuke that spirit of covetousness which the Lord abhorreth."

"Surely, Aunt Julia, you wouldn't have me give away the new furs you gave me yourself last winter."

"No my child; but let us examine for a moment this moth-eaten pile. Here are three coats of your husband's which he never could wear again."

"Those are for fishing, Aunt."

"How often does he fish?"

"Once in four or five years perhaps," said Anna, looking slightly discomfited.

"Well here is a bag of outgrown, shrunken socks and stockings, and these old dresses of Ada's, and those overcoats of the boys, that I heard you say were unfit for wear, even on the playground; and besides I think you remarked that the whole difficulty originated in an old carpet, which had been harboring moths many years, when it might have been out of harm's way upon some poor widow's floor."

"Well, Aunt I believe you are half right."

Try my rule, Anna; not after your property is ruined, but when you find you can spare it

—even at the risk of sending some of your treasure to heaven before you have obtained all you could from its use. Many an old garret have I known to be infested with moths, ruining hundreds of dollars worth of valuable articles, when the whole evil might be traced to an old coat, or carpet, selfishly or carelessly withheld from the poor. We are God's stewards, and our luxuries are not given us to feed a 'covetousness which is idolatry'; but are talents which may be increased ten times before the great day of final account. When people ask me how to prevent moths, I always long to say, 'Lay up your treasures in heaven,' because I have found from experience it is a sure and convenient way."

"Well, Aunt, I own I never thought much about it before as a matter of Christian duty. I will, try, before another year, to confine my case to the articles I need, and shall hope for better success."—*Common People.*

One Day With a Busy Spider.

Araneina began the construction of her net by sticking a tiny bit of gum about eighteen inches from the right end of the window sash, which was four feet wide and was raised two feet from the sill. This she effected by touching the spot with one of her spinnerets. Then fastening the end of her thread to this gum, and spinning out the line as she went—holding it off with one of her hind feet, which are fitted with tiny combs for the purpose—she proceeded to form within this open space a square, three corners of which were fastened respectively to the sash, frame, and sill of the window, while the fourth was held in place by guy ropes attached above and below. So much of the snare completed, she went over her square rapidly, but with the greatest care, strengthening it by adding additional strands as she sped along, for this framework was to maintain the weight of the completed structure.

Araneina now ran back to her original starting place and dropped down on her thread to the opposite corner of the square and attached the end there. Ascending this same line, without making any measurements she now fastened an end of the thread exactly halfway and carried it to the top, holding it off from the other line with the hindmost right leg and carrying it out about an inch to the right and fastening it to the line at the top, thus forming with the line drawn clear across and intersected in the middle, a third spoke of what would eventually resemble a wheel within the square. With the utmost rapidity she ran down her last spoke and carried up another line as before, repeating this process again and again until she had gone clear around the square.

This much accomplished, Araneina, without stopping a moment to rest or admire her work, ran to the center of the web and began to spin a spiral line around the spokes of her wheel, the turns of the spiral being as far apart as she could conveniently reach. She climbed across from one ray to the next, holding her thread carefully away from that already placed, till she reached the right point, where she touched the spokes with her spinnerets and fastened the cross thread to them, accomplishing all this in much less time than it has taken to describe it.

The spiral having been carried to the outside of the web, she began there another and a closer one, spun from thread of a different kind, the first having been smooth, while the latter was covered with a sticky liquid which collected on it in drops and caused it to adhere to anything that it touched. After going around a few times this spiral would have crossed the one that was spun first—which was merely a scaffolding to hold the structure while the permanent lines were placed—except that, as she came to the old spiral she tore it away, leaving only little rags, almost imperceptible, attached to the spokes. Beginning thus at the outside, she was able to cover the entire net with adhesive threads without stepping on them. And now, having tautened up the entire structure by running a few guy ropes from the outside frame of the web to the sills, sash and casement of the window. Araneina came down to the centre of the net, and, hanging head down, waited for her breakfast to come along and serve itself.—*Pearson's Magazine.*

John Clibborn.

Selected.

John Clibborn, son of William Clibborn, was born near Cowley, in the County of Durham, in 1623; and in the year 1649 went into Ireland, a soldier in Cromwell's army. In 1653 he married Margaret Crow, at Newry, Province of Ulster, and settled at Moate Grengo, County of Westmeath. Pride appears to have been one of his faults, and finding that the people called Quakers had a meeting house on his land, he was much displeased; for he, with many others, looked on them, not only with contempt, but aversion, and determining to banish them from his premises, he resolved to burn their meeting house. Humanity forbade his doing this on the day assigned for general public worship, when the people might be assembled in the house; but, on another day of the week he provided himself with fire, and went thither. To his surprise he found Friends assembled, and one of them, Thomas Loe, was preaching. He threw the fire away, went in, sat down behind the door, and was touched with what he heard. His wife asking him on his return, if he had burned the Quaker's meeting house, he said: "No; but if you will come to meeting with me next Sunday, and do not like it, I shall go with you to church the Sunday following." She accompanied her husband to meeting; Thomas Loe again preached. Both John Clibborn and his wife received the truth of his doctrine into their hearts, and became members of that Society which had been the object of such displeasure and dislike. This was about the year 1658. John Clibborn sometime after attended a general meeting in the same meeting house, and perceiving it inconveniently crowded, addressed the assembly: "Friends, if you put up with this house now, you shall have a larger next time." And soon after fulfilled his promise by building, at his own expense, a meeting house which, with a lot of ground adjoining for a burial place, he bequeathed to Friends forever; and in this graveyard were deposited the remains of his wife Margaret, in the year 1661.

In 1664 he took to wife Dinah English, daughter of Thomas English, of Turplean, County Westmeath. He was a man of exem-

plary conduct, generous and open-hearted to the poor of all denominations, and pitiable, especially to those strangers who on errands of love, preaching the gospel of peace; useful in his own society, and in his neighborhood, where he was beloved and esteemed. His situation in the time of the wars in Ireland, was peculiarly precarious and perilous; being only a few miles from Athlone, where the Irish army had established one of their principle garrisons, from whence its parties which distressed the country. This also, the Raparees brought their prison John Clibborn and his friends continued for some time, at great hazard, to keep up the meeting at his house where succoring him and endued with patience and courage, remained till he was dragged in the night by the hair of his head, from that home which had afforded an asylum to the distressed one, which was now the spoil of the plunderer and of the flames. His own life was attended three times by those blood-thirsty men, but at length, desperate in their wickedness and his head on a block and raising the battle prepared to strike the fatal blow. He requested a little time. His request was granted. The pious man knelt down, and in the words of the first martyr, prayed that this sin might not be laid to their charge. He prayed not for his own life. With the prospect of a better world before him, and being harassed and persecuted in this, perhaps he did not wish it to be prolonged. Just then another party arrived, and inquired, "Who have you there?" The answer was "Clibborn." "Clibborn!" re-echoed they; "a hair of his shall not be touched." Thus escaping with his life, though stripped almost naked, he wraped a blanket about him, presented himself before the officer who commanded the garrison at Athlone, and informed him of the treatment he had met with. It is probable that some of the military united with the banditti in acts of violence, for the officer desired John Clibborn to point out the man or men who had committed this outrage, and they should be hanged before his hall-door. This the benevolent sufferer refused to do; declaring that, though no ill-will, he desired not to do the smallest injury, and that all he wanted, as that his neighbors and himself might be all to live unmolested. This good man saw anxiety restored to the land, and thankfully enjoyed that blessing, which those who are witnesses its interruption can best appreciate. He was diligent in attention to religious duties, preserved in unity with his friends, and in love to all mankind, to the end of his long life, which closed, at the age of eighty-two, on the 22nd of the Fifth Month, 1705, at his late abode at Moate Grengo.

Copied Seventh Month 11th, 1902.

A.

How to Write the Year in Roman.

"How do you write this year in Roman?" said one puzzled man to another puzzled man, when the two were trying to discover on the inscription on a public building the form of its dedication.

"That's easy," said the other, glad to see his craning neck in another direction, and began to write it out on the back of an envelope. "M—that's for thousand; D—for five an-

; CCCC—for four hundred; I—for one, there you have it: MCCCCCI.
Yes," said the man who asked, "but not enough. Now see. How do you write ten?" The other wrote down XIX. Now put thousand instead of ten, hundred instead of one, and thousand instead of ten in. What have you?" The other had written MCM. "Now add one to it, and you get MI—M for thousand, CM for a hundred less than a thousand—nine hundred, and I for one. Here is 1901."
But they both give it; mine tells it just as it is too long; mine's more correct." Prove it."

OME COURTESY.—Why should we treat the whom we love, and with whom we associate familiarly every day, with less courtesy than those who are almost strangers? A homes we have seen where pleasant politeness and uniform courtesy were the rule; but, ally, the more constant our intercourse with person the less is the care to be courteous. is not because we love the strangers more, but not wish to retain the good opinion and of our friends and family. It seems to need rather from an almost unconscious perception that the only opportunity we shall have to make a good impression on strangers is by courteous manner in the few occasions we to meet them; while we feel secure in the of our families, and are not impressed with need for treating them with even the ordinary forms of politeness.

many families where genuine respect and prevail, the habitual manner of the ment toward each other is such as to seem to us rarely rude. Think over carefully your manner of speaking to the members of own household circle and compare it fairly with your manner toward those whom you elsewhere. Perhaps you may be startled by the contrast. If you are, try the effect of reasonable and easy adaptation of your "social manners" to the members of your own my. They also may be startled at first, but they will be surprised again to find how well they will like it.—*The Watchman.*

rooting out our selfish desires, even they appear to touch no one but ourselves, we are preparing a chamber of the where the Divine Presence may dwell.—*W. Watson.*

Notes From Others.

T BIBLE FOR THE CORONATION.—Last autumn Edward VII signified his willingness that the Bible to be presented to him at the coronation service at Westminster Abbey should be a gift from the British and Foreign Bible Society. The Archbishop of Canterbury, bound by precedent, has instead Lord Northampton that the Bible Society's gift on that occasion must include the Apocalypse. Lord Northampton has replied to the archbishop, expressing "deep regret that the Bible which is alone circulated by our society, and which does not contain the Apocalypse, cannot be used at the society's coronation service," also, that the

society was unaware of the precedent in question when the offer was made, but that "the spirit of the rules of the society is too definite to enable them to act in accordance with that precedent, and therefore they are compelled to relinquish very unwillingly the provision of the coronation Bible." But the worthy and enterprising friends of the British and Foreign Bible Society were not pleased to let the matter rest in just that way, and so made a request that the king would accept a copy of one of the society's editions as a memento of the coronation. The king has replied that he will have much pleasure in accepting the Bible which they circulate, as a memorial of the coronation.—*British and Foreign Bible Society Report.*

In consideration of the payment to the Louisiana World's Fair Exposition Company of the sum of five million dollars, appropriated by Congress in aid of said Exposition, it is covenanted and agreed by the Directors of the Exposition Company that the gates to the Exposition grounds shall be closed to visitors on the First-day of the week during the whole duration of the Fair.

A church woman who has lived long in Mexico says: "The Mexicans have a Christian Church that, corrupt as it may be, reaches their hearts in a manner we are helpless to rival."

SINGING WITHOUT UNDERSTANDING.—If persons who have no spirit of praise in their hearts deem it their duty and privilege to engage in the external forms of Divine worship, it is not strange that they should hire others who may profess skill in musical undertakings, to perform that service for which they lack both the disposition and the qualifications. But in some cases the persons employed are so unfamiliar with the work that they do not undertake to sing anything without previously rehearsing and practicing it; and they sometimes find it necessary to select hymns as well as tunes in order to perform their parts.—*The Christian.*

J. J. Monro, chaplain to the Tombs, says in an article written for the *New York Observer*: "The evolution of the prison has been a long, dark, cruel process, as it did not excite the interest and sympathy of the Church till within recent times. It is admitted now by every student of history that prison reform began with Jesus Christ."

General Booth has just acquired thirty thousand acres in western Australia, where he will establish a great Salvation Army agricultural and industrial colony, which he intends to populate from the slums of London.

The Independent says: "It was in what corresponded to our public parks that our Lord addressed his great congregations."

Pope Leo XIII. believes that "Human law cannot reach the real seat of the conflict between capital and labor. The moral condition of the workman and his employer must be improved. Each must look at the other through Christian eyes. This is the only way."

A LITERATURE FOR PEACE.—The vast literature of the world as it exists to-day, its poetry and its prose, whether history, biography, or romance, is imbued with the martial spirit, the pomp and circumstance of war. To change this note in literature, to put the dominance on the heroism of peace, will be a great undertaking, demanding the highest thought and the noblest energies of men for many years to come.

A beginning of the work of building up the literature of peace, and the education of public sentiment in favor of settling civil and international disputes by arbitration rather than by the sword

has been undertaken by Ginn & Co., the well known publishers of Boston, Mass. This firm proposes to issue from time to time in cheap and substantial form all the great writings of the past and present that tend distinctly to emphasize peace as the true aim of nations.

The first volume in the series is a condensation of the great work of Jean de Bloch on "The Future of War," which, it was believed, induced the Czar of Russia to issue his famous Rescript summoning the Conference at The Hague. The original work consists of six volumes, and has not yet been translated into English. The work issued by Ginn & Co. is a condensation comprising but 380 pages, but containing the facts and figures on which Bloch bases his conclusions, as well as the substance of his arguments. The price of this volume is fifty cents.

The second volume in the series will be made up of Charles Sumner's three famous speeches, "The True Grandeur of Nations," "War System of the Commonwealth of Nations," and "The Duel between France and Germany." The price of this volume will not exceed twenty-five cents.—*The Intelligencer.*

SUMMARY OF EVENTS.

UNITED STATES.—William Stein, Inspector of the Sixth Anthracite District, covering a radius of eight miles from Shenandoah, including a total of thirty-six collieries, states that five collieries in his district have been permanently abandoned since the strike began. He says there is hardly a mine in his district that is not damaged, and nearly all of the thirty-six have suffered seriously from water, which, in most of the mines, has risen to such a height that the small force at work cannot hope to keep them dry. No inspections of the mines have been made since the strike began, and resumptions cannot commence before every mine has been officially reported as safe.

It is stated that in the Shenandoah district within an area of six miles square, there are 30,000 foreigners, of whom by far the largest number are Lithuanians, these numbering 17,000. The Poles number 8,000, the Ruthenians 3,000, the Slovaks 1,000 and the Bohemians 400. The total of 30,000 is more than three-fourths the total population in the district mentioned.

In an address to the Negro Young People's Christian and Educational Convention lately meeting at Atlanta, Ga., Booker T. Washington said: "I want to see an influence go out of this meeting that shall, if possible, take every young negro from off the street corners and from the bar rooms, North and South. I want to see a lifting up and purifying of the character of our ministers in every part of the country. No race can hate another race without that race being weakened, narrowed and degraded. Let us cultivate friendship and love for all races and individuals, and harbor hatred for none. If others should be little, let us try to be great; if others would hate us, let us try to love them; if others would be cruel to us, let us be merciful; if others would break the law, let us respect it; if others would seek to push us down, let us seek to raise them. In the long run it is the race that helps to push up that succeeds."

The Dairy and Food Commissioner of Pennsylvania, Jesse K. Cope, has instructed his agents "to proceed to make investigations and obtain samples from all meat dealers of salted, canned or fresh meats, regardless of who they are or represent, or their standing, and submit samples to the chemist for analysis. As soon as results are known you will be advised, as I am determined that the practice of the use of preservatives in meats other than those enumerated in Section 12 shall cease in this Commonwealth."

A tunnel is in course of construction in Boston harbor to connect Boston with Noodle Island. The section of the tunnel under the free water of the harbor is to be something over half a mile in length, and, including approaches, it is estimated that the whole work will cost about \$2,000,000.

Professor W. A. Taylor, Pomologist in charge of field investigations in the United States Department of Agriculture, Washington, D. C., has recently said: "The total trees of bearing age in the commercial orchard areas of the United States, according to the Twelfth Census, show an increase of 75,000,000, or more than 40 per cent. over the apple area of 1890. The statistics show that in the great Ben Davis wine sap section of the country there is a day-nearly twice as many trees as in the famous Baldwin Northern Spy region. It is now true that the great apple bin of the United States has been shifted to the west of the Alleghenies."

Two New England railroads, the Boston & Maine and the Boston & Albany, are about to discontinue oiling their roadbeds, after finding that system of dust prevention for three years or more. While the railroads, under the influence of increased prosperity, are discontinuing oil sprinkling in favor of better and more permanent stone roadbeds, the use of oil for laying the dust on country roads is increasing very rapidly.

The system of sprinkling roads with petroleum has been long in vogue in California, and it has been extended throughout a large part of the West. It is stated that in Minnesota it has been determined to sprinkle the roads of Hennepin county with crude petroleum, and Minneapolis is considering the use of oil to allay the dust on her outlying highways.

Experiments lately made by the Pomological Bureau of the Department of Agriculture in shipping summer apples from Delaware to the States of New York, in cold storage, to England, have proved quite successful, the fruit having reached its destination in good condition.

The largest machine in the world for harvesting grain is said to be now in use near Ingleswood, Cal. It cuts a swath thirty-six feet wide and threshes as it goes, covering one hundred acres under favorable conditions in a day.

Certain persons representing themselves as agents and delegates of the Creek Indian tribe in Indian Territory, have brought suit to enjoin Secretary Hitchcock and Commissioner of Indian Affairs Jones from proceeding in execution of what is known as the Creek agreement for allotments. They ask to be allowed to remain in undisturbed enjoyment of their landed interests, and that any property already taken from them be restored to them by the agreement and the ratifying act be restored to them and an accounting made to them by the Government. They allege that the Government has failed to comply with the terms of the agreement and the act of Congress ratifying the agreement.

According to the thirty-second annual report of the Massachusetts Bureau of Statistics, there has been an increase between 1897 and 1902 in the cost of living in that State, which is most seriously felt by persons of moderate means. This increase is chiefly in the cost of meat, butter, potatoes and milk. There has been a decrease in the cost of groceries, which however, does not make up for the advance in price of other provisions. This showing is believed to be similar to that of other States.

The United States, with the addition of the 6,500,000 Catholics in the Philippines, 1,000,000 in Porto Rico, Guam and Hawaii, has among her inhabitants over 20,000,000 Catholics, without taking into consideration the 1,800,000 who are in Cuba. She represents the fourth Catholic power in the world as regards population, and the first as regards the amount of money she provides to the Pope.

It is stated that Pittsburgh men are forming a stock company for the purpose of manufacturing iron railroad ties. The tie can be rolled or cast, and it is so designed that the rails are set in grooves and are held in place by a cleverly fashioned key in such manner that spreading is said to be an impossibility.

There were 413 deaths in this city last week, reported to the board of Health. This is 44 less than the previous week, and 64 less than the corresponding week of 1901. Of the foregoing, 224 were males and 189 females; 40 died of consumption of the lungs; 24 of inflammation of the lungs and surrounding membranes; 3 of diphtheria; 11 of cancer; 15 of apoplexy; 7 of typhoid fever and 1 of small pox.

FOREIGN.—King Edward has lately addressed his people, in which he says: "The postponement of the coronation ceremony owing to my illness, has caused I fear, much inconvenience and trouble to all who intended to celebrate it. But their disappointment has been borne by them with admirable patience and temper. The prayers of my people for my recovery were heard, and I now offer up my deepest gratitude to Divine Providence for having preserved my life and given me strength to fulfil the important duties which devolve upon me as sovereign of this great Empire."

The coronation took place on the 9th instant. In commemoration of the King has presented to the people his estates in the Isle of Wight, upon which Osborne House is situated in a tract of about 5,000 acres.

In a report recently made upon the agricultural imports of Great Britain, the following items with their percentage of the value of the supply received from the United States were, as follows: Wheat, 93 per cent.; hard, 89 per cent.; tobacco, 84 per cent.; wheat flour, 83 per cent.; fresh beef, 74 per cent.; raw cotton, 74 per cent.; cattle, 72 per cent.; Indian corn, 70 per cent., and bacon, 64 per cent.

It is announced from Rome that the Czar of Russia is

again endeavoring to reach an international understanding with a view to a reduction of armaments, and it is stated that Russia spends nearly 26 per cent. of her total expenditure for defence, 2 per cent. for transportation and commerce and less than 1 per cent. for industrial undertakings.

Emperor William of Germany arrived in Russia on the 6th instant. On the 8th he left that country for Sweden. A despatch from Royal, Russia, says: "During his stay in St. Petersburg, the Czar spent his time constantly together, and their intercourse throughout was of the most cordial character."

The Pasteur Institute in Calcutta for the treatment of persons bitten by rabid animals is reported to be rapidly gaining in popularity among the natives. In the eight months ending Fifth Month 31st last, 352 persons were treated. The mortality was only 8 per cent.

The Cuban Government is now asking information in regard to the best methods of keeping and preserving certain of its records. Ordinary ink fades so rapidly that in two years many records cannot be deciphered. The brightness of the sunshine in Cuba is supposed to be the cause of it. India ink and indelible ink have been suggested for official records.

Barbary pirates are reported to have occurred on the 5th instant throughout Central Portugal and at several places in Italy.

In a recent statement from Manila it appears that 1005 cases of Asiatic cholera occurred there between Third Month 20th and Fifth Month 15, 800 of which died. By the enforcement of sanitary regulations a marked decrease in the number of cases was shortly observed. There is no doubt, the report says, that the ordinary household fly can transfer the cholera spirillum from infected matter to food, as is the case with typhoid fever. The Board of Health has inaugurated a crusade against flies of fly poison.

A despatch from South Africa says: "A report made by the Surveyor General and Director of Agriculture estimates that 10,000 white farmers are necessary in order to enable Natal to supply its own agricultural needs, and declares that preference should be given to small farmers willing to work with their own hands. The report recommends the leasing of Government lands at rentals equal to 3 per cent. of their unimproved value, and also advocates assisted immigration and grants of money to encourage agricultural development along various lines."

RECEIPTS.

Unlesse otherwise specified, two dollars have been received from each person, paying for vol. 76.

Philena Y. Smedley and for Horace W. Smedley, Pa.; George P. Stokes for Meribah W. Thorp, N. J.; J. Albin Thorp, Pa.; R. H. Reeve, N. J.; Aaron Mekeel, agt., N. Y.; \$50, for Elizabeth Mekeel, Adell Owen, H. Foster Owen, Mary E. Wood and Edward Wood; Phoebe E. Hall, agt., O., \$6, for Elisha Doudna, Hannah A. Webster and Lydia P. Webster; Thomas W. Newby and for Joseph Little, Ind.; Nathan Steer, O., \$26, for himself, M. B. Binns, Lindley Hall, Jacob Maule, O. S. Negus, John Starbuck, E. B. Steer, Israel Steer, L. C. Steer, W. J. Steer, L. B. Steer and Asenath H. Bundy, \$4; Sarah A. Holmes, N. J., per J. H. D.; John Evans, Ind., \$1, to Geo. J. Hannah E. Sheppard, Phila.; George Haines, Jr., N. J.; Benjamin Heritage, N. J.; Joseph Elkinton, Pa.; Elizabeth S. Brinton, F. K. I.; William T. Cooper, N. J.; Ellwood Evans, N. J.; Sarah G. Woolman, Pa.; Anna Pancoast, Pa.; Matilda M. John, Ia.; John Stamp Keeling, Eng., 10s; Walter A. Moore, N. Y.; Seth Shaw, agt., O., \$50, for himself, Hannah Blackburn, N. M. Blackburn, Chas. Blackburn, J. K. Blackburn, Guelielm Neil, Phoebe Ellyson, J. H. Edgerton, Nathan Kirk and Louis T. Morlan; C. F. Saunders, Phila.; Benjamin H. Lightfoot, Pa.; John Barclay Jones and Edward M. Jones, G't'n.; James H. Moon, Pa., \$6, for himself, Everett Moon, Minn., and W. W. Moon, N. Y.; Thomas A. Crawford, agt., O., \$50, for Eliza Ann Fogg, Mary F. Pearson, Ia.; Edwin Fogg, David Ellyson, Robert Ellyson, Lydia Warrington, Edgar Warrington and Abner Woolman; Jesse W. Taylor for Chas. J. Taylor, Phila.; Evan Smith for Thomas Blackburn, Ia.; Geo. Blackburn, agt., O., for J. Morris Ashead; Sarah E. Garrett, Pa.; William Stanton, agt., O., \$20, for Asenath H. Bundy, \$4; W. J. Steer, L. B. Steer, Hall, Samuel C. Smith, Wm. Bundy, D. C. Bundy, D. H. Bailey, Allen Bailey, Daniel E. Stanton and D. H. B. Stanton, Ia.; Robert Smith, agt., O., \$28, for Wm. Atkinson, Joseph P. Binns, Jonathan Binns, Tabitha D. Hall, Lewis Hall, Nathan L. Hall,

Dyhr, Benjamin E. M. A. Fritchman, Wilson C. Hirst, Nicholas J. E. Michener, Wilton T. Sidwell, Pers. Thomas and William Thomas; Susanna B. Pa.; Marianna Darnell, N. J.; Nathaniel B. N. J.; Henry B. Leeds, agt., for Edith Lloyd N. J.; and Samuel L. Whitson, Phila.; Sop. Pusey, Pa.; Wm. Balderston, Pa.; R. Nichol N. J., \$10, for Sarah Nicholson, Rebecca N. Jr., Henry Reed, Louisa W. Heacock and H. J. Prickett; A. Roberts, Idaho; Hannah B. F. Ind.; Joshua Brantingham, O., \$34, for Jos. Brown, John Hoyle Chase, for Satterthwaite G. Megrall, Alfred Brantingham, Wm. B. ham, Rebecca Price, Louisa Harris, Jose Stratton, Dillwyn Stratton, Jos. Masters, J. Bailey, Alice Cope, Hannah P. Oliphant, W. J. Oliphant, Addison H. Fritchman and Chas. Rebecca W. Warrington, N. Y.; Rich. T. Osborn, N. Y., and for Edmund L. Post; St. W. L. Hoopes, for Edwin C. Hoopes, Phila. Stanton, O.; Stacy F. Haines, N. J.; Thom. Whitson, agt., Pa., \$50, for Susanna Shames Isaac Sharpless, Wm. T. Sharpless, Thos. J. Mess, E. Malin Hoopes, Jonathan Eldridge, D. Wendle, Ruthanna Hoopes, Edward H. Roland Smedley, Phoebe J. Walter, Mary E. Anna Webb, Deborah Smedley, \$4, Phila. S. Varnall, Mary A. Scattagood, N. M. David Cope, Thos. C. Hoque, Stephen S. Deborah Brinton, \$4, N. A. Griffith and Forsythe; Isaac W. Stokes, N. J., \$6, for An. H. Stokes, M. M. Allen and Samuel J. Eves.

In last week's receipts the name of Mary F. P. should be substituted for that of Elma Hayes, O.

Remittances received after Third-day noon appear in the Receipts until the following week.

NOTICES.

FRIENDS' LIBRARY, 142 N. 16th St., Phila.—During Seventh and Eighth Months the Library will be open on Second and Fifth-days from 3 to 6 P. M.

SITUATION wanted by a woman Friend as matron managing housekeeper, either public or private, or a position of trust.

Address "R," office of THE FRIEND.

The committee having charge of Spring Year 1893 desires to engage the services of a suitable young man to serve as principal the coming year.

Address: LEVI BOWLES, Clerk of Committee, Galena, Kans.

CHANGES AND CORRECTIONS IN MEETINGS AT FRIENDS' LIBRARY ALMANAC.—From 10 to 12, London Grove Particular Meeting: mid-week held on Fourth-day at 10 o'clock and not on Fifth-day. Mount Holly, N. J.: hour of all meetings changed from 10 to 10:30.

WANTED.—A teacher to take charge, for next 10, of the Monthly Meeting School at Sugar Grove, Ia. Application may be made to CALVIN NEWLIN, Moersville, or SARAH T. MAXWELL, Plainfield.

WESTWON BOARDING SCHOOL.—The fall term of school begins on Third-day, Ninth Month 9th. Early application should be made for admission to those desiring to enter at that time, if the matter has already received attention.

WM. F. WICKERSHAM, Principal.

WESTERN QUARTERLY MEETING OF FRIENDS.—Third leaving Broad Street Station, Philadelphia, 7:17 A. M., the 22nd instant, will be met at West Grove, to enjoy (free of charge), those desiring to attend the Western Quarterly Meeting of Friends, to be held at London Grove, Chester County, Pa. It would assist the committee those intending to come would inform by postal advance.

No. 140 N. SIXTEENTH STREET, PHILA.

Entered as second-class matter at Philadelphia P. O.

OF A SECT.—It was well said by one of the enlightened and experienced among the members of this Society, in reference to brotherhood, "We are not persons that shot up out of the old root into another variance, as one sect hath done out of another, till many have come up one after another, the ground still remaining the same, of which they all grew. But that (very) hath been shaken and is shaking, divided and destroying, removed and removing. And the Root of Jesse hath been made manifest in us, and we have been transplanted the everlasting power of life, and a real eagle brought forth in us, out of (and separated from) that spirit wherein the world lives in worship into another spirit, into which worship which is of this world can enter. The root of that literal knowledge, historical and outward religion, is but as the old skins, that are to be wrapped up as a scroll, old wine and bottles, that belong not to the kingdom of God."—(Wm. Penn.)

Proselyting.

There appear two motives at work for seeking accessions to membership in a religious institution. The one is of the worldly and the other of the gospel spirit.

The worldly spirit of proselyting is the lust of accumulation,—of gathering to one's own name, profession or party,—whether religious or secular—as many adherents as possible, to make our association seem greater and stronger upon earth. Our choice of an association, church, or doctrine covets the endorsement of numbers, and the pride of such approval swells the zeal for winning names to our organization, and with all the more confidence under a persuasion that this is winning.

Some appear to suspect no difference between winning members into their church

organization and winning them into the kingdom of God. "Our church" and "the kingdom" are spoken of as synonymous terms.

We have seen the eagerness with which newcomers to a college, even before they had reached its doors, were laid hold on to induce them to join this or that rival society of students. So a clearer meaning seemed opened to the saying of Jesus: "Ye compass sea and land to make one proselyte." And this same ambitious energy for the aggrandizement of one's own in business, in church, or in politics is all "off from the same piece" of human nature. It is indiscriminately commended as just and true aggressiveness. The resulting accumulation rises about as high in spiritual values as the fountain or motive.—"Israel is an empty vine; he gathereth fruit unto himself."

The other concern for the ingathering of souls to have fellowship with us, is one in which the agent "seeketh not his own." Our eye is not to our own things, to our own system to aggrandize it by numbers, but our aim is the prosperity of Truth everywhere, and of our fellow beings in the Truth. We would rather spread its possession than monopolize its profession, or gather all its professors into our name. The more that can carry away a seed of Truth from our preaching into the church universal, the better for the cause.

Still it is highly desirable to encourage and to win into organized fellowship with us, all who can sincerely come, and can feel by being possessed of the same doctrine that our people are their people, and our Society their true church home. If we believe, not only that the place of Christian truth which our Society was set up to emphasize is best for a man, but that he will best be blessed and preserved in the truth by membership with us, certainly let us seek to turn him in with us for his best good. But let us not lay down or resign a single principle of truth, in order to let him in. Thereby we would let down that for which we claim he needs to join us. Those whom the Truth does not draw to our membership will do our membership no good; nor will we, by waving a truth, do good to them. We can only suggest, without completing the concern in view. The exigencies of a journey compel further views on this line to be left to the reader's own thought.

For "THE FRIEND."

Memoir of John Watson.

John Watson was born in the year 1651, and came with his father into Ireland, in 1658. Kilkinner in the County of Carlow, became the family residence. When about twenty-two years of age, he was invited to a religious meeting of the Society of Friends at New Garden. It was the first he had attended and the ministry of John Burnyeat so touched his heart, that he joined that Society; and believing he did right in so doing, was enabled to bear the displeasure of his father, which was particularly excited by his son's adopting their plain mode of speech. It may now occasion some surprise that this should have given such offence; but our ancient records inform us of much suffering on that account having been endured, from within and from without; for severe conflicts of spirit were experienced before the will was subdued, and the mind enabled to overcome its reluctance to bear the cross in this particular; especially as the singular number was formerly used in speaking to those of inferior station, and persons in higher rank, when addressed in this manner, were wont to look upon it as denoting disrespect, and accordingly resented it. Not uncovering the head, in salutation to a fellow-creature, also drew much displeasure on those who forbore to foster that self-complacency which expected this outward show of respect from those who withheld it, not from lack of good will or courtesy, but from the conviction that it was their duty to refrain from paying it, believing it originated in pride and servility, and tended to encourage these evils. In 1674 John Watson married Anne Tomlinson, whose parents had settled in Ireland about the time of his father's removal thither. His wife joined herself to the Society of which her husband was a member, and both patiently endured the father's remonstrance against his son's change of religion. In these remonstrances he was seconded by Archdeacon Plummer, who, finding persuasion unavailing, threatened him with a prison; to which threat the pious young man replied: "I do not fear it, but will make ready for one;" and thereupon disposed of some of the land which he occupied, to lessen his rent and incumbrances. He lived in his father's house, which, in 1675, becoming his own by the decease of his father, meetings of Friends were occasionally held there, and regularly established in 1678, which gave great offence to the archdeacon, and to the bishop of Leighlin and Ferns; who sued him for refusing to contribute to the repairs of the parish worship house at Fenagh, and obtained a writ against him, which the archdeacon told him should not be put in force if he would but submit to them, and not allow meetings in his house. On his refusal to accede to those terms, he ordered him to prison, cruelly ad-

ding: "There he shall lie till he rots." He was a prisoner above two years, and besides this suffered in his property, under pretense of an escape, because the sheriff had sometimes granted him liberty to visit his own home. To that home and to his liberty he was at length restored, and found it was allotted to him to do, as well as to suffer, in the cause of righteousness; for in 1696 he believed it to be his duty to preach the gospel, and in that service he took several journeys into England, and through this nation, having meetings in remote places, where none of his religious profession resided. He was also zealously concerned for the support of the discipline established among Friends and for good order in their families, in which he gave the example of ruling well his own house, in the spirit of love; keeping his children in that subjection which tended to promote their own happiness. As he was an affectionate father, so he was a tender and kind husband to a worthy wife; and they united in humble submission to the will of the great Disposer, while they drank the cup which, had it not been paliated by resignation, parental feelings would have found very bitter. Their daughter, Elizabeth, accompanied a ministering woman Friend in a journey to the province of Ulster, and there, remote from her parents, sickened of the smallpox. On receiving this information her father went to her. The state of the roads and posts at that time did not permit the anxious mother to receive regular intelligence of her situation, and her child's death was first announced to her by the sight of her husband returning, bringing his daughter's horse, with her clothes tied on the side saddle. The mother stood awhile silent, and then bore this testimony, honorable to her children, and consoling to herself: "I have had ten children and not one bad one." Elizabeth Watson died at the house of William Gray, of Ballhyagen, in the twenty-fifth year of her age.

John Watson was naturally of a mild and affable temper, yet he was firm in opposing any tendency to violate those testimonies, the proper support of which required humility and self denial. His last illness continued about three months, in which time he was often exercised in fervent prayer to the Almighty; giving praises to his holy name for his favors and mercies towards him, and testifying resignation to his blessed will, saying: "If the Lord have not a further service for me, I am willing to die. I bless God I have a peaceful conscience. My good God hath all along been my strength, my stay, my song, and my salvation." He was pleased to see his friends, and had often a word of tender advice to them, especially to the youth for whose preservation he was much concerned; and addressing a young minister, he thus advised him: "Be sure to keep low in thy mind and little in thy own eyes; yet be not fearful, but of a believing heart. Look not much at others, neither be dismayed at the frowns of any, but mind truth in thyself. I have ever found that my peace and safety." Looking tenderly upon his children, he said: "I leave you to the Lord, and if you love Him above all, He will be your God, as He has been mine." He exhorted his wife, children and servants to treasure up the memory of those seasons in which their minds participated together, of the influence of heav-

enly good; to live in love, and the Lord of love would bless them, as they kept near Him; adding: "O Lord! thou knowest I have always depended upon thee, and thou hast never failed me." When the near approach of death caused his voice to be scarcely audible, he was engaged in advising one of his friends to guard against the snares of wealth, to content himself with the sufficiency which was granted him, to keep in humility, and to devote to the service of the Lord that good understanding which had been given him. To another he thus expressed himself: "My heart is united to thee, and to all faithful Friends, as Jonathan's was to David." He slept little or none the last night of his life but was fervent in prayer on behalf of their small meeting, and that Friends might be preserved a growing people.

"Oh! happy," said the dying man, "is that man or woman who hath their work done in their day. I have nothing to do but to die, and offer up my soul to the Lord," and again, "I have done and go in peace with my God." In this happy state his purified spirit was released, the 19th of the First Month, 1710, at his house in Kilconner, in the sixtieth year of his age. His son Samuel thus bears witness to the character of his deceased father: "When I consider his grave and solid deportment in his family, his great care for our welfare, and good advice to us in tenderness of spirit, when young in years; as also his earnest concern for the growth of truth, and preservation of those who professed it, my spirit is tenderly affected with a sense of the loss, which both we of his family and the Church also sustain, by the removal of so kind and tender a father and faithful friend."

Copied Seventh Month 19th, 1902.

A. F.

CLOUDS.—Have you ever noticed how many of the dispositions of the perfected life can be richly gained only in the baptism of shadow and tears? We are accustomed to speak of them as fruits and flowers of the Spirit. I think we might be nearer the truth sometimes if we spoke of them as the ferns. Flowers are suggestive of the sunny glare; ferns are more significant of the moistened shade. And when I contemplate the dispositions which are the creations of the Spirit, I feel that for their perfect nourishing something is needed of moistness and of shade. Here is a short list of the beautiful things: "Love, joy, peace, long suffering, gentleness, goodness, meekness, temperance, faith."

It is in the cloud that men grow the fern of a spacious tolerance. Narrowness is transformed to breadth. I have known a man of very stern, severe and rigid creed, who definitely relegated to damnation all who lived beyond its sharp and imprisoning fence; and I have met him again in after years, and I have found that the barbed wiring was down, and the field of his creed sympathy was immeasurably enlarged. "But that is not what you used to believe ten years ago?" "No, but many things have happened since then." Then I learned that he had been in the valley of the shadows. Adversity had wrapped him in its clammy embrace. In his distress he had been enlarged. The clouds had dropped their dew!

J. H. JOWETT.

Miracles.

(Copied from Jamieson's Introduction to his Bible.)

A miracle, being a suspension of the established laws of nature, can be performed only by the Almighty power of the Creator who appointed them; and the circumstance of individuals on earth being qualified to achieve such wonders, so far beyond the capabilities of ordinary men, is an unmistakable proof that the workers of them are engaged in the service of God, who, for some special and important purposes, has endowed them with portion of his omnipotent energy. Miracles were wrought in great numbers, and of a passing magnitude and interest, at the commencement both of the Mosaic and the Christian dispensations; and they afford incontrovertible evidence that Moses and the prophets, as well as Christ and his apostles, who all performed them, were executing the duties of a Divine mission. It is true, that miracles have been often reported to have been wrought by others, at different times, and in many different countries. But all of these are markedly circumstances calculated to excite suspicion. They were designed to support the interests of a reigning superstition; the scene of their performance was always laid in the recesses of a heathen temple, or in some dark inaccessible corner, where they could not be seen or examined. And they were also, in themselves, of so trivial and ridiculous a nature, plainly marked the report of them to be a tale of imposture. But the miracles recorded on the pages of the Old and New Testament are of a very different description: they were wrought publicly, and in the open face of God, in support of a cause that was new, and "everywhere spoken against," and before multitudes, who not only did not call them in question, but who were most reluctantly constrained to admit their reality. The accounts of them were published soon after the very places where they were reported to have occurred; and they were attested by great numbers of witnesses of sober minds, unpeachable character, and undoubted veracity, who evinced the strength and sincerity of their convictions by bearing testimony to these miraculous works in opposition to their own cherished views and prejudices, and even sometimes at the sacrifice of their dearest early interests. Moreover these miracles were such a character that they testified to their own Divine origin, as they were uniformly wrought for good and important ends:—in the case of Moses and the prophets to uphold the claims of God and the true religion in opposition to idolatry, and in the case of Christ and his apostles to introduce the reign of Messiah, as well as to typify the blessings of his spiritual kingdom. As thus described, then, the miracles recorded in the Old and New Testament supply a strong additional argument for the claim of its writers to inspiration. It is necessary to examine a little further into the nature of this argument, as some skeptical, or rather rationalistic writers have attempted in modern times to deny the possibility of a miracle; and who, maintaining that the books which record these miracles are mere legendary histories, not written till some centuries after, scout the Bible miracles as myths invented by the Jews to enhance the fame of

magnify the powers of their heroes. See, however, into what absurd consequences this mythical hypothesis leads. Admit it, and you must believe that Pharaoh and his court, including the magicians who acknowledged the finger of God in the wonders done on the field of Zoan, were deceived when they thought that those appalling plagues, which were so fatal to life and property, and the disastrous effects of which were felt for a century afterwards in Egypt, had ever happened or could have happened. Admit it, and you must believe that the whole people of Israel were led through national pride to adopt a tale embodied in a history which was not composed till an advanced period of the monarchy;—that their early ancestors passed through the divided waters of the Red Sea, were sustained with manna from heaven for forty years in the desert, and entered into the promised land by crossing dryshod over the Jordan. The stories of such supernatural occurrences, it is alleged, are mere myths—just like the prodigies that figure so largely in the prehistoric periods of all countries—and they never had any existence but in the floating, fabulous traditions of the Hebrews. But how or when, then, were they brought under the notice and made matters of belief among that people? It could not be by Moses, for he was too good a man to attempt imposing on the credulity of others; and besides how could he for a moment suppose that the people of Israel would believe him when he spoke of their passing through cenes, and being marvellously delivered from evils, which none of them had ever heard of? It could not be any later period in their national history that such a forgery was palmed upon them; for it would have been absolutely necessary to persuade the people that the tradition of those miracles had always existed amongst them,—that the memory of them had always been preserved by the institution of feasts and observances, nay, that their whole national privileges were connected with them. And how could such a thing have been possible, if no memorials of those miraculous events had been preserved? But a copy of the book that recorded the early history of Israel was deposited in the Tabernacle shortly after the occurrence of those incidents. The text is attested in the New Testament, and therefore the Mosaic history, including the miracles, must be received as true. In like manner, admit this skeptical theory, and you must believe that the miracles of Christ (to say nothing of those of his apostles) were mere myths,—miracles which gladdened the hearts all homes of multitudes by the restoration of their lost senses and their dead relatives,—miracles which were so openly wrought, and were also stupendous a character, as to arrest the attention of Herod as well as form a subject of discussion in the Jewish Sanhedrim, and which, as the climax of all, were crowned by the resurrection of the eminent Personage who died them, after He had been publicly executed on the cross,—you must believe that those miracles were mere myths, which originated in an ignorant and credulous age; while in the face of this skeptical theory, the latter great and miraculous event was commemorated, as all the world knows, by the consecration of the first day of the week, which began to be observed at the time, and has been continued

a standing memorial of it throughout the Christian world ever since. Such are a few of the strange inconsistencies and absurdities into which the mythical hypothesis leads; and those who, rejecting miracles as impossible, take refuge in its monstrous conclusions, appear to be far more credulous than simple believers. Plain readers of the Bible act more agreeably to the dictates of reason and common sense; seeing the miracles related in it to be in perfect harmony with the whole tenor of the sacred history, as well as the exalted and holy characters of the persons who wrought them, they admit without hesitation the reality of those supernatural deeds; and being persuaded that the God of truth, wisdom, and goodness, can never give his testimony to falsehood, they are disposed to say in the words of Nicodemus, "We believe that the writers of the Bible were teachers sent from God, for none could have wrought the miracles which they did except God were with them."

THE PRESENCE.

FOR "THE FRIEND."

A distinguished servant of the Lord lay a dying, a friend said "Do you feel the promises sweet to you?" "Yes, but I feel the Promiser sweeter."

We have a fear that many devout persons do not come up to the full measure of strength and joy, for want of a little more care in recognizing the Holy Presence, when they read the Holy Scriptures. The Bible is more than printer's ink, or bookbinder's art, we may say that God is in the book, but that is not all. He is with the book. The Bible is a screen, for behind it I can hear his voice, a veil, and through it I can feel the warm breath of his presence. He is nearer to me than I am to myself. Here is the secret of power: power from on high. This is the reason why Paul could say "I can do all things." This is the secret of devotion; it made St. Francis call poverty his bride; it made Pascal conclude that his constant ill health promoted his spiritual perfection. Peace in the battle, rest in the whirlwind, ineffable power overcoming all, so that the soul in the very vortex of the maelstrom may know itself at rest. This is how the martyrs died. Take an instance: "Cicely Ormes, the wife of a worsted weaver, and daughter of Thomas Hound, a tailor, was burned to death for her faith at Norwich, on Twelfth Month 23rd, 1537, aged thirty-two. After coming to the stake she knelt down and prayed. Then rising up she said, 'Good people, I believe in God the Father, God the Son, and God the Holy Ghost, three persons and one God. I believe to be saved by the death and passion of Christ. Good people, as many of you as believe, pray for me.' Then laying her hand on the stake she said, 'Welcome the cross of Christ.' Which being done looking on her hand and seeing it blacked with the stake—for two martyrs, Simon Miller and Elizabeth Cooper, had been already burnt at it, she wiped it on her smock. Then touching the stake again she kissed it and said, 'Welcome the sweet cross of Christ' and so gave herself to be bound thereunto. After the fire was kindled she said 'My soul doth magnify the Lord and my spirit rejoiceth in God my Saviour.'" (Luke i. 46).

H. T. MILLER.

BEANSVILLE, ONT.

ST. JOHN THE AGED.

I'm growing very old. This weary head That hath so often leaned on Jesus' breast, In days long past that seem almost a dream, Is bent and hoary with his weight of years. I'm old, so old I cannot recollect The faces of my friends, and I forget The words and deeds that make up daily life; But that dear face, and every word He spoke Grow more distinct as others fade away, So that I live with Him and holy dead More than with living.

Bear me once more to my church! There let me tell of a Saviour's love; For, by the sweetness of my Master's voice Just now, I think He must be very near, Coming, I trust, to break the veil, which time Has worn so thin that I can see Beyond and watch his footsteps.

"His worth a hundred years To feel this bliss! So lift me up dear Lord; Unto thy bosom. There shall I abide."

H. T. M.

[Copied and condensed.]

FOR "THE FRIEND."

Extract of a letter from Vasilla Verigin, brother of Peter Verigin, now in exile in Siberia, to one of the Brethren in Canada.

VILLAGE PETROPAYLOVSK, }
February 20th, 1902. }

Dear Brother in the Lord, Anton Vasilievitch. —Thy brotherly letter to me of the 14th of October last year I received. I am very thankful to thee for thy brotherly love, remembrance and wishes. May the Lord save you with an everlasting salvation; and we mutually wish you, dear Anton Vasilievitch, with your dear wife and children from the Lord God, health and prosperity in this bodily life, and in the spiritual may the Lord send you wisdom and perfection to attain to the eternal joys in the heavenly kingdom, which the Lord hath prepared from the creation of the world for those who love him and do his will. In my thoughts I embrace thee, brother, and also your wife Anna Savilevna, with her children. I warmly kiss you and with brotherly, open love give you a low bow. I am safe and well, thank God, and for the future am also trusting in his mercy. I am very grateful to my mother and all relatives for their greetings and wishes. May the Lord be merciful and save them.

I thank thee also, Antosha, that you visit mine (relatives), and let me know of their health and welfare, for your kind dealings toward our relations. If we ourselves may not have the privilege to reward you, the Lord surely will not forget you for your kind actions which you do before the eyes of the Almighty God, and still more if you do that not for the praise of men or any personal profit, but do it from love to God, doing his commandment in helping the widows and orphans about whom the Lord said: "I will be as a husband to the widow and a Father to the fatherless." Here the Lord at this time is fulfilling his promise through kind people. This I say straight concerning our wives and children. Maybe I am making a mistake, Antosha, that such words of the Lord I am applying to such wives and children, but I can't do any otherwise, for it is told to people living in this life, especially at this time of our separation and suffering for the sake of the Lord's name. There is no doubt but this is said to people;

one ought not only to know if we can apply such words to ourselves, but one has to lead a life in accordance with those words, and to be in truth doers of his holy covenant and to give up our lives entirely to God and in everything to act as in his presence. Then why could not such people reckon themselves worthy of those words? It is accessible to every one of us, and if we desire and press on, the Lord God will not deny any of us to be counted his children.

Dear Antosha, transfer my greetings to my dear mother and sister Annie, also Mary and Grounina with children, and to all my relatives a low bow and good wishes for all their life. May the Lord send them all heavenly and earthly blessings. Tell them that, if we can not serve them in any material way, yet for all that, in our hearts we never forget them and always try to live worthy of those that are banished for his truth.

Where is your brother Alisha living with his wife Polia and children? Probably you see them sometimes, I pray thee, give them my brotherly love and good wishes, may the Lord send them all that is good in this life. Also to all your relatives.

Fred and William live in Notora, Vania left for Takootsk on account of sickness. In spring he promises to come back by steamboat to Notora.

With this mail there was a letter received from Yakootsk in which there were joyful and grievous news. The letter is from Gresha Araeshin to his uncle Vasia. You have probably heard that Araeshins have settled near Amga and he writes from town to Amga addressing it to Vasilie Verigin. Grievous news was that Gresha informs Vasia that Aresha, by the will of God passed away on the 10th February at 2 P. M. Receive, Lord, his soul into Thy heavenly kingdom. Aresha was a man of a kind heart and has left after him a good memory in the hearts of men.

The joyful news in the letter was that Gresha writes that he will come to us in the end of March, and will probably not build any more, because the news has gone around town that the elders will be released. Not long since there was a telegram received and in it is said that the Government has settled to release the elders. How true is it? If it is true it will be joyful news.

I am safe and well, thank God. About my coming here from Natora I wrote in letters to my relatives and probably you also know, Antosha. Give my greetings to my brothers in the Lord, Vanusha and Pavlousha Planeden, with their wives and children. Tell them I received their letter and have sent an answer of the 1st of January. Good bye, dear Antosha and all your family.

I remain trusting on the mercies of God,
Your brother in the Lord,

V. VERIGIN.

For many centuries the public worship of Jehovah in any degree of purity was confined to an insignificant fraction of the world's population; and they were often lamentably corrupt; yet they were preserved from utterly perishing, a remnant of vitality being vouchsafed them which has taken deep root and is still growing, bearing fruit to the healing of the nations.—*Isaiah Epistle.*

FOR "THE FRIEND."

The Quiet Removal of a Corner Grocery Store's Traffic in Tobacco.

In the suburbs of the city, a small corner store property used as a grocery, has for some years been under the oversight of the writer of this, as trustee. It is presumably well known that, included in almost every groceryman's stock is to be found a liberal supply of tobacco,—tobacco for chewing, for smoking in pipes, and in the form of cigars and cigarettes. Were we to look this mercantile occupation over throughout the length and breadth of the great city which Penn founded, and indeed of any city and town in the land, as well as in the little villages and at the cross-roads stores of the country side, it would probably be found that hardly one dealer in a hundred is exempt from handling the weed.

Notwithstanding this is so generally the accepted practice, it was impressed upon me in the case under consideration, to take steps to have the sale of the tobacco discontinued, though it seemed probable this might not be easily done, and that a vacant store would be the outcome of the effort, seeing that the father of the family was a confirmed smoker, and the sons were believed to have no scruple against that part of the traffic.

About two years ago, a little change in the moderate rental being mutually considered, the tenants were made acquainted with my disapproval of tobacco using and selling, the sale of cigarettes being then particularly alluded to. There was no denial that that cunningly devised product of the tobaccoist's art worked very great mischief, especially upon the young. Well, now, assuming that the proposition as to the rent charge were to be modified, making it lighter, would it not be the proper thing on their part to drop the sale of the cigarettes, for truth to say, I did not feel easy to have the destructive things dealt in upon property in which I had an interest. The fact that I was not the veritable owner (a readily availed of escape-hole for stirred consciences), I felt did not release me, who was the responsible factor. To my relief the proposition was accepted.

A prior experience of perhaps a dozen years earlier, had had its weight in my taking this course. A very little shop, in connection with a dwelling, had been used for the sale of candies. Some cigars began to be sold, and then, a German woman coming into the tenancy, cigarettes were kept in quantity. Contrary to the law, these were sold to young minors, and, likewise against the law, sales were made (so I was informed) on the First-day of the week. Further, the tenant had refused to remove certain pictures of a kind which commonly, and disgracefully, accompany the cigarette traffic. Listening to no expostulations against the wickedness of this course, a legal notice to depart from the premises was the only evident remedy, though the occupant, finding her money would not be accepted, crouched down, aggressively, as would a tiger when seeing its prey was being taken away.

Returning from this digression to the corner grocery, a right opportunity being sought, when a withdrawal of the entire tobacco "privilege," could, without undue arbitrary procedure or injustice to the tenant be accom-

plished, the end desired was effected some what unexpectedly. The ill health of the older son, on whom the business mostly devolved, necessitated his leaving the store for some months. Meanwhile, the introduction of a little improvement to the premises was mooted. On the return of the young man the subject of discontinuing the tobacco sales being presented, the usual counter argument that if he did not sell the article plenty of others would, was advanced, while, as there was so much keen competition and it was not easy to make a living at the business, my views on the morality of the tobacco trade ought not to guide him. The objector was informed that this was a conscientious scruple of a kind not to be put aside—and whither did he think the world would drift to if there was no endeavor to follow one's serious apprehensions of right and to strive to make something of a stand against the evil which came in like a flood? The matter of the suggested improvement was then brought up, and the assurance being given that with the putting away of the tobacco the improvement would be made, and without increase of rent, the proposition was straightway accepted. It seemed as though the low state of health of the young man more readily inclined him to accede to the plea for the right course. No request was made for three months' or six months' time allowance within which to make the change, and there has been no sign of the weed on the shelves or the counter since.

It may not be amiss to say that the state of our membership in North Carolina as affected by its pronounced environment of tobacco was felt during the operation of the concern above related. Many of us wish to help our brethren therewith in this regard, and in order thereto we will undoubtedly do well if favorably to keep ourselves clear. JOSHIAH W. LEEDS.

WEST CHESTER, PENNA.

SOME other matters may be more acceptable to some people than the plain, simple, straightforward gospel. They may crave an exhibition of eloquence or worldly wisdom and wear of pleasing flattery rather than to have the sins probed into; but we must take our stand with the gospel, for we are commissioned to preach this glorious gospel in the fulness of its truth and power, whether men will hear not, be pleased or not. Our motives should be cleansed of the desire simply to use his sounding phrases, or deep reason, or to please the ear with the fine turns of rhetorical expression, or to entertain by fine words, pictures of fancy and the imagination. The gospel is the power of God unto salvation, and needs adventitious aids to find way into hearts. If it be preached from a full mind, a good heart, and fresh communion with God, "not with enticing words of man's wisdom, but in demonstration of the spirit and of power."—*Lutheran Observer.*

"I did not expect to get a cent from you," said one who had gone to ask of John Murray a contribution for a benevolent purpose, "but had received one hundred dollars." "You twined out one of the candles by which you were working when I came in." "It is by practicing economy that I save up money with which to do charitable actions," was the reply, "one candle is enough to talk by."

FROM THE BRITISH FRIEND.

The Quaker Methodists.

An Account of the Early Independent Methodist Churches.*

To restore apostolic simplicity has been the dream of many sincere Christians. There is fascination in the ideal, and where the efforts to attain it have revealed a blending of common sense with the needful self-sacrifice, sympathy has seldom been withheld. There may be for Friends a more than ordinary interest in the religious experiments which resulted in the formation of the Independent Methodist Churches at the end of the eighteenth century. "Quaker Methodism" was the name invented to describe it. It was a term given in derision, and by those outside, yet it came into use and described an interesting people for more than half a century. A better designation could scarcely have been found, for the pioneers comprised both Quaker and Methodist, and they were finding their ideal in the blending of what seemed strongest and best in both churches.

It can be well imagined that there were Friends who were restive under the quietism and want of progress of the eighteenth century, especially with the example of early Methodism before them. And it is not difficult to realize that in the Methodist church there were some who, though touched with its zeal, were not convinced of the soundness of its position in point of ministry. These dispositions seemed to meet in the case of a few men in Warrington in 1796 or 1797, and the result was the formation of a church of small proportions but very exalted ideal.

No complete account of its formation is preserved, probably none was ever written; but it is clear that the inception was quiet, and that there was no marked cleavage on either side. There was a grievance against the Wesleyan ministry, owing to their refusal to allow the holding of cottage services, and beyond that nothing is known.

The ardent Methodists of the movement were Charles Mills and Peter Phillips, and from the friends came Peter Wright. The place of honor among these, and the title "Founder," is always by popular tradition been accorded to Peter Phillips, a man who combined in his character the best elements of Methodist and Friend, and who held closely through a long and strenuous life to the ideal of the Society.

CHARACTERISTICS.

It is interesting to study the characteristics of the Quaker Methodists. In the first place they were distinctly evangelical. Week evening meetings were of Quaker type, but the "Sunday services" were prearranged, and used for the preaching of salvation. In their manner of preaching they were distinctly Methodist. Their teaching and doctrine was that of the Society of Friends, and the question of ministry was settled upon the basis of the doctrine of the priesthood of believers. Professional ministry and clerical titles were repudiated, and no remuneration allowed for any service rendered to the spiritual interests of the Church. It was only after much agitation

that sustenance was granted to evangelists who travelled in the ministry, and to the present time the entire work of the denomination has been done gratuitously. In course of time, when new churches were established, the question of organization and government came under consideration, and in this they leaned towards the Congregational view, and held for the independence of each body of believers.

With a sagacity which their history has justified, they chose what seemed the strong points of three branches of Nonconformity. They placed themselves on the bed-rock laid bare by George Fox, but found value in the principle of Independency; and sought their progress through the medium of the methods of the then rapidly-extending Methodist church. This blending of principle is still characteristic of Independent Methodism, and has produced through a century communities of Christians, alike in practice, in modesty, and in unvarying adherence to the original ideal.

The story of the early years is one of remarkable self-sacrifice and devotion to principle. They worked quietly, yet enthusiastically, for the salvation of men, and, notwithstanding poverty, erected a number of meeting-houses in South Lancashire, as the homes of newly won Christians. Intellectually, the Quaker Methodists were not given to controversy, and took up the wise attitude of not attempting to prove anyone else to be in the wrong, but sparing no efforts to put themselves in the right—a mental attitude which might have been copied with advantage by many of their successors—and it is not surprising to find that from the first they seemed to have commanded universal respect.

Quaker dress and habits prevailed among them, and though they used singing, the use of instruments was debarred. Indeed, so closely did they resemble the Society of Friends that it would be much easier to name the points of difference than those of identity, and these, we think, would be found to be matters of usage rather than of belief.

LORENZO DOW AND THE QUAKER METHODISTS.

Unfortunately there is no complete account of those early strenuous years. A dread of vain glory prompted them to silence, and the only testimonies to their zeal are those of outsiders. We refer only to one of these, but one to which a special interest attaches—that of Lorenzo Dow, the famous American evangelist. Lorenzo was one of the wandering stars of the spiritual firmament; a man of visions and dreams, an unusual spiritual genius. This remarkable individual seems to have become deeply attached to the Quaker Methodists, and for an extended period made the house of Peter Phillips his home.

The circumstances of their becoming acquainted are interesting. Dow had been moved to visit England, and, though he had no friends here, crossed in a sailing vessel in 1805. His brave wife Peggy accompanied him, and tells in plaintive words of the thirty-five days' sea passage, during which she saw no one of her sex, and of her forebodings as to the strange land they were visiting. No friendly door opened to them in Liverpool, but by some means opportunity to preach in a small church

of the "Kilhamites"—now the Methodist New Connection—was found.

He was at this period quite unknown on this side of the Atlantic, a wandering preacher, "without visible means of support," friendless and all but penniless, wearing long, unkempt hair, that hung around a haggard face deeply marked by smallpox, with nothing indeed, but his spiritual gifts to commend him to the sympathy of good men.

It happened that Peter Phillips was in Liverpool to buy rushes for his chair-making trade, and feeling "drawn" to enter the Kilhamite church, heard the unknown preacher. An interview was sought, and an invitation to visit Warrington given, and thus began a friendship between two uncommon men, which lasted till death separated them. From that time forward the house of Peter Phillips became his home, and Warrington became the scene of extended labors and remarkable religious awakening.

In a remarkable volume, bearing as title, "The dealings of God, Man, and the Devil with Lorenzo Dow," a journal that reminds us alternately of those of George Fox and Wesley, he tells the story of his English wanderings, and has much to say of the Quaker Methodists.

"These people are called in derision 'Quaker Methodists,' because they are so simple, using the plain language, and hold class meetings," is his first comment. But stirring things happened. The meeting-house at Friar's Green became the scene of a great revival: people flocked from afar to hear the strange preacher who in thrilling accents was calling men to repentance, and there was an awakening memorable alike for both preacher and people.

Other events, equally unexpected, bound him to the Quaker Methodists, and made their meeting-house a hallowed spot. But to read of these one must turn to the journal of his wife for they were experiences best told, because most keenly felt, by the woman who shared his vicissitudes. Peggy Dow's journal lingers in the minor key, and reveals in every page the heart of a brave and a tender woman. She left her first-born, the "idol of her heart," in the "burying-ground of the Quaker Methodists." Her child was born here, and as she had been sick of a fever, and lain many long weeks at the home of Peter Phillips, the little one was removed to the country. The news came that it was dead. It was carried to Warrington to be buried, and the little coffin was to pass the window of the house in which she was. In plaintive words she tells of her strong desire to take a glimpse of it as it passed, and how the solicitude of her friends prevented it. Her husband was far away preaching in Ireland, and she must bear her grief alone. "It was a sore trial, but the Friend of sinners supported me."

It is not surprising to find Lorenzo in later life exclaiming, when his thoughts turned to Warrington, "Oh, the feelings of my heart towards that place; feelings that no language can describe."

Strong personal ties were established during the days of sickness and trial, and a deep attachment was formed between Peter and Hannah Phillips and Lorenzo and Peggy Dow.

From the home of Peter Phillips he sallied

*This article is kindly sent us by Arthur Mounfield, of *The Independent Methodist*.—ED. BRITISH FRIEND.

forth upon innumerable excursions to preach to wayside congregations, and stories of the weird preacher still linger in the villages of Lancashire and Cheshire.

It is difficult at this distance to estimate his power and influence. His genius was that of Whitefield rather than of Wesley. He reaped incessantly and in any field, but left others to gather and bind.

ORIGIN OF PRIMITIVE METHODISM.

Most notable perhaps among the results of his preaching were the circumstances which led to the formation of the Primitive Methodist denomination. It was owing to an appeal of his that two young men named Hugh and James Bourne decided upon the holding of the open-air meetings, which gave occasion for the unhappy controversy and division in Methodism in 1806. As revealing a point of contact between the two bodies in their early days, it is interesting to find Lorenzo placing it on record that the "Quaker Methodists," both preachers and hearers played a great part and gave support in the camp meetings. However much the eccentricities of this wandering preacher may have marred his influence, it is clear that he left a mark upon England which several generations have not effaced.

FREE GOSPELISM.

There can be no doubt that the societies received a great impetus from the prolonged labors of Lorenzo Dow, but we are not quite sure whether he did not unwittingly bring upon Quaker Methodism its chief blight and hindrance. In his unceasing travels he discovered in various towns "free Gospelers"—small bodies of Methodists who had severed from other churches as a protest against a hired ministry, and for whom "Cheap Gospelers" would perhaps have been a more appropriate description. He gathered representatives of the Quaker Methodists and Free Gospelers at Leeds in 1806, and some sort of federation resulted. But there was a vital difference of standpoint between the churches so apparently similar. The Free Gospelers held for Methodism minus a hired ministry; the Quaker Methodists had taken their stand for the priesthood and equality of believers with Apostolic simplicity and usage in all things. Externally almost alike, they viewed things from positions which were essentially different, and perfect harmony has never resulted.

THE CONVERSION OF ROBERT MOFFAT.

One or two events in the history of the denomination may be briefly noticed as having a general interest. It was in one of the small meetings of the Quaker Methodists that Robert Moffat was converted. At High Legh, in Cheshire, a meeting held in the dairy of a farm has an unbroken history of fully a century, and at a service here, whilst an undergardener at High Legh Hall, Robert Moffat found the light. The reader of his journal will remember his account of the experience, and of his subsequent walk to Warrington, during which he saw the missionary placard, and may reflect upon the great issues which have hung upon trivial things.

The farm buildings which offered a meeting place for worshippers in his day have disappeared, but the service continues, and the vis-

itor may still see the reading-desk which did duty then as now, and may visit the modest two-roomed hut in which he lived.

THE FIRST TOTAL ABSTINENCE SOCIETY.

To two great teachings the Quaker Methodists, or, as we now call them, the Independent Methodists, have shown conspicuous fidelity—those of Peace and Temperance.

In 1830, when a few earnest men began an agitation in Lancashire, in favor of abstinence from intoxicants, it is said that the only doors open to them were those of the meeting-houses of the Quaker Methodists. Certain it is that in one of them the first English total abstinence society was formed. The history of it is of interest, inasmuch as it places the date of the movement earlier than that usually assigned by temperance historians, and lends probability to the assumption that the men of Preston derived their beliefs and impetus from existing societies.

In 1830, two members of the Society of Friends appeared in Warrington as total abstinence lecturers. They were G. H. Burkitt, of Dublin, and W. Wood, of Manchester. But prejudice was strong, and neither public buildings nor churches could be obtained for the purpose of their meetings. The Quaker Methodists alone were sympathetic, and in one of their meeting-houses at Stockton Heath the first society of which we have any record was formed. The pledge upon which it was based is preserved. It is dated April 4th, 1830, and reads: "We, whose names are subscribed, believing that intemperance, with its attendant evils, is promoted by the prevailing opinions and practices of society with regard to the use of intoxicating liquors, and that decided means are called for, resolve to abstain from the use of intoxicating liquors ourselves, and to dissuade others from using them, and by all proper means to discountenance the cause and practice of intemperance."

Other societies came into existence in the same year in Warrington and High Legh, and a leavening process can be shown to have proceeded through South Lancashire. It was in 1832, that the men of Preston began their advocacy, and by the adoption of different methods brought their teaching more acutely before the notice of the world. They were the first to raise a noise of battle, and have had the leading place assigned to them in temperance history. But the Quaker teachers already named were the true pioneers, and to them must be given the credit for the formation of the first English total abstinence societies.

THE EARLIEST BAND OF HOPE.

It is important also to record that the first organized effort to spread temperance principles among the young was made by the Quaker Methodists of Warrington. As far as research can show there is no earlier Band of Hope, or Temperance Society for the Young, than the "Youth's Total Abstinence Society," which was formed in the early thirties in Brick Street Sunday School.

THE DENOMINATION.

Of the history of the denomination we have not set ourselves to speak. Its growth has not been due to the influence of any commanding personality or wave of feeling. It has had

no Fox or Wesley to fix its ideal or tell the world of its principles. Nor has it had a literature to bind its scattered parts together. One might expect that with so little to bind, and so much liberty to enjoy, churches would develop differently under varying conditions, and often be at the mercy of men of masterful mind. This has unhappily been the case, and it is here that the want of progress finds explanation. Yet the denomination has been true to its early ideal, and was never more than at the present time.

Happily it has been saved from eccentricities in matters of usage, and whilst its rate of progress has been disappointing, there is comfort in the reflection that there is little to unlearn. Like the Society of Friends, it has had its period of quietism, but there is evidence that the awakening is complete, and a strong disposition for progress and self sacrifice, joined with a perfect unity, has become an outstanding characteristic. Its own adherents do not doubt that it carries a permanent message, and when the changing atmosphere of the religious world is considered and it is remembered that ever-increasing numbers are accepting—in theory at least—Quaker teaching concerning the ministry, it will be admitted that a progressive form of Quakerism is likely to find wide acceptance. The Quaker Methodists were idealists in their day, but the ideal of yesterday may be the real of to-morrow.

It remains to say that at the recent Annual Meeting the membership of the Independent Methodist Churches was given as eight thousand seven hundred and three, with twenty-six thousand seven hundred and forty-four Sunday School scholars.

FOREVER IS THY WORD FIXED IN THE HEAVENS.—Some time since a visitor at the Observatory of Harvard University was desirous of looking through their great telescope. Consulting a book of astronomical tables, his friend said: "A star will pass across the field of vision at 5.20 o'clock." The instrument was adjusted and the visitor, lying upon his back, applied his eye to the glass, his friend meanwhile standing with a small hammer in his hand and with his eye fixed on a tall chronomet clock. At precisely 5.20 o'clock the observer said, "There!" At the same instant his friend's hammer struck the table. The exclamation and the hammer stroke were absolutely simultaneous; although the man at the telescope could not see the clock, nor the man with the hammer the star. It was a wonderful coincidence—that passage of the star hundreds of millions of miles away across the object glass of that telescope, at the instant when the second hand marked the hour 5.20 o'clock. The wonder seems greater when we know that the book in which was the predicted position of that distant star was published ten years before, the forecast being based on calculations running back a thousand years! In the same book were other tables predicting celestial movements a thousand years still in the future—movements which we may be assured will prove as certain in fact and as exact in the results as that which has just been noted. So perfect is the law of God, and so absolute the obedience of Nature to his decree! But the order of Nature and the God of grace are one; and

relations to redemption are equally definite and are sustained by no less power than those which bind the universe about his feet. "If," saith Jehovah, by the mouth of his prophet, "I can break my covenant of the day and my covenant of the night, so that there should not delay and night in their season, then may I also break my covenant with David, my servant." And so it is that we may have strong consolation whoever of us have fled for refuge to the hope set before us in the gospel. The covenant on which we rest is as sure as—nay, ten thousand times surer,—than any of the ordinances of Nature.—*The Patriot*.

Elizabeth's Second Thought.

Elizabeth McDonald mounted the steps slowly. There was a little pout on the lips, a wrinkling of the brows, a murmur of discontent. Evidently Elizabeth was not pleased. It was the summer of 1863, in the little town of Gettysburg. The last week had been exciting. For three days the dreadful battle raged. Now the rebels had gone, but no different the staid old, peaceful town! The streets were in confusion, the church bells and schools were full of wounded soldiers, crowds of people were coming to see the battlefield or to help nurse the sick soldiers. In order of the McDonald home was interrupted. An uncle's family, driven from their home, which had been claimed for sharpshooters, were staying there, and the general of the sharpshooters had been invited to join the party at breakfast. There was no room for Elizabeth at the table, but that was not cause of her ill humor, for Elizabeth had brought up in the old fashioned way, and that it was perfectly proper for "children to wait." It was the bill of fare at which Elizabeth's nose turned up the least bit, and the stiff thought that such a handsome big meal ought not to have been set down to be so incomplete—frizzled chipped beef, without butter, coffee without cream preserves. But what else could be done? Mother McDonald's good housekeeping did not prevent the hams from being stolen, or bring the milkman from the farm. An agitated Elizabeth found her way upstairs to the enclosed porch and looked out over the neighboring gardens. Beyond to the west lay blue mountain tops, serene and unconscious of horrors upon which they had so lately viewed them. But Elizabeth's point of view near.

Only a few yards away sat a soldier ready for his breakfast. Slowly he opened his rucksack, and the meal was soon set forth—a slice of hardtack, a slice of greasy bacon, and a tin cup of black coffee.

Elizabeth's lips curled again. How could it be such stuff? The soldier waited, but not with common courage to begin the uninviting breakfast. To Elizabeth's astonishment he held his hands and bowed his head, then declared himself as a devout Roman Catholic, exclaimed Elizabeth under her breath, "he can be thankful!"

There were five minutes of thought. Then Elizabeth slipped down-stairs. The frown had been a cheerful little girl was passing her general his second cup of coffee. "The

best I have had for a month," he gallantly said.

And the little girl with the thankful heart never forgot what she saw and learned that summer morning.—S. E. Stoeber in *Phila. Ledger*.

A WISE JUDGE.—Two Penobscot county farmers bought an old-fashioned pair of steelyards, each paying a part of the cost, and both used them for weighing their produce for market. After a time a dispute arose and each claimed to own them. The matter was carried into court. The jury disagreed. Then the case, on some technicality, was sent to the Law Court, and was again sent back for trial. The costs up to this point had reached about \$500, about a hundred times the original cost of the steelyards. When it came up again Judge Peters was the presiding justice. He told the counsel that, if continued, the costs would be increased to such an extent that one or the other of the parties would lose his farm in order to pay, and advised them to enter it "neither party," and divide the cost as it was. After a consultation the parties said they were willing to do that, and it looked as though the case would be settled. All at once one of the contestants went over to his counsel in the court room and asked: "But who is going to get the steelyards? He shall not have them." The other contestant made the same declaration. Then the counsel arose and said the case was just where it was before any talk of settlement had been made. They were willing to stop litigation and divide the cost, "but what could be done with the steelyards?" "I'll fix that," said Judge Peters. "Let the sheriff of the county take the steelyards at night and go down and throw them into the middle of the river, letting nobody know the exact spot, so they never can be recovered by any one." The contestants agreed to this proposition, each paid his proportionate part of the cost, and the case was dropped.—*Lewiston Journal*.

A GENTLE REMINDER.—An old man and a young man were riding in a stage-coach. The old man was grave but sprightly, short of stature, spare, with a smooth forehead, a fresh complexion, and a bright, piercing eye. The young man swore a great deal, until once when they stopped to change horses, the old man said to him, "I perceive by the registry book, that you and I are going to travel together a long distance in this coach. I have a favor to ask of you. I am getting to be an old man, and if I should so far forget myself as to use any profane language, you will oblige me if you will caution me about it." The young man instantly apologized, and there was no more swearing heard from him during that journey. The old man was John Wesley.

Items Concerning the Society.

While the decease of Maria S. Reeve, of Medford, N. J., is still fresh in our feelings, that of her sister, Rachel S. Howland, recently of New Bedford, Mass., which occurred last week, casts a solemnity over a wide circle among our membership. She was in her eighty-seventh year, and for fifty-five years in the station of minister, maintaining also an active interest for the relief and welfare of the poor and suffering. Her great-grandfather was James Logan, an intimate associate of William Penn, and an early governor of Pennsylvania.

With increasing years her allegiance to the original principles of our religious Society became more and more pronounced, and she was willing to stand, according to her measure, steadfast for the faith.

We gratefully acknowledge the receipt of the book entitled "Quaker Arrivals at Philadelphia 1682-1750," being a list of certificates of removal received at Philadelphia Monthly Meeting of Friends, by Albert Cook Myers, M. L., member of the Historical Society of Pennsylvania, author of "Immigration of the Irish Quakers into Pennsylvania."

This work is a valuable mine of information for the genealogist and for the historian interested in the early migrations into Pennsylvania. It includes a complete list of hundreds of Quaker emigrants from England, Ireland, Wales, Barbadoes, etc., arriving at Philadelphia Monthly Meeting during the above period, giving also the location whence they came, and usually other items of the condensed information especially valuable to the genealogist and historian.

In removing to Pennsylvania the Quakers brought with them certificates of removal or membership, which were received and recorded by the Monthly Meeting at the place of settlement. As Philadelphia, the metropolis, received more of these certificates than any other section of the Province, this list is of peculiar value.

The material has been carefully compiled from the original manuscript records of Philadelphia Monthly Meeting,—from the Book of Recorded Certificates at Fifteenth and Race Streets, and from Original Certificates and Men's and Women's Minutes at Fourth and Arch Streets. No one else has ever collected and printed these records.

A full alphabetical index of the names is appended.

Printed from the type, and edition limited to 300 copies. Price, \$1.25, postpaid.

Ferris & Leach, Publishers, Nos. 29-31, North Seventh Street, Philadelphia.

Notes From Others.

When the hour of the mid-week service comes round, have an attentive ear and mind to its call. Go to it with readiness, and eagerness, and promptitude. There are your Christian brethren waiting for you; and they will be disappointed if you do not join them in the praise of God and contribute your part to the exercise of the meeting. Jesus, the best of friends, is there, and has a blessing in reserve for you. The Holy Spirit has fresh enlightenment, cheer and comfort for you, when you honor Him by your presence, where He loves to hold audience with God's people. And do not go alone. Take your family, as far as possible, with you, or some acquaintance. This will tend to put fresh life and vigor into all hearts, and be a means of benefit to yourself and others.

DAMAGES FOR THE SALE OF LIQUOR.—There is a statute in Pennsylvania which does not seem to be very widely known, but which could be made very effective in the hands of men determined to see it enforced. It is the law which provides that saloon-keepers shall be held responsible in damages for injuries resulting from their sale of liquors to intoxicated persons. The Supreme Court of the State has lately made a decision which sustains the law as constitutional and equitable. A poor widow sued a liquor-seller because he sold liquor to her husband until he was unable to guide his steps homeward, fell into a gutter, contracted pneumonia, and died. A jury gave the widow substantial damages, and upon appeal the Supreme Court sustained the verdict and the law. It brushed away without much ceremony the pleas made for the saloon-keeper that pneumonia, and not liquor, was the immediate cause of death, and that the man took the liquor voluntarily. The court replied to the last plea: "Every drunkard not only takes liquor voluntarily, but whenever he can get it, and

because of his weakness the law makes the saloon-keeper responsible for selling to such persons. He has not the will-power to resist temptation, and for this reason the sale to him is forbidden." A very good, brief temperance lecture delivered from the Supreme Bench.—*Presbyterian.*

SUMMARY OF EVENTS.

UNION STATES.—The President has appointed Oliver Wendell Holmes, Jr., a son of the late Oliver Wendell Holmes, Sr., now Chief Justice of the Supreme Court of Massachusetts, to be Associate Justice of the United States Supreme Court, in the place of Horace Gray, who has resigned on account of ill health.

A riot has occurred at Duryea, near Wilkes-Barre, in consequence of an attempt to operate a coal washery, in which some persons were injured; and many have been arrested.

Under the rules of the Mine Workers' Union, in which at least 90 per cent. of the men working at anthracite collieries were enrolled, the will of the majority rules; and, as a result, the unskilled workmen, employed inside and outside the mines, really control the action of the union. It is said a very large majority of the actual miners' coal were opposed to the strike, which has not yet ended.

Commissioner Sharrett, at Shanghai, has informed the Government that the Chinese tariff protocol was signed on 15th inst. This announcement brings to a successful conclusion negotiations in progress for many months for a tariff treaty between China and this country. This has carried out the purpose Secretary Hay had maintained throughout the preceding negotiations for an "open door," the desire being to open up foreign communications with the interior of China, and thus gain access to the vast markets of the empire.

In a recent decision by Commissioner Yerkes, at Washington, the use of palm oil in making oleomargarine was declared illegal. It was shown that five pounds of palm oil would color fifteen hundred pounds of oleomargarine so much like lard that it would be impossible to tell the difference. The commissioner ruled that where so small a quantity is used, it cannot be claimed that it is put in as a bona fide constituent of the product, but is used solely for the purpose of coloring it so as to make it look like natural butter.

According to a writer connected with the United States Agricultural Department Alaska has resources to support a population of 3,000,000. The Government estimates that Alaska contains 200,000 acres of land suitable for farming and pasturage.

It is said that strontium has been found in West Virginia and in some parts of New York, while near Frankston, Pa., the mineral is found in quantities worth development. Its salts are employed in beet sugar processes and in separating sugar from molasses, and in a limited way in medicine.

The 17th inst. was the hottest day of the year in Lincoln, Neb., where the mercury ranged from 96 to 102 degrees. The same day was the coldest day of the month for the past twenty years, in New York City, the thermometer showing a temperature of from 56 to 72 degrees.

The harvest in the North Western States is reported to be the greatest ever known in that region. The earthquake which occurred at Skagway, Alaska, on the 10th inst. The three volcanoes, Mounts Redoubt, Ilimina and Augustine, in the Cook inlet section of Alaska have lately been active. An observer said: "We were in full view of all three peaks, the farthest being not more than fifty miles distant. The smoke did not appear to be very dense, but enough ashes have been scattered over the snow covered peaks to almost blacken the white surface. There was no flame coming from either mountain."

On the 13th inst. the temperature at the top of Mount Washington, N. H., registered 25 degrees and the summit was thickly covered with sleet and ice.

New Hampshire has carefully collected statistics touching her summer population. The capital invested in summer property is valued at nearly 150,500,000, and the number of summer guests is placed at 174,000. The care and entertainment of these visitors employ over 12,000 people.

The Raleigh (S. C.) *News and Observer* states that there are 9,000 children under 12 years employed in Southern factories, which condition the editor of that journal declares should not be permitted to continue a day.

Southern competition in the manufacture of cotton goods has seriously affected mill owners in the Northern States, and a recent telegram from New Haven, Conn., states, that it is rapidly transforming the pretty New England hamlet of New Hartford, a few miles west of that city, into a typical "deserted village." The business

is to be removed to Tallahassee Falls, Ala., and the mill there is to be abandoned by Ninth Month list. It employs about 700 persons, with their families.

FOREIGN.—A battle has taken place at Barcelona in Venezuela, between revolutionists and government troops, in which the former party destroyed the city.

A dispatch from Paris, of the 13th inst., says: The expulsion of nuns from conventual schools in the provinces is still marked by desperate resistance on the part of the population, and it is only where the police or military have been requisitioned to assist the authorities that the buildings have been forced into and their occupants expelled.

The work of demolishing Newgate Jail, the historic prison so long a feature of the city of London, has been begun. It is said that the prison will not be rebuilt and that the site will probably be leased for commercial buildings.

The city of Tien-Tsin, the port of Peking, has been restored to the Chinese authorities. This city has been in the hands of the allied Powers since their invasion of China in consequence of the Boxer uprising, and its evacuation has been steadily urged by the United States.

The Viceroy of Chi Li has issued a proclamation in which the people are warned against carrying arms. The proclamation, which is in Chinese and against the "other," concludes the proclamation, "but forever be at peace."

The new North German Lloyd steamship *Kaiser Wilhelm II* has been launched. It will be the largest, and is designed to be the fastest, ship in the world. Her dimensions are: Length, 707 feet; beam, 71½ feet; depth, 32 feet, and draught, 22 feet. Her displacement is 13,500 tons. She is to be of 39,000 horse power, and will have accommodations for 1,000 cabin passengers.

The low rates of freight which have prevailed for many months on both sides of the Atlantic have, it is said, resulted in the enforced idleness of an enormous fleet of vessels, particularly steamships, which are now laid up in all European ports.

An English paper announces that the automobile and a fire engine have been combined. The points of advantage which are claimed for the apparatus are these: It can cover the ground quicker than the ordinary machine, being able to run at the rate of a mile in two minutes; it can go further, thirty miles being its limit with a single supply of fuel; it can be prepared for action more speedily, only a few seconds being required to set it in motion, and the cost of maintaining it is, comparatively, very slight. The fact is, petroleum is the only fuel which is so light, regarded as a highly commendable feature, inasmuch as no sparks arise from its combustion.

"A novel plan for utilizing wireless telegraphy in its present stage of development," the *New York Times* says, "has been devised in Liverpool, and will soon be in practical operation. The scheme is to establish a post office and signal station, not in midocean, but 110 miles west of the Lizard, a place where, for British commerce at least, information from the shore is more valuable than it would be further out at sea. The purpose is to moor there a ship equipped with a powerful search light and the Marconi apparatus. It is expected that great advantage will be derived from the distribution of orders sent from shore by owners for vessels passing in or out."

The completion of the great dam across the Nile at Assouan, the first contract was announced. It is one of the largest of its kind in the world. It is about a mile and a quarter long and rises ninety feet above the river bed, is thirty feet wide at the top, and will impound 220,000,000 gallons of water. The purpose of the dam is to regulate the height of the river for agricultural purposes.

Reports and other reports from India state that the famine situation there is becoming more serious, owing to the lack of rains throughout almost the entire country, and especially in the Bombay Presidency.

The London *Telegraph* says that four hitherto unknown tongues—so far as print is concerned—are now being added to the list of languages in which the British and Foreign Bible Society prints the Gospels. The new Testament is to be turned into Nyanja, for the tribes of the Shire River basin, Nyassaland. A version in Yalunka is nearly ready for natives of the Falahe district of Sierra Leone, and in Bugoto for the inhabitants of Ysabel Island—one of the Solomon group. Lastly, a translation, into Visayan, spoken by some 2,000,000 persons in the Philippine archipelago, is being undertaken.

The feeling of opposition to the yoke of Russia by the masses of the people has been recently shown by the refusal of about 2,000 young men in one of the provinces to enter into the Russian military service, although they have by declining subjected themselves to a heavy penalty.

Certain Hungarian journals state that Count Tolstoi intends to reside in Bucharest, since having been ex-com-

municated by the Russian Church he could not be Christian burial in Russia.

It has been discovered that typhoid fever can be conveyed by means of oysters. It is said that steps are being taken in England to protect the oyster beds from exposure to contagion.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 76.

H. B. Garrett, Phila., for Frances Garrett; J. M. Sager, Pa.; Nathan Pearson, Ind.; Reese Thomas, Pa.; Josiah Wister, N. J.; Gus Kus, N. J.; Paschall Worth, Pa.; Martha M. Vaug N. Y., and for Hannah Hoyle, O.; Jorgen E. Ia.; Mary Roberts, N. J., per Susan R. Willis; Mary Paxson, Pa.; Hannah P. Rudolph, N. Warner W. Cooper, N. J.; Sarah A. Longstre Phila.; Josiah W. Leeds, Pa., and for John Leeds, N. J.; Gertrude W. Garland, Mass.; H. L. S. Taylor, Pa.; K. L. Roberts, N. J.; William Wickersham for Hannah N. Harry, Pa.; Sard T. Haight, agt., Canada, \$20, for Catharine F. Jos. H. Clayton, Jos. G. Pollard, Anna H. Moore, Henry S. Moore, Mary A. Trefrey, John Poll. George Pollard, Edward Waring and Joshua V. V. Amos E. Kaighn, N. J., and for Wm. Mary M. D.; David Heston, Phila., \$6, for himself, in B. Heston and Chas. D. Scholl; Henry Woods, N. J., for Edmund Wood and George W. Wm. W. Hazard, agt., N. Y., for Martha K. C. Mary Reynolds, Ind.; Thos. Dunn, La.; Edward Comfort, G'ton, and for Edith C. Tattall, H. Thos. H. Whitten, agt., Pa., \$12.16, for T. C. Sidney Eldridge, Albert L. Entring, Geo. O. Hibbel Sidney Temple, George B. Mellor and J. Hoopes, \$2.16; B. V. Stanley, agt., Ia., \$4.50; William Cockcock and Isaac T. Devese, \$2; Alfred Embree, Pa.; Phebe T. Hall, Pa.; Willa Abel, Neb., \$1, to No. 27; William C. Stokes; Mary E. Branson, Phila.; Mary H. Ridgway, Mary W. Bacon, N. J.; Robert R. Hulme, I. Henry B. Leeds, agt., N. J., \$6, for I. Powell Le Anne K. Woodward and Chas. A. L. Clark; Clark Moore, agt., Pa., \$20, for himself, Penn. Cooper, Elizabeth C. Cooper, Priscilla H. Hug S. Morris Jones, Elizabeth W. Moore, Pembina Moore, Sarah L. Passmore, Thos. L. Passmore d. Wm. Wickersham; Zenaida M. Hartz, Phila. Benj. P. Hoopes, Phila.; Wm. F. Terrell, Va.

Remittances received after Third-day noon will appear in the Receipts until the following week.

NOTICES.

FRIENDS' LIBRARY, 142 N. 16th St., Phila.—During Seventh and Eighth months the Library will be open on Second and Fifth-days from 3 to 6 p. m.

WANTED.—A teacher to take charge, for next term the Monthly Meeting School at Sugar Grove, Ind. Application may be made to CALVIN NEWELL, Moorestown, or SARAH T. MAXWELL, Plainfield, in

WANTED.—Position as housekeeper in private family, by a middle-aged widow, competent to take full charge. Address R. Office of THE FRIEND.

WESTWON BOARDING SCHOOL.—The fall term begins on Third-day, Ninth Month 9th, 1902. New scholars should present themselves for classification in the season or not later than 2 o'clock in the afternoon.

WM. F. WICKESHAM, Principal.

CHANGES AND CORRECTIONS IN MEETINGS AS PUBLISHED IN FRIENDS' ALMANAC.—Concord Monthly Meeting: the hour has been changed from 10 to 9½.

London Grove Particular Meeting: mid-week is held on Fourth-day at 10 o'clock and not on Fifth-day at 10 Mount Holly, N. J.: hour of all meetings changed from 10 to 10½.

Rahway and Plainfield Monthly Meeting: Monthly meeting held at 11 instead of 10½.

Lanphorne, Pa.: The hour of meeting has been changed from 10 to 10½.

Self-Love and Unity.

"Sweet are the uses of adversity," is an old remark; and we could oftener say the word of *diversity*, were we not so often aware, when we come to divergence of views and sentiments, of their engendering in us the reverse of sweetness. But it is for our training in patience that such tests of patience are suited. To some minds unity means simply "a rung over to my, or our view." "Unite with me and we shall be agreed." As a husband has declared unity in marriage to be, that man and wife are one, and I am that. Such an attitude must make one's selfishness little short of complete. But there are so exactly the same likes and dislikes, such unity of tastes shared by two together, as to confirm each in selfishness. There have been remarked in a view of our unity on love and unity. And indeed only a few days ago when a couple were paying a call, one said of the other, "I should not have married her, had not her preferences been the same as mine." The other replied such things being a true ground of unity, and she was right. But the view predominate on the Query was, that where the husband and choice of food of both husband and wife were one, neither one in the providing had to think for the other, and each had his or her own preference to suit, known to be sure to suit the other. So the husband would grow on them, of consulting self

it is with opinions. Where there is divergence of views there is occasion for each party to think for the other, or with respect to his standpoint. Thus may they hearer together in thinking with each

other,—in putting themselves in each other's place; and so find the union of sympathy a higher unity than that of opinion, or of correctness on some fact. Both are set upon a comparison of their views with the essential truth and so, if their sifting between essentials and non-essentials is honest, are drawn nearer to the central truth which should unite them.

As regards the question, "What think ye of Christ?" it does one good to try to see how much of Christ there is in others,—even in a doctrinal opponent, rather than to refuse to see anything in him but the Adversary.

Are we the pronounced standard-bearers of the doctrine of the universal and saving light of Christ for heathens as for civilized? If we felt as free to acknowledge a measure and manifestation of Christ in Christians who follow not with us, as we are to acknowledge it in heathens, some of us might be more enlarged in that spirit which is His.

Christ, "the same yesterday, to-day and forever," is not divided. But human mind cannot grasp his wholeness but sees in part and knows in part; and should be judged, not for his inability to comprehend the whole, but for his faithfulness to the point of view which he has. We may have a service of love unto his larger enlightenment, but there is none in impatience and rejection of him.

In life as a warfare for development, diversity is intended to cement rather than break up that larger unity which is in Christ. The foot, the hand, and the eye are all very unlike and diverse members but are all of the body; which deprived of some very odd member, might be found a very crippled body. But these so diverse members all have the same blood and are quickened by the same Head over all. Their higher unity in the one Head and Life, works a diversity of functions from one wisdom unto one end. Before we decide on a fellow-being's substantial disunity, let us see if we can trace him back as a branch to the one Truth and Life.

The one awful diversity is a diversity from the witness for the Truth in one's own heart. For this, whose name is Sin, every one of us shall give account of himself to God. But a healthful truth-loving diversity apparently from each other but not from Him, is under the true unity in which all lovers of Truth are

encompassed as under a higher covering; where each, though doing different work and seeing different sides of the manifold grace, is doing what his hands find to do as from the Lord unto the Lord.

There are essentials of Christian religion which admit of no variableness or shadow of turning. There are also for each Society of the Church of Christ, another set of essentials to that Society's specific existence, and without which it has no right to exist as a distinct organization. For our organization is not for itself, but for the principle which organized it for the perpetuation of its central truth among men. Diversities under this truth, and entertained for its sake, may well have their healthful place, as breaking up self-love, and promoting forbearance and love of each other.

Ascent of Mount Ararat.

At twenty minutes to seven, when the summit of Little Ararat was about on a level with the eye, we paused for awhile and turned toward the prospect, now opening to a wider range. The day was clear, and promised warmth; above us the snowy dome of Ararat shone in a cloudless sky. The landscape on either side of the beautiful pyramid lay outspread at our feet; from northeast, the hidden shores of Lake Sevan, to where the invisible seas of Van and Urmi diffused a soft veil of opaline vapor over the long succession of lonely ranges in the southeast and south. The wild borderland of Persia and Turkey here for the first time expands to view. The scene, however much it may belie the conception at a first and hasty glance, bears the familiar imprint of the characteristics peculiar to the great tableland. The mountains reveal their essential nature and disclose the familiar forms—the surface of the tableland broken into long furrows, of which the ridges tend to hummock shapes. So lofty is the stage, so aloof this mighty fabric from all surrounding forms, the world lies dim and featureless about it like the setting of a dream. In the foreground are the valleys on the south of Little Ararat, encircling around to the Araxes floor; and on the northeast, beside the thread of the looping river, is a little lake dropped like a turquoise on the sand where the mountain sweeps the plain. In the space of another hour we had reached an elevation . . . of over fourteen thousand feet. We were now no longer threading along the shore of an inlet; along the vague horizon of the summit circle was the limit of the broad white sea.

After about eight hours of continuous climbing the travelers at length gained the top of

the mountain at an altitude of more than seven thousand feet.

We are standing on the spot where the ark of gopher rested when first the patriarch alighted in the face of an earth renewed. Before him lie the valleys of six hundred years of sorrow; the airiest pinnacle supports him, a boundless hope fills his eyes. The pulse of life beats strong and fresh around him; the busy swarms thrill with sweet freedom elect of all living beings. In the settling exhalations stands the bow of many colors, eternal token of God's covenant with man.—From "*Armenia: Travels and Studies*," by H. F. B. Lynch.

Luke Howard.

Selected.

Luke Howard, of Dover, England, was a serviceable man in the early breaking forth of truth in this nation, a faithful sufferer for its testimony, and preserved to the end in peace. The following account is extracted from a short journal and collection of his writings.

In his tender years he experienced in himself the appearance of the love and grace of God, reproving for evil; and when about fourteen years of age he was bound an apprentice to a shoemaker in Dover. His master, being in a seeking state, and having forsaken the public worship and joined with some who were separated from it, treated him kindly; which so wrought on him, that he took a resolution to become more conscientious towards God, and more orderly to his master, than he had been, not daring to wrong him by neglecting his work. Thus he served out his apprenticeship to his master's content; and, a few weeks after his time was expired, he came to London to work, frequented a meeting in Coleman street, and was admitted a member thereof. The war between the king and parliament being then very hot, and forts raising about the city, he sought to be entered in the army; but many pressing to go, "it was my lot," says he, "to be left out; that so I might be clear of the blood of all men, as since I have seen it and rejoice, though then troubled at my dismissal."

He then returned to Dover, where there were several young men inquiring the way to Zion with their faces thitherward, and searching the Scriptures, hoping to find the right way. "There, and in that day," says he, "I was convinced that singing of psalms in rhyme and metre, was a lie in me as to my own condition, and a mock service as to the Lord; and was forced to sit silent under the cross, when others sung." This, at that period was so strange, that the priest took notice of him, and in a little time it was noised abroad as a great wonder, that he refused to sing psalms. His master, with whom he had served his apprenticeship, being also troubled at it, got Samuel Fisher, their priest, to come and discourse with him. Fisher had much to say to him; "But" said he, "I said what was in my own conscience manifested, and I did not know another in the world of my mind; but so it was, my peace abounded, and knowledge increased." Samuel Fisher returned home and never dared to sing more in the steeple-house; but was soon after convinced of the everlasting Truth, in which he ended his days in prison for his testimony thereto.

Luke Howard meanwhile went among the Brownists, also the Presbyterians and the In-

dependents, and then among the Baptists, with whom he chose rather to join than with any other. He passed through their ceremony of water baptism, but still knew not where to find a resting-place, not knowing he had a guide within him to keep him out of all evil; and in this state he mourned with tears.

Nevertheless he got over his convictions, and went into liberties; "In this great loss," says he, "I continued until I did, as too many do, get above the witness, and I sought to make merry over it, and to take my fill of the world with all I could enjoy thereof."

But soon after coming to London on business he went to hear a preacher in Lombard street; and afterwards a young man, named William Caton, stood up and sounded an alarm out of Zion, and proclaimed the gospel of peace out of the Lord's holy mountain; but L. Howard's mind being after visible things he slighted it at that time.

The next First-day, being at home, he was told a Quaker was preaching; and going to see what manner of man he was, found him to be the afore-named William Caton. Luke was reached by his testimony, was a guard to him from the boys and others who offered him abuse, and in the evening went to visit him, where he found his companion John Stubbs. He invited them to go home with him, which they did, and had several meetings there, and their testimony was to him as a pleasant song, and he bore them company out of town. Then exercises fell to his lot, but he was led along in safety under the teachings of truth, so that he expresses himself thus, after giving an account of the exercises he had to pass through: "My experience hath been and is, as I abode in obedience to the Lord in waiting on Him, which I hope I shall ever do; the word of the Lord opened to me when in a great strait, saying, 'I will cleave the rocks and mountains, that the redeemed of the Lord may come to Zion;' at which I felt and saw a little light, and a hope sprung up of getting over and through those rocks and mountains of thick and black darkness in me, which the enemy presented to be so great, that it was impossible to get over. So then, and ever since, in that grounded hope, as an anchor to my soul, I have cast my care upon the Lord and have rode through many bitter storms, and I bless the Lord my flight hath not been in the winter, and now, I hope in the Lord, it will not be in the Sabbath-day. Even so, amen."

In the course of his pilgrimage it was sometimes his lot to be imprisoned. Once he was sent to Dover Castle with three more, and detained sixteen months because he could not forbear meetings. At this time he employed six men in his trade, but he was obliged to shut up his shop for six months. Neither could he work in prison for a time; but obtaining the liberty of an entry to the grate, where they drew their meat up with a cord, he worked a little there, and his wife kept cows and sold milk, to assist in supporting his family; "and," says he, "I had perfect peace, joy and content in it all; and the Lord made it all good to me, both within and without." It also appears he suffered a long imprisonment in the castle, in 1684; during which he often pleaded with the magistrates on account of their cruel and unjust treatment of him.

Thus persevering, he was preserved in

greenness to old age. The following expressions were taken down during his illness friend present as delivered, viz: "God, Lord of heaven and earth appeared to me an acceptable time in the year 1655, by word, through his servants John Stubbs William Caton, in the gift of his grace, son of his love, Christ Jesus, whom he got out of his own bosom, and by the sword of his own mouth, and by the brightness of his shining, cut me off from the wild olive tree, which I was rooted in by transgression, grafted me into the true olive root, the life which is the light of the world, and by his Spirit in my heart, raised me to work in spirit and truth. Then the cross appeared so great, that if it had been his I would rather have parted with my natural life if I could have had peace, than to have taken it up; but in the day of his love and peace through the word of life, and the arising thereof, I was made willing to do his will, to take up the cross, not for a little while, but with a resolution as long as life continued. And though many temptations have attended, yet the Lord hath delivered me out of them all, and hath engaged my soul and all within me, to serve Him in newness of life and blood, and continued a breathing, that He would never give more knowledge than He would give me power to obey; and in the day that hath made me willing to serve Him and myself, and his reward is in my bosom. He is worthy to be worshipped, obeyed, and fed forever, for He speaks peace to his children, that they turn not again to folly. In peace stands my rest, which rest remaineth the people of God, and in this I take my life of the world, with soul, body and spirit, given up to the Lord in and through his grace, as a life of Christ Jesus, in whom all the promises are yea and amen."

He departed this life the seventh of the Eighth Month, 1699.

QUARANTINE YOUR HOUSE.—You must quarantine against immoral literature. This is a deadly poison. It comes in various and attractive disguises. Exclude it as you would the germs of a pestilence. To effectually protect your homes from its baleful influence supply them with healthy literature. It is as easy to cultivate a good as a depraved literary taste in children. They will read anything, and what they read will exert an important influence on their character. Let your most earnest effort be exerted to keep out of the house the sensational novel, the blood-curdling tale of vice, the obscene pictures, and the whole flood of wicked, degrading, crime-producing literature that threatens us. Put a reach of your family good papers, magazines and books. Bait them with a chaste story, and keep them supplied with wholesome knowledge. A bad book may prepare your son for the life of a felon. A novel may vitiate the whole life of your daughter.—*Memphis Advocate*

THOUGH you feel to be few in number, yet trust there may still be preserved a remnant to uphold the standard of truth as professed by Friends, remembering that strength is always in proportion to numbers. For we were told that "one shall chase a thousand and ten put ten thousand to flight."—*Iowa Epistolary*

Epistle to Friends of Great Britain and Ireland.

BY MARY JESSUP.

ar Friends:—Prompted by motives of devotion to my fellow professors and by a desire for the exaltation of Christ's kingdom in hearts I venture to address them on a subject which appears to me to be of the first importance. I have neither the tongue nor pen of the learned to employ in this service; I believe this ought not prevent my writing, in the simplicity of my heart, the message I have long been under on behalf of members of our religious Society, that they increasingly become a spiritually minded people; such were the primitive Christians; there is reason to believe, were our early disciples; would it not be well for us to consider by what means we also may be enabled to walk in the spirit with persevering watchfulness? To engage in religious performances with unprepared hearts would not promote this noble end; but I would encourage all amongst us to be vigilant in waiting for the Spirit to perform the indispensable duties of prayer and praise; and this not only in religious meetings and when families are gathered for reading the Holy Scriptures, but also to be taken daily to dedicate a portion of the day to withdraw from our temporal engagements, and even literally where it may be, to retire into the closet or private apartment and shut the door, that we may be secluded from all worldly interruption; such an effort to disengage our minds from bewildering things, it is loved would prove an acceptable sacrifice in the sight of Him who seeth in secret. And an encouragement might at times be felt that "the flesh is weak," yet, if there be a patient waiting for holy help, and a perseverance in looking unto Jesus, the Author and Finisher of our faith," there is no need to believe that a capacity would be given to bow acceptably at the footstool of His mercy and to offer up our petitions for others to "lay aside every weight and the sin which doth so easily beset," and "to run with patience the race set before us."

Would this address obtain general circulation, I trust it will fall into the hands of many who testify from blessed experience that seasons, when they have retired in a state of loneliness and insensibility, light has arisen, and they have been favored to experience a hunger and thirst after righteousness," and that they have been made sensible that the Father indeed helped their infirmities and intercession for them. I do not assert that every rightly exercised mind will, at all times, derive sensible encouragement and comfort from this practice; but I fully believe it is nevertheless our duty to place ourselves in a situation the most likely to draw down the Divine blessing upon us. There will be seasons when we shall have the assurance of death in ourselves that we should not trust in ourselves but in God which raises the dead;" but this will humble the creature and promote our growth in spiritual advancement, perhaps as much as those seasons when sensible refreshment is dispensed. I am, therefore, my dear friends, to impress upon your minds the necessity of faith-

fulness in the discharge of so great a duty as that of "watching unto prayer:" we read that our blessed Lord "spoke a parable to this end, 'that men ought always to pray and not to faint,'" and in another place he says "Verily, verily, I say unto you, whatsoever ye shall ask the Father in my name, He will give it you; ask and ye shall receive that your joy may be full;" and again "If ye, being evil, know how to give good gifts unto your children, how much more shall your Heavenly Father give the Holy Spirit to them that ask Him." Surely the encouragement thus held out by the highest authority should strengthen our faith in his promises. "Let us therefore come boldly to the throne of grace that we may obtain mercy and find grace to help in time of need."

To those who thus reverently wait upon the Lord, I believe it seldom occurs but that a renewal of spiritual strength is experienced and a degree of ability witnessed to offer up our petitions "unto Him that is able to keep us from falling and to present us faultless before the presence of his glory with exceeding joy;" and who that has been thus exercised in the opening of the day, but would be impressed through the course of it with a sense of the necessity of endeavoring to cherish the spirit of prayer; that when he mixes with society a holy restraint may be felt lest there should be any departure from the paths of duty? This watchful disposition of mind would neither be productive of a gloomy reserve, nor preclude the enjoyment of social intercourse, but would expand our hearts in love and charity towards our fellow-mortals and in desire that we might be preserved from putting "a stumbling-block or an occasion to fall in our brother's way." Who does not see the spiritual advantage that would result from having the mind thus impressed, day by day, with a sense of its duty to God and man and with a conviction, that in order to perform this duty, Divine assistance must be reverently waited for? Thus sensible of the incalculable benefits of retirement I am anxious to prevail upon all my friends to avail themselves of the privilege to press through the crowd of impediments which may obstruct their perseverance in this important duty; should they even seem when faith is at a low ebb, like insurmountable difficulties. It is admitted that, in some situations in life, the time devoted to this purpose must of necessity be short; but if very little time can be prudently spared from domestic or other duties, that little, rightly spent, may prove as acceptable to the Searcher of hearts, as the widow's mite, which was cast into the treasury. Again, persons in health, by early rising, may always secure a portion of time for this important service before the occupations of the day commence. Thus the man of business may be enabled to cultivate the spirit of prayer and if his "eye be single" his whole body will be full of light, so that his spiritual perception will be quick and he will the more readily discover the snares which the adversary of man's happiness is continually laying to entangle the unwary. If this watchful state of mind be cherished, devotional feelings, there is every reason to hope, will so prevail in the evening, that sleep will not be given to the eyes nor slumber to the eyelids, until some time has

been spent in reverently drawing nigh unto Him whose we are and whom we ought faithfully to serve. "A mother whose innumerable may be many in attending to her infant charge and to other necessary cares, will find that a few minutes thus spent in reverential awe at the footstool of Divine mercy will not be to her time lost, on the contrary, she will thereby be enabled to cast her care on Him, who is "touched with the feeling of our infirmities," and be encouraged to commit the keeping of her soul with the souls of her offspring, to a faithful Creator. In an especial manner I wish to encourage diligent minds who may be tempted to think it almost presumption in them to expect that the spirit of prayer should be vouchsafed to any so unworthy as they feel themselves to be. May such be animated to begin and persevere in the practice here recommended, for there is no doubt with me if they thus present themselves before the Lord, in humility and abasement of soul, but that the blessing they seek will be mercifully dispensed. And oh! how thankful should I be if any nominal professor amongst us, who may have forgotten his Heavenly Father or neglected his duty towards Him, days without number, might be awakened to a sense of his dangerous situation, and should any such be so smitten with remorse as to fear that his iniquities will forever separate between him and his God, let him not despair, but remember that the Saviour declared, "I came not to call the righteous, but sinners to repentance." Instead, then, of the awakened soul endeavoring, like our first parents, to hide himself from the All-seeing Eye, because he is afraid, let him consider how awfully affecting it would be if, in such a state of alienation from his Maker, he should be summoned to appear in another state of existence before the Judge of all the earth; may such an awful reflection induce him to flee to our great advocate, Jesus Christ, the righteous, "who is the propitiation for our sins; and not for ours only, but also for the sins of the whole world;" trusting in His mercy, who is able to save them to the uttermost that come unto God by Him, seeing He ever liveth to make intercession for them." Let all such be encouraged to humble themselves under the mighty hand of God and listen to the apostolic counsel. "Repent ye therefore, and be converted that your sins may be blotted out when the times of refreshing shall come from the presence of the Lord." The poor penitent, humbled under a sense of transgression, waiting upon the Lord in daily retirement and patiently "hearing his indignation because he hath sinned against Him," will come to witness a capacity to "sorrow after a godly manner," and in a degree of faith to adopt the language, "Lord, if thou wilt thou canst make me clean;" and if he sincerely confess his sins, God is "faithful and just to forgive him his sins, and to cleanse him from all unrighteousness." Then will he be enabled to pray with the spirit and "with the understanding also." May persons of this description come, taste and see for themselves that the Lord is gracious, that He is mercifully disposed to "heal their backslidings and love them freely." If these submit to have their steps ordered of the Lord, they may in due time be enabled experimentally to adopt the words of the Psalmist, "I waited patiently

for the Lord, and He inclined unto me and heard my cry; He brought me up also out of an horrible pit, out of the miry clay, and set my feet upon a rock, and established my goings; and He hath put a new song in my mouth even praise unto our God."

Those who have been measurably purified and enlightened so as to have a deep and abiding sense of the incalculable value of immortal souls, and what is due from dependent creatures towards the Author of our being, will not only experience a living exercise of spirit on their own account, but will be likely at seasons to feel their hearts enlarged to supplicate for their families, their friends, their connections, and the whole family of man, agreeably to the advice of the apostle Paul, in the first of Timothy, second chapter, first to the seventh verses, viz:—"I exhort therefore that first of all, supplications, prayers, intercessions and giving of thanks be made for all men, for kings, and for all in authority, that we may lead a quiet and peaceable life in all goodness and honesty. For this is good and acceptable in the sight of God, our Saviour, who will have all men to be saved and to come to the knowledge of the Truth." This comforting assurance of the universality of the love of God may encourage us to intercede for those who appear dead in trespasses and sins, when we are favored with access to the throne of grace even as the same apostle exhorts, "I will therefore that men pray everywhere, lifting up holy hands, without wrath and doubting." Many, indeed are the iniquities and transgressions which abound in this land; some of its inhabitants who have the form of godliness, are, it is to be feared strangers to the power thereof; there are others who have even "denied the Lord that bought them" and are in danger "of bringing upon themselves swift destruction." Because of these things the hearts of the righteous, among the various religious denominations are made sad; perhaps justly fearing lest the awful language should in effect go forth from the Most High:—"Shall I not visit for these things; shall not my soul be avenged on such a nation as this?" I have a firm persuasion that sincere prayers have been offered up by many.

LEARN TO BE CONTENT.—The classic of Addison tells us of a dream in which he saw a king make proclamation to his people that on a certain day, they might gather at a given place, and there exchange each his life burden with any other who might desire to make the exchange. At the given time thousands were seen hastening to the rendezvous, and there they changed their burdens for others they thought easier to bear. Then they started homeward with rejoicing. But he saw again in his dream, that after some days had passed, the same multitude was toiling back again to the place of meeting, in the hope that those who exchanged burdens with them might be willing to take them back again, and give to each that burden which had been fitted to each shoulder according as it was able to bear it. And there they found them all seeking the old burdens, and when they had secured them they started homeward a second time, having a new joy and a new peace. They learned to be content. Shall not we?—*H. A. Johnston.*

Live for Christ in your home.

Science and Industry.

In a lecture recently delivered before the Royal Meteorological Society, H. R. Mill said that many tons of sand blown from the Sahara desert had been plowed into their furrows by English farmers this spring.

AN Eskimo arrow of walrus ivory, found imbedded in the breast of a healthy Canadian gray goose shot near Spokane, is on view in a store in that city. No arrow of that sort was ever seen in Spokane before. The bird had evidently carried it thousands upon thousands of miles from the far north, where it was shot by some Eskimo.—*Public Ledger.*

THE camera promises to become as indispensable in business affairs as the typewriter. It is now being used in the reproduction of documents, statistical tables and other papers whose duplication by hand would be laborious and expensive. In a very brief period the camera reproduces these things with absolute correctness and with much labor saved.

PRESERVING CUT FLOWERS.—Flowers may be kept constantly on hand in city homes at small expense if they are properly cared for. When you bring them in untie them at once, and place them loosely in a large bowl of water, the temperature of which should be exactly that of the surrounding atmosphere; then after an hour or two lift them out and spray them very lightly with a little fresh water, and arrange them in the desired vases, to the water of which a small block of charcoal should always be added if practical.

The next day a tiny morsel may be cut off the end of each stem, the flowers rearranged in fresh water, delicately sprayed, and thus treated they will last in good condition a long time.

A GOOD SUBSTITUTE FOR FEATHERS.—Feathers and down are expensive, but if you know a hawk where the cat-tail grows, you can have down pillows galore for the mere making. You must know that the fluff of the ripe cat-tail, which may be gathered in July or August, makes a pillow equaled only by down itself. So be provident this year, and if you live near a lake or pond get you a harvest of cat-tails for future use. You will find them the most inexpensive and satisfactory material you can employ for this purpose. If it should be your fate to live in a section of the country where cat-tails do not grow, then substitute the silk from milkweed pods. Gather the pods in the fall of the year, hang them away in paper bags to dry, and they will burst open before the winter is over, and can be made up into pillows in the early spring.—*Woman's Home Companion.*

WHAT BECOMES OF THE OX.—But one-third of the weight of an ox is of such material that it can be eaten, yet not one bit of it is thrown away. What is done with the two-thirds was explained in a recent periodical, from which the facts are taken. The blood of the animal is used in refining sugar and sizing paper, or it is manufactured into door-knobs and buttons. The hide goes to the tanner; horns and hoofs are transformed into combs and buttons. The thigh bones, worth eighty dollars per ton, are

cut into handles for clothes-brushes. Foreleg bones sell for thirty dollars a ton; collar buttons, parasol handles, and jewelry, the water in which the bones are boiled is reduced to glue; the dust from sawing the bones is food for cattle and poultry; the small bones are made into bone-black.

Each foot yields a quarter of a pint of neat's-foot oil; the tail goes to the "saw" while the brush or hair at the end of the tail is sold to the mattress-maker. The chop-chops of the fat make the basis of butter; the intestines are used for sausage casing; are bought by gold beaters. The undigested food in the stomach, which formerly cost packers of Chicago thirty thousand dollars a year to remove and destroy, is now made of paper. All scraps unfit for any other use go to the welcome in the gluepot, or are employed by the farmers as fertilizers.—*Young America.*

THE MANY USES OF OLIVE OIL.—Concerning the value and increasing use of olive oil, a writer in the *American Kitchen Magazine* says:

Only a small part of the olive oil in the markets of the world is used for cooking; it is largely employed for soap making (castile soap is made from olive oil), medicinally and in silk, and woolen factories.

The increased use of oil for food should always be encouraged. If children are trained to eat it, there is little likelihood of their losing the appetite. Instead, the tendency is generally to an increasing use of oil not only with salads, but with almost all vegetables.

Aside from custom there is no reason why olive oil, more than good butter, should be regarded as a luxury by an ordinary family.

It is hard to draw a sharp line between the use of oil as a food and its use in therapeutics. The former makes the latter less likely to be required. If a small part of the money saved for patent medicines in the United States were employed to put a pure olive oil on our tables, there would be less call for the various waters, pills and liniments that are advertised on every side.

The body can be fed artificially with oil baths, massage, etc., and physicians and nurses know of the wonderful gain made by patients for whom this is done. In typhoid fever, appendicitis and kindred diseases, the use of oil results very successfully. It is also employed in the treatment of burns and as an antidote for poisons.

THE United States was the first nation to recognize the independence of the Spanish American Republics, and over them it reared the flag of the Monroe Doctrine almost eighty years ago; yet, compared with the Europeans, we in America are profoundly ignorant of the South American. We know almost nothing of its scenic wonders, for we do not visit them; our share in its exploration is insignificant; what information the world has of its flora and fauna has been gleaned by Europeans; our knowledge of its ethnology also comes from them, and the same may be said of the history of its people in the nineteenth century (from American sources almost no account of the rise of the Spanish Republics can be had), and it is European, and not American, capital that has opened up its wildernesses, built its cities and railroads and established its in-

How many Americans have seen Ecuador? "avenue of volcanoes," twenty of whose crests exceed fifteen thousand feet, one ten thousand and three others less than twenty feet? How many Americans have heard of the Paulo Alfonso Falls, near Rio San Francisco, with their descent of five hundred feet and volume of one hundred and fifty thousand cubic feet per second, or of the falls of Guayra, on the Parana, which combination during the rainy season challenge the grandeur of Niagara?

How many Americans are familiar with General Martin's achievement in making the siege of the Uspalata Pass, twelve thousand seven hundred feet above the sea level, with an army of five thousand men, infantry, cavalry and artillery, in the war of independence in 1817? The Great St. Bernard, over which Napoleon led an army, is five thousand feet lower than Uspalata.—*Ainslee's Magazine*.

Life Eternal.

What is life? Even in its lowest forms it is beyond my ken. I saw it revealed in a tiny spring on the western slope of the Sierra Nevada Mountains. In close relation to it were the trees pulsating with the same kind of the annual rings of which in fallen trees the rings, carried their individual beginning to the times of Moses—plant life of one perpetuated by God from the creation.

A high rock in Yellowstone Park I saw an eagle's nest. In it there were helpless eaglets. They were dependent upon parental love, strength and skill for every particle of food that sustained the bird life in them. And then the parent birds, after soaring and gliding downward, plunged into the forest and gazing downward, plunged into the living prey, and gave it to nourish the life of the eaglets, till they, in turn, should be strong eagles and care for their young. Once more, is life in the beasts of field and forest. The life is nourished from birth to maturity. It expires by the limitation of its own nature, or it is taken to support other life, including the life of man.

When God had wrought the wonders of creation, swiftly, or slowly, in days of hours, or of years, he said, "Let us make man in our image, after our likeness; and let them have dominion over the fish of the sea and over the fowl of the air, and over the cattle, and over all the creeping and every creeping thing that creepeth upon the earth." "So God created man in his own image, in the image of God created he him; male and female created he them." And as if this were not a sufficient attestation and record of the creation of man on the earth, there was quickly added this: "And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul."

Earth first was animal life of higher order than any other. Here next was human personality, alone, and supreme, among God's only living creatures, with dominion over all. And here at last, and best of all, child life—life like God's own life, not to whom it could answer but the living Father.

With the sinless possessor of this blessed life the Creator, walked and talked, and in rational loving fellowship in an earthly

Eden of visible beauty and delights. In its highest order that was spiritual life, to be perpetuated as eternal life on the one condition of perfect obedience. But it was lost to the two who had it, as to their natural descendants, by disobedience, strange, sad willfulness, under satanic subtlety and power. . . .

But thanks be unto God that the spiritual life given to be perpetuated into eternal life by personal obedience, lost in and by "the first Adam," is more than regained in and by "the last Adam." By his obedience unto death, even the death of the cross, under the law that justly condemns every one of us, and by the grace and gift of God in Jesus Christ our Lord, the life spiritual and life eternal become our individual possession and heritage. God gives. We receive. Even the act and habit of receiving are ours by grace. Faith is this receiving. In the life spiritual are the first pulsations of the life everlasting. The life is real because of our effectual calling, "the work of God's spirit whereby convincing us of our sin and misery, enlightening our minds in the knowledge of Christ, and renewing our wills, He doth persuade and enable us to embrace Jesus Christ freely offered to us in the gospel."

"This is the record that God hath given us eternal life, and this life is in his Son. He that hath the Son hath the life, and he that hath not the Son of God hath not the life." Then I must have the divine Son to have the divine life. Is this possible? Can we have the Son of God and the very life that is in him? Here is the written answer: "He that abideth in the doctrine (teachings) of Christ, he hath both the Father and the Son." Therefore if there is eternal life for us anywhere in the universe of God, we have it individually, when we have the true God and his Son, Jesus Christ. And we do have the true God and his Son, Jesus Christ, when the Spirit of Truth, who searcheth all things, even the deep things of God, and glorifies Jesus Christ as the revealer of the Father, makes the truth as it is in Jesus precious to our hearts.—*John D. Wells*.

A Stonebreaker.

I passed by a quarry one day and saw a new machine at work, running by steam. Quite a gang of men were employed, teams brought up to a platform stones weighing twenty to twenty-five pounds each. These were thrown into two massive jaws, which crushed and ground them into fragments of various dimensions. These were taken away by trucks underneath and were sorted and made ready for shipment.

As I wandered on the hill-side I thought of another stonebreaker, not run by steam but by Spirit, not open to the eyes of a rough gang, but deep down and hidden from the eyes of all men. There are stones of different degrees of hardness—on many a hill side—but the hardest stones that come under the operation of our spirit-machine are stony hearts, with pieces of various size—pieces of obstinacy, of indifference, of pride.

As I stood by the stonebreaker I saw a wagon load of stones disposed of in a few minutes; as I think of the human heart I discover a process very different and oh, the slowness of the operation! What rubbing, chafing,

turning over, until the crumbling powder is made very fine. But why trouble about this slow grinding machine? I answer, you cannot get into heaven unless your heart is turned into a grinding mill, and you come out of the process refined and purified. "I dwell with him that is of a contrite and humble spirit." The meaning of contrite is a crumbling and a broken spirit. How may I get it? There is only one way. We must go into the presence of the Great God, and go alone, bringing along our self-esteem and pride, and behold a wonder. You will be changed, and after you are broken and crumbled, then will come humility, your rebelliousness will melt into beauty, and you will go softly all your days.

Lift up the gates of your heart and the King of glory will come in. H. T. MILLER.
BEANSVILLE, OHI.

How Girls Can Help Their Mothers.

Every girl, if she be not thoroughly selfish, is anxious to lift some of the burden of household management from her mother's shoulders on to her own; but, unfortunately, many girls wait to be asked to do things instead of being constantly on the lookout for little duties which they are capable of doing.

If you would be of any real use in the home you must be quick to notice what is wanted—the room that needs dusting, the flowers which require rearranging, the curtain which has lost a ring and is therefore drooping. And then you must not only be willing to do what is needed, but willing to do it pleasantly, without making people feel that you are being martyred.

It is almost useless to take up any household duties unless you do them regularly. If you do a thing one day and not the next, you can never be depended on, and if some one else has to be constantly reminding you of and supervising your work, it probably gives that person more trouble than doing it herself would cause.

Have a definite day and a definite time for all you do—the flower vases will need attention every other day, the silver must be cleaned once a week, and there should be one day kept for mending and putting away the household linen. Begin, too, directly after breakfast, and keep on steadily till your work is done.

If you begin by sitting down "just for a minute" with a book, or think you will "just arrange the trimming" on your new hat, the morning will be half gone before you know where you are.

A girl who has brothers may spare her mother all those tiresome little jobs which boys are always requesting to have done for them, if she will only do them kindly.

But a boy will not come and ask his sister to repair frayed out buttonholes and to make him paste for his photograph album if she snaps and says he is "always bothering."

It is not easy work, but it is quite possible for the daughter at home to make up a good deal of its sunshine, and it is only when she has learned this that she is fit to go away and be the sunshine of a home of her own. Presbyterian.

THE high and sacred privilege is witnessed that God's tabernacle is with men, dwelling and walking with them; they his people and He their God.—*Western Yearly Meeting Epistle*.

Simple Living.

Reiterated until it has become as an oft-told tale, is the statement made on every hand that life is becoming more complex with each succeeding generation. Life, we are told, is not as easy as it once was. The ever-developing civilization into which we are born and by which we are surrounded is making life more complicated every year. Where men had one need a generation ago they have ten to-day. The creation of artificial needs has led to the living of a "stilted life." So marked has been the growth of this that men are to-day bewildered. They are so related and interrelated that they lose their way and spend many idle hours in futile longing for the simpler days when the world was young.

But is this complexity real or fancied? It is both. Real enough it is, but complexity is simply doubled by the fact that men fail to reduce life to its ultimate analysis. So busy are we in looking at things that we miss the one thing. He is a great scientist who discovers a law by which ten thousand things are regulated. He is a great economist who makes clear some fundamental principle which may issue in a thousand directions. He has learned the art of living who has reduced the complexity of life to the living of a single principle. The radii of a circle are best seen from the centre. The "mixed condition of things" is largely in the seeming because men ignorantly persist in wandering from the centre and living life at the circumference.

No life is so complex that it cannot be lived simply. Given the proper centre, the circumference swept from it can never be too extended or take within its sweep too many details. If our hearts were but simple, the outward things of life would be less complex. Simplicity is the state of being unmixed or uncompounded. The real complexity of life is not in its thousand and one externals, but in the doubleness of the human heart. When the heart is right life is no longer complex.

What, then, is the one fundamental law which reduces life to simplicity. What is the one principle, which can regulate all life's manifold diversities. What is the one force that can drive and regulate the intricate machinery of national and individual life. Hear the conclusion of the whole matter: "Fear God and keep his commandments." "The fear of the Lord is the beginning of wisdom," in all things. It is the pole star that unerringly guides howsoever dark may be the night or tempestuous the sea. This is the secret of simple living, and for men and nations the one foundation fact upon which can be erected a safe and noble structure.

This principle holds in all national life. No age is without its prophets of despair. They look for all the dark features of the days in which they live. They tabulate the problems, many of which are contradictory. In their efforts to entangle life's skein, they pull first at one thread and then another, until they make confusion worse confounded. There are race problems upon which they brood until they make the world an Armageddon. There are "class interests" that they clash one against another until we are driven well-nigh mad with the din. They play upon the ignorance of people. They make the rags of poverty flutter before our eyes. They cause us to

bear the jangling of the chain that fetters crime. All these things they bring to our notice that we may be filled with despairing bewilderment.

But these things are not new. They have existed in some form or other since the world began. They were ever present to the eyes of the Great Teacher. And this Expert in the art of healing human woe had one unfailing panacea. It was the reverential love of God. Race problems melted before the warm shining of this truth. For in Him there is neither Greek nor Jew, Barbarian, Scythian, bond nor free, but in Him all are new creatures.

Beneath the beneficent sway of his law, "class interests" do not clash, for masters and servants are brethren, in "honor preferring one another." Ignorance is taught the way of wisdom, the shivering form of nakedness is clothed, the captive exile hasteneth to be loosed, for a reverential love of God issues in man's loving his neighbor as himself.

The simple principle applied to individual life makes it both sane and joyous. We speak of our age as one of perplexing doubt. The very foundations seem removed. Destructive criticism rends the air. A thousand questions are asked to which there appears no answer. We bruise our knuckles knocking at doors that will not be opened yet. But life in this matter is a very simple thing. It does not consist in the abundance of knowledge one possesses but in the intensity with which it is possessed by this one principle—the fear of the Lord—and the eagerness with which it obeys his commandments. There are many things such a simple life may not know, but one thing it does know, that living such a life is God's purposed plans for mortals. He that wills to do the will of God shall know of the doctrine that it is of God.

The same principle holds in the life that we characterize as actual. To incarnate it is to live unerringly. No real mistakes are possible to the man who does all from a fear of God. He cannot sow to the spirit and reap the harvest of the flesh. The harvest of the flesh may appear good but that of the spirit is good and eternal. A man must choose what he desires to reap and sow accordingly. The lock of human life may appear complex and resist a hundred keys inserted in it, but to the right key it answers and the door opens into eternity. No problem of individual life refuses its solution. In every crisis to act upon it is to go in the right direction. There is no perplexing question possible to which this is not the true answer.

The complexity and contrariness of life are due ninety-nine times out of a hundred to the fact that men persist in living "against the grain." The stars in their courses fight against Sisera because Sisera fights against Jehovah. But these same stars fight for the Israel of God. Incorporating this simple principle—"only fear the Lord"—life becomes easy, for all things work together for good to them that love God.—*Episcopal Recorder*.

What an Old Gunner Says.

I remember once, some three or four years ago, I stood on a lonely beach, just at sunset. The last of the red rays was setting all the waves on fire, and crimsoning the side of the sand-hills behind me. There was hardly a

breath of wind to disturb the waters of the bay and everything but the gun on my shoulder spoke only of peace and quiet.

I stood resting, looking out over the water to the other side of the bay, where the waves were fast changing from a sober brown rich purple. I was completely absorbed in the beauty of the scene, when all at once a sail sailed slowly in range. I raised the gun, fired, and the poor tern, with a broken wing, fell whirling through the air to the water. Wishing to end its misery, I fired and charge, but that fell short, and then, my munition being gone, I shouldered my gun, went slowly back over the sand-hills, leaving the poor tern to float back and forth on dark water, and utter its mournful cry. In the morning I went to the beach again, and found the poor creature half alive, half dead, dragging itself up the sand, covered in blood, and its poor broken wing hanging in its body. In mercy I wrung its neck. Now shall I forget the look of those deep, shining black eyes, that seemed to ask only for death and relief from suffering; eyes that soon glowed over in death, as its pretty head dropped all the body became limp in my hands. It was a murder, and for a moment or two after they seemed to lose its brightness, and the fair beauty of the morning went away. I laid the bird on the sands and went back to the boat, with a firm resolve never to fire another shot at a living thing.

My comrades in the field, why should you continue this slaughter of innocents? I have learned of late to go into the wood and enjoy the beauty of the life around me, to look at all the living things as a part of the world's nature has put before our eyes, and not something to be slain.

If you go gunning because you love the woods and their beauty, why, they are still the same with or without the gun. There is as much amusement as well as instruction to be gained in studying the birds instead of killing them. I have spent more than a happy half-hour whistling to a quail and hearing his answering call as he came nearer and nearer, until at last discovering the bird, with a saucy flirt of his wings, he sprang into the air, and went buzzing away into the trees. Could I find it in my heart to kill such a beast?

I am convinced that, whatever the place or season, it is a poor sport for a man to follow which brutalizes and degrades him to such an extent that he is willing—yes, longs for slaughter.—*P. E. D., in Rockland Independent*.

"A YOUNG man sat chatting with some gay girls. Among them was a sweet, quiet young woman known as a Christian. The young man, thinking to tease her, bantered her about her religion. The silly girls tittered, but the object of his mirth remained silent. To with the folly of youth, and the recklessness of impiety, he uttered infidel objections to Christianity. She did not smile, nor look him nor seem to notice him. Then he continued his harangue, hoping to force her to refute something. But she maintained the same sweet, dignified silence. A vision of his stupidity broke over the young man, and convicted him of sin. He said afterwards, telling the story, "That silence saved me."—*Vanguard*.

Peace Principles in Action.

Hotchkiss was located among tribes more than one occasion their attitude distinctly threatening. Once on the moment, he made a show of a revolver, an act which he has ever regretted. But his general plan with natives was moral suasion, not the use of

the morning I was attending to the long suffering ones; the last one had been killed, and I was binding up her foot, a huge having eaten away half the upper portion of the bone. I did not notice the approach of my boy, Vui, until I heard him say, "I have hit a Mkamba." Finishing my work I looked up, and, used as I was to the sight of blood, I gave an involuntary shudder. A ragged, gaping wound, in his head, fully three inches long, pouring a stream of blood down over his forehead and his shirt and loin cloth were already

had said nothing about having been killed, so I said, "What is the matter, who has done this?"

"I went to the river," Vui replied, "to get water, when a man sprang upon me and beat him off with my club and cut it, and he broke his club over my head. There is a great crowd down there they are going to kill us all!"

had been only a few months among them, and yet not succeeded in breaking down the natural suspicion against white men. At the moment I struck me that this incident might in any way be turned to account for the Master, I scarcely knew how. So I went into the bush and got a sponge with which to wipe his wound, and came out just as I was, started off. Vui looked at me curiously, and then said, "Master have you not your rifle?"

"No," said I, "we are here on God's business. He will take care of us, and we will never use any way without the gun." At such a moment I thought it much better to display no arms, for its very presence created suspicion.

Arriving at the river, about two hundred yards away, we found the whole river-bank there being no running water in it at the moment—with a howling mob of painted savages, armed with bows and poisoned arrows, and short swords. They were evidently in mischief. So, with a wordless prayer, I stepped into the midst of them, much to their amazement. This was the best course I could have pursued, for they have at first a suspicious awe of a white man, not knowing what he has some unseen method of defeating himself.

The leader of the band, who likewise had a gash in his head from Vui's club, made a dash at him; but springing between them, I was talking to the crowd, asking them if they ever harmed them in any way, if I had told them well for everything I had gotten them, if I had not ministered to their wounds. I had not showed them in many ways that they were my friends. Gradually they cooled down and became silent as I talked, and when the bows were taken from their bows, and the hands quit playing with their swords, I

took Vui to a water pool, cleansed his wound, and sent him off down the river for water. Then to their amazement, I took the wounded leader, pulling him to the water hole, and began to do the same with him. They could not understand it. "An eye for an eye," yea, a life for a life, is the only law, their poor minds can grasp, and they rigidly adhere to it. That the white man should take his worst enemy, and do to him the same kindness he had done for his own boy was so foreign to their ideas of justice that they simply stood and looked in wonder.

"Having cleansed the wound thoroughly, and noting the advantage I had gained, I followed it up by saying, 'Now, if you will come to the house I will put on some medicine.' Slowly they followed me up the path, thoroughly vanquished. Getting out my instruments, I shaved the head, sewed up the ragged wound, bound it up carefully, and they went away."

"From that day their attitude changed, the stubborn opposition melted away, sufferers thronged the station, and some of those who had been most troublesome became my staunchest friends. Thereafter I could go anywhere through that country unarmed, so far as danger from the people was concerned."—*Sketches from the Dark Continent.*

Up the Panama Canal.

Captain William Coules, of New York, gives to the N. Y. Times a graphic account of his trip in a naphtha launch up the Panama Canal in its present state:—

"Around a small point not far from Colon there is the mouth of the Chagres river, which crosses and recrosses the canal. It was at ten o'clock on the morning of the 18th of April when we rounded the point which has been made partly solid ground by hundreds of tons of good machinery thrown in there to make land. Poor old man De Lesseps never knew how he was being fooled."

"Cocoanut trees in plenty were growing out of the soil heaped up on the broken machinery, and in plain sight was what all the people down there call 'De Lesseps' Palace.' I never saw such queer foundations for a palace in all my life. There were boilers, hoisting engines, locomotives and valuable machinery worth hundreds and thousands of dollars, thrown in a heap to make a foundation for a house. Imagine a solid structure of wood, three stories in height, with fifty rooms, and so built that the large windows and doors could be opened to let the breezes blow through; large verandas, and all around banana and cocoanut trees, and you have in your mind the picture which we saw."

"We visited the De Lesseps mansion. It was in charge of a keeper and he showed us the large offices, all the silverware, the books and furniture and the household things just as they were left nineteen years ago by the owner. The mouth of the Panama canal is about half a mile in width, and on either shore there is low shrubbery. We found a depth of over twenty feet of water at this point. On both banks could be seen all kinds of derricks and machinery lying partly in the water."

"As we journeyed up the river in the launch the tropical trees met overhead, and it was not long before we were in the jungle. Banana

plantations could be seen about a mile apart. The first Indians we met were friendly, and they talked to Mr. Wilcox in their Spanish-Indian jargon."

"We came to places in the canal where the banks had been washed down, so that there was only a depth of a foot of water. Our Jamaica darkey would go overboard, put his shoulder against the stern of the launch and shove it across the sandbar two hundred or three hundred feet. Then he came in handy when we wanted to go ashore. He would pick us up in his arms one after another and wade ashore without any apparent effort."

"As we went up the river the Indians became more wild. They would peer out from the jungle and as soon as they saw us would scatter as if we were going to kill them. One strange thing was that the women never ran."

INDEED it is a sifting time to many, and their faith tried as to an hair's breadth, on account of the devastations of the enemy, in our once highly favored Society. Yet to those who remain faithful and continue to keep their ranks in righteousness, their affliction will work for them a far more exceeding and eternal weight of glory, a treasure in heaven that fadeeth not away. Zion will yet arise and shake herself from the dust of the earth, and put on her beautiful garment and become a praise in the earth. Oh, may we, with you, be found abiding in our dwelling until the sifting time may be over, that we may be found among the solid wheat in the end of which not one grain will be lost. — *Women's Epistle, Iowa Y. M.*

Men seek to do themselves what grace alone can do in them.

Notes From Others.

The volume of Latin poems written by Pope Leo XIII, which has recently been published, contains some poems written in 1822.

That civilization has reacted on Christianity is palpably true, but it is not one whit more true than the fact that Christianity has woven itself into the very fibre of the civilization whose triumphs it has so immeasurably increased, says the New York Tribune.

THE CHURCH OF THE FUTURE.—The church of the future will be the one which has the most of Christ in her spirit, in her doctrine, in her worship, in her life, in her organization, in her ordinances, in her missions and in her glorying. Not science, not art, not culture, not civilization, not learning, not philosophy, is going to conquer the world, but the Cross of Christ. Jesus is the mighty revolutionizer, and reformer and elevator of humanity. The earth is his, and the instrument which He will honor to effect his purposes must be full of his mind, power and glory.—*The Presbyterian.*

TWO MUCH BEGGING.—Methodists all over the United States are asking for a reduction of the number of public collections in the local churches. They say there is too much "begging" in connection with the preaching services, and both clergy and laity are demanding a change. Besides the various local needs—church expenses, neighborhood charities, etc.—there are general interests for which several millions of dollars must be raised annually. Some pastors claim that of necessity they are obliged to make a public appeal about

every alternate First-day of the week, which they think is a little more than their congregations will endure for any length of time. For the purpose of relieving this unpleasant situation, the bishops have appointed a commission to consider the matter of consolidating the collections by uniting some of the benevolent societies.—*Boston Herald.*

SUMMARY OF EVENTS.

UNITED STATES.—A summary of the appropriations made by Congress at its last session, shows the grand total of \$800,024,496.55. Of this nearly 140 millions were for pensions and 180 millions for military purposes. In addition to the above, expenditures amounting to 263 millions were authorized, making a total sum authorized and appropriated of \$1,063,000,000. The actual appropriations exceeded those of last year by 70 millions.

President Roosevelt began a journey on the 22nd inst. into New England.

Several carloads of anthracite coal from Wales have been landed in New York, and if tests being made prove satisfactory, it may be imported in large quantities. It is said that anthracite has not been imported for the past fifty years.

A dispatch from Fort Worth, Texas, of the 19th says: "Edmund Butcher, a full blood Indian, walked seventy-five miles to Muskogee to surrender to the officers, stating that he had killed his brother-in-law in self-defense. With him were his wife and two children. The jailer pointed out the jail, and Butcher walked into it without an officer or commitment."

William D. Collyer, United States Inspector of Dairy Experts, and Professor McKay, of the Iowa State Agricultural College, have completed the work of inspecting butter for the United States. On Fifth Month list the first shipment of butter was received. More than 500 buttermakers have sent their butter to Chicago for the test. The butters are in "high class," says W. D. Collyer. "None of it is perfect, but one man's butter was scored at 98, which is just 2 points off. The test for the butter was rigid. The flavor counted 45 points, the body 25, color 15, salt 10, and the package 5. This is the first time that butter has been scored in the United States."

There are 13 submarine telegraph cables now in successful operation between this corner of New England and the British Isles. The cables are owned by the Massachusetts company that the Boston Elevated Railway Company is responsible to abutting property holders for any damage they may suffer from the nuisance of noise in the operation of the road. In Pennsylvania it has been repeatedly held that no damages can be recovered for the noise made by the operation of a railroad.

Eight hundred Indians have for several months been working as farm laborers in the Dakotas, thus helping to meet the scarcity of labor. In the Southwest, Navajos are being used in railroad construction. In some instances the Government has employed them in digging irrigation ditches and building roads, where they receive about a dollar a day. It is said that the Indians work well.

Six schools have been open in Philadelphia during the public school vacation, furnishing instruction to an average attendance of 2500 pupils. The work done by the pupils of the vacation schools is largely of an industrial character. It includes cooking, sewing, housekeeping, carpentry, history, literature, physical culture and nature study.

A series of tests covering a period of several months in which it has been demonstrated that the high grade of rubber may be obtained from the Beaumont, Texas, oil, when put through the refining process. Cotton oil is combined with the Beaumont oil in the manufacture of this rubber substitute.

The discovery has been announced that the spread of a fatal fever in the Bitter Root Valley in Montana is due to the bite of a certain species of tick.

The farmers of Walla Walla County, Wash., are trying the experiment of laying their roads with straw to improve them. The farmers turned out in force, plenty of straw was offered, ready hands laid it to the depth of a foot or more on the main thoroughfares of the county, and traveling became easy. Three hundred miles of road it is said will be covered with straw.

There were 37 deaths in this city last week, reported to the Board of Health. This is 67 less than the previous week and 112 less than the corresponding week of 1901. Of the foregoing, 207 were males and 172 females: 32 died of consumption of the lungs; 27 of inflammation of the lungs and surrounding membranes; 2 of diphtheria; 15 of cancer; 18 of apoplexy; 10 of typhoid fever; 5 of scarlet fever and 1 of small pox.

FOREIGN.—A dispatch from Paris of the 18th says: "The attempt of the authorities to close the religious

schools in the provinces is still bitterly and aggressively resisted by the peasantry. When the act was passed there were in France 100 congregations of men representing 35,000 priests and their assistants, and 373 associations of women containing 65,000 active workers. The large number of people were employed in hospitals, asylums, reformatories, schools and other charitable institutions in all parts of the country. It is contended that the Orders do not do their work so well as the State, the Church's activity in educational matters being especially deplored. It is held, too, that the Orders are accumulating wealth in an unwarranted way, and their property and influence is a serious interference with the State. Out of 3,000 schools involved in the decree 2,700 it is said have complied with the law. This law it is stated, is expected to be the forerunner of one separating the Church from the State.

Private advices from China received by the Methodist Mission Board represents that a renewal of the Boxer trouble with increasing violence and fury has begun in West China, and that "Throughout the country there has been widespread destruction already, and it is probable that most of the Christians living outside walled cities, comprising several hundred persons, will lose all they have, if not life itself."

It is said there are 227 different religious sects in Great Britain and Ireland.

The White Star Line steamer *Cedric*, of 21,000 tons, has been successfully launched at Belfast, Ireland. She is 700 feet long, has 75 feet beam, and draws 49½ feet of water. Her carrying capacity is 18,400 tons, and she has accommodation for 3,000 passengers. It is expected that the *Cedric* will be ready for service in the autumn.

In order to diminish the use of intoxicating drinks in Sweden, warm milk has been placed for sale in public places, and it is said that thousands of working people who otherwise would have been victims of the saloon, have now been glad to get a warm drink for a smaller price. The success of the enterprise has been noted by many travelers, and the press in Southern Europe has published several recommendations for a universal adoption of this system as a very practical step against the threatening spread of alcoholism.

A dispatch from Manila of the 24th says: "Official statistics show a total up to date of 25,664 cases and 18,040 deaths. The actual number of cases and deaths is greatly in excess of the official reports."

In Germany, briquettes are manufactured from brown coal, peat, and the dust and waste of coal mines. They "form the principal domestic fuel of Berlin and other cities and districts in Germany; they are used for locomotive and other steam firing, and are employed for heating in various processes of manufacture. They are clean and convenient to handle; they light easily and quickly, and burn with a clear, intense flame. They make practically no smoke, and are, withal, the cheapest form of fuel for most purposes."

The natives of Mindanao, one of the Philippine Islands, have again shown their hostility to the American troops, and made threatening demonstrations. They are Mohammedans, and an active campaign against them has been authorized by the War Department at Washington.

A dispatch from Yokohama of the 18th says: "The little island of Torishima, one of a chain extending between the Bonin Islands and Hondo, an island of Japan, was overwhelmed by a volcanic eruption between the 13th and 15th instants, and all the inhabitants, numbering 150, killed. The eruption is still proceeding, and is accompanied by submarine eruptions in the vicinity, which make it dangerous for vessels to approach the island."

A London dispatch from Simla, British India, says that the plague mortality is increasing at the rate of a thousand weekly.

Much excitement is reported in the peninsula of Yucatan, Mexico, because of the discovery of petroleum. Officers of the steamer *Dahome* report a severe eruption of Mont Pelee, on the island of Martinique, on the 21st instant. The eruption was followed by total darkness five miles away from the volcano. The *Dahome* was obliged to change her course to escape the volcanic dust which fell heavily upon her deck.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 76.

Anna W. Lippincott, Phila.; Hamilton Haines, N. J.; Wm. T. Zook, Pa.; Esther P. Terrell, Ore., to No. 13, v. 77; Isaac N. Vail, Cal.; James Edger-ton, O.; Joseph Trimble, Pa., \$12 for himself, Phoebe M. Hawley, Natalie R. Stacy, Susan H. Sharpless, Susan E. Sharpless, D. Sharpless, D. Sharpless, Wm. C. Warren, Ctn., and for S. Eliza Warren, N. J.; John B. Rhoads, N. J.; Martha G. Cook, Md.;

Anna Hart, Pa.; N. Steer for Deborah H. J. T. Scofield, O.; Sarah L. North, Phila.; F. Reid and for Eliza A. Martin, Pa.; Jo Tatum, Pa.; Henry H. Ellyson, La.; M. Trimble, Pa.; Levi S. Thomas, Pa., \$6 for John G. Haines and Thos. W. Fisher; Jos. P. Pa., and for Elizabeth C. Yarnall; Margaret O.; Kuhama J. Barnett, Wash., \$1 to No. 27; C. Smedley, Frankford; Lloyd Balderston and for George Balderston; S. Howard W. for Y. M. C. A., Los Angeles, Cal.; A. J. Cooper, Pa.; Margaret Maule, Pa.; Geo. W. H. Whitson, act., Pa., \$10 for Kallston R. H. Gilbert Coe, Enos E. Thatcher, Rebecca J. more and Lydia Embree; J. C. Starbuck, Mass.; Elizabeth Taylor, Pa.; Mary B. C. N. J.

Remittances received through Third day noon appear in the Receipts until the following week.

NOTICES.

A YOUNG woman Friend, with experience in teaching and teaching young children, desires position. Address "M," Box 53, Tongueanona, Pa.

FRIENDS' LIBRARY, 142 N. Sixteenth St., Phila., and after Ninth Month 1st, 1902, the Library is open on week-days from 11.30 A. M. to 2 P. M., and 3 P. M. to 6 P. M.

WESTWON BOARDING SCHOOL.—The term closes on Third-day, Ninth Month 9th, 1902. New scholars should present themselves for classification in this season or not later than 2 o'clock in the afternoon.

WM. F. WICKESHAM, Principal.

FRIENDS in the vicinity of Philadelphia are aware of a man of short stature, about thirty, light complexion, representing himself a member of "Portsmouth New York Meeting." He carries a letter purporting to be a section foreman at Norfolk, Va., offering him a position on the railroad if he will come at once. He solicits to reach this point.

HADDONFIELD QUARTERLY MEETING will be held at Medford, N. J., on the eleventh of Ninth Month. The cars will be run to Medford from Camden by J. Haddonfield. Last boat from Market Street Ferry leaves at 9 o'clock. Train leaves Camden at 9.08 A. M. Ave. Station at 9.11 and Haddonfield at 9.25. Return trains leave Medford at 2 and 5.20 P. M.

DIED, at his residence near Harrisville, Ohio, twenty-ninth of Seventh month, 1902, JOHN W. SEBASTIAN, the seventy-eight year of his age; a member and an active worker of the Society of Friends, he was a member of the Short Creek Monthly and Harrisville Particular Meetings. Being from early life firmly convinced of the truth and practices of the Society of Friends, he was devoted thereto himself, and diligent in encouraging his members to a like course. As the end of his life near, he expressed to a friend, "If it is the dear Lord's will to take me now, I have a comfortable hope that he will." Of him it may be truly said that "A life in Israel hath fallen."

He was the thirty-first of Seventh Mo., 1902, JAMES MILES, of Turner, Oregon, in the eighty-third year of his age. He was the son of David and Jane Miles, a son born in Miami County, Ohio, Fifth Month 13th, 1815. He married Rebecca, daughter of Samuel and Miles, of West Milton, Ohio. Removing in 1854 to Marshall County, Iowa, he afterward lived successively in Parke County, Indiana, in Miami Co., Ohio, the success of his childhood; in Clay County, Kansas, where he served several offices of trust; and several places in Oregon, which State he finally settled near Turner. He was in early life in the Christian warfare, and often won the baptismal cleansing of the Holy Spirit. He had faith and trust in Christ, and was a consistent and faithful member, and for a number of years an esteemed member in the Society of Friends. He bore a testimony with Christian patience and fortitude.

ENVOYING FOR MEMBERS.—In bringing to close week before last the editorial review entitled "Proselyting," which commended our seeking a proper distinction between the worldly and the spiritual motive for joining our ranks, the thread of our suggestions was left to its leadings in other's thoughts. A little imagined by the writer that at the same time such thoughts were engaging the mind of a correspondent; who says:

Have been led afresh to meditate on the end and law of Church unity and efficiency by the genuine *Christian fellowship* is so distinguished from plausible but temporizing and ambitious confederation. It seems to me that the radical query which concerns all church workers for the needful extension of Kingdom of God and of Christ,—of all, I think, who are becoming emancipated from their individual account,—is whether the leading direction in or to which our members should be primarily and singly bent, to work of conviction and conversion in the relation of individual souls; or whether, on the other hand, we should be directly and primarily concerned with that "bearing witness unto the Truth," by word and deed, in which, as fellow workers "of God" and "with it," we may be required and privileged initially to contribute to the continued development of truth and doctrine. Conviction and conversion being concededly Divine prerogatives, it seems to me that the question is self-intuitively decided in the fair statement. That it seems to follow that the blessed striving of the Holy Spirit must operate through us effectually, as we consciously give presence to the impersonal aim, as "loving one another" to borrow Phillips Brooks's phrase—"more than any brother" . . .

It often seems to me that there is more of drifting into idle flirtation in the life of personalities, than into idle speculation in that of principles . . . let us increasingly beware of slighting any

aspect of truth, 'as we see the day approaching.'"

To us the concern for the prosperity of Truth and of souls in the Truth, seem inseparable in the gospel motive; and let not man put them asunder. They are of the true ground on which we may say, "come and have fellowship with us." But the "temporizing and ambitious confederation" is rather *churchianity* than Christianity, and its churches are religious clubs rather than folds of Christ. Besides its zeal of aggrandizement, there is the conniving at admission to membership by purchase. For what else is it, in an expensively conducted church establishment, when recruits whose doctrine will not bear scrutiny, are laid hold on as so many more among whom the church expenses may be shared?

It is no small safeguard to the integrity of our doctrine as Friends, that our meetings are not conducted on a moneyed basis,—to maintain salaries, architecture, showy attractions. So we can ask of an applicant, not what money, but what doctrine does he bring? and chiefest, what living experience of the Truth as it is in Jesus?

THE letter of William Dyer, husband of Mary Dyer, which has been printed for the first time in *The Nation*, of New York, we have hesitated on account of its length, to reprint in our columns. But our religious Society's literature should have a place for it somewhere, as a matter of historical record; and *THE FRIEND* may very appropriately undertake to preserve such matter. The yearning and anxious husband's many words, addressed to the Boston authorities, may well, under the circumstances be forgiven him. "It is," says the *American Friend*, "a most vigorous document, and shows plainly that Mary Dyer had a husband of unusual ability, who, though not a Friend, had the deepest respect for his wife's calls to duty."

MARY DYER.

To the Editor of the Nation (of Fifth Month, 29.)

SIR:—The tragedy of Mary Dyer, who was hung on Boston Common in 1660 for being one of those people called in scorn Quakers, must always glare from the annals of the early Massachusetts colony. A woman of attainments above the average, the wife of a leading man in the neighboring plantation of Rhode Island, the mother of a large family, and a person of acknowledged exemplary conduct, her experience at the hands of the Massachusetts au-

thorities stands out as shockingly brutal, even though inflicted at a time when persecutions of Quakers were carried to extremes. Returning from England to Boston in 1657, she was imprisoned because the magistrates were incensed at the conduct of the Quakers. Released on condition that she would not lodge or speak in any town of Massachusetts, she remained in Rhode Island until June, 1659, when William Robinson and Marmaduke Stephenson, both Quakers, were thrown into prison in Boston, and she felt a call from the Lord to visit them. The authorities, Endicott and Bellingham, arrested her, and it was to secure his wife's release that William Dyer wrote the letter now printed for the first time. Released she was, with her fellow prisoners, but all were banished from the province on pain of death should they return.

The subsequent history of these three persons is among the well-known stories of New England. How they did return, in response to what was to them a call from on high, and how Robinson and Stephenson were hung in the clumsy manner of the day, while Mary Dyer sat under the gallows tree, with a rope around her neck and expecting to suffer the same penalty; how the torture of seeing her friends strangled was prolonged by making her mount the ladder, blindfolded only to be saved from death by a reprieve determined upon days before the date of execution—could the details of such a story be heightened even in imagination? Again sent out of the colony, she once more returned, to find that her judges had in the meantime grown merciful— they hung her without torture.

This letter throws much light upon the attitude of the Quakers and the manner of arresting Mary Dyer. It is now in the collections of the Boston Public Library.

WORTHINGTON C. FORD.

BOSTON, May 5, 1902.

Gentlemen

Having received some letters from my wife, I am given to understand of her Commitment to close prison, to a place (according to description) not unlike to Bishop Bonner's rooms not a place to sit or lie upon butt dust. It is a sad Condition that New England professors are come unto, in exercising such Cruelties towards their fellow creatures & sufferers in old England upon the same account. Under the bishops as yo'selves now, had you no consideration of a tender [the paper here eaten out by mice] that being wet to the skin you cause her to be thrust into a Room whereon was nothing to [eat] or lie down but dust (as is s^d) hadl' yo' dogs been wet you would have afforded it the same. of a chimney corner to dry it self, or had yo' hogs been pend in a sty you would have afforded them some dry straw, or else you would have wanted mercy to yo' beast, but alas Christians now with you are used worse than hogs or dogs oh merciless Cruelty, & what doth enunciate but a rafeaction of that booke lately come out to M^r Cunningham from his wife in England intitled the Popish inquisition executed in N England, with how then, & how may

bee resented by the suprem Authority of England & its dominions time will declare, & I believe you will be made sensible of, the carriages therein exprest doth relent the harts of the rudest of men, besides abominating the carriages of men called magistrats in y^e seat of justice, w^hall relating that you have done more in p^rsecution in one year than the worst bishops did in seven, & now to add more towards a tender woman in y^e condition, that gave you the last cause against her; for did she come to y^e meetings to disturb them as you call it, or did she come to reprehend the magistrats: only came to visit her friends in prison, & when dispatching that her intent of returning to her family as she declared in her . . . the next day to the Go^r, therfor it is you that disturbed her else why was she not lett alone [what] house entered she to molest, or what did she, that like a malefactor she must be haled to [prison] or what law did she transgress? she was about a business justifiable befor god & all good men; [even] not the visitation, and Reliefe of friends to their *paper stained* vers, w^h my self have oft experienced, by visiting M^r Prime M^r Smart & other eminent . . . when he was Commanded close in the tower, I had resort once or twice a week, & neuer felt better Authority to ask me wherfor I came to the Tower, or Kings bench, or Gate house; sure it argues y^e selues, little to practise that duty when you were ther in England, and men had not ther enen more aduenterous tender hart professors than yo^r selues many of them you call godly ministers and many might have perisht for ought I know, & doubtless the authority ther might quickly have [filled] the prisons with such as came upon such arrants out of a tender conscience; if that course you take had been in use w^h them, as to send for a person, & ask them wherfor they came thither, what hath not people in America the same liberty as beasts & birds have to pass the land or ayre without examinacon, or are you of the fearful mind as the barbarous Chinesen, that wold not permit others to come into their Country because . . . And when she had declared her distress, and for those that sat in the seat of justice to charge her she said was a quaker; what a judge & an accuser both just as did the Spanish inquisitors in Spaine to M^r Lithgow, You are a spie, say they notwithstanding he shew'd his Comissions, butt ipse dixit, a spie they say he was, & into such a like place as you have putt my wife, so did they thrust him, & did not giue him so much as straw to lye on butt kept him close according as my wife writes me word, & informacon, y^e she had ther been about a fortnight & had not trede on the ground, butt saw it out at y^e windowes: what inhumanity is this, had you neuer witness y^e owne, what can man y^e is borne of a woman, or enen had any tender afficion to a woman deale so w^h a woman, what is nature forgotten, if refreshm^t be debarred, butt Benningfoold the Lady Elizabeths dogged keeper wold aduitt the Liberty of the garden to her though a condemn'd Heretic, as they called her, oh cruell unheard of dealings, wher was her accusers that she was a quaker, only M^r Bellingham, a magistrat & an accuser what hath magistrats (in the simplicity of justice) to doe to make inquisition upon persons, innocent persons, y^e brought before them, or what president is ther butt the Romish Inquisitors & the Bishops' oath ex officio, for did she not say when she had finisht her visitacon of friends, her business was done for aught she knew & so should returne to her family, butt some of you wold charge her to come to foment her errors, wisdom wold have staid till some svch thing had been done, that so some colorable transgression might have appeared for proceedings, & not upon yo^r owne suggestions to draw up & stuff a mittimus w^h

All y^e standers by could not butt . . . by their silence being appeall'd vnto, y^e the gaur a good account of her mittimus & she said no such things as you exprest in yo^r first mittimus, a copy of w^h I have also to be declared in time, and be sure such proceeds will be clothed in Roman Buff. It is not to be forgotten the former cruelties you used towards her when she came from England, having been tossed at sea, all the winter, but a

little refreshm^t they had by cross winds at Barbadoes, yett as soon as come into Harbor shvt vp into a prison & ther kept *[here follow three lines which have been carefully obliterated]* for no transgression at all, only M^r Bellingham then as now said she was a quaker, just as Bonner, Gardiner, and y^e rest of y^e Bloody Crew said to the poore saints in St. Marys *[illegible]* they sent their blood-hounds about, (as Vauit was) w^h their eagerlast- ing Commission to spie out & bring them before the thees, Common the first & second word to them was, you are an Heretic; but it may be those dayes are forgotten, yett surely you or some of you, if ever you had the courage to look a Judges [?] in the face, cannot butt remember that the 1-2 or third word from them was, You are a puritane are you not, and is it not so in N. England. The magistrats hauing contrary to gods Law assumed a Coercive power ouer the Conscience, the first or next word after appearance is You are a Quaker. See the steps you follow, and lett their words be yo^r warning; and lett the same be made according to the ruling will; Away w^h them to the Colcheor, or new prison, or house of Correction, and neuer any of the three ages, haue wanted rayling scurilous termes, to make the innocent saints odious in the peoples eyes, especially when they are not able to gainsay their righteous profession, and all borrowed from y^e nurserie of Deuils, the persecutors of the Waldenses: And now Gentlemen consider their ends, & believe it, it was Certaine the Bishops ruine suddenly followed after their host pursuance of some godly people by their call'd Pursuits, especially when they proceeded to sway y^e blood of Doctor Laytons and G. Lilbornes backs (no more do they rend them proceeded to whip) & the blood of M^r Prin M^r Burton & Doctor Bostwicks eares, only them three & butt three, & these were as odious to them as the quakers are to you; and lett me appeale to yo^r owne consciences, & to yo^r owne . . . ouer two witnesss came against any person you have eyther prisoned . . . sworne they were quakers, or a quaker, butt as yo^r brests conjectures so must . . . this in General, & now in particular, do I demand what witness or whether Legally testimony [?] was given against yo^r blood of Doctor Laytons a quaker, if not before god & man how can you clear yo^r selues & seat of justice, from Cruelly persecution yea & so furr as in you lies murder as to her & to my self & family oppression & tranny, the god of truth knows all this, & beleve it is in Remembrance w^h him & of you twill be requir'd, who haue kept her to the utmost that is to this present court or sitting to bring her into or vnder the capacity of yo^r Cruell Law of Banishm^t, and this is the summa totalis of yo^r Law titled Quakers: That a Law titled Quakers shall be a law that is guilty of a breach of a Law titled Quakers is so strong, that she is Lawfully committed by 2 witnesss is not yett heard of, that she must be banished by a law titled Quakers being not being conuicted by law, but being conuicted (i.e. summoned for trial) by surmise & condemn'd to cloce prison by M^r Bellinghams suggestion is so absurd & ridiculous, that the meanest pupill in law will hiss at such proceeds in old Lawyers. What branch of the law titled quakers hath she broke or will you say she is vehemently suspected to be a quaker in your law titled Quakers Felony or Treason, that vehement suspition renders them capable of suffering. Look now lett all be rancanall & persecuting governments in the world, & giue the like instance, & it may appease, butt for my owne pⁱ I neuer heard or read of any: To Rome I being an Englishman & knowne not to be of their profession, yea to be a protestant, & may see & visit, & yett not banished because I am suspected to be a protestant, & now you that profess the Law of god is yo^r Rule, when yo^r Law or Rule to keep a man's wife from him 7 or 8 weeks, & a mother from her children, in a capacity of close prison, w^h Admits of no Baylem, is not this indeede fact a more a diuorcement, by you may, & is not this little better murder by yo^r owne Catechismes to bring in a guiltless person into a little chamber in such a contagious time as god shakes his Rod ouer you in, & hath not offered her the benefit of the fresh ayre, truly this is a

non parricide, and that she has broke no y^e mittimus do sufficiently witness; w^h sh^h sh^h sh^h by virtue hereof you are to take into yo^r Court the person . . . who upon examination authority professeth her Coming into this was to visit the prisoners . . . account be Comming. haue you a law or doth yo^r law did Quakers prohibit any person from visiting a woman you call Quakers in hold (besides she asking to go into them, butt stood w^h the doors) the raine till she was wet to the skin the she had you had some Colour, & yett her ignorance of Law or clause had ther been one, might have pleaded a sufficient excuse for the first time an merciful men, 2^o yo^r mittimus s^h that she p^r her self of the same Religion that Humphreton was of, I dare imagine 500^o she neuer spak w^h a word, butt that she might say H. n. was the truth I deny not, yett, haue you a law to count such to cloce prison as shall say they were H. Nortons Religion: 3^o that she refused to p^r direct ans^r to what was proposed therfor may no person shall be imprisoned or molested by the preests condemn o^r sauior, besides that saum^t much the oath ex officio: so much formerly act by yo^r owne selues 4^o for affirming the light vnder to be the Rule, haue you a Law that lett the light in M^r Dyre is not M^r Dyre's rule, you haue for that or any of the fornamed a lash that may be made a transgressor for wor & yo^r mittimus hold good, butt if not, then haue you imprisoned her & punisht her w^hout Law & against the Law of god & man, I mean yo^r selues, 5^o if you be men I suppose yo^r fundamentall law is that no person shall be imprisoned or molested upon the breach of a Law, & yett behold my w^hout the Law & against law is imprison & punisht & so hieely punisht as intended to a p^r next unto death, and y^e for w^h you practise selues in part, as, she is condemn'd for sayin^t the light in her is the Rule! Is not yo^r light w^h you yo^r rule by w^h you make & act such law, for yee haue no Rule of gods word in the bill to make a law titled Quakers, nor haue you any order from yo^r Supreme State of England to such Lawes, Therefore it must be yo^r light w^h you sufferings of yo^r part butt I question not my faith what Jesus Christ s^h If the light that be in you is darkness how great is that darkness, Therof of his grace dispell it from you that yee ay come to see and say as Adonibezek did three m^o & ten kings hauing their thumbs & great toes of gathered their meat vnder my Table, as I me done to others so God hath done to me and ey carried him to Jerusalem & ther he died: I ve written thus plainly to you, being exceeding asible of the unjust molestation & detainm^t of yo^r deare yoke fellow . . . & my family as w^h of her will urge Lond in yo^r eares together w^h sufferings of yo^r part butt I question not my faith yo^r Comfort from the most high to her enenle, though at present my self & family be you deprived of the Comfort & Refreshm^t we no haue enjoyed by her so s^h

DEATH can never interrupt a faithful Christian life. When we feel the touch upon a shoulder and hear the word whispered in our ear, we may be at our work or on a journey, walking the street or asleep in our beds, prying at church or sowing in the country. What difference does it make? We are trying to please our God in what is our business just then. Sacred places and times have no superior advantage for the dying. Sacredness is in the motive of the heart that would do everything as unto the Lord, dying along with rest. As heaven is still the glad doing of God's will, where is there any interruption of Babcock.

The Stain That Wouldn't Rub Off.

was but six years old, and a boy of six is not expected to know as much as a boy of eleven. That was one reason why Charlie hadn't have been quite so sharp in his remarks and then mother showed him another in that evening.

Charlie and Freddie were "cutting across" and, as they went along, were gathering flowers for mamma. Charlie was walking ahead so far had spied all the flowers, which he picked up with gracious condescension, allowed Freddie to gather. Suddenly the little boy came in sight of a bunch of yellow beauties deep brown centres. They were down at the bottom of a little hill, and the grass under them was most brilliantly green and fresh. Charlie had evidently not seen them. Freddie darted down the slope.

"Here, Freddie!" shouted Charlie glancing his shoulder, "don't you go down there. It's muddy."

Freddie's warning was disregarded and the moment Freddie had sunk in the slime away up his fat little legs.

"Now, how'm I goin' to get you out of it?" demanded Charlie, crossly. "I told you not to go in, and you went. Now I'll get you out of it, myself pullin' you out. It's still!" this time more sharply than before. "Don't try to get in any deeper than I. Quit your blubberin' now. I'll get it some way."

It took a long search for a limb of sufficient length before Charlie, standing on the edge of the swamp, pulled little Freddie on firm ground again, though in doing it he nearly pulled the little fellow on his face.

Freddie's sobs broke forth afresh, and the brother relented a little.

"Here," he said in a gruff tone, that was intended to hide the tenderness which he might show, "now I'll scrape off the mud with a stick, and when your shoes dry they can be blackened, and will look most like new. I tell you, though, Freddie, you ought to have listened when I told you the mud was bad."

"I didn't see any mud," whimpered Freddie, "the grass was prettier there than anywhere else."

"That's just it," replied the brother, "when these awful green grass as that you saw there's a swamp."

"But I didn't know," protested the little boy, "and I couldn't see any mud."

"Then that's just why you ought to have listened to me," declared Charlie, feeling that he must not lose the opportunity of rebuking further. "You see I'm twice as old as you, and ought to be supposed to know as much." This last sentence had a stinging tone that hurt Freddie, though Charlie pleased with this conceit.

"But he was so well pleased that he wouldn't forbear repeating it to mamma, and he really had not meant to be too hard on the smaller brother."

"You see, mamma," he said, "I told him I was twice as old as he was and know about as much. That's what he got for not listening to me."

Freddie could bear the reproaches no longer. He was sitting on mamma's lap, and his little bare feet wiped quite dry, and

she was wiping away the tears, and telling him it might have been much worse, and that he was her own baby boy and the rest of the nice things mothers say when their children are in trouble. So this last speech of Charlie's was really too much.

"Why don't you always mind?" Freddie burst out, sitting bolt upright and digging his fists into his eyes to stop the welling tears. "He don't mind papa, mamma, for I saw him smoking a cigarette in the barn. I peeked through a whole and saw him. He'd better tell himself to mind, hadn't he, mamma?"

Mamma only looked at Charlie, but it made the blood rush up around his throat and up his face to the very roots of his hair. That evening, though, she came in his room after he was in bed. She turned out the light—for she was one of those mothers who know a fellow can tell things better in the dark—and then she said:

"How about the smoking, Charlie? Did Freddie tell me the truth?"

This time she couldn't see the blush (though it was there), and she could barely hear the whispered, "Yes."

Then, like all wrong-doers, ever since the time of Adam, he began to excuse himself.

"I didn't do it to disobey papa, I truly didn't mamma. But half the boys in our class smoke cigarettes, and I don't see where's the harm in it."

"Neither did Freddie see the mud, and you were very cross with him because he did not obey you who were twice as old. Papa is more than three times as old as you. Don't you think, then, that he should know at least three times as much as you? Don't you think when he tells you that cigarettes are very harmful, that you should believe he knows the truth of what he is saying? He tells you that the boy who smokes cigarettes can never be as strong and healthy a man as the boy who does not smoke. He tells you that the man with a weak body can never do as valiant service for God or the world as the man who is strong. He tells you that the boy who deliberately does those things that will injure the body, is not only committing a great wrong against himself and the world in which he is to be a worker, but he is sinning against God."

"Remember, dear," she was bending over him for a good night kiss, "remember that Freddie's mud was easily brushed off; but every act of disobedience or wrong-doing of any kind leaves an indelible stain on the soul."

—Presbyterian.

THE TIRED FOOT.—A woman was watching a potter at his work whose one foot was kept with a "never-slackening speed, turning his swift wheel around," while the other rested patiently on the ground. When she said to him in a sympathizing tone, "How tired your foot must be!" the man raised his eyes and said: "No, ma'am, it isn't the foot that works that's tired; it's the foot that stands. That's it." If you want to keep your strength use it. If you want to get tired, do nothing. As a matter of fact, we all know that the last man to give a helping hand to any new undertaking is the man who has plenty of time on his hands. It is the man and woman who are doing the most who are willing to do a little more.

FOR "THE FRIEND."

The Cost of Intoxicating Drinks and Tobacco to the Nation.

An essay in the current number of the *Popular Science Monthly* by the eminent statistician, Dr. Edward Atkinson of Brookline, Massachusetts, on what he humorously terms "Social Bacteria and Economic Microbes, wholesome and noxious," gives the result of his studies of the census reports, the Bureau of Statistics of the Treasury Department of the United States, and two periodicals called *The American Grocer* and *The Tobacco World* relative to the consumption of alcoholic liquors and tobacco by the people of the United States, that have deep significance for every Christian mind solicitous for the spiritual and secular welfare of his fellow citizens. He states that the Government Bureau estimates the annual average value for each person of the liquors consumed at \$17.90. Placing the present population of the United States at eighty millions, this would involve an annual expense to the nation of one billion, four-hundred and thirty-two millions of dollars. The estimate of *The American Grocer* is \$14.20 per capita, but Dr. Atkinson considers this too low, and enters into a minute calculation from the number of gallons of beer, wine, and spirits returned for internal and customs revenue tax, and the number of drinks when retailed to customers to the gallon, with the customary price for a drink, to prove that the government estimate is more nearly correct. Striking off the ninety cents from the latter he adopts \$17 per capita as the fairest standard, which will give \$1,360,000,000, for the grand total that the Nation expends for alcoholic drinks, which the majority of medical experts considers as in no sense of any food value, and rather as a poison to the human system.

Dr. Atkinson quotes the authority of the editor of the "Tobacco World" for an estimate of the annual cost of tobacco to its consumers in the United States, which he states at an average of \$6.15 per head of all sexes and ages. This for eighty millions of people aggregates \$490,000,000, and over. Thus we find our American nation expending annually \$1,850,000,000, for two articles mostly useless in themselves, and one of them destructive of all that is valuable to mankind. This if distributed equally among all the population would subject each one to a tax of \$23 per annum.

The cost of carrying on the government of the United States for the last fiscal year was \$1,063,000,000. This includes all the military, naval and pension expenditures.

The total cost of all kinds of bread stuffs used by citizens of the United States is placed at about \$1,520,000,000, per annum and being \$340,000,000, less than the liquor and tobacco.

When will statesmen and legislators study these greatest of all factors in social economics, and realize that the suppression of the manufacture, cultivation, and consumption of intoxicants and tobacco constitute the highest duty of those who guide and control the affairs of the commonwealth and nation?

CHARLES RHODES.

HADDONFIELD, N. J., Eighth Mo., 1902.

HE who is taken up with the King's business has no time to meddle with his neighbor's.—Standard.

For "THE FRIEND."

Samuel Fothergill.

Samuel Fothergill, of Warrington, in Lancashire, was the son of our worthy friend John Fothergill and Margaret his wife. Being of an active and lively disposition, and during his apprenticeship, mostly from under the watchful eye of his affectionate parent, he fled from the holy cross of Christ and indulged himself in the gratifications of folly and licentiousness, violating the repeated convictions of Divine grace in his own mind, which had been mercifully extended from his early years, thereby wounding the soul of his tender father, of whose religious care to form and lead the tender minds of his children to piety and virtue, we have an account in the memoirs of his life. Yet his pious admonitions proved, nevertheless, as bread cast on the waters, which returned after many days; for about the twenty-first year of his age, the visitation of Divine love was so powerfully renewed, that it proved effectual to turn his steps out of the paths of vanity; and as he has expressed, with humble and awful gratitude to the Preserver of men, it then appeared clear to his understanding that would be the last call the Heavenly Father would favor him with.

He therefore consulted no longer with flesh and blood, but gave up to the holy visitation, devoting his whole heart and affections, to seek reconciliation with God through the mediation of Jesus Christ; and abiding in great humility under the purifying operation of the Holy Ghost and fire, he became thereby qualified for those eminent services he was called into. In a few months by the constraining power and love of God, his mouth was opened to bear a testimony to the sufficiency of that holy arm that had plucked him as a brand out of the fire. Thus a dispensation of the ministry being committed to his charge, he attended faithfully thereto, and moved therein at the requirings and under the direction of Divine wisdom, by which means he soon became an able minister of the gospel, called thereto, and qualified by the Holy Ghost. Under this influence he labored with diligence, and devoted much of his time and strength when health permitted, to the service of his dear Lord and Master; for the continuance of whose favors he counted nothing too near and dear to part with, that he might be instrumental in gathering souls to God, which was the object he had in view in all his gospel labors. Being diligent himself, he endeavored much to incite Friends to a due and constant attendance of meetings for religious worship, and those for the discipline of the church. Through the course of his gospel labors, both in public and private, animated by Divine love, he expressed an uncommon warmth of affection for the rising youth of this generation with whom he was led into deep brotherly feeling and sympathy, for their present and eternal welfare; under which concern his love to this class of both sexes under all denominations, was strong and ardent.

He travelled much in England and Scotland, several times in Ireland, and once through most of the North American colonies, in the service of Truth, where, though singularly humbled in a sense of poverty, weakness and insufficiency on his first landing, he was by accounts received, marvelously strengthened,

both in public and private, in gospel authority and love, to the awakening and comforting of many.

In the fore part of the year 1769, he visited most of the families of Friends in the Monthly Meeting of Gracechurch-street, London; in which service he was divinely strengthened, and enabled to extend a helping hand to many in close and necessary labor, for their increasing care, to live, and act, consistently with our holy profession, to the comfort and help of many, and his own peace; and afterwards at two different opportunities, he visited the families of Friends in Horslydown and Westminster Monthly Meeting in that city, to the same good effect. He mostly attended the Yearly Meetings in London, and other places, when of bodily ability, in which his gospel labors were very acceptable and edifying; being particularly careful, when called from home to return to his family and friends with as much expedition as the nature of his service would admit.

Having acquired a moderate competency by his diligence, and industry, he declined trade for several years before his decease, devoting his time and talents to the service of the churches. As a pillar in the Lord's house, he was steadfast, being actuated by a Christian and manly zeal;—in deportment grave; his private conversation was savory and edifying, corresponding with his ministry, which at times went forth as a flame, piercing the obdurate, yet descended like dew upon the tender plants of our Heavenly Father's planting, the true mourners in Zion; with these he travelled in a deep sympathy of spirit. In his gospel labors he was free from affectation; in doctrine, clear, sound and pathetic, filled with charity, allowing for the prejudices of mankind, being indeed a minister and elder worthy of double honor, speaking whereof he knew, and what his own hands had handled of the good word of life.

He endured a long and painful illness, with much patience and resignation, and towards the close of his time expressed himself to some of his relations when they took leave of him, previous to their setting out for the Yearly Meeting in London, to the following effect: "Our health is no more at our command than length of days; mine seems drawing fast towards a conclusion; but I am content with every allotment of Providence, for they are all in wisdom, unerring wisdom. There is one thing, which as an arm underneath, bears up and supports; and though the rolling tempestuous billows surround, yet my head is kept above them, and my feet are firmly established. O! seek it, press after it, lay fast hold of it. Though painful my nights, and wearisome my days, yet I am preserved in patience and resignation. Death hath no terrors, nor will the grave have any victory. My soul triumphs over death, hell and the grave. Husbands and wives, parents and children, health and riches, must all go. Disappointment is another name for them. I should have been thankful had I been able to get to the ensuing Yearly Meeting in London, which you are now going to attend, where I have been so often refreshed with my brethren; but it is otherwise allotted. I shall remember them, and some of them will remember me. The Lord knows what is best

for us. I am content and resigned to his will. I feel a foretaste of that joy that is to come; and who would wish to change a state of mind. I should be glad if any angel could be found to inform the Yearly Meeting, that as I have lived so I shall close, with the most unshaken assurance, that we have not followed cunningly devised fables, but the pure, living, eternal, substance. Let the aged be strong, let the middle-aged be animated, and the youth encouraged; for the Lord still with Zion; the Lord will bless Zion, he now removed out of the church militant, where I have endeavored in some measure to fill up my duty. I have an evidence that I shall gain an admittance into his glorious city triumphant, far above the heavens. My dear love is to all them that love the Lord Jesus." He departed this life the 15th of the 4th Month, 1772, in the fifty-seventh year of his age and the thirty-sixth of his ministry.

The Spirit of the Lord.

The source of power has been an interesting study among men, for all ordinary exertions fail to satisfy the conditions of the problem. We often see people with very mental or physical equipment accomplish results that those of vastly superior abilities fail to secure with all their most eager endeavors. The prediction of great success in life is made of the bright and promising sons and daughters in families come to naught, while the ones of whom little was expected, accomplish spiritual and material wonders. Barren places where all work seems like sowing seed on the rocks at length become like blossoming gardens, while fruitful spots yield nothing in spiritual results. The worker who is set to some unpromising field because there seemed to be so little in him, so slight a hold upon the forces necessary for success in this world, reports triumphs that the brilliant young man who was sent to the "high place" never attains. There are constant puzzles presented to those who view matters only from the standpoint of human ability. The understanding of truth does not seem to be conditioned upon large intellect and abundant opportunity of study with the learned of the earth, for the woman in some distant farm district enters into the secret of the Most High, and propounds questions that puzzle the seminary student who comes to preach, and offers solutions that surprise the seminary professor. There are some in the world who are evidently taught by superior instructors, some who are aided in their work by spiritual giants. They lift loads, they carry burdens, they speak truths, they control difficulties, they subdue opposition, they smooth rough ways, they level lofty mountains, they accomplish the impossible. All this clouds that no one else would dare to attempt they cheerfully step, and dissipate them by the might of their presence. They are a tonic to every body. They are of utmost value in hours of depression. They furnish the courage for heroic enterprises, and open the Red Sea, and bring the water from smitten rocks. But they never claim any power for themselves; they never want votes of thanks for their efforts; they solemnly declare that they have no might nor worth in themselves. All this comes from the Spirit of the Lord, S. H. VIRGIN, in *New York Observer*.

The Irish Friends in Pennsylvania.

History, in this country, begins with the coming of the white man. The arrival from Europe of the new people, who displaced the Indians and occupied and kept the land is the starting point for our historical work.

This portly and attractive volume (title irrelevant),* Albert Cook Myers has taken for his theme the migration of the families of Friends who left Ireland and located in Pennsylvania between 1682 and 1750. This is a subject which has received but little attention, and which therefore has particular value as a historical study. The coming of Friends' families to this region in the colonial time has been described in many works of genealogical research, and in local histories, but these have only related to families from England; those who left Ireland, for some reason, had been nearly left for a work like this.

After treating at some length of the beginnings of Quakerism in Ireland the author discusses the inducements that led the Irish Friends to emigrate to Pennsylvania. From the time of his conviction, while in Ireland, of the truth of Friends' doctrines, William Penn had been brought prominently before the eyes of Ireland. In 1669 he went to that country to assist in the management of the estates and hearing of the persecution and imprisonment of Friends there went at last to Dublin and succeeded in procuring the release of those in prison. The Irish Friends had great confidence in him and they were among the first to whom he opened his Pennsylvania project.

The Free Society of Traders had much to do with the first Irish migration to Pennsylvania. The society, consisting of three hundred members, among whom were several prominent Irish Friends, purchased twenty thousand acres of land in Pennsylvania. Robert Turner, of the committee of twelve at the head of the organization, removed to Philadelphia in 1681, with his daughter and seventeen "indentured" servants. As he took a prominent part in the affairs of the colony no doubt his influence much to forward the migration of his countrymen. Some of the letters that passed between the early immigrants to Pennsylvania and the Friends who remained in Ireland are of interesting reading.

Although a few Irish Friends came over during the first decade the greater part arrived on the lands near Philadelphia had been located and were obliged to push out into what was then the wilderness. A few of these early immigrants settled in Bucks, Montgomery and Berks counties. About sixty-five per cent. of the whole number settled in Chester county (which then included Delaware county), and twenty-six per cent. in Philadelphia. After the Philadelphia Monthly Meeting comes New Garden (with one hundred adults, Kennett (forty New York) with eighty-two, and Chester sixty-three. The trades-people who were sent from Dublin, Cork, Waterford, Limerick and Wexford, naturally settled in Philadelphia, while the yeoman from the counties of Ulster and Leinster chose the outlying districts.

Of the forty-three persons taxed in Ken-

nett in 1715 nine were Irish Friends; George Harlan and Gayen Miller were probably the first of these to secure land in the township. The first map of New Garden township shows two vacant lots, twenty tracts owned by Irish Friends, and ten tracts belonging to other owners.

The only Irish Friend taxed in Marlborough township in 1715 was Joseph Pennock, a native of County Tipperary. In 1738 he built a mansion called "Primitive Hall," which is still standing. He served as a member of the Provincial Assembly almost continuously from 1716 to 1744. During the Cresap War in 1746, arising from the dispute over the boundary between Pennsylvania and Maryland, he was one of the five men appointed by Governor Thomas Penn "to investigate a conspiracy hatched by agents of Maryland among the settlers of New Garden and London Grove."

Newlin township was owned entire by an Irish Friend, Nathaniel Newlin, of Concord, who evidently bought it as a land speculation. A difficulty arose between the settlers who bought of him and the Indians on the north side of the Brandywine, which was finally adjusted by the Provincial Assembly. Another Irish Friend, who owned an entire township, was Joseph Pike, a merchant of Cork, to whom William Penn granted a tract of over ten thousand acres in 1705, which was afterwards organized as Pikeland township.

Moses Coates, grandson of emigrant Moses Coates from County Carlow, was married in 1770 to Hannah Musgrave of Sadsbury, the daughter of an Irish Quaker, and became the owner of the land now occupied by the borough of Coatesville. Quite early in its history, Wilmington, Delaware, received Irish Friends as settlers, and many who helped to build up this industrial city were of Irish Quaker stock. The Nottingham settlements, now in Maryland, also received a number of Irish Friends, and the meetings in Pennsylvania farther west than Chester county all had a fair proportion of Irish members.

Among the Friends that emigrated to the Carolinas before the Revolution there are many Irish names. When the competition of slave labor crowded out these Friendly colonies and the stream of emigration set westward, we find these same Irish names among those who made homes and built up Friends' meetings in the Northwest Territory.

The most eminent of the Irish Friends was James Logan, a young man in whom William Penn placed great confidence. He came to Pennsylvania in 1699, with Penn, and for forty years thereafter he held some high office in the colony. He bequeathed to the city of Philadelphia his private library of three thousand volumes, which formed the foundation of the Loganian Library.

Thomas Holmes, who had been imprisoned in Dublin, was one of the first purchasers in Pennsylvania, buying a tract of five thousand acres. Penn appointed him Surveyor-General of the Province of Pennsylvania. He also held many other places of trust and honor, and at one time acted as Governor of the Province.

Other eminent Irish Friends not already mentioned were Thomas Griffiths, who served as Mayor of Philadelphia and Judge of the Supreme Court; Robert Strettell, a prosperous

Philadelphia merchant, who had a country house in Germantown, and who also served as Mayor; William Stockdale, a writer of Friends' books; Nicholas Newlin, who served as a judge of the Chester County Courts; and Lydia Daragh, who risked the safety of herself and family to give important information to General Washington.—*Intelligencer.*

FOR "THE FRIEND."

A Trade and Habit That Worketh Ill to our Neighbors.

In a previous article by the undersigned concerning dealing in tobacco, a reference was made at the conclusion to the pronounced tobacco environment of our membership in North Carolina. The writer feels that a few more words there-along may not be uncalled for. Having some correspondence with a valued member of that Yearly Meeting some fifteen years ago, in which expression was given to a concern relative to the immorality which accompanied the advertising of the manufactures of tobacco, my correspondent thence wrote to a member there who was concerned in the wholesale trade, laying the subject referred to before him. His reply, which was forwarded to me, stated in effect that he thought his firm was quite clear of the charge, but admitted that there was a tendency among "the merchants and manufacturers generally" in the trade to make use of a line of pictorial advertising that was undoubtedly corrupting; adding the postscript—"Probably I may have become infected with the tendencies of the time, and will be on my guard in future to eschew the appearance of evil." Unhappily, the trade itself being antagonistic to the well-being of society, bears upon its face this wrong appearance of evil.

We will look upon the picture nearer home. The principal of a large public school southwest of the central part of the "Quaker City," became practically acquainted with the evils of the tobacco habit, through the fact that several times in a week, boy pupils would come to her complaining that they were ill. She would either give them some simple remedy for sick stomach or send them home. Later, when the same boys were again afflicted with nausea, she became suspicious as to the cause, and found that they had been smoking cigarettes, bought at various stores in the neighborhood. One boy stated that he had gotten them from a slot machine, a contrivance that has been found signally efficacious in drawing the spending money from school boys' pockets. The vicious operation of these machines having already given the principal trouble, she now complained to the police authorities for relief. Several dealers were arrested and their cases were sent to court, but remain yet untried. It may be taken as a verity that if the fathers smoke cigars, the sons will test the worth of cigarettes. "Love worketh no ill to his neighbor," said Paul, and so advised "make not provision for the flesh to fulfil the lust thereof."

JOSIAH W. LEEDS.

THE seed sown in the ground contains in itself the future harvest. The harvest is but the development of the germ of life in the seed. A holy act strengthens the inward holiness. It is a seed of life growing into more life.—*Robertson.*

Immigration of the Irish Quakers into Pennsylvania: 1682-1750. By Albert Cook Myers, M. L. Published by the author.

First Issue of the Scripture in Irish Characters.

A few years ago the subject of Celtic renaissance occupied much time and space on platform and in public prints, but the apparent silence on this subject in these days does not necessarily betoken that the claims and claimants for Celtic literary superiority are now non-existent.

As a matter of fact there has been considerable activity in publisher's circles.

The recent publication of the revised edition of the Gaelic Bible has aroused keen interest in Scotland, where for several years past every encouragement has been offered to the young men and women of the Highlands to preserve and practice their mother tongue.

It is widely recognized that the picturesque of Highland speech is largely due to the translation of the more poetic Gaelic into the so-called Anglo-Saxon prose of daily life.

But the most fervent Scot, being also a Celt, must never forget that the Irish Celt is his senior and superior in language and literature, and as many allusions have been made to Bishop Bedell's Irish Bible in connection with this new edition of the Gaelic Bible for Scotland, readers of the *Ledger* may take interest in a few particulars as to this first edition of the Bible in Irish characters.

This book was not actually printed and published until the spring of 1686, or fifty-six years after Bishop Bedell first expressed his determination that the Bible would be translated.

A few words first on the subject of the introduction of printing into Ireland may help to elucidate the story of the struggle during these fifty-six tardy years.

We all exclaim at the seemingly fabulous sums offered in these days in auction rooms for first editions of rare books or standard works. Let us enhance our admiration by the effect of contrast between the appreciative spirit as displayed then and now.

Webb tells us that previous to the reign of James I., all Irish MSS. were made an object of search, "with the intention of destroying them—and so infatuated were the blind Government of that time that they not only would not allow them to be translated in England, but they exerted their influence to prevent this being done on the Continent."

Records certainly prove that during the reign of Queen Elizabeth the king of Denmark applied to England to send Celtic scholars to examine and translate Irish MSS. in his royal library at Copenhagen, but the request was refused by the Privy Council. (Tradition tells of valuable MSS. carried to Denmark and Spain.)

Printing in Irish type was first introduced into Ireland by John Kearney and Nicholas Walsh, who, in 1571, obtained a printing press and font of type from Queen Elizabeth, also permission to print the prayers of the Church in native Irish, to be read of the common people in a church set apart in the chief town of each diocese. The title of their first book is "Alphabetum et ratio legendi linguam Hibernicam, et catechismus in eadem lingua. John A. Kearney, 1571."

Thirty years later a translation of the New Testament was published, in 1603, which had been begun by the two printers in 1573. Walsh, however, was assassinated in 1585, and

then Donellan—who had studied at Cambridge—assisted Kearney.

This Donellan was afterwards made Bishop of Tuam, in 1595. This first edition of the Testament was dedicated to King James, but the cost of printing the same was borne by the Province of Connaught.

It may be wisdom to refer here to a statement made by Lemoine, in his "History of Printing," to the effect that an Irish Liturgy was printed in Dublin in 1566 for the use of the Highlanders of Scotland; but this is now believed to be a reference to Carswell's prayer book.

In 1608 the Book of Common Prayer—but without the Psalms—was translated and published at his own expense by O'Donnell, who in the following year was made Bishop of Guam, and who died in 1628.

Finally in 1630, William Bedell, Bishop of Kilmore, but a native of Essex, began his work of translating the Bible. He, realizing his inability to do justice to the Irish idiom, found in King and O'Sheridan valuable colleagues of scholastic note.

Soon the greatest opposition arose against the trio, and in 1638 King, although eighty years of age, was thrown into prison. The good bishop resented and resisted vigorously, and his letter of protest, addressed to the Lord Lieutenant, was long quoted as a masterly rebuke.

To pave the way for a more kindly feeling he printed, in his own house and at his own expense, a few of the homilies of Chrysostom and a catechism, and circulated these in hopes that he could thus overcome the popular opposition to an Irish Bible.

Alas! the Rebellion broke out, and, in 1642, the worthy bishop slept with his fathers.

His successors in the See did not trouble themselves, but, although many of his papers were lost during the troublous times, the MS. of his Bible was saved.

The font of type given by Queen Elizabeth to Kearney and Walsh were used, in 1652, for the printing of a catechism in Irish character, and then sold by the king's printer, and carried by the Jesuits to Dorey.

Our next record is in 1678, when the Testament of 1603 had become so rare that Robert Boyle ordered a font of types from Moxon, of London, and, in 1679, assisted by one Reilly, began a new edition of the New Testament. This work was finished in 1681, and this second edition numbered seven hundred and fifty copies.

Public interest, stimulated by Robert Boyle's zeal, was revived in Bishop Bedell's MSS.: a search was instituted, and the son of O'Sheridan was able to place the MSS. into the hands of Dr. Sall in 1681.

Dr. Sall found many of the sheets much defaced, but he succeeded in arranging and binding the same together. Then, by an expenditure of one shilling per sheet, he had the whole rewritten for the press. Alas! there seemed to be no continuous effort possible, for in 1682 Dr. Sall died suddenly. Then others were found to take his place, so that in that year one hundred and forty sheets were ready. In 1683 the Book of Jeremiah was reached, and in 1685 the whole work was transcribed into seven hundred and nineteen and a half sheets, and sent to Reilly in London, who pub-

lished the same in the spring of 1686.

There were seven hundred copies printed, and, although the total cost has not been certain, it is well known that Robert contributed seven hundred pounds.

This is the Bible, which, full of Irish, was transcribed into Scottish Gaelic, in by Robert Kirk, of Balquidder.

Although copies of Bishop Bedell's Bible are not rare, they are of fair value. For example, the bookseller, Quaritch informs me that he had three copies in stock, from 1686 to 1688, at prices ranging from 10 to 15 dollars upwards, according to condition, clean pages and binding. A copy without the title page loses much in value, but there is no doubt whatever that those who own one now will find them to be a good investment within a few years hence, and, as Bedell said, this new issue in Scotland has called attention to Bishop Bedell's life-work.—*Daily Ledger*

MOTHERS, SPEAK LOW.—I know some faces, well built and handsomely furnished, but it is not pleasant to be even a visitor. Still, angry tones resound through them from morning till night; and the influence is as contagious as measles, and much more to be dreaded in a household. The children catch it at last for life, an incurable disease. A friend has such a neighbor within hearing of her house when doors and windows are open, and even Poll Parrot has caught the tune and lights in screaming and scolding, until she has been sent into the country to improve her habits. Children catch cross tones quicker than parrots. Where mother sets the example you will scarcely hear a pleasant word and the children in their plays with each other. Yet the discipline of such a family is always weak and irregular. The children expect so much scolding before they do anything as to be arid; while many a home where the firm, tone of the mother, or a decided look for her steady eye is law, never think of discipline either in or out of her sight.

Others, it is worth a great deal to cultivate that "excellent thing in a woman, a low, sweet voice. If you are ever so much tired by the mischievous or wilful pranks of little ones, speak low. It will be a great help to you to even try to be patient and cheer up if you cannot wholly succeed. Anger makes you wretched and your children also. Impatient, angry tones never did the heart good, but plenty of evil. You cannot have the excuse for them that they lighten your burdens, they make them only ten times heavier. For your own, as well as your children's sake, learn to speak low. They will remember the tone when your head is under the willow. So, too, would they remember a harsh or angry voice. Which legacy will you leave your children?—*N. Y. Chronicle*.

THERE are prodigal daughters as well as prodigal sons. How many young girls are wasting noble talents and precious time at opportunities with frivolities, that no more feed and satisfy the longing soul than the husks with which the Prodigal Son would have filled himself. Yet they say to the selves, some time we will change and do better or that. That sometime spirit has led many to perdition.—*Christian Instructor*.

A MIGHTY RICH MAN."—Once in New and I was driving with an old farmer, one of the men of the neighborhood came for criticism. Speaking of a prominent in the village, I asked: "He is a man of us?"

"Well, sir," the old farmer replied, "he got much money, but he's mighty rich." "He has a deal of land, then?" I asked. "No, sir, he ain't got much land neither, till he is mighty rich."

The old farmer, with a pleased smile, obeyed my puzzled look for a moment, and exclaimed:

"You see, sir, he ain't got much money, he ain't got much land, but still he's rich, because he never went to bed owing any man not in all his life. He lives as well as he is to live, and he pays as he goes; he owes nothing and he ain't afraid of no; he tells every man the truth, and does duty by himself, his family, and his neighbors. His word is as good as a bond, and every woman and child in town looks up to and trusts him. No, sir, he ain't got much money and he ain't got much land, but still a mighty rich man because he's got all lands and all he wants."

I assented to the old farmer's deductions, thought them entirely correct. When a man has all he needs and all he wants, he is really rich; and when he lacks these things he is certainly poor. Now the poor man's possessions—defining riches and poverty in this—may be double those of the rich man. I can illustrate in point. I know a man who lives with his family in a country village. He is, without doubt, larger than that man in the township, and still he is in a position more harassed by want of money than any man in the neighborhood. He requires many things that he always spends some more than he makes, and therefore he stays in debt, always importuned by his creditors. Now, according to the idea of the New England farmer, my friend is really richer than the artisans and gardeners and laymen who work for him. And I know that that gentleman counts himself among the poorest of the poor.—*John Gilmer Speed, in the Boston People.*

LOOKING FOR THE FUTURE.—Would it not enlarge our daily existence if we more vividly realized, than we do customarily, that our human life is not ultimate even in this sphere, limited by its extent and duration, but has an eternal prolongation even in this world, when pursued for personal ends? It is that no man liveth to himself or dieth to himself, for life and death, though personal phenomena, have a more or less remote proportion upon the race. The energy, force, mental and moral power set free must have certain continuance. God will not be trifled with or relegated to some other time and place. He is here at your elbow and at mine, and he bids us to use the day wisely, cheerfully, and to enjoy, to love, to worship, to act for in this day foundations are laid for a better time to come.—*Christian Register.*

Items Concerning the Society.

The Society of Friends remains, on the whole, as the *Presbyterian*, "rather stationary." The statistics for 1901 show no great gains or

great losses. In Great Britain there has been a gain of 208, and in the United States a loss of 284 members. The total membership is 113,930, a net decrease of seventy-six. The number of ministers reported is 1,719, with 146 workers in the foreign mission fields. The mission stations number 292, with 2,533 native members and 7,077 pupils in Bible schools.

The valuable "Reminiscences" of departed worthies of Philadelphia Yearly Meeting, which have until lately been appearing in our columns, have, so far as obtainable from the hand of their beloved writer, William P. Townsend, come to a perpetual end. Passing peacefully away in his nineteenth year, an elder worthy of double honor, he was faithful through many years, though silent in meetings for worship, an able minister of the gospel of love. So long as a succession of such adorners of the doctrine of Truth shall be maintained, there is clear use for the existence of the religious Society whose good he sought and loved.

NORTH CAROLINA YEARLY MEETING, 1902.—The Representative Meeting convened at 11 A. M. on Third-day, the fifth of Eighth Mo. at High Point, Joseph Potts being the Clerk. After transacting the usual routine business, it adjourned, and having again met, it completed its labors for the year. On Sixth-day, the 8th, it was dissolved and merged under the name of "The Permanent Board" into a new body consisting of 50 members appointed by the Yearly Meeting, ten of whom are to be retired each year, and new ones appointed, our meetings at home not having the nominations to make as heretofore. At 2.30 P. M. the Meeting of Ministry and Oversight assembled, a few Friends from other Yearly Meetings being in attendance. The names of the representatives were called and some minutes for Friends present read. An old Friend who had come all the way from Canada spoke to us in humility and tenderness as to his call.

On Fourth-day, the 6th, at 10 A. M., the Meeting for Business gathered, L. L. Hobbs, clerk, P. Hackney, assistant, with Josiah Nicholson added to assist, and all three were afterwards appointed for the year. Most of the Friends appointed as representatives were present. The minutes of ministers and elders from other Yearly Meetings were read and recorded, except two from Canada and one from Philadelphia. The London Epistle was read, also the London General and the Epistle from Ireland. Afternoon at 2.30, Meeting for Worship.

On Fifth-day, at 10 A. M., the meeting resumed business. The statistical tables were read, showing about one hundred additions. No improvement as to the Use, Sale and Culture of Tobacco. The Queries and Answers were read at 2.30 P. M. The Report of Home Mission Committee, and at 8 P. M., the Christian Endeavor work occupied the time.

On Sixth-day at 10 A. M., the consideration of the so-called Uniform Discipline brought together a large gathering, with several transient attenders. The Clerk explained that as the subject had been before two previous Yearly Meetings, now Friends would be expected to confine their remarks to approval or disapproval. He was reminded that Eastern Quarterly Meeting had sent up a minute against its adoption, which he looked up and read. A Friend from Cententree Quarter stated that most of its members were against its adoption—members did not want birthright membership taken away. None of the other Quarters were invited to tell how their Friends felt. It was proposed to refer the consideration to the representatives, but this being put by, the Friends in favor spoke and afterwards those against its adoption. The absence of that cementing bond of unity under such a complete overturning of what so many of our members hold dear and true, transmitted to us and tested by faithful predecessors, and of the evidence of Divine unction calling for such changes being

apparent. The reports from the Foreign Missionary Board, and the presentation of Foreign Missionary Work, came before the afternoon meeting at 2.30 P. M., and the night meeting at 8 P. M.

On Seventh-day at 10 A. M., the Report of Orphanage Committee was read, and the children being present evoked much interest. A school-house for their use is being erected on the premises. A subscription was taken up. The children sung a few hymns and were taken away at 2.30 P. M. The Report from Guilford College and Educational reports were read and spoken to. This year 192 children, 75 of whom were our members, were on the roll; deficit \$1,300—deficit now about \$21,000. One of the directors appointed last year held out the expectation that within two years the college would be placed on a paying basis. Several thousands and dollars had been paid in, and about \$25,000 subscribed towards a new endowment. If those so subscribing were willing to have so much of it used as is necessary to pay off the indebtedness, and then whether it continues under the name of college or high school, to keep out of debt, and fulfil the purpose for which it was acquired, viz: to give the best religious, moral and industrial training to fit our numerous children for the duties of our day in this Southern land, all would be well.

On First-day there were large gatherings to the various meetings held in the house, tent and grove, singing and preaching most of the time. Little silent waiting as an assembly before the Lord. At the evening meeting in the house a collection was taken up—another new departure.

On Second-day, two meetings for business concluded the Yearly Meeting. The finance account duly audited showed a small balance of cash on hand. The mortgage of \$1,000 on the Yearly Meeting-house still unpaid. Two years ago we had nearly enough to pay it off with the help of women Friends; it certainly is better to pay as you go, and not make appropriations until the liberality of Friends supplies the needful funds. Reports of the temperance work came before us, and much encouragement was given to continue the work and get our young people into it. The epistle to the Yearly Meetings with which we correspond was read and approved.

The attention of the Friends remaining, now reduced to a small number, was called to the practice of giving out hymns from the gallery, and calling on the congregation to join in singing them; also to the introduction of musical instruments into our places of worship as a departure from our testimony as to the worship of God in spirit and in truth; and it was shown there was no warrant in the New Testament for the use of musical instruments, and even under the Old it was the degenerate sons of Adam, not the "sons of God" who constructed them. If an organ is allowable, why not the trumpet and the drum, the bagpipes, the clarinet, and other instruments to cause confusion? A. F.

SUMMARY OF EVENTS.

UNITED STATES.—The Presidents of the coal carrying roads have decided not to permit any interference or arbitration of the anthracite miners' strike. Justice Shiras has remarked in reference to arbitration in settling the anthracite miners' strike:

"There is now one great difficulty standing in the way of an arbitration law: many of the labor unions are not incorporated. Until they are, no law can be made binding on them, while the operators on the other hand, could be held liable.

"Incorporation of all labor unions is the primary step toward the passage of an arbitration law. The unions must be responsible for the carrying out of an agreement, and until they are there is little hope for compulsory arbitration of labor troubles."

Jews have a law which provides for the confining of habitual drunkards in insane asylums. It is popularly known as "the old tower law," and its enforcement is reported to be having a wholesome effect. Many men who for years were in the habit of getting drunk regularly have reformed and become more or less useful as citizens.

In a recent address during his journey in New England President Roosevelt has alluded to the necessity of additional legislation to regulate the great corporations commonly called trusts. On one occasion he said: "At present we have really no efficient control over a big corporation which does business in more than one State. Frequently the corporation has nothing whatever to do with the State in which it is incorporated, except to get incorporated, and its actions may be taken in entirely different communities—communities which may object very much to the methods of incorporation in the State named."

On another occasion he remarked: "Material prosperity without the moral lift toward righteousness means a diminished capacity for happiness and a debased character. The worst of the world is not the poverty of the material centre. When this man lacks moral rectitude, material progress only makes bad worse, and social problems still darker and more complex."

The area of the United States is now given as 3,025,000 square miles and the population is a fraction over 25 to the square mile. Its wealth is said to average \$1235 for each individual.

The Census Bureau shows that, measured by the value of products, more than eighty-five per cent. of the coal and coal manufacture is carried on in Troy, N. Y.; more than sixty-four per cent. of the oyster canning industry in Baltimore, Md.; more than seventy-four per cent. of the manufacture of gloves in the adjoining towns of Gloversville and Johnstown, N. Y.; more than forty-eight per cent. of the coal-mining industry is in the north of the State, Pennsylvania; more than forty-seven per cent. of the manufacture of brassware in Waterbury, Conn.; more than forty-five per cent. of the manufacture of carpets in Philadelphia; more than thirty-six per cent. of the silver-ware manufacture in Providence, R. I.; more than thirty-five per cent. of the slaughtering and meat-packing industry in Chicago; more than thirty-two per cent. of the manufacture of glass and glassware in Meriden, Conn.; more than twenty-four per cent. of the agricultural implement industry in Chicago, and more than twenty-four per cent. of the silk industry in Paterson, N. J.

The Secretary of Agriculture has issued a circular inviting the attention of persons who engage in hunting game and birds at this season of the year to the provisions of the Federal law, and to the laws of the several States, in regard to this matter. The act of Congress is aimed to preserve animals and birds that are valuable as food, or as destroyers of pests. The restrictive laws are sustained by public sentiment, but have been frequently violated through ignorance. The act of Congress makes it unlawful for any person to deliver to any common carrier, for transportation from one state to another, or for any common carrier, or consignee to knowingly receive any wild animal or birds killed in violation of local laws. The purchase of native song birds, as well as of herons, pelicans, gulls, terns or sea swallows, grebes, or other game birds should be avoided. The shipment of these birds or any part of their plumage is prohibited by the provisions of the Federal law.

George A. Hill, Inspector of the Beaumont, Texas, oil field, has given out a statement in which he says: "The conditions of the oil field are alarming in the extreme. The gas is so dangerous to the lives of the operators that over one hundred are overcome daily, and danger of total blindness is greatly feared as a result of constant contact."

The annual supply of eggs in the United States is said to be 500,000,000. Their value is equal to that of the product of our gold and silver mines.

By the census returns it appears that in the United States as a whole, excluding Alaska and Hawaii, the male population, at least twenty-one years of age and living in cities having at least twenty-five thousand inhabitants, was 5,885,644, of whom 339,223, or six per cent., were reported as illiterate. In the rest of the country the number of men of voting age was 15,248,655, of whom 1,919,247, or thirteen per cent. were reported as illiterate.

Among the native whites the differences between the population of large cities in the North and the South in the matter of illiteracy are comparatively slight, but in the smaller cities and rural districts of the South a considerable per cent. of the adult population have not acquired the elements of book education.

It is said that the corn crop this year will be the largest ever known in this country. It is expected that the total number of bushels to be harvested will exceed the crop of the entire world during 1901. Two billion five hundred and eighty-nine million nine hundred and fifty-one thousand bushels are expected to be harvested, or enough to supply the needs of the world for this and next year, even should there be a failure in 1903.

The Medical Alliance of America, a foreign corporation, has been licensed in Indiana. For a stipulated sum the company guarantees to furnish all the medical attention required during the year for a family. The patrons of the alliance may select any physician they choose, and they may call on him as often as they like.

In Chicago the number of places of worship is 666, the estimated number of persons attending on the first day of the 24th ult. was 80,844; of the women, 123,723; total 204,567. The population of Chicago is set down as follows: men, 562,163; women, 1,289,815; in all 1,851,978.

A systematic effort to obtain large quantities of allotted Indian lands through the opportunity to buy them from the heirs of deceased Indians without competition has been kept going to the detriment of the commoner Indian affairs. It is estimated that there are over \$10,000,000 worth of lands that are now in the position of becoming the property of designing operators.

The United States exported during the twelve months ending with Sixth Month 30th, 16,000,000 pounds of butter of all kinds, and of this 10,000,000 went to England, principally to the market for dairy products. The total amount of foreign trade in butter for the same period was 14,267,000 pounds, the bulk of it going to England, the Netherlands and Germany.

There were 417 deaths in this city last week, reported to the Board of Health. This is 38 more than the previous week and 7 more than the corresponding week of 1901. Of the foregoing, 211 were males and 206 females: 54 of the males, and 49 of the females, were of indeterminate age; 100 of the lungs and surrounding membrane; 4 of diphtheria; 3 of scarlet fever; 10 of typhoid fever; 1 of small pox.

FOREIGN.—The law of associations, the enforcement of which has led to many riots in the French Provinces, especially in Brittany, provided practically that the religious training of the youth of France should be controlled by the state, and also for the expulsion of the religious orders that did not agree to its provisions and apply for permission to continue teaching under the new law. The result has been, it is said, that nearly all the orders have refused to obey the law and have left France.

In England, a law recently enacted relating to schools is giving great dissatisfaction to non-conformists. The new bill merges in a common system the so-called board schools, hitherto maintained at the public cost, and the "voluntary" schools, heretofore maintained by religious denominations, mostly by the Church of England, and it gives the managing bodies of these voluntary schools a considerable majority in the new boards of control. In these schools, religious instruction is a regular feature of the school work, and not religious instruction merely, but the forms and catechism of the Established Church. The result of the change will be to give these denominational schools of the Established Church the status of State schools, supported by the public rates, regardless of the religious predilections of the ratepayers.

On the 1st of Ninth Month the post offices of Great Britain will accept parcels for transmission to the United States. The Cunard and White Star Lines will convey the parcels, and the American Express Company will deliver them. The charges will be 24 cents for each three pound parcel, and 72 cents for parcels weighing more than ten to eleven pounds, to principal points in the United States, with an additional charge of 24 cents for a British customs clearance fee. The United States customs fees will also be added. A similar parcels post service is to be inaugurated from the United States to Great Britain. The weight and size of parcels will be a maximum weight of seven pounds and a maximum length of six feet for length and girth combined. This arrangement has been made independently of the United States Government.

King Victor Emmanuel, of Italy, arrived in Potsdam on the 27th ult. on a visit to the German Emperor.

A dispatch from Victoria, B. C., of the 28th ult. says: "The epidemic of cholera is reaching alarming proportions on the other side of the Pacific, the outbreak extending further and having more victims. It extends from the island of Java to Japan, and almost every city on the coast and many in the interior are affected. The disease, too, is being contracted by Europeans." In the Philippines 27,929 cases and 19,640 deaths are reported to the 31st ult.

Near Chamieron on the west coast of Guatemala, the lights of active volcanoes have lately been seen for many miles. An earthquake had caused the inhabitants to desert the city.

It is said that sheep have been dying by the millions in Australia, because of the long continued drought there.

An uprising of the Kafirs in South Africa appears imminent. A great number of them are armed, and live in proximity to the Boers.

A series of earthquakes attended with the loss of life has lately occurred in Mendoza, one of the largest

of Philippine islands. There are numerous volcanic islands, some of which are active.

The telegraph lines of the world have a total of 1,180,000 miles, over which 400,000,000 messages are transmitted annually. Of this no less than 200,000 miles are laid beneath the sea, they carry 6,000,000 messages per annum. Eve is spanned by cables except the Pacific.

Clouds of volcanic dust were reported to be falling on Guadeloupe, St. Kitts and other West India Islands. Martinique, and Mont Pelee was believed to be in on the 31st ult.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for volume.

Caspar T. Sharpless, N. J.; Margaret J. Con Pa.; Anna P. Chambers and for Alfred Sharpless, Pa.; J. A. Holloway, agent, O., \$22; John Branson, Asa Branson, Joseph Bailey, Thomas C. Holloway, Mary J. French, Ann B. Hoge, S. C. Holloway, Edwin F. Holloway, Asa G. Howland, Abigail Sears and George W. Stratton; Sam Co. Ind.; D. P. Mendenhall, Pa., to No. 77; Elizabeth F. Foster, R. I.; John W. Gaudin, agent, Ia., for John Ramsey; Milton M. Isaac Hancock, Pa.; Alice Tucker, Mass.; Charles Haines, N. J.; Richard J. Allen, Phila. Pa.; Gregory, Cal.; Wm. Stanton, agent, O., for Mary P. Doudna, James Steer, Esther S. Sarah T. Williams, William Pickett, Joseph G. Gons, James Henderson, Charles Livezey and Friends' Boarding School, \$3; O. T. Savoy, \$14 for himself, Iver Olson, John Knudson, Thompson, Anna T. Tostenson, Sigbjorn Rodale and Knud Thompson; B. L. Wick, Ia., agent, \$12 for Lars Tow, Anna M. Tow, Albert Tow, Thom G. Tow, Axel Melberg and G. G. Sevig; George J. Foster, Ill.; Henry W. Folger, Pa., \$4; James Davis, Pa.; Thos. S. Sheehan, Canada; J. Preston Thomas for Anna M. Thomas, Pa.

Remittances received after Third-day of Ninth Mo. appear in the Receipts until the following week.

NOTICES.

ROBERT SMITH has been appointed agent for FRIEND, in place of Edmund S. Smith, removed to address, Harrisville, Harrison County, O.

A FRIEND wishes to dispose of a complete set of FRIEND—sixty-six volumes bound and the balance bound.

Inquire at office of "THE FRIEND."

A MAN and eight-year-old son want room and board with easy walking distance of Friends' Select and Sixteenth and Cherry Streets. Terms must be moderate. Address "W."

Office of THE FRIEND.

WESTWIND BOARDING SCHOOL.—The fall term begins on Third-day, Ninth Month 1st, 1902. New scholars should present themselves for classification on the afternoon or not later than 2 o'clock in the afternoon.

WM. F. WICKERSHAM, Principal.

HADDONFIELD QUARTERLY MEETING will be held at Medford, N. J., on the eleventh of Ninth Month. Cars will be run to Medford from Camden by 9:11 A. M. Haddonfield. Last boat from Market Street Ferry, Ia. leaves at 9 o'clock. Train leaves Camden at 9:08 A. M. Ave. Station at 9:11 and Haddonfield at 9:25. Return trains leave Medford at 2 and 5:20 P. M.

CHANGES AND CORRECTIONS IN MEETINGS AFTER PUBLISHED IN FRIENDS' ALMANAC.—Concord Monthly Meeting: The hour has been changed from 10 to 9 A. M. London Grove Park Meeting: mid-week day on Fourth-day, at 10 o'clock, and not on Fifth-day at Mount Holly, N. J.: hour of all meetings changed from 10 to 10 A.

Railway and Plainfield Monthly Meeting: Meeting held at 11, instead of 10 A.

Langhorne, Pa.: The hour of meeting has been changed from 10 to 10 A.

Declan Monthly Meeting is held at Downingtown, Pa., each month in the year. The meetings at Union (Livonia) have been discontinued.

Our Children are Our Echoes.

Our attention has been arrested by a remark of Hezekiah Butterworth, of Boston, in a Universal Peace Meeting lately held. He said that "when mothers and children bring peace to their homes, universal peace will come" among nations.

Why the fathers should appear wholly left out, is not evident. Their tempers and dispositions are certainly no small factor in the peace of the family. Yet this must be said, that during the cares of domestic life throughout the day, the father is not usually in his home. He is working or dealing with outside people, where it is found good business policy to control himself; while mother and children are much together, and exposing their thoughts and emotions to each other in an unguarded manner. A thousand moments are flowing one upon another, and not one of them may forewarn the next of its irritating or explosive nature. A single day is a history of many surprises to one's temper, fortitude, control of speech or behavior, and the result of these is on the mother and children; and it is their emotional natures which are peculiarly susceptible of them.

The mother through her quicker emotional life is intended to be a channel of moral influences to her children. The same sensitive constitution, as it is subject to the Spirit of Christ on the one hand, or of Discord on the other, is peculiarly adapted to be made an angel of peace, or a vixen of war, in the spirits of her household. The atmosphere of one kingdom or the other prevails in a family, according to the inward state of its chief minister of influences. How important that for her to live should be Christ, that for the household to live may be peace. The father

may rule, but she inspires. He may be the law, but she the love. The father may lay down truths and judgment, but she is to teach, instill, influence. And it is the unconscious influence and savor of her spirit,—and his so far as it is available,—that is breathing the peace or the war into the spirits of children. According to his own gifts and endowment, the father's place is not less responsible, but his opportunities are made increasingly fewer by the growing artificial standards of living requiring the money-earner to be an absentee from home.

Both parents are solemnly responsible for the example and contagion of their speech tones, and spirit. Many are asking, "Why are my children so angry or so disrespectful?" No neighbor who is familiar with the parents' mode of speech to those children wishes to give the faithful answer: "You must expect your children to be your echoes. If ye have sown to the wind, what wonder is it if you reap the whirlwind?"

But so it is. As we build by habit our own characters, we are therein building those of our children. We may punish them for being or speaking like ourselves; but much better is it to confess our faults one to another, and seek to build up one another in the most holy faith and practice, and require ourselves to be that which we wish our offspring to be.

THE OUTWARD APPEARANCE AND THE HEART.

—Where we deny the letter or form, we are constrained at times to acknowledge the Spirit. So superior is the Spirit that maketh alive as to prevail often above the letter that killeth. Our recently printed story about the thanksgiving of a poor Catholic soldier over his uninviting food, was not offered as an un-mixed example; but it tended to illustrate the principle, or an inward thankfulness notwithstanding erroneous modes of expression. "For man looketh at the outward appearance, but God looketh at the heart."

We may here reproduce another extract:—"By prayer I understand no vain exercise of words, no mere repetition of certain sacred formulae, but the very movement itself of the soul, putting itself in a personal relation of contact with the mysterious power of which it feels the presence—it may be even before it has a name by which to call it. Wherever

this interior prayer is lacking, there is no religion; wherever, on the other hand, this prayer rises and stirs the soul, even in the absence of forms or of doctrines, we have living religion."

William Michener.

William Michener, of Penn township, Chester county, Pennsylvania, son of Joseph and Anna Michener, departed this life the 26th of Twelfth Month, 1833, in the forty-sixth year of his age, of a pulmonary consumption. He was generally considered a good moral character, and for some years filled the office of a Justice of the Peace. He was favored a short time before his decease, to see his situation and in the earnestness of that feeling was frequently led to express his mind to those around him. A few of which expressions were taken down, and are as follows:

"Twelfth Month 2nd.—Some of his friends being present, he expressed himself as follows:—'I am a poor, weak creature.' And on being answered that he could not be otherwise than weak, 'Oh,' he exclaimed, 'you don't understand me; I feel another weakness; I am a poor, weak creature.' My mind is unstable, tossed to and fro; I find that I have a great deal to do, and but little time to do it in; there is too much that has to be performed on this boisterous bed. Ah! this thing of mere morality; building one's self upon the faults of others; gliding thoughtlessly along; it will not do for such an awful time as this. Dear children, I have been an indulgent father to you, but I have neglected my own peace. I believe that I have been too stubborn; I would not give up; my warning, too, has been so long, and yet I find that I am still unprepared for that solemn change. Oh! that this preparation—this great work—should all have been hurried into the last moments of my existence. I fear that those speculative opinions that are in the world will cause many a poor, weak, wavering mind, like my own, deep travelling to get along; at the last they will have to retrace those steps that they have taken, with sorrow. I must confess that I have been too wavering in my mind, with regard to my dear Redeemer—sometimes almost doubting the existence of such a being. Why should I have been so, that I could not take warning, before I had to be tied down so close. I have often said, why is it that I should have been so much afflicted; but it was all right—all just—I might have taken warning. Oh, thou neglected Redeemer, have mercy upon me!—Do not hide thy face from me at this awful time; strengthen my faith, that I may be enabled to intercede for pardon for my many and numerous transgressions; my sins are many and very grievous ones. I have been guilty of wild and extravagant conduct, even of late years; con-

duct very unsuitable for me as the head of a family. I was an exceedingly wild youth. My youthful days were spent in wild and unprofitable company. All these things press heavily on me now; they all come hurrying in on me like a flood at this awful period. I hope that I may be enabled to proclaim to you, before I have to leave this bed, that my peace is made between me and my God; but oh! if I have to take one great and awful leap in the dark, I wish that you may take warning by me, and not put off the work of your soul's salvation for such an awful time as this.

"My dear children, you are all that I have now in this world. I want you to remember what your poor father has told you, whilst lying on this bed. Do not neglect the attendance of meetings; read your Bible frequently, and mind what company you go into."

"On the 5th of the month, some friends calling to see him in the evening, he said, 'I have hard work, hard work, to get along. I find that there is too much to be performed at this awful time. I am a poor weak creature—a poor, weak, nervous creature, wearing away little by little. I have need of consolation from my friends.'

"After some words of consolation and encouragement from one of the friends, 'a minister,' he exclaimed: 'Oh! what a comfort, what a consolation, to hear such encouraging language. I have indeed been favored with the company of my friends, my weighty friends.' As this friend was about to leave him he said to him, 'thy visit, though short, has been a very comfortable one to me.'

"On the 8th, a friend calling to see him, he said—'I have for some years back, say three or four, thought all was right with me. I thought I was living a tolerably moral life, but I have seen, since lying here, that I have all yet to do; and feel thankful that I have been permitted to see that I was not prepared, and have been laboring for some time, in a retired and inward way, to make my peace; and thought to have kept all to myself; but I could not withhold in viewing that blessed prospect that was brought to my view, last night, of everlasting happiness. I now can say that true religion is no farce; but it is the most joyous life we can live. I have compared myself to a child just beginning to walk. Last night my spiritual mind could walk, but today I feel weak and tottering; but I hope it is all for the better. If there was no bitter there would be no sweet.'

"On the 12th—a friend who had previously been to see him, and at this time calling at his request, he said, 'Oh! dear Lydia, how I have wanted to see thee, to tell thee what a state I was in when thee and friends were here; I thought I would as lieve have had your room as your company, though you were welcome. I was whole; I was sound; I needed nothing—but Oh! how glad I would have been since, to have the company of solid friends. I've seen things so different since. Some years ago, I think I was in a pretty good state of mind. I attended meeting twice a week, and felt comfortable; but little by little I gradually fell away into a lukewarm state of mind, and oh! awful would have been my situation if I had been taken away in that state. I should have had to make a bold leap in the dark; but oh! I thought some days ago I would have given anything in

the world to feel as I now do. I lay here; I have sweet communion with my dear Redeemer. Oh, how comfortable I feel; it is not worth while to try for words to express the comfort I feel.'

"At one time he said, 'I think if I was to be set on my feet again, and have the cares of the world around me, I should make a very different appearance from what I have done.'

"To a friend, who was with him the night after the above date, he said, 'if I had been possessed of ten thousand worlds, not two weeks ago, I would have given all for the peace of mind I now enjoy. Oh! how much better it would be if people were more candid and honest one with another, in telling us our faults, not merely in a society way, but whenever one was overtaken in a fault, tell him of it in candor, not fearing to offend—they Quaker, Presbyterian, Methodist, or any other. I think it would be of great advantage in general. If I was permitted to be raised again, I should take the New Testament in whole for a rule of life. If we deny any part of it, we may as well deny the whole; it all came from the same fountain-head, and is all true. In my most profligate days I never denied it openly, but cavilled with and disbelieved a part.'

"Shortly after, laying for the most part of the day very quiet and composed, towards evening being told that he seemed to be very much favored, he said, 'Oh yes! these are precious moments, wherein I am permitted to commune with my blessed Saviour, with my dear Redeemer, whose presence is near me and round about to support me;' and particularly enjoined the reading of the Scriptures, especially the New Testament, just as it is. 'Do not go to picking out some here and some there, to suit our own purposes; that won't do; oh! it will not do. I have done too much at it myself.'

"15th of the Month—He said to a neighbor, 'I think it strange if my way is not clear, for amidst all my sufferings this evening I have felt comforted.' On being told that it felt very comfortable to them, that he was thus sustained in those trying moments, he said, 'I believe that I have spoken from my heart; I feel my heart to glow with thankfulness to the Supreme Author of all good. Oh! glory, glory to his name; I cannot sing his praise too long or too loud.' After laying some time in silence, he spoke of the late trying seasons that he had experienced, and requested that some of the fragments might be gathered together. 'As I have thrown myself open to the world of late, pretty much, with regard to spiritual matters, those of you who have heard me express myself, though in broken sentences, may perhaps be able to preserve some of them; not to make any glare or glitter about me; but perhaps they would be of use in awakening some poor wayward mortal, like myself, that has strayed far from the path of peace, to a sense of their condition that they might not put off the work of the soul's salvation to a late period; to a time when it may be very uncertain. The time has not been long since I was permitted to see my undone condition; but I have passed through some trying scenes.'

"On the 16th—A neighbor calling in to see him, he said, 'My dear friend, I am yet here; very unexpectedly here in this tabernacle of

clay at this time. My comforts and joys yesterday were such that I had no doubt this time the Lord would have taken care of himself; but his will be done. I have long to say in the matter. It is of his pleasure that I am here, no doubt for a while. I have no fears to depart; my joy is clear. Certainly it is of the Lord; if of my own coining my comforts, my joys, delights, could not be what they are. I am certain of my near approach to dissolution as my approach nears, my prospects brighten. Can I be deceived? is it not of the Lord? certainly must be of the Lord. I can witness his honesty and thankfulness of heart, say to my friends, Come, and see what the Lord has done for my soul. Yesterday my comforts were such, not for a short time, but for most of the day, I felt such delight at the prospect of leaving this tabernacle before morning that I fell into a sweet sleep for a good while; when I awoke my joys were such that I was astonished to find myself on this bed; it could not have been reconciled to it, but on the consideration that it is the Lord that is the author of his good pleasure. Let Him do, let Him do what to Him seemeth good. Oh! I think I need not go back to my past life now. I have reviewed it over and over again and have laid it open before my God. To my knowledge I have kept nothing back, and feel that I have assurance all is well; that the Lord of his mercy has forgiven my sins, that He will remember them no more; that all I have to do now is to watch and pray; for He is a merciful God, and endureth forever. Oh! my dear, (speaking to his wife), shed not tears for me; it is to me a matter of rejoicing, that I am so near death. My fears have all left me; I have a goodly prey for I have thrown myself altogether on the mercy of the Almighty, trusting on Him alone for salvation, and have good reason to believe I have heard and He has pardoned me; and as I laid up for me a crown of rejoicing.'

"23rd.—In the presence of his family he said, 'Oh! gracious Father! if it is consistent with Thy Divine and blessed will soon to be done to thyself; but not my will, but thine alone. Grant me patience, fortitude and faith, to endure to the end till the final close come. Do not take me out of the furnace till I am thoroughly purged. I do not wish that; I be pleased to be with me, and support me along through this trying time; I feel myself to be a poor, weak creature, a poor, worm, and oh! what would become of me at this awful time, if it was not for thy all-sustaining, all-preserving power.—Oh glory! glory to his Name! what a pleasure to see his praise, both now, henceforth, and forevermore, amen. And thou, my dear Redeemer, do not forsake me at this trying moment, but be round about me, and support me also through this vale of tears till the final close come; then let me sleep in thy arms. O blessed Father! if it is meet with thy Divine and holy will that my dear spiritual parents should shortly be released from this suffering body, what a glorious thing it would be for me.—Oh! that I may be supported with fortitude and faith, to hold fast what I have got to keep the faith and hold out steadfast to the end.'

"24th.—In the presence of a neighbor, he said, 'Oh! my sufferings are great, I cannot

the them; I fear I will offend thee, oh merciful Father, by my complaints; be pleased, merciful Goodness, to forgive me, and support me, and suffer me not to lose any ground which I may have gained. Oh, thou beloved Jesus Christ, my dear Redeemer, do thou provide for me, and have my transgressions forgiven. Oh, Lord, they are many, but thou art able and willing to help me; be pleased to be with me not off in the last and trying hour, but my support and consolation. My sins are great, but not too great for thee, oh, merciful Goodness, to forgive.'

25th, the evening before his decease, he frequently exclaimed, 'I long to be in my Saviour's arms.'

He spoke to his brother of the uncertainty of time, and the necessity of a preparation for a painful change which awaits us. He spoke of that light that he had once known, and of the light becoming darkness, and how great was the darkness, which makes very hard work. He once attended meetings pretty regularly, and when meeting day came, he felt a desire to go; 'but,' said he, 'some how or other I slid away and became careless, and was guilty of becoming things as ever I was in my life.' This was the night of the 5th of the Twelfth Month; on the morning of the 6th he expressed great thankfulness, for his night's rest; both rest of body and peace of mind."

THE DOUBLE GROWTH.—"Nay," said the beholder in the Lord's parable to the impatient servants who longed to clear his fields of wheat. "Nay; lest while ye gather up the tares, ye root up also the wheat with them" There are many wrongs that our unskillful hands may not safely touch despite our longing to set the world right. Virtue and error have tangled their roots in the same soil; innocence has twined its heart strings round the filly, until justice to the one means cruelty to the other; we needs must wait for the harvest and a wiser method than ours. Even in our own little world, where the sufferings, the stakes, the burdens and sorrows of those whom we love so grieve us, the same is true. We would root out all the trouble if we could, we say, but we do not know what precious growth of courage and faith, of patient sweetness and strength of character, are slowly made in the shadow of the trials that seem evil.—*Selected.*

How often do we sigh over opportunities of doing good, whilst we neglect the openings of providence in little things.

CHILDRED RATCLIFFE'S REMARKS AT THE TABLE OF JONATHAN EVANS THE LAST TIME SHE WAS AT HIS HABITATION.

I deem it a great privilege that I have been once more permitted to be refreshed at thy table, and as it seems to me the last time that is privilege will be enjoyed by me, I cannot be without expressing my earnest desire and belief that we shall be permitted, through the power of God and the mercy of his dear Son, Jesus Christ, to meet together in eternity, and enjoy the feast of fat things at the marriage of the King's son, the supper table of the Lamb, where our enjoyment will be unin-

terrupted and continue through the boundless ages of eternity. Oh may we keep our eyes singly directed to the Pilot of our soul's happiness, and steadily follow Him, so that nothing present or to come may be permitted to separate us from his love, or prevent us from being landed by Him in the haven of rest; where in the enjoyment of the feast of fat things we shall ascribe glory, honor and high praises to Him who sitteth upon the throne, and to the Lamb who liveth forever and ever.

A Sketch of the Life of Archbishop Fénelon.

Among the greatest and best men of the seventeenth century, whose labors and piety will never be forgotten, and whose influence will never die, is Archbishop Fénelon. I believe his pure soul will shine in the heavenly firmament as a star of the first magnitude.

He was born in France in 1654. After finishing his education he decided to be a minister of the Catholic Church. He received holy orders in 1675. He entered upon his ministerial work with great vigor. Soon after he was ordained he was engaged to attend the hospitals, besides performing the duties of the parish of St. Sulpice. When he was thirty-seven years of age he was director of an institution founded for the reception of female converts. Then the King of France, Louis XIV., selected him as preceptor to his grandchildren, especially the Duke of Burgundy. In 1695 the king appointed him Archbishop of Cambray.

In after life he was closely associated with the life of Madam Guyon. One writer says: "Fénelon was one of those uncommon men who are destined to give luster to the age in which they live, and who do equal honor to human nature by their virtues, and to literature by their superior talents. He was affable in his deportment and luminous in his discourse, the peculiar qualities of which were a rich, delicate and powerful imagination . . . His eloquence was more mild than vehement. He brought himself to the level of his company. Grace dwelt upon his lips. He preached upon the greatest topics with facility. He was always original and creative, imitating no one, and himself imitable. His sublime simplicity gave his appearance the air of a prophet."

The Duke of St. Simon says: "Fénelon was a tall man, thin and well made. His eyes issued the fire and animation of his mind like a torrent. His countenance could never be forgotten. It required an effort to cease looking at him. His manners were answerable to his countenance. At one time he had it in his mind to go as a missionary to Canada, which was at that time a French province. At another time he desired to go to Greece. He wrote to Bossuet, 'The whole of Greece opens before me, and the Sultan flies in terror.'"

We have no account of the time when Fénelon was born of the Spirit, but his life declares to all around that he had the fruits of the Spirit. His acquaintance with Madam Guyon was very extensive and very long. Her fervent piety and missionary labors commanded his admiration.

They often conversed upon the importance of a transforming and sanctifying spirituality, and the deeply felt need of his own soul. He could not fail to notice the fervid eloquence of this woman of rank, of beauty and afflic-

tions. Her evangelical simplicity and sanctity made upon him a deep impression.

After hearing the bishop preach, Madame Guyon realized that there was a great lack in his religious experience. The next time they met she poured out her heart to him on deeply spiritual lines. This was after a season of silent prayer. The bishop was greatly blessed by this intercourse with Madam Guyon from year to year. He also became greatly inclined to believe the deeply spiritual doctrines that she preached. She had a great desire that he should be wholly sanctified—body, soul and spirit. She presented him before God in fervent prayer. He fully subscribed to the doctrine of faith as the life and guide of the soul. Fénelon did not despise these sacred truths because they were presented to him by a woman who had but a limited knowledge of theological writings. By fully yielding himself to God he became not only a man, but a man in the image of God. In this inward work of God upon his soul we find the secret spring of that almost divine justice and benevolence which impart unspeakable attractions and power to his writings. He was not only free from the spirit of selfishness, but was bathed in purity and love. His hearers felt that he was an eminently good and holy man. This distinguished piety helped him to have a good and great influence over his pupil, the Duke of Burgundy, whom the king had committed to his care. The Duke was a very unpromising young man, but the bishop was not weary in well-doing.

In after years, when Bossuet had a discussion with Madam Guyon, he drew up a writing that reflected upon this eminent lady, and wanted Fénelon to sign it; but he utterly refused to do so. At length Fénelon wrote and published a book called "Maxims of the Saints;" this was in 1697. This book related to the higher experiences of holy living, and was very much like the writings of Madam Guyon. It was, indeed, her defense. It was an exposition of her views as Fénelon understood them. These maxims cover more than forty large-sized pages.

The bishop having taken this stand, his friends knew that he would not abandon his position. He was forbearing in his dispositions, but inflexible in his principles. Neither flattery nor threats would move him. Distinguished men examined this book and admired the deep-toned piety that it set forth. Bossuet was wild. He said: "I will raise my voice to the heavens against these errors. I will complain to Rome, to the whole earth." He knew that by attacking the doctrines of Fénelon he should be found a defender of Louis XIV.

No doubt he was sincere in the course that he took. The king had no love for Madam Guyon, and about as much for Fénelon. There was something peculiarly commanding in the personal appearance of Fénelon. His mind possessed that simplicity and strength which he taught in his writings. He had a calm, dignified serenity in his countenance; vice and hypocrisy stood abashed in his presence. It is said the King of France stood in awe of him. The king had given him one of the highest positions in the Church, yet he had no personal attachments to him.

Bossuet tried to guard the Church against

the errors of sanctification or of pure love, and at the same time gain the favor of the king. Fénelon was as firm as a rock. The people wondered what these champions of the truth would do. It was a conflict of the two great minds of France. Bossuet had the experience of age. Fénelon had the vigor of his manhood. Both were eloquent in the pulpit, as well as in their writings. "Bossuet reminded you of the philosophical mind of Burke." "Fénelon had a large share of the luxurious imagination of Jeremy Taylor, chastened by the refined taste and classic ease of Addison."

Fénelon taught, first, that the gospel provided a salvation by which we may gain the entire victory over the sinful propensities, and may have the constant and accepted communion with God. Second, persons are in this state when they love God with all their hearts—with pure, unselfish love. Third, there have been instances of Christians, though probably few in number, so far as can be decided by man's imperfect judgment, who have reached this exalted state.

The controversy between Bossuet and Fénelon was very able and strong. They were mighty men. "Fénelon was not idle. He showed himself at home on every contended proposition, and not more a master of language than he was of every form of legitimate argument."

He defended himself by his [ability.] He also defended Madame Guyon when evil-minded men were seeking to destroy her good name. He kindly reminded Bishop Bossuet "that nothing that is dishonorable ever proves serviceable." This is a most valuable sentiment. Fénelon gained the victory. Butler says: "Never did virtue and genius obtain a more complete triumph." Fénelon was equally willing that his own high character should stand or fall with that of Madame Guyon. His mind was too pure to estimate virtue by the public favor or the want of public favor which attended it.

The enemies of Fénelon were not content till this controversy was submitted to the pope. The pope did not desire this work, but King Louis would not rest till the pope decided. Twelve men were appointed to examine Fénelon's book, "Maxims of the Saints." After twelve sittings they were so divided that nothing satisfactory was the result. Then a company of cardinals held twelve sittings on this book. They were so much divided that they came to no conclusion. Another company of cardinals were appointed by the pope. They had fifty-two sittings. They lacked entire unanimity. The discussion went on for nearly two years under the eye of the pope. Meanwhile the King of France denounced the book as erroneous and dangerous. A few days after this the king ordered Fénelon to cease his labors as spiritual adviser of the Duke of Burgundy at Versailles, and retire to his own diocese of Cambray, and forbade him to leave it. He returned with a heart full of submission, full of zeal, of gratitude to God and man. He stayed in Paris only twenty-four hours, and never returned. He became an exile from all the world in his own diocese. Some of Fénelon's friends were involved in his calamities. They also believed in the doctrine of pure love. He felt more deeply the disgrace of his friends than

he did his own. In his distant place of exile he found the rich consolations of Divine grace. Pure love filled his soul, for God and for all men. He thought it his duty as a Catholic to be submissive to the higher authorities of the Church. He was condemned by the pope on twenty-three propositions of his book. At the same time the pope said that neither he nor his cardinals condemned Fénelon's explanations of the book. So that it was more of a condemnation of those who put their own explanations on the book. Fénelon ceased to write controversial articles, but always inculcated and practised pure love. He also avoided expressions and illustrations that would provoke a misunderstanding.

He was temperate in his habits, eating and sleeping but little. He rose early and devoted his first hours to prayer and meditation. Walking and riding were his chief recreations. In the country he often found God's holy peace. Everything seemed to be filled with God's infinite goodness. His heart glowed with purest happiness when he could escape from his business and cares and be among the fields and flowers of the country. In the country he often met some of his poorest parishioners. Sometimes he would inquire about their temporal and spiritual conditions. He was a friend of all mankind.

Strangers from all parts of Europe came to see him. It was pleasing to see how readily he suffered himself to be interrupted by this influx of friends and strangers. "He would drop his eloquent pen with which he conversed with all Europe, that he might bless the humblest person that came to his palace home; at other times he would maintain his episcopal dignity as he conversed with the nobility that called upon him. He was admired as much for his kind condescension, by which he became all things to all men, as by the sublimity of his discourses. His divine life was his chief quality. He walked with God like Enoch, and was unknown among some men. He was a sanctified Quietist, because he had a believing acquiescence in the will of God. He was religiously quiet in spirit. He had the inward rest which Christ calls peace. "My peace I give unto you." "The peace of God which passeth all understanding" supported the Archbishop of Cambray in his conflicts with both men and devils. "He dismissed all useless ideas and disquieting desires, to the end that he might preserve his soul pure and in peace." He counted all but dross that he might win Christ and be found in Him. He died to his own abilities. This was a crucifixion.

He bore patiently the passions and faults of others. He said, "It is often our own imperfections that make us reprove the imperfections of others." He believed in religious toleration. He said, "A man's belief is and ought to be sacred. Liberty of thought is an impregnable fortress, which no human power can force. Violence can never convince; it only makes hypocrites."

Fénelon's very dear friends of eminent piety could see him only occasionally, but his soul centered in God. He saw God in all things and all things in God. Those who are united in God are not far from one another. This was his consolation in the absence of his friends. He justly says: "It is the flux and reflux of an infinite ocean of good, common

to all, which satiates their desires and completes their happiness."

"After Fénelon was confined he never saw the Duke of Burgundy, the king's grandson, whom he had tutored for nine years; neither could they correspond for many years. The duke never forgot him or his kind ministrations. Before the archbishop died the duke wrote him a very kind letter, confessing his obligations and asking an interest in his prayers, that God would give him grace to follow the advice that the bishop gave him in former years. The duke confessed his faults, but confessed also his purpose to give his life to God. "In respect to yourself, you may be assured that my friendship is always the same."

"Mark the perfect man, and behold thy right, for the end of that man is peace." So the end of this learned and eloquent and deeply pious man came in peace. How could be otherwise? God called him to leave the trials and misunderstandings of earth, that he might enter upon the eternal victory and rest of the bliss and glory of the heaven of heavens. He died in 1715, at the age of sixty-five years. "He rests from his labors, and his works do follow him." This was nearly two years after the death of Madame Guyon.

Fénelon's writings were very great (the latest collected edition embraces twenty-eight octavo volumes) and include every variety of subjects— theology, philosophy, history, literature, ancient and modern, asceticism, spirituality.—*E. Davies, in Christian Advocate.*

REMEMBRANCE OF A LONG-FOROTTEN LANGUAGE IN DELIRIUM.—An interesting case of abnormal memory in delirium is recounted in *The Lancet* by Dr. Henry Freeborn. The patient was a woman of seventy years, who was suffering from broncho-pneumonia.

"On the night of the 13th and 14th [Sixth Month] she was found to be speaking in a language unknown to those about her. It sounded as if she was repeating some poem sometimes or carrying on a conversation with others. She repeated the same poem time after time. This language was found to be Hindustani. On the 14th, in the evening, the Hindustani began to be mixed with English, and she spoke to, and of, friends and relations of her girlhood. On the 15th the Hindustani had disappeared altogether and she was talking to and of friends of a later date in English, French and German. The patient was born in India, which country she left at the age of three years and landed in England, after five months' voyage, before she was four years old. Up to the time she landed she had been under the care of Indian servants and spoke no English at all, her only language being Hindustani. On her coming to England the ayah was sent back, and she then began to learn English and from that time she had never spoken Hindustani. She apparently, on the 13th, went back in her delirium to her very earliest days, when she spoke again in the first language she ever heard. The poem was found to be something which the ayahs are in the habit of repeating to their children, and the conversations were apparently with the native servants, one being recognized as a request that she might be taken to the bazar to buy sweets.

"Through the whole delirium there could be

nized a sequence. As time went on the she spoke of were of later date, and she took events in their proper order. She presently began at the beginning of her life went through it, until on Third Mo. 16 she reached the time when she was married and had her children, growing up boy and girl. It is curious that after a lapse of sixty-six years, during which time she had not spoken Hindustani, this language of the early childhood should be recalled in delirium. The patient now speaks English, French, and German (one as fluently as the other), but although she knows a few Hindustani words she is quite unable to speak the language or to put one sentence together. She says that she has no recollection (nor had she any before her illness) of ever having been able to speak Hindustani. The evidence that this language really was Hindustani is that she does not know, nor has she ever known, any other language except those mentioned in this paper. A lady who has lived much of her life in India, and who speaks the language, recognized the poem as commonly in use among the ayahs, and she translated some of the conversations which the patient carried on with her imaginary visitors."

Science and Industry.

FOUND COAL IN OLD YARD.—Honesdale, fifteen miles from the coal fields at Carbondale, is having a hard struggle to get coal, and there is relief of a temporary character tonight.

Along in the late '40s Thomas Ham owned and operated a boat yard a mile below the town on the banks of the Delaware and Hudson canal. Two miles below was a large rectangular piece of land situated between the canal and the Lackawanna River. It contained several acres, and T. Ham saw possibilities of a coal boat yard. He bought the land.

Honesdale at that time and until five years ago was one of the largest coal storage places in the world. Hundreds of thousands of tons of coal were brought over the mountain from Carbondale and Scranton by rail and dumped in enormous piles to await shipment to this city by rail or canal. The coal was carefully screened and only the larger sizes used. The screenings, pea and buckwheat size, were dumped wherever a place could be found. The Erie Railroad secured permission from T. Ham to use his land as a dump. For years the screenings and tons of the screenings were dumped here. Then the matter was forgotten.

A few weeks ago T. F. Ham, of Honesdale, who inherited the land from his grandfather, and about the old dumping place. He made an investigation. He found that he had better than a coal mine, as the coal was almost on the surface. A large force of men are now taking out tons of small-sized coal, which is a ready market. It burns with little ash, and can be used without specially constructed cars.

The Delaware and Hudson abandoned its land from Honesdale to Rondout a few years ago. All of the small towns along its line are now reaping a benefit from its existence.

For years, as the canal boats passed along the canal, quantities of coal slipped off the heavily loaded boats into the water. It is now being reminded by the farmers and villagers

who live near the abandoned canal bed. Good, clean coal, of various sizes, is being dug up.

HOW WATER FREEZES.—It used to puzzle all thinking people why ponds and rivers do not freeze beyond a certain depth. This depends on a most curious fact, namely, that water is at its heaviest when it reaches 40 degrees Fahrenheit, that is, 8 degrees above freezing point. On a frosty night, as each top layer of water falls to 40 degrees it sinks to the bottom; therefore, the whole pond has to drop to 40 degrees before any of it can freeze. At last it is all cooled to this point, and then ice begins to form. But ice is a very bad conductor of heat, therefore it shuts off the freezing air from the big body of comparatively warm water underneath. The thicker it gets the more perfectly does it act as a great coat, and that is why even the Arctic Ocean never freezes beyond a few feet in thickness. *The Marine Journal.*

LEGITIMATE GOLD BRICKS.—Beneath stout bars guarding a wide, arched window in the United States Assay Office in Wall Street, thousands of dollars' worth of little gold bricks, the honest and true kind, pass every day from Uncle Sam's coffers to the hands of jewelers and bankers. And all that Uncle Sam charges for the exchange is 4 cents on \$100 for the large bars and 5 cents on \$1000 for the small ones.

For the week ending Seventh Month 28 the gold bars (they do not call them bricks in the assay office) exchanged for gold coin amounted to \$190,780.17. This is a small figure compared with what the office has done on a busy day. Once, six or seven years ago, when a large quantity of gold was to be shipped to Europe, the assay office exchanged \$8,000,000 into bars.

The bars Uncle Sam dispenses are of two general sizes, the \$5000 size, for bankers, and the \$150 size, for jewelers; the small size being about an inch and a quarter long, three-quarters wide, and perhaps half an inch or less in thickness. Very often they run up to \$200 or even more in value. Their size adapts them to the size of the jeweler's crucible. As for the banker, he does not melt his gold; he contents himself with shipping it back and forth across the ocean.

A remarkable feature of this exchange of legal tender for gold bars is that one can not always get just the amount he wishes. If a jeweler or a banker wishes \$10,000 in gold bullion, Uncle Sam gives him as near that amount as he possibly can. It may be \$9970.50 or \$10,006.30, because the bars vary in size and weight, and practically all of them have odd cents in their value. Two bars the cashier handed out one day this week were stamped \$531.70 and \$123.10.

In buying gold bars the purchaser first tells the cashier at the assay office how much he wishes; the cashier comes as near this amount as he can with the bars on hand, and then the purchaser goes next door, to the sub-treasurer, where he deposits his legal tender, gold certificates, greenbacks or gold coin, for the amount designated by the assay office cashier as the nearest to the desired amount, receiving therefor a certificate which, upon presentation at the assay office, insures the delivery of the

bars. But before they may be taken away the recipient must sign for them in the register, which lies open beneath the bars of the wide-arched window.—*New York Evening Post.*

WIRED OFF THE SEA.—In 1846 there were 736 vessels carrying the American flag (practically all were from New Bedford) hunting whales in every corner of the watered world, from Okhotsk to Arabia. That was a mighty fleet. Of it to-day are left but 39 small barks and schooners. First Month 1st, 1859, a year before the civil war began, there were 625 vessels; by 1866 the figures had fallen to 263. The annals of ruined New Bedford fortunes will tell how much of the decrease was caused by the vindictive Alabama. The whalers would be coming home from four-year-long cruises in the Arctic. They knew nothing of the war that had begun since they left port in peace. Their holds were loaded down with oily cargo, and the crews reefed and tacked cheerfully enough to the thought of homeward bound. Then would come the astonished encounter with the Alabama, and the whaling captain would pace the Confederate's deck a prisoner and watch the fruit of his toil roll off across the sea in big billows of dense black smoke.

The Alabama scourge was artificial. After the war trade picked up. In 1869 there were 338 vessels. Then came the striking of oil in Pennsylvania, and the whaling industry was doomed.

Of the remnant of the fleet still afloat, 24 hail from New Bedford, 4 from Providence, 2 from Boston and 10 from San Francisco. These are scattered through the North and South Atlantic, in Hudson Bay and in the Japan and Okhotsk Seas. With the sailing vessels, the old fashion of long voyages that took a large gap from the sailors' lives still persists. Some of the New Bedford whalers have been away from port since '96.—*Boston Transcript.*

CORN ROW 25 MILES LONG. Kansas is simply inexhaustible in the matter of oddities. Just when it might be supposed that she had run the whole gamut, she appears with another novelty such as nobody else in all the wide world would ever have thought of. For example, a Kingman County farmer is growing a row of corn a little more than twenty-five miles long for no other reason than to be singular and extraordinary. He commenced in a fifty-acre field and went round and round in a circle with a lister until he had planted the whole in a single row, which commences at one of the edges and terminates in the middle. When he cultivated it he had to plow the same way. As appearances go, the field will make as much crop as it would if planted in the ordinary way.—*Kansas City Journal.*

A GREAT ENGINEERING FEAT.—With the laying, on the first day of the present month, of the last coping stone of the great dam across the River Nile the ancient land of the Pharaohs sees the completion of a national work, which is not only the greatest of its kind in existence, but in its beneficent results will probably outrank any scheme carried out in Egypt, either in ancient or modern times. The completion of this dam and a similar structure at Assiout will provide in the Nile

Valley a vast reservoir capable of supplying over a billion cubic yards of water every year. The surplus waters of the river will be stored during the flood season, and then drawn upon for the irrigation of wide tracts of land which for many centuries past have lain waste for want of water. As a result of the new system of irrigation, there are extensive tracts of land which henceforth will bear two crops a year where formerly they bore but one; while the area devoted to sugar cultivation will be greatly increased.

The Assouan dam itself is one of the greatest engineering works in existence. It is no less than one and a quarter miles in length, and it is pierced by 180 sluice gates twenty-five feet in height and seven feet in width, by means of which the regulation of the waters will be secured. The total cost of the two dams will be about \$25,000,000.—*Scientific American*.

THE DANCING BEAN.—A wonderful seed, a native of South America, is called the dancing bean. It is a small fibrous seed of triangular form and about the size of a pea. It is very light and easily crushed. It contains a small quantity of pulp; that in case of one seed examined, was dried up into a soft, white substance.

The seed will not move for some time after having been handled, but will begin moving again in a few minutes after having been left in repose upon a smooth surface.

As an experiment, a dozen little seeds were placed on a small, smooth tray, when they seemed to be effected with St. Vitus' dance. Without any apparent reason they would shift about with spasmodic little jerks and twitches that were ludicrous to gaze upon.

For a while one would keep perfectly still, then the fit would assail it and, beginning with scarcely perceptible oscillations, it would rouse itself into a regular spasm, rolling over from side to side and going through all sorts of strange movements, taking occasional rest from its exertions.

"WHAT is bird's-eye maple?" asks *The Scientific American*, Sixth Month, 14th. "That is a question which just now seems to be baffling not only people who use furniture made of this particular wood, but even wood-workers themselves. In a recent number of a woodworking magazine an article was published which stated that bird's-eye maple was not a peculiar maple, but simply ordinary maple cut in a certain way. In a recent issue of the *New York Sun* that statement is refuted. It is there stated, on the authority of a woodworker, that bird's-eye maple and curly maple are both cut only from the logs of the rock maple-tree, *Acer saccharinum*, in which a beautiful lustrous grain is produced by the sinuous course of the fibers. This tree is not at all the common hard maple. It is a hard maple, but it is full of little gnarls called eyes. Men looking for bird's-eye maple logs go through the standing timber and pick out the bird's-eye maple-trees, paying for them from thirty dollars to fifty dollars a thousand feet in the woods. Ordinary hard maple logs are worth only from six dollars to seven dollars a thousand feet. It would be impossible to cut a piece of veneer with eyes in it from a common hard maple log, and would be equally impossible to cut a bird's-eye maple

log, no matter how you cut it, so that it would not show the eyes."

FINE SCREWS IN WATCHES.—The minuteness of some of the screws made in a watch factory may be measured by the statement that it takes nearly one hundred and fifty thousand of a certain kind to weigh a pound. Under a microscope they appear in their true character—perfectly finished bolts. The pivot of the balance wheel is only one-two-hundredths of an inch in diameter, and the gauge with which pivots are classified measures to the ten-thousandth part of an inch. Each jewel hole into which a pivot fits is about one five-thousandth of an inch larger than the pivot to permit finest play.

The finest screw for a small-sized watch has a thread of two hundred and sixty to the inch, and weighs one one-hundred-and-thirty thousandth of a pound. Jewel slabs of sapphire, ruby or garnet are first sawed into slabs one-fiftieth of an inch thick, and are shelled out to plates so that they may be surfaced. Then the individual jewels are sawed or broken off, drilled through the centre, and a depression made in the convex side for an oil cup. A pallet jewel weighs one one-hundred-and-fifty-thousandths of a pound; a roller jewel a little more than one two-hundred-and-fifty-six-thousandth. The largest round hair-spring stud is four-hundredths of an inch in diameter and about nine-hundredths of an inch in length.—*Detroit Free Press*.

"It is well known," says the *Revue Scientifique*, "that certain spiders can be transported by the wind, owing to a very light silken thread that they emit from the spinneret which is blown along by an ascending current of air. A thread a yard long, according to the experiments of M. Favier, can sustain the weight of a young spider. For many years M. Favier has witnessed every spring the dispersion of young spiders from a large number of nests; in a few hours, in favorable weather, a thousand young ones will set out from the same nest to begin their travels. The spider is not absolutely passive, but can regulate its ascent, both at its departure and during the journey. It is sufficient to increase the length of the string to mount more quickly and to shorten it when wishing to alight. Possibly certain hibernating species may accomplish a sort of periodic emigration by this means."—*Literary Digest*.

A VISION OF GEORGE FOX.—The following remarkable passage, says the *British Friend*, is taken from the ancient Register Book recently acquired by the Devonshire House Library. George Fox's visionary contest with the power of darkness in the shape of a mad bull reminds one of Paul's experience when he "fought with beasts at Ephesus"; but where, even in Paul's records, can anything be found more beautiful than Fox's care for the little children, and his instinctive feeling that he had "many with him?"

A Vision of George Fox's when he set up Men and Women's Meetings.

"At the setting up of the Men and Women's Meetings which was set up by the power of God, the dark power appeared in opposition and great strife against it; and then there was a fierce bull did chase me sore, and would have

devoured me, and there was a shepherd I bid him keep off the bull with his staff. The bull was mad at me, and made at many places, as I passed by him and he pursued him. And I had many with me and little children, and I was loath they should be hurt with the bull, and I did set the children upon my horse that they should not tire, because of the bull's chasing them, I was a tender towards them. And the bull met me in a place where he thought he had me sure in his prey, and would destroy me at his pleasure, and he was not hasty to destroy me, so he gave a great hedge stake and chopped it down at his throat to his heart and laid him still.

(G. J.)

The Christian and the Stage.

AN ACTOR'S TESTIMONY.

An actor belonging to one of the prominent families of histrionic art, called at our house in regard to the funeral services of a relative. In the absence of my husband it was my duty to meet the gentleman, and during the conversation our thoughts incidentally turned to the relation of the stage to the Christian.

In the conversation the actor said: "The theatre was not made for Christians. I can wonder why they are found within its walls, not that I think they injure themselves in attending its plays, but their influence upon others in thus doing is harmful. Christians are in another profession, and I think that profession ought to occupy and satisfy them."

"I have always had a desire for the stage. My first performance was at a Sunday School exhibition, when I played the violin. My sire strengthened from year to year, and when yet in boyhood I joined a professional company. Having been trained to observe the stage, the knowledge that I was obliged to rehearse on that day was at first very repulsive to me, but I saw that everybody had to rehearse, and if this was to be my business I must rehearse too, so I yielded, and the work on that day was soon done without any struggle of conscience."

"Respecting the morality of the profession, though there are a number of virtuous men and women on the stage, yet for the inferior parts of plays so many have to be engaged, that the question is more 'the survival of the fittest,' than that of character. Then again, the familiarity in some performances renders it exceedingly difficult for either sex, especially the women, to remain unsullied. My wife was formerly a member of the profession, but upon my marriage, I refused to have her return to it; others may see no harm in so doing, but I prefer for her the purity of home."

Does not this testimony clearly corroborate the principle which Paul expresses in 1 Cor. vi. 12, "all things are lawful unto me but all things are not expedient?" Here is an actor, who while readily admitting that some Christians might witness certain theatrical performances without injury to themselves, believes their example might lead others to witness the same, or different, and less moral plays which would be seriously detrimental to their spiritual life.

In the second place, we see the progress of sin. This man though at first repelled by the thought of rehearsing on what he had been

it was the Lord's day, is soon found entering into it with the others; thus establishing another passage of inspiration wherein we are taught that if we walk in the counsel of the Lord, we shall soon come to stand in the way of sinners, and at length sit in the seat of the scornful.

Finally, we notice that "evil communications corrupt good manners." If a professional actor of long experience feels that it is undesirable to expose his wife to the contaminations of a theatrical society, may we not well question his attendance at play houses can be regarded in without in some measure resulting in the same evil influences, or without practicing paying for performers to be ruined for their attainment.—Susan Gale Gray in *Ep. Recorder*.

MY TIMES ARE IN THY HAND.

Rested in Thee, O Lord; I said, Thou art my God.
My times are in Thy hand (Psalm xxxi: 14, 15).
My times are in Thy hand!
I know not what a day,
In an hour, may bring to me;
I am safe, while trusting Thee,
Through all things fade away.

All weakness, I
On Him rely
To fix the earth and spread the starry sky.

My times are in Thy hand;
In poverty or wealth,
In quiet care or calm repose,
In balmy breath or winter's snows,
In stress or buoyant health—

Whatever betide,
If God provide,
For the best; I wish no lot beside.

My times are in Thy hand!
I would friendship pure illumine
I would my path with faithful flowers,
I would I spend life's dreary hours
In solitude's dark gloom.

Thou art a friend
Till time shall end,
Unchangeably the same; in Thee all beauties blend.

My times are in Thy hand!
For a few my days,
I live with Thee—this only pray,
Give Thy grace I, every day,
Giving to Thy praise,
May ready be
To welcome Thee
When Thou com'st to set my spirit free.

My times are in Thy hand!
When'er those times may end,
No or slow my soul's release,
In anguish, frenzy, or in peace,
I am safe with Christ, my Friend!

If He is nigh,
How'er I die,
He be the dawn of heavenly ecstasy.

My times are in Thy hand!
When I can intrust
In moldering clay, till Thy command
Shall the dead before thee stand,
Rising from the dust.

Beholding Thee,
What bliss 'twill be
To see Thy saints to spend eternity!

And eternity
Thy heaven's uncloyed light!
Thy sorrow, sin and frailty free,
Thy living and resembling Thee—
No transporting sight!

Prospect too fair
For flesh to bear!
Haste, my Lord, and soon transport me there.
—Newman Hall.

SENT UP.—A rich woman is said to have dreamed that she went to heaven and there saw a mansion being built.

"Who is that for?" she asked of the guide.
"For your gardener."

"But he lives in the tiniest cottage down on earth with barely room enough for his family. He might live better, if he did not give away so much to the miserable poor folks."

Further on she saw a tiny cottage being built.

"And who is that for?" she asked.

"That is for you."

"But I have lived in a mansion on earth. I would not know how to live in a cottage."

The words she heard in reply were full of meaning: "The Master Builder is doing his best with the material that is being sent up."

Then she awoke, resolving to lay up treasure in heaven. What are we sending up for our building? What kind of material are we building into our everyday life? Is it being sent up?

THE United States government has expended some six million dollars on the canal and locks at Sault St. Marie, Mich., in order to facilitate navigation on the great lakes. Through this canal passes in a single season a larger tonnage than passes through the Suez Canal in an entire year. But for nearly a week this vast expense was made of no effect, and hundreds of vessels were kept waiting, all because one steamer fell out of line and blocked navigation. In passing through a narrow cut in solid limestone the rudder chains of the Houghton parted, and the steamer drove her nose twelve feet into the cliff on one side, while the current swung her entirely across the channel.

The service of divers and tugs availed nothing until heavy charges of dynamite had been used. Then navigation was once more open. What a procession passed down Lake Huron that night—one hundred and twenty vessels in all, one-third of a mile apart, forty miles of shipping. Five days' delay for scores of boats, and each day lost meant from five hundred dollars to one thousand dollars deficit in the season's profit account! And all because one boat swung out of line!—*John T. Faris*.

Notes From Others.

Let us live Christ more than talk Him. Christ spoke as no other man ever spoke, but how few his recorded utterances. If what Christ said were taken out of the New Testament and put in a book by itself, his words would make a very small volume indeed. It was what Christ was and what He did that made Christianity.—*A. Swift*.

There has recently passed away, in the East End of London, a clergyman who was loved by thousands while living, and whose memory will be revered now he is gone. "Father" Dolling was rector of St. Saviour's Church, in the poorest part of the East End. He was a strange contradiction. A very high churchman, he yet believed in extemporaneous prayer. An advanced ritualist, yet he cut up to suit the needs of his work the services of the Church of England. We have ourselves seen him several times in his ultra clerical garb, standing bareheaded, preaching in front of his church. He combined in a wonderful way the instincts and desires of an advanced ritualist, with the slum work which the Salvation Army has made so helpful. Though sworn to celibacy, he was a

passionate lover of little children. Not a single stone did this strange man leave unturned in the hope of uplifting the mass of poverty-stricken, ignorant people by whom he was surrounded. One phase of his work was an effort he made for clergymen who had gone astray. He would take them into his home and "straighten them out," and many a man who once "tasted of the heavenly gift" and had fallen away has been saved by his kindly ministry. We refer to this man's career, not to endorse in any way his "advanced" peculiarities, but to endorse his method. He went down to the people, he lived among them and shared their poverty, if by any means he might save some. He lived absolutely for the down-trodden, and his death at an early age was due to the great struggle to raise means for the carrying on of his work.—*Episcopal Recorder*.

Ritualism, with its mummeries and millinery, makes away with the simplicity of the gospel, interposes an unauthorized mediation between the Lord and the soul, and buries Christ beneath a mass of ceremonies and superstitions, till the plaint of the bewildered woman in the garden is again in order, "They have taken away my Lord and I know not where they have laid Him."—*Episcopal Recorder*.

The supreme authority in all the affairs of men is God. All human authority is subservient to the Divine. The powers that are to be ordained of God. In proportion as earth's rulers recognize this, they rule for the well-being of the people; wherein they fail, the people are corrupted and depraved. Rulers who judge for reward, priests who teach for hire and prophets who divine for money are abhorrent to God and will be judged by Him. The one hope of a perfect system of government is that of the coming of God's own kingdom and government.—*G. Campbell Morgan*.

FINNISH RESISTANCE TO TYRANNY.—There is less of surprise than of gratification and of vindication of confidence in the news that Russian recruiting or conscripting officers are being coldly received in Finland. In the metropolitan province of Nyland, for example, we are told that while 2,577 young men were summoned for military service only 577 responded. The others, 2,000, or nearly four-fifths of the whole, declined to take the oath dictated by their Russian oppressors or to enter the service of the latter, though in thus declining they made themselves liable to a heavy penalty. Of more than 10,000 men summoned in various provinces, less than one-half responded, and of these latter the great majority were those suffering from some infirmities which would make their rejection certain. The proportion of the 10,000 acceptable as recruits was no larger than in Nyland. Thus the young men of Finland incur the wrath of the Russian conqueror with the same proud disregard of danger which made their forefathers world famous in the days of the great Gustavus.

Such conduct of the young men of Finland is a protest against the Russian conquest and spoliation of their fatherland. It is also particularly a protest against the manner in which the present conscription was brought about. A military service ukase was issued by the Russian Government, and the Finnish Senate was commanded to ratify and promulgate it. The majority of that body did so, although the edict was palpably unconstitutional.—*New York Tribune*.

SUMMARY OF EVENTS.

UNITED STATES.—In discussing the anthracite miners strike, Abram S. Hewitt lately stated: "There is one phase of this strike to which the public as a whole has not had its attention drawn. It is a mistake to suppose that the mines are in the hands of seven or eight individuals who alone reap the rewards of victory or suffer the disadvantage of defeat in this crisis. The mines be-

long to many thousands of stockholders and bondholders who outnumber the men that are employed. It is a vast field divided up among all sizes of investors. Speaking of the earnings of the anthracite mines, while they are immensely profitable and valuable industries, their earnings are not what they are commonly supposed to be. In the case of one of the oldest companies doing business in Pennsylvania, the earnings in the last six years have averaged approximately 6 per cent. The men who to-day are administering these concerns are executing the duties of their office not for their personal ends, but in the interest of a very large body of men. He also commented on the fact that the public seems not to be aware that there is growing up a vast labor trust, fraught with a far greater menace to industrial conditions than many of the so-called monopolies that are now occupying the attention of the entire country.

In an interview with Senators Quay and Penrose on the 3d instant, President Baer of the Reading R. Co. again defined the position of the several operators, and stated that "it is by reason of varying conditions at each mine, impracticable to adopt a uniform scale of wages for the whole region; but that at each colliery every complaint and grievance will be taken up and investigated by the superintendents, and adjusted whenever it is just. I personally offered to Mitchell and his district president to go with them and investigate any grievances. None of these things can be the subject of arbitration. A free man cannot be compelled to work, and an owner by the same rules cannot be made to do business at a loss."

On the 3d instant a carriage containing President Roosevelt and others came in collision with a trolley car near Pittsfield, Mass. The President was slightly injured, and one of the employees of the service officer named William Craig was killed. The President reached his residence at Oyster Bay that evening. On the 5th he started on a journey into Ohio and some of the Southern States.

A dispatch from Chicago of the 2nd instant says: "The Chicago public schools opened to-day with an aggregate enrollment of 275,000 pupils. The children will carry a supply of pure drinking water for their protection against typhoid fever."

The Census Bureau has issued a statement showing the increasing age of the population from decade to decade. The statement gives the results of computing the median instead of the average age. The median is such an age that half the population is under it and half is over it. The median age of the white population in 1890 was 22.8, as compared with 21.9 in 1880. The median age of the white population in the last census year was 23.4, and the colored, including negroes, Indians and Mongolians, was 19.7, while in 1890 the white population was 22.4 and the colored 18.3. The report shows there was an increase in the median age of the white population during each decade from 1810 to 1900, amounting in the ninety years to 7.4 years, or an average amount of about five-sixths of a year in a decade. The median age of the colored population increased after 1890, but with less regularity.

A despatch from Seattle, Wash., says: "The steamer Oregon, a large ocean going vessel, is being fitted out here for the purpose of taking a party of American manufacturers with exhibits on a six months' cruise to Russia, China, Japan, the Philippines, the Sandwich Islands, Idly Mauritius, South Africa, Australia and the Hawaiian Islands. This is a unique and practical opportunity for buyers and sellers to become personally acquainted and discuss the exhibits and methods of packing and preparing goods for the various markets, establishing agencies, effecting sales, and ascertaining the financial responsibility of interested parties."

It appears from the statistics between the Sixth and Ninth and Ninth Month 5th this year there were 297 cases of small pox in Pennsylvania, and during the same period last year there were 1077.

A despatch from Reading, Pa., of the 1st inst. says: "For twenty-four hours an almost endless procession of gnats passed along the Schuylkill at this point. This afternoon at five o'clock the warm was so dense it formed a sort of dark, animated mist. Men, women and children suffered from the strange visitation. During the flight of the gnats people were forced to take refuge in their houses."

About 4,000,000 barrels of Texas oil were sold last year for fuel purposes. It was sold from 25 cents to 30 cents per barrel. No economical method has been discovered for refining this Texas oil for illuminating purposes, and some experts are of opinion that no such discovery will be made. It is being used quite extensively on many of the railroads of the southwest, this year having been forced by the high price of coal.

Charles W. Hayes, of the U. S. Geological Survey, has

estimated that this oil has a fuel value of at least \$3 a barrel, compared with anthracite coal at \$6.50 or \$7 a ton.

An analysis of oil from the Jager well, in Uinta Co., Wyoming, made by State Geologist Knight, disclosed the presence of more than two gallons of rhigolene to a barrel of oil. At the present market price of rhigolene this would make the oil worth about \$12 per barrel. Rhigolene was first discovered about twenty years ago, and with the exception of cyrogene, is the most volatile liquid known. It evaporates at 64 degrees, and is used in surgical operations, though on account of its high price, only sparingly. From the Pennsylvania and Ohio oils it has been possible to distill it, but only in very small quantities.

It is stated that there are printed in this country newspapers in twenty-five different languages.

The great canal at Sault Ste Marie is completed. This canal is designed to utilize the power of the waterfall from Lake Superior to Lake Huron, a fall of sixteen feet. The waterway is two and a half miles long, 224 feet wide, and much of it cut through the solid rock. In it will be placed powerful turbines for operating dynamos. The canal will furnish enough electric power for the greatest industrial center in the world.

There were 426 deaths in this city last week, reported to the Board of Health. This is 23 more than the previous week, and 107 more than the corresponding week of 1901. Of the foregoing 225 were males and 201 females: 44 died of consumption of the lungs; 21 of inflammation of the lungs and surrounding membranes; 5 of diphtheria; 3 of scarlet fever; 8 of typhoid fever and 1 of small pox.

FOREIGN.—The Hague Tribunal consists of eighty judges appointed by the twenty-four nations that joined in the convention. From this number each litigant selects two, and the United States selects two, and the two judges thus selected select the fifth. For two years this Court met quarterly without having a case brought before it. The first case is now under consideration, which is one in which the United States and Mexico are the interested parties, and relates to a claim originating in the seventeenth century for the support of Spanish missions in Mexico, and which on the cession of Upper California to the United States became a subject of dispute between Mexico and this country.

On the 17th ult., as the result of a landslide supposed to have been due to seismic disturbances, some twenty villages were destroyed and nearly 700 persons were killed, on the northern slope of Mount Kasbek, one of the Caucasus range in Southern Russia.

Over 200,000 to 250,000 tons of Welsh anthracite are reported to have been ordered for immediate shipment to New York.

Statistics presented in an official document which has just been printed in London, show that England sent out 386,081 troops and raised 52,414 more in the South African colonies, during the Boer war. Of this great number, 5,774 were killed, 23,029 were wounded, and 16,108 died of their wounds or of disease, a total of 45,900 men, or nearly ten per cent of the force.

The volcano of Mont Pelee on the island of Martinique, has been active since Eighth Mo. 15th. On the evening of the 30th, an account states, "The sky was cloudless; suddenly and without warning one-half of the horizon was obscured by a pitch black cloud of dust. This cloud was the centre of most magnificent electric effects, the flames surpassed the most elaborate fireworks. Flames and flashes continued to burst from the crater until nearly midnight. Columns of flame shot out of the crater of Mont Pelee, to explode about the cloud in showers of balls of golden fire, which fell through the darkness in myriads of sparks." This eruption appears to have been one of the most severe which has yet been experienced; and the loss of life is reported to amount to over a hundred, a large number of whom had been removed from that part of the island after the eruption in the Fifth Month 14th, but had lately been returned by the Government.

On the 30th ult. there was a startling series of detonations from La Soufriere, on St. Vincent Island, louder than any since the terrible eruption of Fifth Month 11th. The noises were terrific, and gave the impression in every town and village of the island that the scene of disturbance was only about two miles away. During the period of intense anxiety which attended the detonations, two luminous circles, like rainbows, appeared in the cloudless sky to the northwest. Volcanic dust has been observed at a distance of hundreds of miles from these volcanoes.

A despatch from Caracas, Venezuela, says that a strong earthquake shock was felt at Carupano on the 30th ult. It was accompanied by a strong current which was heard along the whole shore of the Caribbean Sea.

A despatch from Naples says that large volumes of flames were issuing from the crater of Mount Vesuvius on the 6th instant.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for volume. Charity Baldwin, Pa.; Samuel Bede Robert H. Russell for Anna P. S. Russell Milton Stanley, agent, Ind., \$12 for Richard Ashton, John Newlin, Addison Hadley, Maxwell, Arthur B. Maxwell and Edward Wesley Haldeman, Pa.; Rachel M. Pa.; Wm. P. Churchill, Nova Scotia; Wickesham for Sharpless Mercer, Pa.; Trimble, M. D., Pa.; Anna Freeman, Ind.; W. Hutton, Pa., and for Samuel T. Hutton, Benj. H. Coppock, agent, Ia., \$24 for Dil Hampton, Joseph Edgerton, Edward Edgerton, Lydia Hampton, Elmer Heald, Elsie James E. Hogg, Benjamin Briggs, David H. Mary Spencer, Thomas E. Smith and Edw. Vail; Jesse Negus, agent, Iowa, \$56 for Edmundson, Lars C. Hansen and Jane Gueliema Smith for James Smith, Penna. D. Brinton, Pa.; May Ward for Thomas Ward, J. Barclay Hilyard from Mary E. Hilyard, N. J.; Harvey DeVries, Pa.; H. H. Mary Briggs for David Sears, Ia.; Reubert, Del.; L. O. Stanley, agent, Ind. Wm. C. Stanley, R. P. Pickett and Joel W. son; Annie Mickle for Wm. Mickle and Evans, Pa.; Thomas H. Whitson, agent, Ia. for Lydia H. Darlington; Sibella S. Copeland, Mary Scott May, Edward Savery, J. H. Taylor at Nathan Gott, Albert M. Mass., Susan B. Smith Pa.; Henry B. Leedman, N. J., for Amos Ashhead.

Remittances received after Third-day Ninth Mo. appear in the Receipts until the following week.

NOTICES.

ROBERT SMITH has been appointed agent for "THE FRIEND," in place of Edmund S. Smith, removed to address, Harrisville, Harrison County, O.

A FRIEND wishes to dispose of a complete set of "THE FRIEND"—sixty-six volumes bound and the balance bound.

Inquire at office of "THE FRIEND."

A MAN and eight-year-old son want room and board within easy walking distance of Friends' Select the Sixteenth and Cherry Streets. Terms must be made in advance.

Address "W."

Office of The Friend.

The sub-committee of the Yearly Meeting's committee engaged in service in the limits of Calv Quarter Meeting, propose holding a Meeting for Divine Worship in P. H. Smith Building in Coatesville on First 14th, at 3 P. M. The company of Friends is especially desired, and all others are welcome.

FRIENDS' SELECT SCHOOL will reopen Ninth Month 1902. J. HENRY BARTLEY, PR.

DIED, at his residence in West Chester, Pa., on twenty-fourth of Eighth Month, 1902, WILLIAM P. SEND, a beloved member and elder of Birmingham and West Chester Preparative Meeting, aged eighty-six years, a resident of that place, who had been suffering illness of nearly two months' duration with remarkable fortitude, patience and resignation to the will of him, in childlike faith in our Heavenly Father. It was said of him, "His heart was fixed, trusting in the Lord. He was a firm believer in all the doctrines and testimonies of Friends, adorning the same by his life and conversation; being by the grace of God what he was—entirely a reality of word in conversation, in life in faith and in purity." "Write blessed are they who die in the Lord from henceforth: yea, said from the Spirit; that they may rest from their labors and works do follow them."

—, near Norway, Benton County, Iowa, Eighth 6th, 1902, in the twenty-eighth year of his age, J. W. Wick, a native of Reunes, Norway, Europe, for sixteen years a resident of this country, and a member of the Young Men's Monthly Meeting of Friends.

—, on the fourth of Eighth Month, 1902, at residence in Germantown, EMMA N. EDWARDS, a member of Germantown Particular and Frankford Monthly Meeting, in the ninety-second year of her age. The days of this dear Friend were marked by increasing earnestness of spirit, and a deep and fervent faith in the Lord. He was loved very peacefully the life which had been lengthened out, while a reverent assurance was that the Redeemer whom she had long loved and faithfully to follow, was near to sustain her to the end by his own "Everlasting Arms."

THE FRIEND.

Sub-Letting Our Religious Meetings.

The safest meeting in which the Holy Spirit provide more teaching, is the meeting which is held "for consecration of heart, for equal communion and worship, based upon waiting upon God, but welcoming all fully qualified vocal service."

The truest kind of meeting in which the Holy Spirit over all things to his church can provide full service in the freedom (which must be the authority) of the Spirit is also that kind of meeting,—based upon silent waiting upon God, whose Spirit alone can put forth all the free gospel message in its season, and all the teaching in its season, that could reach the church, or the people present.

We have nothing here to say about conferences called for particular topics to be presented or discussed,—only that we should call for conferences or lectures, and not Friends' meetings, whether "evening" or "morning." The conference, or the talk, is what those Friends' meetings would surely be reduced to, if such limitations are placed on the Holy Spirit, as to arrange to confine Him, in his ordering of a meeting, to but one line or topic of service. Thus it is practically said to Him, "No, in the morning meeting we allowed a pretty wide range of choice, both as to the messages and the messengers Thou dost use. We hampered Thee with no pre-arrangement of topics, concerns, prayers, readings, teachings or preaching that we should put forth in or by any worshiper. That was thy meeting. Now this afternoon, or midweek meeting is to be arranged." That freedom of the Spirit was good, and now we claim the freedom of the individual. We limit the speakers (and Thee) to the consideration of 'Repentance,'

Next Fourth-day to 'Prayer for Young Men in Business;' First-day evening exclusively to 'Praise;' next time, perhaps, 'Baptism.'" So the deliberate assignment by its caretakers of a special line of service, or a lower ground of service, for a Friends' meeting for worship, abolishes it as such. To the unspiritual this procedure might, for a change, become popular. If so, its tide would by degrees draw the morning meeting into the same whirlpool; till, as in most places where the program system under our name obtains a hold, Friends' meetings have vanished while their name for the audience is kept.

Do we thus reflect on the ordering of worship in other churches? They honestly adhere to their standards of man-arranged and man-limited worship; and we, though set as a sign for calling them up higher, can commend their consistency with what they have received to hold. As to public worship they have not departed from their standards. It is our own desertion, in many quarters, of our standard of worship for theirs, that we praise not. Theirs is honest for them, dishonest for us till we consistently join them. In this passing over of any to them, which the same level makes so easy, where is the difference found in the principle of worship and ministry? The current complaint is that these meetings of ours which are left entirely open to the freedom of the Spirit in his choice of exercises, are left by members on whom the Lord is felt to lay his hand for a simple service, dry and dull because of their disobedience. Many still young will confess their having held back when touched with a little message to hand forth. Our concern should be in the line of forwarding true faithfulness to all spiritual openings of true worship, rather than in replacing these by artificial substitutes through pre-arranged topics—"broken cisterns that can hold no water." We have seen a mid-week meeting—and it is these that it is sometimes claimed may be run on a lower standard of expression—beginning with being turned into a religious conversation, and ending with the vocal reading of a New York paper. The matter it contained is nothing to the point. The anointing is everything.

But what is there to choose between a Friends' meeting degenerated into the man-arranged exercises of the churches in general,

and those churches themselves, but our loss, not only of the reason for the Society's existence, but also of dignity and spiritual authority on the part of our efforts however able, and being ourselves a disappointment to the churches, as awkward imitators of method, observance, and discourse, which they, having for generations the start of us, are trained to do so much better. Surely it is by the Holy Spirit alone that we can presume to compete with them, and He who was our only success at the beginning, is simply our only resource as a Society to-day, and forever. To Him and his free worship in simple truth, let us simply return. Are those who are exercised in spiritual gifts seeming so very small, and are robbers of churches by holding back their obedience, sufficiently aware that they are inviting upon us the day of spurious substitutes to fill the vacuums left by them barren?

A Baptized Meeting.

An aged Friend having frequently repeated the following incident in the writer's hearing it has been deemed worthy of preservation, as it is now found written out by the narrator, a minister now deceased:—

One day as I was waiting for a train at Tremont station, in Massachusetts, an old man came up to me and said: "I perceive by your appearance that you belong to the Society of Friends, and so I feel drawn to speak with you. For I love the Friends, and I want to tell you the reason why I have cause to love them."

I was at a Methodist conference. The Presiding Elder said there were two meetings that First-day that were not supplied with ministers, and wished me to be at one of them. I was at the morning meeting. A woman who was a member of your Society requested the opportunity to be at the meeting in the afternoon. As that day had been assigned to me for public service I felt glad to give her the opportunity to use it as she might prefer. When the congregation had assembled she was found sitting there before us in devout silence which continued for some time. Then she arose and took off her bonnet, turned round and laid it upon the seat. As she turned back the tears were seen falling down her face, and there she continued standing speechless and weeping with the company. In that silence there were more tears shed than I ever saw in any public company before, while a spirit of solemnity, tenderness and contrition seemed rolling over us more and more deeply for half an hour; till at length her mouth was opened with the words, "Surely God is in this place,

and there are many here that know it." As she continued with her message with that gospel power, a baptism of tears still seemed to possess the company. It was the most powerful preaching I ever heard. A deep concern for eternal life was received at that meeting by many. I was put in charge of that meeting for the year. I must say it was the beginning of the greatest religious awakening and conversion in that place I ever knew. So you see I have good reason to love the Friends and I never see one of your people without being reminded of that woman's ministry."

EDWARD G. DILLINGHAM.

Drugs to Produce Sleep.

An ex-editorial writer of this city took an overdose of sulphonal a few days ago to induce sleep. The result was death. The belief has been very common that sulphonal, which was introduced into medical practice fifteen years ago, is a simple and safe remedy and that no one will be in danger from a dose of any size. Sulphonal cannot be taken with impunity by persons with overtaxed hearts or inactive kidneys. The number of cases of death from its use has not been large, but persons who resort to any drug which will produce sleep, should know that some kind of a powerful effect is at work upon their nerves in one form or another. They ought also to know that if a person who naturally requires seven or eight hours' sleep gets an average of three or four hours a night, he is not going to die for a long time as a result of the want of sleep, and if careful in his way of living generally, unless there is some cause for his sleeplessness of a dangerous nature, will get over his insomnia.

We have had attacks of it from time to time, and in no instance have taken any anodyne or a hypnotic or a soporific, while some of our friends have become the victims of drugs and have been ruined in the prime of life, when a few little things would have brought them to normal habits. At such times the open air, an entirely unstimulating diet, chiefly vegetables, the nonuse of tea and coffee, at all events late in the day, the proper use of milk as food and not as a beverage, sipped rather than poured down; doing no mental work of any kind after sunset; sitting in front of an open fire without gas lighted in the room; getting chilly intentionally, and if wakeful taking monotonous exercise in the midst of the night until the point of fatigue is reached; reconstructing half-forgotten hymns and pieces of poetry; mentally making a multiplication table that shall run up to fifty, and reciting it hour after hour; never moving, if possible, or allowing any part of the body to move; breathing very slowly through the nostrils and counting the number of breaths—anything to prevent a mental operation that stirs up many of the brain cells; any or all of these monotonously done will in a few days put an end to insomnia. A nap in the middle of the day is sometimes the only thing that will calm the nervous system so as to bring back sleep at night.

The best of all rules is never to admit to the bedroom a single thought of one's troubles, apprehensions, or business. If this cannot be done with eyes shut, let them be open and the gas lighted. All these experiments were

once tried by us for two weeks, and we averaged about three hours a night. At the end of that time we strapped a fourteen-pound knapsack on our back and started on a pedestrian tour. The first day we made fifteen miles; the second day twenty, not having slept more than three hours in the interval. The next day was Sunday and we went to sleep under a monotonous sermon. As soon as the service was over the bed was found, and a long nap taken. But the habit of not sleeping had been fixed, and during the night but two hours of sleep was obtained. The next day the diet was milk, three quarts being consumed in the course of the day. Insomnia took its flight. The walk was continued until two hundred miles had been covered, at an average rate of twenty miles a day, and no sign of sleeplessness appeared again for many months. A drug would have given us semicomatose at any time. Hypnotics and alcoholics of all sorts are most dangerous. A drug habit is as bad as an alcoholic habit. A word to the wise ought to be sufficient.—*Christian Advocate*.

FOR "THE FRIEND."

Life of Samuel Fisher.

The conversion of Samuel Fisher to the principles of the Quakers, appears to have been the effect of the ministry of William Caton and John Stubbs. The time and place of his birth is not ascertained. He was educated at one of the universities, and entering into holy orders, as they are called, he first became chaplain to some person of quality, and afterwards was made priest of Lydd, in Kent, a living at that time worth two hundred pounds per annum. While in this situation, he was requested by the master of Luke Howard, an apprentice to a shoemaker at Dover, to converse with the young man respecting a scruple which he entertained about the singing of David's Psalms in places of public worship. Luke Howard explained the reasons of his uneasiness with that practice in such a manner, that Fisher rather than he, was altered in opinion on the subject. The arguments used on this occasion were these, that God is a Spirit, and must be worshipped in spirit and in truth; but that it was contrary to truth for a proud man to sing, that he was not puffed up in mind, that he had no scornful eye, and did not exercise himself in things too high for him. Further, to sing, "rivers of tears run down my eyes, because other men keep not thy law," when those who thus sing, never knew true repentance for their own sins, was such a violation of common morality, as true religion could not sanction. By this conversation Samuel Fisher, who had already entertained some disaffection with various matters connected with his present employment, grew more uneasy with it. Preaching for hire, and the baptism of infants became a burden to his tender, feeling mind; and so great was his dedication to that which appeared to be his religious duty that he voluntarily resigned his lucrative situation, took a farm for the support of his family, and joined himself in society with the Baptists, by whom he was highly esteemed; and he became a minister among them. When William Caton and John Stubbs went into those parts, he hospitably entertained them at his house; and their gospel labors made some impression on his

though he did not then acknowledge it, leaving Lydd and visiting some places about, they returned thither again, where he found their former labors had been blessed many persons were now ready to join Geo. Hammond, however, a Baptist preacher publicly preached against them; which S. Fisher so much uneasiness that he stood in the same meeting and said to Hammond, "Dear brother, you are very near and dear to me, but the truth is nearer and dearer, is the everlasting truth and gospel." This was very trying to Hammond, and with a mixture of anger and sorrow, he exclaimed: "brother Fisher is also bewitched." made no reply, but attaching himself more closely to Caton and Stubbs, he the religious Society to which they belonged. This was in the year 1655. In the following year Cromwell convened the Parliament, which met on the seventeenth of Seventh Month, the Painted Chamber, Whitehall. S. Fisher was under a great exercise for several days from an apprehension of duty to go there at that time, and to deliver what he considered a message from the Lord to the Protector and Parliament. After much conflict of spirit, he resigned himself to this duty, and went to the Painted Chamber at the appointed time. The Protector made a long speech, in the course of which he said, he knew not of one man who suffered imprisonment unjustly in England. As soon as Cromwell had finished his speech, Fisher attempted to deliver what was upon his mind; but he had proceeded a very little in his intended speech before he was interrupted in the cry of, "A Quaker, a Quaker; keep down, he shall not speak." He, however, proceeded as long as he possibly could, and believed the Protector and Parliament men to have heard him had not others violently opposed and prevented his speaking. Beith prevented from verbally communicating that which was upon his mind, he committed it to writing and published it. The following narration will show the very low opinion he entertained of the then ruling party in the nation and the plainness of speech with which he delivered his message, or rather the message of the Lord, to them. After some introductory words he expressed himself thus: "Ye seed of evil-doers, saith the Lord; an apostate generation, a people whose heart is not right, and whose spirit is not steadfast toward the Lord. Ye have made many shewings of my face, but ye have not found me, because ye have not sought it in sincerity. I have talked much of turning unto me, but ye have never done it yet with all your lips; but feigningly, saith the Lord. Ye have made to enquire much after me in your long prayers, as if ye did delight to know my ways, I say ways, which are ways of purity, peace, and pleasantness, though grievous to the wicked; ye yet know not, so well as ye might do, ye stand in my counsel; and so far forth, do know of them ye have no delight to walk in them, so strait and rugged are they to the nature which ye yet remain in. Ye call on me to after light, as if ye were weary; desirous to be enlightened; but ye are hateful to my light and my life, saith the Lord, even the light in the conscience which I have placed in every one of you. This ye come not to

est ye should be reproved by it, but love me more than it, because your deeds are evil. Ye have fasted often and held up your heads like a bulrush for a day; ye have never yet fasted unto me, saith the Lord. You find your own pleasure, still the hands of wickedness are not loosed; you are captivated still in the cord of your sins; neither have you in the midst of all your abstinence, abstained yet from the fleshly lusts which war against your souls; but are as proud as ever, as pompous and vain as ever, as luxurious and wanton; as covetous and miserly minded, as self seeking; as time serving as men pleasing; as oppressing and unmerciful as before. Ye have often fasted, but not ever fully from your iniquities to this day, saith the Lord. Ye would be counted as reformers, yea promoters of religion, but are in fact persecutors of the very life and power, and of that people that do believe in the life and power of that same religion, which in former words ye have long professed." After a remonstrance of this kind, and laying before Oliver and his Parliament the great inconsistency of their conduct with the spirit of holiness, and predicting their disgrace and downfall, he concludes thus: "What shall I answer the messengers of the nations? In this, that the Lord hath founded Zion, and the poor of his people have betaken themselves into it. But all luxurious, wanton and vicious wordings, all formal professors and trembling hypocrites, painted sepulchres and bedded walls, base backsliders, and filthy liars, flatterers and fawning prophets and all oppressors, and wicked opposers, and persecutors of Christ in his people, can have no part in it, but are shut out into the lake and burn forever with the uncircumcised in the pit, which hath shut her mouth upon thee, there, without end, to be condemned." Thus plainly did our early Friends (with that "hypocritical generation," who for pretensions of promoting liberty, both civil and religious, had proved more cruel persecutors than those who had gone before them, many of them became so darkened in their understandings as even to plead for persecution and to pray against the spreading of a spirit of toleration. No wonder that the invitation both of God and of good men was held against such a people as this.

The 24th of the Seventh Month was appointed for a public fast and humiliation, and Oliver Fisher again attempted to relieve his people in a public manner. For this purpose he held the parish worship house called St. Andrew's in Westminster. This was the place where the members of Parliament were wont to attend. After two of their ministers had preached their sermons Fisher attempted to relieve his mind, but with no better success than before. He therefore had recourse to the expedient and committed to writing the substance of what he would have verbally commended. Indeed it is probable he rather regretted that he contracted it; as the piece consisted of eight folio pages and contains much irrelevant advice as well as close remonstrance on various subjects relating to their public and private conduct. In the year 1659 he accompanied Edward Burrough to Dunkirk, where he visited the Capuchin and other monks; also the Jesuits; and had some dis-

courses with them on the subject of the Light of Christ and warned them of the day that would come upon their idolatrous ways, worship and works. They had also religious meetings with the English soldiers and their officers; Dunkirk being at that time in possession of the English. They were sent for on their landing by Colonel Alsop, deputy governor, to Lockhart, and when Lockhart returned he also sent for them. To those persons they explained the nature of their concern and were civilly treated by them. Having performed their service at Dunkirk, they returned to England and in the following year Samuel Fisher and John Stubbs went to Rome, where they entered into conversation with some of the cardinals and testified against the popish superstitions. They also distributed books explanatory of their principles among the friars, some of whom confessed to the truth of their doctrine, but said that if they should acknowledge this publicly, they might expect to be burned. Fisher and Stubbs, however, met with no interruption or molestation. In the course of their journey they underwent many difficulties, travelling on foot over the Alps, and in the countries through which they had to pass; but that Divine hand which led them forth, protected them and brought them safely back to their native land.

(To be continued.)

Shrinking from Honor.

Few men hesitate to accept worldly honor. The Old Testament relates the story of a young man who was chosen king. A day was appointed when this elevation to office should be publicly proclaimed and recognized. The prophet commanded the people to assemble together to witness the solemn ceremony. When all was in readiness for the public inauguration the king was nowhere to be found. It was only after inquiry of the Lord had revealed the place of his hiding that he was found among the stuff. Saul was a shrinking, bashful, modest young man. He was in no haste to push himself forward or to grasp the honor freely offered him.

Few men are so modest. We have read of kings abdicating in favor of their sons or brothers, but it is usually when they have grown old and the crown has become a burden. We have heard of a minister who was called from an obscure congregation in the country to a great church in the city, where his talents would have wider scope and his family an ample support, but because he believed it to be his duty to remain with the poor people who loved him and needed him, he declined the call. In the history of the Methodist denomination there is an account of one man who, having been elected bishop, refused to accept the office because he believed it to be his duty to serve in a less conspicuous position. But such cases are rare.

Most men eagerly grasp after worldly honor. They even push themselves forward and crowd others out in order to secure a good place. Some who have no fitness for leadership are not too modest to seek after it and use unworthy means to obtain it. We are disposed to praise Saul for his modesty and wish that others might follow his example. After all the honors which men seek are empty and vain,

Thousands eagerly strive to secure these, while they despise and reject true honor. Jesus says, "If any man will serve Me, him will My Father honor." How will the Father honor us? He will honor us with his praise, with his love, with his presence, with a crown of glory. This is honor indeed.

There are thousands of young men now shrinking from this honor. They are hiding among the stuff—among the stuff of worldly pleasure, of secular business, of commercial traffic, of political preferment, of scientific study, and of sinful indulgence. God is calling them to be kings. They were made for royalty. All things are ready for the inauguration and coronation. But they are not to be found. They are running themselves out of breath for the honor that fades, but hiding from the honor that cometh from God.—*Christian Advocate.*

Trusting in God.

Not long ago a business man found himself in narrow financial straits. He became moody and reticent. He appears to have been a Christian, but without strong faith. His financial burden almost crushed him. He sat down at the table with his family and ate his bread in silence. When he did speak it was with petulance and feverish excitement. One day he took up an old book and opened it. The book chanced to be an old geography which he had studied when a boy. On the page to which he opened there was a picture of Atlas bearing the world on his shoulders. Looking at the picture, he was reminded of the freedom and happiness of his childhood. To himself he exclaimed: "There is poor old Atlas. Ever since I was a child he has crouched under that burden, and for centuries before. How his back must ache! I can sympathize with him now. I wonder what he has been standing on all these centuries." Then closing the book he took out his pencil and thoughtfully wrote on a slip of paper these words: "I will not be an Atlas. Since I must trust God for ground to stand on, I will trust Him also for the load."

With that resolution a new inspiration came into his soul. He went out to struggle with his financial embarrassment with new hope. His business associates observed a change in his spirits. His countenance was brighter, his voice was more ringing, his step was lighter. They thought some change must have taken place in his financial condition. But the change was within. He had rolled a heavy load from his soul. He had found a Burden-bearer who was able to carry his load. He went on in this new way and prospered. Afterwards he said he would have gone to the wall but for the new hope and strength which came into his life when he made that decision to trust God for the burden as well as for the ground to stand on.

Trusting God may bring financial success. It will not always do so. If it did it might tend to make men mercenary. But it may do so, because it makes the heart lighter. It inspires new hope and strength into the soul. When the burden of care is lightened one is in better frame for financial enterprises. His mind is clearer, his nerves are more quiet, his spirit is more calm. But whether trust in God

bring financial success or not, it will certainly bring what is far better. It will bring peace. "Thou wilt keep him in perfect peace whose mind is stayed on Thee, because he trusteth in Thee." It will give strength. Even physical strength and intellectual strength may result from patient trust in God. Certainly spiritual strength will be the result. "They that wait on the Lord shall renew their strength."—*Christian Advocate*.

England's New Education Bill.

A recent dispatch from London to an American newspaper said that all England was rent by the discussions of the new education bill which the government introduced early in the session, and, apparently, intend pressing to enactment. That it is receiving an extraordinary degree of attention is apparent to every one who sees English newspapers. Reports of meetings, communications in great number and editorial articles are devoted to this one subject. There is no doubt that the proposed action has aroused an intense feeling of opposition in all the bodies of Nonconformists, by whom it is regarded as an oppressive measure. It is, in fact, an overturning of the system of unsectarian public primary education that was instituted by the Liberal party in 1870, in the establishment of which William Edward Forster had a large influence.

That system has never been satisfactory to the State Church because it was strictly un denominational. Ever since the Conservatives, the successors of the Tories, came into power they have been bent upon uprooting it and substituting for it another that would permit the schools maintained at public cost to be controlled by the church, at least wherever the church desired to control them, and to be used for religious as well as secular instruction. This is only a natural development of the state church ideal. What is the use of having a state church unless it can have the privilege of inculcating its religious dogmas and forms in the education of the children of the state? Why tax the people to sustain a state church and not tax them also for sustaining an educational system in the interest of that church?

The Conservative party which to a large extent is the English church party, does not relish the secularization of common school education, but would pervert it to sectarian religious education. Not long ago a letter of the archbishop of Canterbury was quoted in these columns expressing the unalterable determination of the church to have its children in the schools receive religious instruction only from teachers whose qualifications to give it were approved by the church. Under the existing law the religious instruction in the state schools is not sectarian instruction. Devoted adherents of the church who desired their children to be educated in a church school have established what are called "voluntary" schools, just as the Roman Catholics in this country have established parochial schools. One purpose of the new bill is to have these schools also supported by general taxation. The Nonconformists object that it is their right as citizens not to be compelled to support sectarian schools to which they cannot conscientiously send their children. They plead for unsectarian public schools, open to

all, as in the United States, not disputing the right and privilege of any who are dissatisfied with such schools to maintain others at their own cost.

It is to be noted that England is far behind most of the enlightened nations of the world in the provision made for popular education. Germany, France and the United States are far in advance of her. Scotland has had for centuries a system of public school education for all the people that puts England to shame. Hardly in any other modern nation have opportunities of education for all except the prosperous been so poorly provided. The present educational law, limited and inadequate as it is in many respects, is but little more than thirty years old. Before its passage education, even primary education, in schools, was the privilege of those whose parents had means to purchase it for them. The schools, except the endowed schools, were of a low order.

The act of 1870 has wrought a revolution. Few would now consent to return to the conditions that prevailed before. But that act was the work of Liberals, and was a Liberal law. It has been obstructed in its natural development by judicial decisions and by the hostility of the classes who can afford to educate their own children, and do not yet perceive that general education will advance national intelligence and national power. At the last session of Parliament the government introduced a bill that was so clearly and scandalously reactionary that it was permitted to die. The bill now under consideration is somewhat broader and more generous in its terms, but it aims not at higher development of public education, but at restriction rather, and its subjection to church control. The Premier, Balfour, who is its sponsor, talks of it as a "reform." All except the nobility, the philistines and the church party regard it as a reform that faces backward.

How profound the sentiment of opposition is appears from the nature of a protest made to Balfour by a deputation representing the National Council of Evangelical Free Churches received by him, by appointment, in a committee room of the House of Commons, on the 12th instant. The deputation was a remarkable one in its personal character. Dr. Townsend, who introduced the deputation, said, among other things, that "from the days of Elizabeth, Nonconformists had had a pathetic and noble history. Their life had been one of struggle, strain, pains, penalties, sufferings and sorrow and their convictions had never been more earnest than in their determination to resist this effort, as they believed it would subject them to fresh injustice and wrong."—*Boston Herald*.

The Power of Righteousness.

Are there intimations of a world-wide domination for Christianity? The reader of the Bible will at once answer in the affirmative, and will quote such sayings as "His dominion shall be even from sea to sea, and from the river even unto the ends of the earth," or, "His kingdom shall never be destroyed," or, with Isaiah he will say, "Of the increase of his government there shall be no end." It is by the might of the King and of his Spirit in the

hearts of his subjects, that this conquest anticipated by Christians. It is a monarchy. Its weapons are truths in the mind and Christian graces in the lives of its tains.

It may be asked, will a scientific search of the history of progress, a getting down to facts, reveal substantially the same thing, namely, victory for moral forces? Many sages, especially among the opponents of the claims of the churches, will deny that religion really a power among the races of men, certainly that it has the promise of a kingdom among the powers. Is the Christian's claim good? Would man's claim of dominion over the wild beasts of the forest over the mightier forces of nature, having been acknowledged as good? Thousands have been torn by the beasts, and even the lightning sweeps man away as a straw, but he is not rightly adjusted to it. So war and wickedness break out, and are ruinous. They laugh at meekness and the power of meekness is not broken steadily age by age, and century by century the forces of evil are being covered and curbed by the forces of moral and of spiritual realities.

Intelligence and righteousness march in the march of the nations. The larger the righteousness the more perfectly assured is the advance. Intelligence, under the lead and command of righteousness, is binding the nations together. Righteousness is winning ancient and modern alike, because it ought to win, and because it covers men from dangers, and opens the door of opportunity and blessings, making man co-operative and not competitive. The advances which have been made and which are being made are to be secured and guarded by the power which is spiritual. Intellectual, moral and national dominion, which is under the sway of righteousness is working at its advantage.—*The Examiner*.

Sarah Hillman to Mildred Ratcliff.

PHILADELPHIA, Tenth Month 25th, 1883.

My Dear Friend.—With a trembling and a heart full, from a sense of the awfulness of the service, to which some of us have believed, and our dear Lord and Master has called us, for which my poor spirit feels that I am altogether unfit, I sit down, just to say to thee, hold on thy way, for I believe that the Shepherd of Israel will string thy bow for the battle, and teach thy fingers to fight, and that place where it seems to me there is occasion to remove much rubbish, before the true seed can be found. Ah! my dear friend, I do sympathize with those who are so united to the Lord Jesus, to his law, and to his testimony, that they dare not rejoice while the Seed reigns not, but who are willing to go down to the very bottom of Jordan, and die there, not only until all the people pass over, but until the command is given, to come up. These will bring stones of memorial upon them, to the honor and praise of Zion's King.

While I fear and tremble for myself, and earnestly do I crave to be of this number, however despised by such as can speak in their own words, and cry Peace, when there is no peace. Truly, when I began, none of the things were before me. But thou wilt understand me I hope, and feel with me, with

thee, that in obedience to what seemed to be a required sacrifice, I have just been the end of all our Monthly Meetings, in which I feel deeply, both for myself and others. I cost me some suffering, but the peace which passeth understanding is infinitely beyond every earthly satisfaction. And I trust I may say to the praise of his grace, who loved us and died for us, that He was true to strengthen me, and his arm did bear me up. He remains to be the mighty Help Israel; the shadow of a great rock in a dry land.

Thou knowest, my dear friend, that to be humbled about, is a humbling, a self-abasing employment; but if we are, from season to season, renewedly made to feel that the Most High reigneth, and that notwithstanding our weakness and vileness is great, yet through the power of an endless life, his strength is perfected in our weakness, how it enables and enables us patiently to submit to the watchings and fastings and the deprivations, which we have to pass through, not while treading the awful path of preparation, but while eating the roll of prophecy, eaten within and without with mourning, lamentation and woe.

Thou hast no doubt heard of the death of Newberry Smith, furnishing another evidence of the necessity of faithfulness, and here we have no continuing city, but are strangers and pilgrims, whose business it is to seek a city that hath foundations with diligence. Ah! the time draws near, when this mortal must put on immortality; when we shall each have to appear before the judgment seat of Him, who is our Prophet, Priest and King, and who will be our Judge also. And I humbly hope that we may be permitted, through the Redeemer, to enter that glorious city, whose walls are salvation, and her praise is eternal praise, while the troubles of time have no effect on us more.

Affectionately salute thee, and bid thee adieu.

Thy attached

SARAH HILLMAN.

ALFRED RATCLIFF.

The following lines were addressed by Richard Peters, a clergyman of the Protestant Episcopal Church in Pennsylvania, to Anthony A. Zet, who had loaned him Barclay's Apology. It was understood that Dr. Peters, previously to his perusal of Barclay, had entertained and expressed unfavorable opinions of Quakers and their principles.

Barclay's learned Apology, is due hearty thanks and gratitude to you. I read, the more my wonder's raised, and often, and as often praised, admiring reason through the whole design, thoughts sublime appear in every line. Some divine spirit did inspire the pregnant genius with celestial fire. I had I censured with stupendous rage, I cursed your tenets with the foolish age, I thought nothing could appear in your defence, but Barclay shined with all the rays of sense. I work at least shall make me moderate prove, those who practice what we writes I'll love. In the censorious world, no more I'll sin, denouncing those who own the light within, but can see with Barclay's piercing eyes, the world may deem them fools, but I shall think them wise."

The Ministry of Suffering.*

More than two thousand years ago, Socrates first expounded the theory that pain is a necessity to true pleasure. The jailer was removing the iron fetters from the ankle of the philosopher, a short time before the cup of hemlock was handed to him. His friends gathered around him to hear his last inspired words and take their last farewell. Socrates bent his limb from which the fetters had been removed, rubbed it with his hand and said, "How strange a thing, my friends, is that which is called pleasure, and how oddly it is connected with what is called pain! Pleasure and pain do not come to man together, but if a person runs after the one he almost immediately catches the other also, as if they were fastened together at the ends. So it happens to me now, there was a pain in my limb when the chain bound me, and now comes pleasure following the pain." A law of physiology, a law of the whole universe, underlies these homely reflections of the ancient Greek! From the first feeble wail of an infant, till the last expiring breath, life is a continual illustration of this doctrine of pleasure linked with pain. Life, all sunshine without shadow, all pleasure without pain, would not be human life. The mere ceasing of pain, is in itself a pleasure of a considerable degree, as in the case of Socrates released from his irons; indeed, probably some of the moments of our most intense delight are those experienced on a sudden relief from acute suffering, or during the reaction from long privation.—Suffering then, is the necessary condition of happiness. Do we not most enjoy those walks in which we have climbed the higher mountains, rather than climb the lower one, even if the lower one have the finer view? The beautiful crystals of nature are made through successive shocks. Is not wheat obtained from straw by means of the flail, and gold purged of its dross by burning. Is not the richest fruitage from the trees which have suffered the prunings of the knife? Does not the goldfinch chant its finest note only when pierced by a thorn? Accordingly is not all that gives pleasure in life, practically measured by the difficulty of its attainment?

There is no such thing as the evil we call suffering, but evil only in our way of thinking of it. A healthy person gets his pleasure from exertion, from what would to him under different circumstances be suffering, and we sometimes measure ill health by this inability to turn suffering into pleasure. Therefore, suffering is a manifestation in disguise, to every individual, of his own capability for happiness. There are thousands of things about our soul of which we are ignorant, until we come under the chastisements of life; these tend to develop in us something sweeter, nobler, richer than modern prosperity can ever give. They tend to open to us the door of Heaven.

Pain has been the great stimulus by which the race has advanced. Civilization has directly sprung from pain, and pain is the door through which the deeper problems of life and its meaning enter. The minds of mankind are

continually bent on the avoidance of suffering. All the arrangements of modern civilization are contrived with this intent.

With this idea, however, the thought arises; if suffering causes invention, does not invention necessarily bring about suffering? With knowledge, the power to suffer is increased. The sensitive ear of the musician, taught to detect harmonies which are obscure to our duller senses, is wounded by a thousand discords which are powerless to give us pain. The eye of the trained artist, skilled in detecting beauties of which we remain unconscious, is pained by inartistic blendings about which we know nothing. Nevertheless, though knowledge involves pain, without knowledge and consequently without pain, the world would stand still. A noble soul catches a gleam of truth not before known. It may be only a discovery in mechanics, but a discovery which will greatly aid in the process of human economy. He declares his knowledge, but the world doubts; he insists on his message, but men scoff; he becomes to them a fanatic, or an insane enthusiast. The man passes his life in bearing the pains of misunderstanding and poverty. It is often not till he is gone, that men learn to appreciate and utilize his knowledge. Because of the dulness of humanity the inventor must suffer long, to teach the world his truth, and raise humanity a little. Thus it is that our commonest comforts and appliances of life have been purchased. Crimson with the life blood of some of earth's best spirits, is the pathway over which our commonest daily conveniences have come to us.

In the spiritual and moral world, this is especially true. The reformer and prophet come with their vision of a higher life, but their message is received with scorn, by the reactionists of the age. Truth is crushed, its messenger is trampled, his life is passed in a living martyrdom, till the message, at last burned into men's hearts by his patient suffering, is welcomed, and the race steps forward into a higher realm.

"For humanity sweeps onward,
Where to-day the martyr stands,
On the morrow crouches Judas,
With the silver in his hands.
Far in front the cross stands ready,
And the crackling fagots burn,
While the hooting mob of yesterday,
In silent awe return
To glean up the scattered ashes,
Into History's golden urn."

To the sufferings of our ancestors, then, we owe the degree of intelligence to which we have attained. Through every age it will be the same. No cross was ever borne, no mental battle ever fought and won, but some soul has been uplifted. The martyr is not a failure if the truth for which he suffered acquires a fresh lustre through his sacrifice. The patriot who lays down his life for his cause, may thereby hasten its triumph, and those who seem to throw away their lives in a great movement, often open a way for those that follow them, and pass on, over their dead bodies, to victory. The triumphs of a just cause may come late; but when it does come, it is due as much to those who failed in their first efforts as to those who succeeded in their

*The late William P. Townsend and others desired a copy of this essay, but before it was permitted to reach his hands, he passed beyond the ministry of suffering.—Ed.

last. Of some great men it might be said that they have not begun to live until they have died. Pain and sorrow are necessary to bring about the highest development of some men's genius. Shelly has said of poets:

"Most wretched men are eroded into poetry by wrong,
They learn in suffering what they teach in song."

Another gain that may come to those who suffer, is that they may learn to weep with them that weep, and rejoice with them that do rejoice. It is when we feel the great weight of our own sorrow, that we learn to "bear another's burdens, and so fulfill the law of Christ." How is it that David was able to write those grand hymns of consolation that have been sounding down through the centuries and will still be as sweet when the sun has shed its last ray? We have the answer in his afflictions. The anointed of God are those who have walked through the furnace. They have eaten the bread of anguish and desolation. With agony and tears they have battled with trial. As in the realm of nature, it is those plants that have the bitterest roots, that unfold the sweetest and whitest blossoms, so in the realm of the soul, the noblest, purest characters, are those who have known the severest ordeals of suffering.

Without pain we would not know pity, without danger we would not develop courage, without receiving injuries there would be no chance to show forgiveness, without affliction there would be no opportunity for fortitude, without ingratitude there would be no means of proving disinterestedness, without injustice there would be no occasion for forbearance without violence no training in self-control. Surely encountering misfortunes must be the greatest fortune in life!

It was a saying of Milton that "Who best can suffer best can do." The work of many of the greatest men, inspired by duty, has been done amidst suffering and trial and difficulty. They have struggled against the tide, and reached the shore exhausted only to grasp the sand and expire. They have done their duty and been content to die. But death has no power over such men, their memories still survive to soothe, purify and bless us.

When we turn from the lives of these men who have suffered so as to raise humanity a little, unto the years of sorrow of our Saviour, who during his wonderful life on earth, "was despised and rejected of men," "a man of sorrows and acquainted with grief;" who was wounded for our transgressions, who was bruised for our iniquities, upon whom was the chastisement for our peace, and with whose stripes we are healed—what are our lives or our sorrows in comparison with this—the life of the greatest Sufferer the world has ever known! But the beauty of his, as well as of all suffering lies in the patience with which it is borne, and endurance will be easy if we can remember that the greater the cross is on earth, the more glorious will be the crown in an everlasting eternity.

E. C. D.

doing too much. We want—at least this is my own want—a higher quality of work. Our labor should be to maintain unbroken communion with our blessed Lord; then we shall have entire rest, and God abiding in us; that which we do will not be ours, but his.—*John Keneth McKenzie.*

Science and Industry.

In the middle of the Colorado desert, a little to the north of the Mexican border, and two hundred and sixty-four feet below the level of the sea, lies a field of crystallized salt more than a thousand acres in extent, presenting a surface as white as snow, and beneath the noonday glare of the sun, so dazzling that the naked eye cannot stand its radiance. It stretches away for miles and miles about Salton, Colorado, an ocean of blazing, blistering white.

For the American naturalist, botanist, hunter and traveller, no part of the world should have more attractions than South America. Brazil alone has seventeen hundred species of birds, many of splendid iridescent plumage; no less than fifty kinds of apes; fifty varieties of snakes, including the water boa, which swallows horses and men; eight species of alligators; the yacareguazu, twenty-seven feet long; twenty-four bats, including the loathsome vampire (*Phyllostoma Spectrum*), two feet in wing stretch, that kills cattle and fastens on sleeping children; and eighteen hundred distinct marine creatures. Eight thousand species of beetles have been recorded in Ecuador; in the calambo it has a snake which is domesticated and trained to patrol gardens, and in the flautero a bird whose song so resembles the sound of a flute as to deceive the practiced ear. Among the apes of equatorial South America is the howler, which has developed a kind of tribal organization under a chief who leads a chorus of dismal music, unlike that of any animal and heard for miles at dawn and sunset. A curiosity of the plant world in Peru is the Tamai caspi, or rain tree, which grows to a height of sixty feet and absorbs the humidity of the atmosphere in such abundance that in drouths water drips from its branches. So many strange things there are in the animal and vegetable kingdom of South America that no prudent person would do more than suggest the wealth of them.—*Ledger.*

HOW BAY RUM IS MADE.—Bay rum is manufactured in Dominica from the dried leaves of *Pimenta acris*. Bay rum is procured by distillation and this in a very simple manner. The leaves are picked from the trees and then dried. In this state they are placed on the retort, which is then filled with water, and the process of distillation is carried on. The vapor is then condensed in the usual way and from what is known as "bay oil," a very small quantity of which is required for each punch-oon of rum.

The manufacture of bay rum is carried on at the northern end of Dominica and proves a very lucrative business to those engaged in it, as the plants are plentiful in this district.

NICKELS AND CENTS.—The United States Treasury during the fiscal year which has just

ended manufactured seventy-nine million six hundred and eleven thousand one hundred and forty-three cents and twenty-six million one hundred and eighty thousand two hundred and thirteen nickels.

Massachusetts took five million cents, Pennsylvania four million, Illinois seven million and New York nearly ten million. These are the great cent-using states and stand in the order as to consumption of nickels.

Ten years ago pennies were little use in California and the South, and were unknown things in Nevada, Wyoming and Arizona.

The cent-making machines in the mint at Philadelphia are constantly turning out pennies all the year round.

Up to date the Treasury has turned out one billion one hundred million cents, three hundred and forty million nickels, one hundred million dimes, two hundred million quarters and one hundred and fifty million half dollars.

Somewhere in the world are one hundred and nineteen million big copper pennies. What has become of them is a mystery, for, barring a few in the hands of collectors, they have disappeared, no one knows where.

Many years ago the government issued one million five hundred thousand bronze 2-cent pieces, and of those over three millions are still outstanding.

The same is true of the nickel 3-cent piece, of which nearly two million are unaccounted for.

Slot machines have greatly increased the demand for coppers, and so also have the many newspapers and the odd prices made popular in dry goods shops.

Cents and nickels wear out pretty rapidly, because they are passing constantly from hand to hand and the immense numbers of them pour into the Treasury at Washington are regularly sorted over for the purpose of sorting out those which are too much damaged to fit for further use.

The "life" of a cent is only four or five years, because it changes hands ten times for once that a half-dollar is removed from a person's pocket to another's.

All worn-out pieces are melted for reissue, and on every one thousand dollars remitted the government loses nearly ten dollars.

Cents are subject to more accidents than any other coins. Being of such small value very little care is taken of them, and thus the Treasury has to go on turning out new ones at the rate of sixty million to a million per annum.

At the Treasury they say that the cent is a barometer of business conditions. A calm or a storm or a sudden coming of cold weather anything in short, that keeps the penny-saver part of the population at home—is accurately reflected in the falling off of the coming to the sub-treasuries for exchange. During periods of dullness cents accumulate in sub-treasuries, but when trade revives they begin to circulate rapidly again.

Anybody who wants cents may get them by sending a check to the superintendent of the mint, who will ship them at the expense of the government.

Not a day passes that a good many counterfeit cents and nickels do not turn up at the Treasury, most of them coming from

DON'T be unwise enough to think that we are serving God best by constant activity at the cost of headaches and broken rest. I am getting to be of the opinion that we may be

th and Philadelphia, where the business of selling such small coins occupies the attention of many Italians and Polish Jews. The files of the industry are small, but the pieces being of such small value, are easy to pass.

Eventually the counterfeiters go to the bureau of the secret service, under the direction of which they are melted in a furnace, to be finally as old metal.

The pieces that are too much worn to be of further use are thrown into a receptacle, and every few weeks a large consignment of them is sent to Philadelphia, where they are melted and recoinage. Quite frequently foreign coins turn up, and they likewise go to the melt-pot. — *Boston Post.*

MILLIONS OF BUFFALO.—In the forties, in the American Fur Company was in the hey of its power, there were sent from St. Louis alone in a single year one hundred thousand robes; and the company bought only the best ones. The hunter usually kept an amply for his own needs so that for every robe bought by the company three times as many were taken from the plains. St. Louis only one port of shipment. Equal quantities of robes were being sent from Mackinaw, Detroit, Montreal and Hudson Bay. A million did not cover the number of robes sent east in a year in the forties. In 1868 Inman, Custer and Custer rode continuously for ten days through one herd in the Arkansas region, and in 1869 trains on the Kansas Pacific were held from nine in the morning until midnight to permit the passage of one herd across the tracks. Army officers relate that in 1862 a herd that covered an area of seventy thirty miles moved north from the Arkansas to the Yellowstone. Catlin and Inman and army men and employees of the fur companies considered a drove of one hundred thousand buffalo a common sight along the line of the Santa Fe trail. Inman computes that from St. Louis alone the bones of thirty-one million robes were shipped between 1868 and 1881. — *Century.*

FOR "THE FRIEND."

Thomas Finch.

Thomas Finch, of Brentford, in Middlesex, born in the county of Berks of pious parents, under whom he had a guarded education, and about the eighteenth year of his age was favored with an heavenly visitation, to which, if he had given way, he has since told an intimate acquaintance, he thought he should have been called to the work of the ministry. But neglecting to live under the influence of this Divine principle, and turning his attention to the reading of the deistical authors, his understanding became so darkened, his mind seemed closed up, in an unbelief of the truth of inward revelation, and he thought there was nothing greater than reason to be known in man; but as he has said he was renewed with Friends, among whom he was educated, because he believed them the best instructed. Although he continued many years fighting against the Truth, yet it pleased the Most High, about the latter end of the year 1756, to favor him again with a fresh revelation of Divine love. He now no longer contented with flesh and blood, but gave up to

its heavenly instructions; and being humbled under the mighty hand of God, he in due time received a part in the ministry of the gospel of Jesus Christ in whose spiritual as well as outward appearance he now fully believed. Having tasted of the Lord's judgments and mercies, he labored to persuade men to let their conversation be as becomes the gospel. He was diligent in attending meetings for worship and discipline till near his decease; zealous for the promotion of righteousness, and of a benevolent disposition which endeared him to friends and others of his acquaintance.

During his illness, which was long and painful, he was favored with that resignation and peace which bespoke a mind elevated above earthly things. To some friends, not many days before his decease, he expressed himself thus: that although during his indisposition he had felt great poverty of spirit, and at times as though deserted, yet he trusted in the Lord's mercies; believing that he should be favored, before the closing scene, to feel the Lord nigh as in days past. This there was good cause to believe he experienced; for the First-day evening before his decease, he broke forth in a living testimony to the mercy and loving kindness of the Almighty encouraging all who had known something of his goodness, to trust in Him; saying, "There is no shortness in Him. If there is any shortness it is in us, not in Him. I bear this last testimony to his goodness." At another time being asked how he did, he said, "I have been praying for help to carry me through with that patience which I love to see in myself and others." To one who attended meetings, he observed, "How comfortable a thing it is to have nothing to do but to die;" that nothing stood in his way; and that the way to die the death of the righteous, was to live the life of the righteous.

He departed this life at Brentford the 5th day of the Fourth Month, 1789, aged seventy-seven years, and a minister about thirty years. The following remarks were dictated during the course of his illness. "As sure as things are in their places the best things will be pre-empted. Now as we read, 'The king's daughter is all glorious within,' so there is something truly beautiful in the regulation made by true religion when the objects of our affection are rightly regulated. It is of great consequence what we love best, because our lives and conversations are generally according to the order or disorder within. Notwithstanding the increase of knowledge among men, it seems but little of the best sort. There seem to be many who understand Latin, Greek and Hebrew, who know but little of themselves. It must be allowed to be a material point whether a man has liberty or not; and if he has, wherein it consists, and which is the way to make the right use of it. This, well considered, may help us to discern the great importance of spiritual mindedness. The carnally minded world seems to know little of these Divine things. Men, in common, seem but little aware how necessary a good state of mind is, in order to live a good life. Accordingly we see few men in much care about the state of their minds." — *Selected.*

"Difficulties are errands, which, when God sends us on them, are signs of his confidence."

Self-Respect.

Self-respect has been well defined as the "sense of individual worth." It is a correct estimate of our moral worth—such an estimate as will prevent us from doing ignoble deeds, because they are beneath our inherent dignity.

It has been mistaken for vanity, but vanity is elation with a high opinion of our accomplishments or with things that are more showy than valuable. It has been mistaken for pride, but pride is the exaltation of self at the expense of others, which issues in arrogance of demeanor. It has been mistaken for selfishness, but selfishness is regard for one's private interests chiefly, if not solely. Self-respect is none of these. It is not self-conceit, for it never over-estimates itself. It is not pride, because instead of looking down upon others it looks up to its best self. It is not selfishness because it is eminently social, recognizing the claims and value of others.

Self-respect is the act of holding in proper estimation my own nature for what it is in and of itself. This virtue may be acquired, and will be acquired, when one comes to examine the base upon which it rests. Like all virtues, it was first set in its true light by Jesus Christ. Graces and virtues which seemed to adhere in human nature before his coming, are caught up and vitalized by his life and teaching. This is true of all virtues, and among them self-respect.

All self-respect is based upon a true estimate of the greatness of human nature. Man is made for a little while lower than the angels and crowned with glory and honor. Men did not know how great poor human nature could be, until Jesus, emptying Himself, took upon Him the form of a servant and was made in all things like unto his brethren. The possibilities of human nature slumbered until He aroused them and showed how perfect they could be made through suffering. It was He who opened up to us the depths of pity. He unsealed the fount of compassion. He developed the fibre of moral strength. He showed the capacity for sacrificial service.

Self-respect is based upon the consciousness that human nature is the inheritor of a great name. Such a name is of more value than great riches. Men feel instinctively impelled to "live up to" a great name. By what more precious name could man be called than by that of the Master? Christian, or Christ's man, is distinction, indeed. It tells of being restored to a lost inheritance and adopted into the family of God. It is a sign of our belonging to the aristocracy of the ages. It is eloquent of Divine royalty, for it tells of our creation into a kingdom of priests. It tells of our being a living part of that fast rising temple whose corner stone is Christ.

Self-respect is based upon our realization of the fact that we are engaged in the doing of an eternal work. The importance of a task and the skill necessary for its accomplishment gives dignity to the doer. We are called to be "co-workers together with God." The works of his hands are great, but for the salvation of men He has made bare his arm. In this work, necessitating the baring of the Almighty Arm, we are co-laborers. The sacrifice of Calvary made atonement for sin, but in

our faithful effort to be the saviours of our fellows we are to "fill up that which is behind in the afflictions" of Christ.

The doing of it is a matter which even the angels "desire to look into." To be about the Father's business is the most honorable of all toil, and to be able to say, "I have finished the work Thou gavest me to do," is the supreme triumph of life.—*Episcopal Recorder*.

WHEN we ascend a hill, do we rise in spite of it, or because of it? Manifestly we do both. The hill tends to force us back, downward, and so we rise in spite of it. On the other hand we could not rise without it. Unlimited energy on a dead level will not carry us upward. Our rising in spite of the hill, then, is to be credited to our wisdom in taking advantage of circumstances, and making of them an opportunity for rising. In either case we must do—the hill does nothing. Difficulties, sorrows, losses, tend to depress and throw us backward. They are circumstances which we must regard as opportunities. We can rise in spite of them, and rise because of them.—*Patterson du Bois*.

Items Concerning the Society.

The Quinquennial Conference of several American Yearly Meetings will assemble at Indianapolis on the twenty-first of Tenth Month next. On the final adjournment of this conference the "Five Years' Meeting, composed of delegates from the Yearly Meetings which have adopted the Uniform Discipline, will organize.

"What would my meeting be if all its members were just like myself?"

The first Yearly Meeting of Australia is to be held at Melbourne on the third of Eleventh Month.

In this month's number of *The Sunday at Home* an article is contributed by E. E. Taylor, entitled "A Notable Day on the Fells," in which he describes the work of George Fox, Francis Howgill, Edward Burroughs, and others in the district of Sederberg. About 1675 "there were, within six miles of Brighlatts, no less than six hundred Friends who met in eleven appointed farm-houses." The present condition of Quakerism in the district is described as "few and small gatherings, alongside a general appreciation, in every day you enter, of the Quaker character and worship." The article is illustrated with a portrait of George Fox, a view of "Fox's Pulpit," and the meeting-house at Brighlatts, said to be the oldest in England.

SUMMARY OF EVENTS.

UNITED STATES.—The Presidents of the coal-carrying roads appear to be united in their decision that no outside influences would be heeded, and that the strike would continue until the miners got tired of it and return to work.

In one of his recent addresses President Roosevelt remarked on the responsibility of individuals in connection with the government: "No man can take the burden of government off the shoulders of a people fitted for self government. No man can make it easy for any people to govern themselves. They have to determine for themselves what the government shall be, and in the long run the government will represent their wishes; their wishes for good or their wishes for evil, or else they are indifferent to good or evil. As so you are to you, my fellow Americans, as to every citizen in every section of the country, is remember that in this country nothing, no law, no leadership, can possibly take the place of the exercise by the average citizen of the fundamental virtues of good citizenship, the exercise of the fundamental qualities of honesty, courage and common sense."

President Roosevelt has returned from his recent journey in the Southern States, and is expecting to leave on

the 19th instant for a visit to several of the far Western States. A telegram from Deadwood, S. D., says: President Roosevelt's disapproval and the protests from several humane societies have resulted in the abandonment of a proposed cowboys race from Deadwood to Omaha.

The Commissioners of the District of Columbia have been experimenting with various kinds of fuel, and have satisfied themselves that coke and bituminous coal, burned in alternate layers, will furnish an available substitute for anthracite in heating the public schools.

Secretary Wilson, of the Department of Agriculture, has lately stated: "The wheat crop of the West this year is very fine, and what may be considered as really the most important crop of all—the grass crop—is exceedingly good, and, as it is felt that there has been a great increase during the past ten years in the number of cattle in the United States. This information, taken together with the fine crop of grass, insures lower prices of meat."

It is stated that the number of Jews in the United States in 1840 was 15,000. There are now nearly 1,200,000. More than 60,000 landed in this country from abroad in 1900.

Agents of the Department of Agriculture have been in Western New York lately selecting the best varieties of pears for shipment and superintending the packing of them. Every pear is carefully inspected and wrapped. The cases are sent in cold storage cars and carried on shipboard into cold compartments. The success with peaches leads the Department to believe that an even greater success is possible with pears.

A course of lectures which are free for all to attend, and which are intended to be educational and informing, has been maintained in New York City, at the expense of the public. The 3172 lectures given last year were attended by 928,000 persons. It is said that many of those who were in attendance found in their varied entertainment the only opportunity for mental improvement and relaxation.

The Pennsylvania Railroad Company has ordered 250 freight locomotives from the Baldwin Works, to be delivered the first six months of 1903. The aggregate cost will be \$3,250,000, and the order is considered the largest ever placed by any railroad with a single works. It is said that 100 more will be ordered of other parties, and that these additions have been made necessary by the congested condition of the freight traffic.

The town of Thomas, in Oklahoma, founded only four weeks ago, is already a place of 1200 inhabitants. Thomas is situated in the midst of a fertile, well watered country. It is five and a half miles from the South Canadian River, and the nearest town on the west is 100 miles away. A railroad has lately been finished to this point from Wichita, a newspaper and a bank have been established. There were 373 deaths in this city last week, reported to the Board of Health. This is 47 less than the previous week and 51 less than the corresponding week of 1901. Of the foregoing 208 were males and 171 females: 48 died of consumption of the lungs; 19 of inflammation of the lungs and surrounding membranes; 15 of diphtheria; 3 of scarlet fever and 13 of typhoid fever.

CONGRESS.—In a recent meeting of the British Association for the advancement of science the superiority of the Germans in the field of chemistry as applied to the arts was commented on. German chemical manufacturers, the speaker declared, enjoyed a practical monopoly, which enabled them to exact huge profits from the rest of the world, and to establish in an almost unassailable position industries which were largely founded on basic industries made by English chemists, but which had never been properly developed in the land of their birth. In explanation of this he said it was the failure of schools to turn out, and of manufacturers to demand properly trained men, which explained Great Britain's loss of valuable industries, and the country's precarious hold upon others.

The Hungarian Government is adopting stringent measures to restrict emigration, and has introduced a bill forbidding emigration of men until they perform military service.

A commission has been appointed in Italy to examine into a plan submitted by an engineer for the establishment of a system of electrical delivery of mails, by which letters are to be transmitted in aluminum boxes along overhead wires at the rate of 25 miles an hour.

From statistics lately published the loss of life in Cuba during the last seven years from the effects of war is put down at about 200,000. In 1899 only 3 per cent. of the area of the island was under cultivation.

Destructive storms have lately raged in many parts of Germany. In Saxony the temperature sank to zero on the 14th instant.

It is said that orders aggregating hundreds of thousands of tons of coal have been placed in the South

Lancashire collieries for shipment to various ports in United States.

A despatch from Calcutta says that an earth has been felt throughout the Province of Assam a Chittagong division of Bengal. An earthquake, six seconds, was also felt at Pau, France.

A despatch from Rome of the 9th says: Mount Vesuvius is showing signs of activity. The volcano, Stromboli island is in full eruption and is throwing great columns of fire and torrents of stones. The volcano is shrouded in smoke.

From Honolulu on the 3d instant it was stated that the volcano of Kilauea in Hawaii has broken out. The eruption was preceded by heavy earthquake shocks in Hilo, thirty miles from the volcano. In the middle crater of Halemauama. A lake of molten lava in diameter has formed, and at last account was within 600 feet of the top of the crater and is rising.

Angelo Heilprin, of Philadelphia, who has lately been in Martinique, says of the late eruption of Mount Pelée. The scene of destruction in the last eruption of Pelée was far surpasses in extent that of the eruption of Fifth Month 8th, when St. Pierre was destroyed. "The structure built, instead of confining itself to a section area, as was the case during the first eruption, widely distributed, crossing the lower summit of the volcano near the knob of Morne Jacob, and skipping down between its rays. The danger from Mount Pelée has materially increased, and perhaps no position exists on the island so absolutely secure. The Government has judiciously ordered the evacuation of all points near by a radius of about eight or ten miles from the crater. The recent phenomena were precisely like those of Fifth Month 8th, death resulting in most cases from cases with the terribly swift and hot blast, which burst and suffocated.

A terrible drought reported in the lower Rio Grande region of Texas and Mexico still continues, hundreds of poor Mexican families are on the verge of starvation.

NOTICES.

A FRIEND wishes to dispose of a complete set of THE FRIEND—sixty-six volumes bound and the balance unbound.

Inquire at office of "THE FRIEND."

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 76.

John W. Hilyard, N. J.; Elizabeth D. Meritt, Pa.; Caroline Cole, Cal.; John S. Kirk, Pa.; B. Evans, N. J.; Jacob L. Evans, N. J.; Hiram Evans, N. J., \$1.50 to No. 52, vol. 76; Adm. Dillon, Kans., \$1. to No. 27; Feltchell Governor, Thomas Elmore, Ind.; Hannah H. Smedley, N. K. Buzby for H. T. Hilyard, N. J.; Geon. D. Reeve, Gtn.; Anna M. Warrington and for F. Warrington, Pa.; Mary W. Carslake, N. J.; C. C. Haines, N. J.; Joshua Brantingham, Agn. O. \$10 for Martha Harris, Hannah Whinery, Gdn. Dewees, Walter Edgerton and Isaac H. Satchell wait.

Remittances received after Third-day noon appear in the Receipts until the following week.

DIED, at Mount Holly, N. J., on the sixth of 11th Month, 1902, JOSEPH H. DAVIS, only child of Charles and Lydia H. Darnell, aged forty-seven years, a member of Mount Holly Particular and Burlington Monthly meeting of Friends. He bore a long and painful illness, his Christian fortitude and resignation, often saying "I had not one pain too many, but deserved them all, and that he had many blessings and much for which to be thankful.

At his home, Oakland, near Wilmington, Delaware, on the seventh of Eighth Month, 1902, JOHN TATUM, in the seventy-fourth year of his age, a member and member of Wilmington Monthly Meeting. Though his summons came with no time for a farewell, his friends have the consoling belief that he has been fulfilled the blessing promised to those who are faithful.

On the twenty-sixth of Fourth Mo., 1902, at the home of Alfred Ebert, near Malvern, Pa., SARAH C. GOSWELL, in her seventy-first year; a member of Gosport Monthly Meeting. Her firm attachment to the principles and testimonies of our Society in their ancient practice and final experience verified that "the effect of rightness in simplicity and assurance forever."

Do It!

Yea, rather blessed are they that hear the word of God, and do it!" said Jesus—more blessed than to be his mother in the flesh. On the day of the blessing of Mary, the doing of the word heard. So, at "the beginning of the world," she had learned to deliver the first of God's preaching of the new dispensation: " whatsoever He saith unto you, do it."

Between the doing with it first hearing. just as it is doing, and the waiting to hear, but doing, and then, for avoiding the doing, getting deaf, our religious Society has been losing its life as between two spoilers. There is no christian activity till it is livingly energized in the doer. There is no virtue in activity when once the word "Do this" has been forth, tho' it may be a still, small voice. We are waiting for fear of doing, and doing for fear of waiting, there is a desert or a waste; while waiting in order to hearken and be rewarded with the abundant Life.

It is vain to pray "Give us this day our bread," without digesting the bread given, by faithful exercise of obedience. Mental indigestion now burdens our land for its surfeit of hurried and scrappy reading. So spiritual dyspepsia can make a sickly man by not putting to faithful action the word from heaven. They are bad hearers, hearing deaf, who do not do; they are hearing doers starting deaf, who will not hear. After blessed than either of these conditions, they who both "hear the word of God, and do it." "If any man knoweth to do good, and withhold it, to him it is sin." "He that will not do the will of God shall know of the doctrine."

Christian Workers.

likewise, the following from John R. Whitcomb, in striking language with a false

theory of spiritual growth that has invaded even the Society of Friends in many places:

Thus God manifested Himself to them (the Israelites), and they were brought nigh to Him to receive forgiveness when they sinned—guidance from day to day—and strength for all the trials of their journey. Thus they grew, not by their activity, but by their receptivity. This is a very important consideration. For the modern theory of spiritual growth is by active service. So societies are multiplied, and machinery invented, and multitudes rush in for membership in the one, and for opportunity to manage the other. For it is a common opinion that men must grow spiritually in stature and strength as the muscles of the blacksmith grow by exercise and labor. So they must, but exercise and labor are not the first essentials with the blacksmith. His muscles would not be at all developed by the intelligent and diligent use of his hammer if he were not healthy and well nourished. But being healthy and well nourished, and being a blacksmith, he must wield his hammer diligently. His very calling demands it. If he did not, he would soon lose all right to the name. And if he were not regularly well nourished by proper food, he could not use his hammer at all, or if he did he would only wear himself out and gain no strength.

So, it is with the believer. His growth depends more upon what he receives from Christ than upon what he does for Christ. If he does not feed every day upon the heavenly Manna—and be renewed by the indwelling of the Holy Ghost—and draw nigh to God in Christ as his adorable Redeemer and resting upon his atonement—he cannot grow strong. But if he does—like the blacksmith—he must work or be unworthy of the name he bears. If he is not active in Christian service, it simply shows that he is weak and sickly, and that like the people of Sardis, he has only a name to live and is dead (Rev. 3:1). The greater number of such in the Church, the greater is its weakness. For, like the thirty-two thousand in Gideon's army, they add to it no strength and for the same reason (Jud. 7:2). For the true child of God does not work to gain strength, but because he is already strong in the Lord. Then he cannot contentedly sit at ease. So it was with the early disciples. No opposition, or command, could repress their zeal, for they said—"we cannot but speak the things which we have seen and heard" (Acts 4:20). So always, when obedient faith is strong the lips cannot keep silent, or the hands be idle.

Retreats a Stage Career.

Julia Marlowe, the well-known actress, gives the following testimony against the stage:—

Always it is easy for us, looking back on

our life-decisions in the light of our experiences, to realize how much wiser, saner decisions we might have made. Could I have an opportunity once more to define my purposes and give direction to my ambitions the issue of the matter would be something very different from what it has been. It would have nothing to do with the stage. I am far from decrying art as a thankless or an unkind mistress. She spurs us on to a measure of achievement in spite of ourselves sometimes and her rewards are sweet. But she denies us the one thing in life that I have come to believe is best worth while, a strong personal influence exerted within a small circle, benefiting a few, and these few supremely.

And so if I had the great decision to make again—and knew what I know—it would be for those things which should cast my life in more peaceful walks and surround me with a family and a few intimate friends. I would have been worth more to the world than I am now because the influence I might have exerted would have won what is finer and sweeter than a line in a book—the gratitude of a few dear hearts.

The Lost Prince.

In forwarding for insertion in THE FRIEND the notice, which appears elsewhere, of the Dauphin of France, the aged contributor writes: "There is probably no one but myself acquainted with the fact that he met my uncle, Stephen Grellet, and was immediately recognized by him." Many of our readers have listened with interest to our friend Watson W. Dewees's graphic lecture in which he exhibits the probabilities of Eleazar Williams being the "Lost Prince." While we cannot judge the merits of the case, it is at least interesting to read the confirmatory link in the chain of evidence now thrown in by our friend John Collins.

Home Duties and Studies.

A woman whose writings have proved helpful to many, recently told some of her youthful experiences to a writer in *The Household*:

She resolved, on leaving school, to go on with the studies which she had begun. She allowed so much time for Latin, so much for science, so much for mathematics: music, painting and general literature, and proposed to take regular exercise.

But when she sat down to her Latin, her brother Will was sure to rush in with a coat to mend or a splinter to be taken out, or perhaps to tell her a long story of a football match or a fight at recess. She always pushed the Latin aside and listened to him.

When busy with logarithms she would catch

sight of her mother stooping over a basket of unended stockings or other household tasks. Books and slate were put aside while she took the task and sent her tired mother to rest.

When she wished to go to the gymnasium, the parlor had to be dusted; when she intended to glance over a novel, there was old Peggy in the kitchen spelling out a verse in her Bible.

Often the day appeared to be filled with nothing; a little sewing, a little housekeeping, a thousand little trifles done for her mother, for the boys, for the old servant.

She was irritated and rebellious. Her plans had been for a higher work and a higher life than this!

But looking back at the age of sixty, she said, "I have never found occasion for the use of the higher mathematics or Latin in my life. But the old negro in the kitchen died trusting in her Saviour, whom she learned to know as I read to her every day.

When my brother Will at twenty fell into bad habits and ran away from home, I was sent to bring him back. He had grown fond of me because I talked and sympathized with him, and he came. It was the turning point in his life.

"I know now, too, that if I had not taken some of my mother's hourly burden of little duties upon myself, she would have sunk beneath them. As it was she lived to a happy, helpful old age. God knew better than I what work was best for me in life."

Shall we, then, conclude that this woman's education was of no value to her? By no means. It may have been because of those studies faithfully carried on, that she was able better than all the rest of the family to sympathize with that brother and call him back from his wanderings. The lesson is that we should do the duties that lie nearest. If at school study faithfully and well. If at home, think no duty too humble for a follower of Him who came not to be ministered unto but to minister.

If an education does not make its possessor more capable of performing the minor duties of life then it is probably not the fault of the education; but of the misguided youth who thinks his education has been given him to enable him to escape the duties of life instead of to enable him to deal with them more intelligently and effectively.

It may be true that the higher mathematics will not help a girl in the housework,—though some evidence could be offered that they do, but the sustained effort necessary to master the higher mathematics will give training to mind and will which will be of service in many a household problem. Although mere information will not make a person wise, information furnishes the necessary basis for action. All knowledge is useful, but that knowledge is of most value which helps us in our daily duties. So, girls and boys, get wisdom, but with all your getting, get understanding.—*The Safeguard.*

Selected.

Elizabeth Smith.

Elizabeth Smith, of Burlington, New Jersey, was one whose deportment from a child was composed and steady. Frequently, while others sought recreation and amusements abroad, she chose to be at home employing

herself in the business of the family, or improving her mind by some useful application. As she grew up the reproofs of instruction became the way of life to her, and she was governed by a meek and quiet spirit; her conversation and conduct seemed to be almost one continued example of child-like simplicity and innocence. Her mother dying while she was young, the care of her father's family devolved upon her, a considerable time before his death. Her duty to him and behavior in general, gained the love of a careful, religious parent, and a blessing attended her, as her future life manifested. Her words were few, but savory and instructive; she had a feeling heart, and the distressed were often relieved by her charity; happy in herself, she endeavored to make all about her so.

She had a great regard for the Holy Scriptures; on taking up a Bible, she remarked, to a particular friend what a treasure it contained; and sought to inculcate the reading thereof, and to discourage the fashionable books of the times.

It was her concern to retire frequently to wait upon the Lord,—to know her strength renewed in Him, and the effects were visible by a cheerful serenity in her countenance. In her early youth she was called to the work of the ministry, in which she delivered herself in a clear, consistent manner; and it flowing from the right spring, was often attended with good effect. She was concerned to travel in the exercise of her gift as far to the northward as New England, and also in some of the Southern provinces, and frequently to the meetings near her home. . . .

The last summer before her death though much enfeebled in body, she had often very acceptable service in the ministry; alive and strong in the best sense her company was greatly satisfactory to friends about her. She waited for her change with a lively hope; and a serenity of mind attended her, being inwardly supported beyond mere human attainment.

She uttered many expressions during the conflicts of her illness, much to the comfort and satisfaction to those present.

In solemn supplication to the Almighty on her own account, to be near and support her, she expressed herself in great reverence to the following effect: "Thou who art the God of my life, who hast kept and fed me all my life long, be now near and support me by thy presence, and if it is thy will to put an end to my being here, I submit. Be graciously pleased to give me rest in thy mansion, with thy dear Son, the Lamb immaculate, for ever and ever.

She often said she had nothing to do but to bear her pains with patience. Once in great extremity of pain, she remarked that she reasoned, "Why am I so afflicted?" and had received this answer in her mind, "My beloved Son, who never offended me, drank of the cup before thee." "Thus," said she, "I am helped along with one kind hint after another." She frequently expressed the peace and consolation she felt in those trying moments, in having lived in the fear of her Creator.

She died the second of the Tenth Month, 1772, aged about forty-eight years.

Extract from an epistle left by her to Burlington Quarterly Meeting:

"In a fresh remembrance of the many favors of Divine favor we have been made takers of together, does my spirit affectionately salute the living, with fervent desires for the prosperity of truth and righteousness in general, that you may not fall short in up to the faithful performance of your respective duties, and discharging that which the Lord has committed to you, especially, as in his sight. I tenderly beseech all, both older and younger, who have known and may know the Master's will concerning you, that you may be obedient. Let no sinning with flesh and blood, or pleading excuses because of unfitness as you may think prevail. . . . Where that is the case of selfishness and weakness will be the consequence, and the best life is in danger of being lost; as it may with sorrow be remarked of some who profess with us, that a name taken and be accounted as wise virgins, has seemed to suffice, whose case I have often lamented.

"It is the ardent prayer of my soul for thee, while I am writing this, that they may be to righteousness, and diligently attend to the teachings of the Spirit of the Lord, who will not fail to fit and qualify for every good and work."

FOR "THE FRIEND."

Louis XVII., Dauphin of France.

It is generally believed that this unfortunate prince died in captivity, in the Temple Tower in Paris, which report was widely circulated there, after his royal parents had perished at the guillotine. Some facts prove that he was not the case.

In a school reader, published at York, England, entitled "*Recueil Choisi*" (Select Collection), a few years after the French Revolution, is an interesting statement, that a gentleman named Cléry had been chosen by the king as attendant and body servant to the little Dauphin while growing up, and was also entrusted with his education. He was separated from him when his parents were thrown into prison, and was exposed to the heartless barbarity of Simon the jailer, who sought by every means to destroy his sense of purity, honor and religion.

After weeks of solitary confinement, the poor little prisoner fell sick, and the report was spread around that he had died. A certificate of death was made out by the physician and the public had no doubt of the truth of the report.

Many years afterwards, a volume was issued by a firm in the United States, under the title of "*The Lost Prince*," attesting upon good authority the rescue of the young Dauphin. It appears from this publication (a copy of which is in the Mercantile Library of Philadelphia), that a lad of about the same age, height and figure, had died in the Tower prison at the same time that the young prince was slain at the point of death. A bold scheme was contrived by some parties to rescue the little prisoner. A plain coffin was ordered, and being taken into the darkened room, the Dauphin was placed in it. It was hastily taken away, the supposed deceased released from his short confinement and the conspirators fled to the city at once, taking their charge with them.

in the Biographical Dictionary edited by the late Joseph Thomas, we find the following statement, viz : Jean Baptiste Cant Hanet, the servant of Louis XVII., was born at Versailles in 1759. He served the King as valet-chambre in prison and published a journal of the captivity of the King in the Temple. No mention is made of the aforesaid Cléry. In Markham's History of France, page 517, Jacob Abbott, published by Harper & Brothers, occurs a brief notice of the appointment of M. Cléry as valet to the King. The same book contained a concise account of the brutality with which the Dauphin was treated by his inhuman jailer.

"The Lost Prince" gives very interesting details of the escape of the young prince, his emigration to Canada, and adoption into a large family of the St. Regis Indians, where he grew up as one of them, notwithstanding his fairer complexion. While recognized by the tribe as a member, he resolved to become a Romish priest, and as such he endeared himself to every one in after years.

It is stated in "The Lost Prince" that he had only a confused recollection of the terrible humanity that befell him in past years, but, when, after falling from a tree near his prison home he struck his head violently, and then the blow the memory of former events seemed to return with much clearness. Yet he carefully avoided any allusion to the sad story of the sufferings, imprisonment and violent deaths of his relatives.

After he had grown up and was established as a missionary work among several tribes of Indians, two French gentlemen found by persistent inquiry, his residence among the St. Regis tribe. They brought a very large amount of money as a gift and informed him that they were commissioned by a powerful party in the French government to offer him the crown of France, as a prince of the royal blood, the right to which he was justly entitled. Every attempt to induce him to accept the offer was in vain. He had no earthly ambition, but was determined to live as a missionary and to minister among his beloved parishioners.

Some years afterwards, public business called the Dauphin (known by his assumed name, Elazar Williams), to visit the United States, during that Stephen Grellet, the well-known French Quaker minister, resided at Burlington, N. J., he called at the house. No sooner did they meet, than Stephen, with uplifted hands, exclaimed "C'est le mème!"—"The very same!" proving by his Bourbon features to be the real son of the unfortunate monarch. As Stephen Grellet's father attended worship with the royal family and was on intimate terms of friendship with the King, as Comptroller of the Treasury, his son Stephen must have seen the young prince only twelve years younger than himself, and also when enrolled, afterwards was, as one of the royal householders of the King. Hence we have undoubted evidence that the Dauphin and Elazar Williams were identically the same person.

The above facts were made known to the writer by Rachel Grellet in a personal interview.

JOHN COLLINS.

102 N. 43rd St., Phila.

ALL life should be as sacred as a prayer, for we live in the immediate presence of God. Selected.

Science and Industry.

It takes about three seconds for a message to go from one end of the Atlantic cable to the other.

SECRETS OF TREES.—Nobody seems to know what cause it is which produces those delicate and beautiful lines in maple, known as bird's-eye. Some people think they come from the hundreds of little branches which shoot out all over the trunk of the tree as soon as a clearing is made around it. Expert timber men say that is not the case. The only way to tell a bird's eye maple tree is to cut it. There are no outward signs by which one can judge. The *Railroad Gazette* tells a story of the late George M. Pullman. Many years ago he was offered a mahogany log for \$3000, to be cut into veneers. It was supposed to be a very fine piece of wood, but this could only be discovered by cutting it. He declined the log, but agreed to take the log cut into veneers for what it was worth. The owner had it sawed and was paid \$7000 for his veneers. Any one who can discover the secret of determining the interior nature of wood from the outside will have a fortune.—*Popular Mechanics*.

THE YELLOWSTONE BEARS.—General Corbin, who has just returned to Washington from a trip to Yellowstone Park, tells how some bears in the park raided the Fountain House. "I investigated myself and found that the bears had broken into the kitchen of the hotel and simply ruined all the stores, leaving the hotel and its guests without food enough for a meal. It was side-splitting to listen to the Chinese cook attempt to describe the visit of the bears. He became excited, spluttered, grinned and squeaked, and went through all the supposed maneuvers of the beasts in his endeavor to explain the damage that had been done. It was really no laughing matter, for the proprietor of the hotel and Colonel Pitcher sent men to punish the intruders." "Would they kill the bears?" General Corbin was asked. "Oh, no; they would only whip them. They would take a big bull whip and lash the bears soundly. Experience has taught, so the park people say, that a good sound thrashing from a bull whip will last a bear, either brown or grizzly, for the remainder of the season."—*St. Paul Dispatch*.

DIVING FIFTY FEET.—The working crews of the Islands were quartered in suitable camps near their field of labor. They were native Hawaiians, good fellows, willing workers, admirably adapted to the duty required of them, which was largely in boats and in the water. I well remember one who excelled in diving. On a certain occasion, when the placing of a deep water mooring had just been accomplished, it became necessary to detach under water the end of a hawser, which had been made fast to the submerged part of a spar buoy, about forty or fifty feet below the surface of the sea. The man was told to take his sheath knife down with him and cut the hawser as near its end as he could, so as to lose as little as possible of the valuable cable. Taking his knife in his teeth he disappeared

beneath the water, and remained out of sight so long that he was almost given up for lost, when he suddenly reappeared, and, on being asked if he had cut the hawser as he had been told to, answered that he had unbent it without cutting off any part of it whatever.—*James D. Hogue in the September Century*.

SOCIAL INSTINCTS OF ANTS.—A swarm of *Formica pratensis* was closely pressed in its nest by an army of the same species, and crowds of alarmed defenders issued from the entrances to the nest, and flew to take part in the fight. Like Satan, the tempter of old, I placed near them a beautiful drop of honey on a piece of paper. At any other time the honey would have been covered in a few instants with ants gorging themselves; but this time numerous working ants came upon it, tasted it for scarcely a second, and returned to it restlessly three or four times. Conscientiousness, the feeling of duty, invariably prevailed over gormandism, and they left the honey to go and be killed while defending the community. I am bound to own, however, that there are ants less social in whom gormandism does prevail.

Compared to the manners of other sociable animals, and especially to those of man, the manners of ants exhibit a profound and fundamental aggregation of facts of convergence due to their social life. Let me mention devotion, the instinctive sentiment of duty, slavery, torture, war, alliances, the raising of cattle, gardening, harvesting and even social degeneracy through the attraction of certain harmful means of enjoyment. It would be ridiculous and erroneous to see in the fulfillment reasoning, the result of calculated reflection, analogous to ours. The fact that each is fixed and circumscribed within one species, as well as the fatalistic character it has in that species, proves this superabundantly. But it would be as grave a mistake to refuse to recognize the deep natural laws that are concealed under this convergence. Is the case different as regards our actions, though they are infinitely more plastic and more complex individually? I do not believe it.

I have been unable to give more than a short sketch of the social life of ants. Let each one study it for himself, and he will experience in doing so the deep enjoyment that comes from sounding the secrets and laws of nature, while at the same time he will enjoy the most delightful satire upon human wretchedness, and will perceive at least the main lines of a social example that we ought to be able to imitate, though we cannot do so, on account of the too large dose of egotistical and ferocious instincts that we have inherited from our ancestors.—*International World*.

THE KIKUYU COUNTRY.—The Kikuyu country in East Africa is famous for having within its borders one of the greatest snow mountains of Africa, Mount Kenia, whose summit is always white with snow, though it lies directly under the equator. All travelers have been enthusiastic over the beauty and fertility of this region of forest and plain that rises from a height of about four thousand feet to the summit of Kenia, more than 18,000 feet above the sea. In this land, exceedingly rich in agricultural possibilities, it is said that

the white man can live and work as he does in Europe, and very likely die of old age. It is practically the only region yet studied in tropical Africa of which it may be truthfully asserted.

Travelers, however, have given the inhabitants of these islands an evil reputation. In other words, the Akibuyu are said to be suspicious, treacherous and hostile to all strangers. But the latest testimony, coming from Major Richard Crawshaw, of the British army, who has lived among these people for years, is to the effect that they are the finest African people he ever met, and he has had long experience among many tribes in British East Africa. It will be interesting to read some things that Major Crawshaw says about the country in which white men may live in good health, and about the remarkable natives who inhabit it.

The first traveler to describe this region was the late explorer, Joseph Thomson, who wrote as follows of the large area of Kikuyu, lying between six thousand and seven thousand feet above the sea, where, it is said, white men may live and work.

Drought is unknown, and astonishing fertility is everywhere seen. Streams abound in great numbers. Enormous quantities of sweet potatoes, yams, Cassava, sugar cane, millet, etc., are raised, and the supply seems to be quite inexhaustible. On my return journey I found a caravan of over fifteen hundred men who remained a month, and carried away little short of three months' provisions, yet it did not seem perceptibly to affect the supply or to raise the ridiculously low prices. Extremely fat sheep and goats abound, and there are cattle in considerable numbers.—*New York Sun.*

The Need of Patience.

Patience is more necessary than the bread we eat; for when bread fails, or there is not enough of it, then patience takes its place. Most truly did Paul of Tarsus say: "Ye have need of patience." Patience makes a man who is foolish in other respects, victorious over both the devil and himself; the man who is armed with patience, may safely challenge the whole army of the adversary. The giant Philistine cried out: "Give me a man that we may fight together." Such an athlete was Job, who met the devil with every kind of weapon, and always bore away the palm. Patience is the bulwark of all virtue, as Gregory affirms. "Patience," he says, "is the root and guardian of all things!" And there is nothing by which a man can more powerfully win God than by patience; nor is there any more certain proof of love for God than enduring many sufferings for God patiently and willingly.

Lois of Blois, commends even moderate patience, and that which is shown in little things, in remarkable and noble words; nor do I think there is any writer who has set forth this matter in such natural and fitting language. I will quote his exact words: "Nothing," he says, "can happen to a man more useful than tribulation, whether it be external or internal. And there is no more certain sign of Divine election than if a man bear tribulation humbly and patiently for love of God. It is a precious and bright ring, with

which God betroths the soul to himself. To suffer for God is a matter of such dignity, that a man ought rightly to reckon himself unworthy of that honor. Even a little trouble borne with equanimity for God, is incomparably more excellent than frequent and laborious practice of good works. Every burden recalls some picture of our Lord Jesus Christ's most noble passion; by it a man may be made a partaker in that same passion of the Lord."—*Jeremy Draculus.*

Minor In sincerities.

From one point of view, nine distinctions between insincerities may well appear dangerous, and those teachers take a straightforward course who, without discrimination, brand all insincerity as wrong. But however simple the matter may be in theory, a great many people share the practical difficulty felt by a correspondent, who invites us to write on "Minor In sincerities." The suggestion is apparently prompted by the fact that, while admitting insincerity in the abstract to be wrong, there are certain concrete forms of it to which we somehow become half reconciled. It is not a subject with which it is easy to deal without being misunderstood, but its very delicacy is a sufficient reason for frankly facing it. Guides who never deviate from "safe" roads must forego the privilege of leading people out of difficulties. You cannot reach the entangled if you keep far away from the thicket.

There are, then, two kinds of minor insincerities to which it may be of some use to refer. First, there are those regarded as minor because trivial, and at least as to these our judgment need not be uncertain. Where right and wrong, truth and falsehood, are concerned, there is, strictly speaking, no such thing as the trivial. When we allow ourselves white lies, we are serving an apprenticeship to black lies. There is no falsehood so petty that it "does not matter," for morally as well as physically the great is made up of the small, and depends upon it. To be unfaithful in little is to be unfaithful also in much. To put it, if possible, even more strongly, if we were jealous of the tiniest speck on the mirror of our truthfulness, there would be no danger of its ever being smeared with a great shame. The first step may only carry us an inch, but it is still a step, involving downward momentum. This tells us plainly enough where our first and altogether most important duty lies: it is to keep undulled our sensitiveness to truth, to recognize that in this realm there is nothing trivial, and therefore no room for trifling. In Locke's words, "To love truth for truth's sake is the principal part of human perfection in this world, and the seed-plot of all other virtues." Only so far as we recognize this shall we be able without risk to address ourselves to that aspect of the matter which is not quite so clear.

This brings us to what really exercises our minds—viz: the insincerities that are minor in the sense of conventional. In order to consider these properly, let us state the defence of them as it is usually presented. The argument runs somewhat on this line: If there is to be social life at all, there must be certain amenities and courtesies, and these in their turn necessitate some degree of departure

from absolute sincerity. What kind of intercourse, for example, should we have our fellows if we always said what we thought and never said what we did not think? If we are, here and there, people who pride themselves on this unalloyed social frankness, it is not too much to say that they are a terror to their friends. They indulge in brusqueness and *gaucherie* in a way that would make anything but solitary existence impossible. To take some common instances, are we frankly to tell an unwelcome visitor that he is not pleased to see him? Must we leave a party which has bored us, deny ourselves the courtesy of expressing gratitude for our host's endeavors? Or, again, is it morally blameworthy to announce ourselves as "not at home" to certain visitors, who are actually in the house? And, once more, is it not permissible to "regret our inability" to accept an uncongenial invitation? The suggestion is that all these are, so to speak, technical terms which, so far as social intercourse is concerned, have their own special meaning or lack of meaning. The recognized spirit of politeness, they are, it is contended, not to be looked upon as having any moral significance, and can therefore be used without injury to ourselves or others.

In all this there is a certain amount of truth, but it easily gets corrupted, and it becomes the stepping-stone to an habitual insincerity, which makes the whole life ring low. In particular, the "not at home" example is, to say the least, so near the borderline that it is far better to discard it altogether. When people call whom we do not wish to see, it is easily possible to intrude as much without giving them the impression that we are not in the house. Here, among every case, the important point is, are the words calculated to deceive, and do we mean them to deceive? It may be true that "at home" and "not at home" are terms which, under some circumstances, are acceptable bearing what might be called a socially technical meaning; but they are, on the other hand, often used with the intention and effect of suggesting what is untrue, and in clearly, they have no defence. People who are too little scrupulous on this matter, may be reminded that they have responsibilities for their servants, whose moral sensitiveness can hardly fail to be blunted when they are made the intermediaries of social equivocation. On the other cases not much need be said. We may express polite gratitude for what we have not enjoyed, and may be agreeable to unwelcome visitors, without committing any violation of truth. We can, at the same time, avoid the wanton insincerity of a dash in which so many indulge, and keep ourselves free from the quite unnecessary artificiality which so largely poisons social intercourse. There is great strength in saying to ourselves, with George Herbert, "Nothing need a lie!" If we make a habit of honor and practicing reality, the harmless conventions of speech will keep their place and remain harmless.

To one other point it may be worth while to refer. While scrupulous about our own sincerity, let us help others to preserve theirs. Untruths and half truths are often provoked by questions that are unwise, rude, or

reason improper. To ask what we have right to know, or what others have no right to reveal, is to make honesty difficult; it is lamentable to think of the harm in this way by idle or impertinent curiosity.

We, perhaps, pity the more or less persons to whom the interviewer the tyrant, storming the citadel even of intimate sanctities; but in our quieter we are sometimes hardly less exacting to another, forgetting that privacy still has rights. And in defending those rights, not fair that any of us should be tempted to insinuations, major or minor. No man has learnt to respect humanity until he understands that every life holds secrets and tendencies which ought never to be so much challenged.—*Episcopal Recorder*.

Learn to Understand Rightly.

What alone indeed hath merited redemption for us; but not in such a way as that for any proper merit's sake, he will freely lose his childhood by an outward adoption and so receive us for his children, when none. No. He himself is the merit, the open Gate that leadeth through life, and through that Gate we must enter. Heiveth no boast into his merit, but those that turn, and become as children. Those that thus come to him are his reward, and he hath merited.

Thus he said: "Father, the men were made and thou hast given them to me (as my Father), and I will give them eternal life." The life of Christ will be given to none, until they come to him in his Spirit, into his life, sufferings, and merit, and therein to true children of the merit.

Must be born of his merit, and put on Christ in his suffering and death; outwardly with verbal flattery only, and the comforting of ourselves therewith, while we remain aliens and strange children, of the flesh or nature. No, the strange cannot inherit the childship, but the true Essence it inheriteth it.

The innate Essence is not of this world, but of heaven, of which Paul speaketh saying: "Our conversation is in heaven. The filial Essence speaketh in heaven, and heaven is in

us. If heaven in man be not open, and the heart without heaven flattering himself, he is still without, but Christ will be in through his grace; is not his merit? Such a one is vanity and sin with his self man.

Therefore, learn to understand rightly, what has taught us, and done for us. He is given; he must get a form in us, or else he will not be in heaven. Thus then the outward man, with the holy body of the new birth, is in heaven, and the outward mortal man is in the world, and Christ spake, saying: My sheep are of the Father, and none shall pluck them away; for he who gave them to me is greater than I.—*Jacob Boehme*.

FOR "THE FRIEND."

Remembrance of John W. Foster.

At his residence in Western, R. I., on the 10th of Tenth Month, 1901, John W. Foster, a member and minister of South Kings-

ton Monthly, and Western Particular Meeting, aged seventy-one years, six months and four days. By the removal of this dear Friend our religious Society and the Meeting to which he belonged has lost a much beloved and valued member.

The labors and services of this faithful watchman commenced in very early life, through the heart-searching convictions of Truth, and a patient abiding under the preparing hand of his Heavenly Father. Being obedient to its tendering manifestations, as he came to mature years the fruits of the Spirit were abundantly shown forth in his life, enabling him to adorn the doctrines of our holy profession by a circumspect life and godly conversation, to the praise and glory of God.

His every-day demeanor was that of a disciple of Christ,—with a sobriety and gravity which bespoke his earnestness, and at once impressed those who met with him that he was endeavoring in sincerity to walk worthy of his high vocation and holy profession,—and it was truly said of him, "he was one in harmony with everything that ennobled life and that testified his faith in the Master.

He was noted for unquestionable candor, integrity, and uprightness—a soul so sweet and gentle, a spirit so loving, that he was a friend to all, both old and young, and to every class and denomination. He was naturally of a social nature, but deeply concerned to keep the world under his feet in view of that better country in which his hopes were centered; yet often constrained to admonish others in things pertaining to their souls' salvation, greatly to the comfort and edification of those whom he addressed.

His sufferings during the last few weeks of his life were of a very trying nature, through nervous prostration and partial paralysis of left side. Though he could move his hand and limb, the feeling of touch was not acute, and great numbness at times appeared. But the principal trouble was his extreme nervousness, and a great sufferer he was therefore. But it was a comfort the intellectual portion of his brain was not impaired. Often he said, "This poor, nervous body cannot enter the glorious city, but it will soon shake off these poor shackles. I do not want to have any will of my own, but as the dear Master sees fit."

At another time he said, "I am nearing the great white Throne, but all through mercy," giving evidence his faith was strong and "reached within the veil," anchoring fast to the Throne he felt he was nearing. He had no fear of death, yet said, "It is a solemn thing to die." He felt the gates of Heaven were open for him, but often saying, "I am so unworthy, and my shortcomings have been so many; but the Lord is with me, and it is through his mercy alone if I am able to enter the gates. He desires me to suffer a little longer, and I want not for one moment to lose sight of his Divine presence, yet I long for the land whose promise alone is changeless and sure as eternity's throne."

At various times he left loving messages for absent friends, and in a calm and solemn manner gave directions concerning his funeral and burial, and the Friends he desired specially invited to attend.

The third night before his departure he very impressively recited much of Longfellow's

"Resignation," dwelling particularly on the fifth verse: "There is no Death! What seems so is transition," etc.; then, after a time of silence, said:

"Jesus can make a dying bed
Soft seem as downy pillows are,
While on his breast I lean my head
And breathe my life out sweetly there."

On seeing his beloved companion much affected, he said to her, "Do not grieve for me. It is hard for us to part, but I have the assurance hard things will be made easy and bitter sweet." At another time, "I would like to recover for thy sake, but feel it is doubtful; and when I am gone, go about the house cheerfully—try to be cheerful—try to be cheerful. It is thy duty to do so. Just think how much better off I shall be forever at rest on my Saviour's bosom."

Concerning the stripped condition of the little meeting to which he belonged and was much attached, he said, "Don't give up to discouragements. Christ is head over his church. He was never foiled in battle nor beaten in the field. He giveth abundantly even more than we could ask or think."

He often asked for a Psalm to be read to him, or a portion of the New Testament, and his frequent petitions to the Throne of Grace for those around him were most touching and beautiful, and his child-like faith and trust in his adorable Redeemer were unbounded.

This dear Friend from conviction of duty in the latter years of his life visited in Gospel love the Yearly Meetings of Ohio, Western Kansas, Iowa and Canada, and some of the meetings and families composing them, returning to his home "with the reward of peace, and feeling strength and ability to perform this labor had been mercifully granted by the dear Master who commanded him to go forth." He had a humble view of his own attainments, but was a steadfast believer in the doctrines of the Gospel. His confidence, however, was not placed in any sense of deserving service, but in the mercy of God; and his family and friends are comforted in believing that through this mercy he has been safely gathered into rest.

AS TRUE AS TRUTH ITSELF.—It is as true as truth itself that without the mortification of the flesh, neither prayer, nor piety, nor any work of the Spirit, can be ever perfected in man. And to figure out this to us the better, it pleased God to appoint that all the beasts should be put to death which approached the holy mountain of Sinai; which thing is an allegory, and is written for our instruction and edification; For by how much more ought we to slay our bestial lusts and brutal affections, if we would ascend into the holy mount of our God, would offer up the incense of prayer and spiritual sacrifices, and would meditate upon the Divine word, and give ourselves up to internal recollection? And if we do otherwise, are we not already judged? There remains, therefore, a fearful expectation for us, if we transgress this order; and if we think here to spare our own flesh, we are strangely mistaken. The beast, which is our flesh, must in this case die, that so we may live, live unto God; but if this live in us, according to the old Adam, then must we ourselves die the death.—*True Christianity*.

The Marks of Christian Perfection.

We must not build our salvation upon men's opinions. It is a matter of too great importance, upon which depends our eternal happiness. He that ought to teach us the way of salvation, and the means of perfection, is Jesus Christ and none other (John xiv: 6). He is the only Way that is sure and certain. Stay yourself there, and his doctrine will make it easy for you to discern true perfection from the false and suppositions. And if you would know what souls are possessed with true perfection, hear the Sermon which Jesus Christ made upon the seashore, when He preached the eight Beatitudes; where he clearly shows what souls are happy, or in the blessed state of perfection; for we must not foolishly believe, as many ignorant people do, who think that in these Beatitudes, our Saviour speaks of souls that are departed, and entered upon eternal happiness. For they have not any more need of a law, nor instructions; and Jesus Christ needed not to preach their Beatitudes unto them, seeing they know them well enough by the union which they had with God, and needed not any more, any other doctrine, or any other law, than that which proceeded from the love which they possessed. It could not then be for souls that are already saved that Jesus Christ preached thus, but for those that are yet on the earth, that he might declare unto them, in what state they ought to be if they would attain Christian perfection. Jesus Christ calls them blessed, to show the happiness which they have in this world, who are poor in spirit, and so of the rest. They are already pronounced blessed by Jesus Christ's own mouth, seeing he calls them blessed, and promises them eternal blessedness, with so many other even temporal graces; for unto every virtue he promises a reward.

Wherefore, we are not to judge of Christian perfection by visions, revelations, ecstasies, or raptures; nor believe that they who can speak well of God and of perfection, are therefore perfect; for Satan himself could do all these things, and speak more admirably of God than any man could ever do; because of his angelical light and understanding, which serves now as a hell and rack to him letting him see what he has lost by desiring to be equal with God. So as we must not judge of Christian perfection by fine discourses or external piety, but only by the marks which Jesus Christ hath set forth in the eight beatitudes.

We must diligently observe if those who say they are regenerated into the Spirit of Jesus Christ, or have attained perfection, have their souls truly ended with the eight beatitudes, without which none are truly to be called virtuous, or said to have Christian perfection; yea, they cannot aim at perfection without aiming also at the eight beatitudes, seeing Jesus Christ calls none happy, but those that are poor in spirit, those who mourn, those who hunger and thirst after righteousness, the merciful, the pure and clean in heart, the peacemakers, and those who suffer persecution for righteousness' sake. If there were any other "blessed" beside those, without doubt Jesus Christ would have declared them so; or said: "Blessed are they that have the gift of prophecy, or he that

worketh miracles, or speaks languages; or they that fast, or go to church, or preach, or read, or frequent the Sacraments;" and yet, he speaks not a word of the happiness of those that do all these things, and many more which men call piety and devotion. But he only speaks of the virtues which reside in the inward ground of our souls, and promises a reward to every one of them, for no good shall be in us, which shall not be particularly recompensed; neither any evil, for which we shall not be particularly chastised.—*Antonia Bourignon.*

Illustrious Dunces.

In reading the biographies of eminent men one is surprised to learn what great things have been achieved by men who, in youth, were pronounced dunces. Histories of their careers are full of encouragement to timid, self-distrustful beginners in life. Among the illustrious dunces—dull, and even stupid boys, but most successful men,—were Justus von Liebig, called "Booby Liebig," by his schoolmates, when he replied to a question by his teacher, said that he intended to be a chemist, and provoked a burst of derision from the whole school, yet lived to become one of the greatest chemists of the nineteenth century. Tommaso Gaudi, the great painter, the precursor of Raphael, whose works were studied by the latter and by Michael Angelo and Leonardo da Vinci, yet who was known as "Heavy Tom," when a boy; Thomas Chatterton, who was sent home from school as "a fool of whom nothing could be made." Isaac Barrow, a quick-tempered, pugnacious, and idle boy at school, but in manhood a celebrated mathematician and preacher; Dean Swift, "plucked" at Dublin University; Richard B. Sheridan, the brilliant wit, play-writer and author, but "an incorrigible dunce" at school; Thomas Chalmers, one of Great Britain's most noted pulpit orators; John Howard, the noted philanthropist; and even William Jones, who besides writing various legal and other solid works, distinguished himself as a judge in India, and, at his death, at the early age of forty-eight years, had mastered twenty-eight languages.

Not less illustrious than this roll of dunces were Robert Burns, a dull learner at school; Adam Clark, "a grievous dunce," as his father said, in his boyhood the "dull scholar," Napoleon and Wellington, characterized by his mother as a dunce, who was only "food for powder;" "Useless" Grant, as Ulysses was termed by his mother, and Robert Clive, who, a dunce at school, was sent, to get rid of him, as a clerk to India. Last, but not least,—perhaps the most marvelous blockhead of all in the long roll,—was Walter Scott, of whom his teacher, Professor Andrew Dalzell, said that "dunce he is, and dunce he will remain," and who, visiting the school when at the zenith of his fame, asked to see its dunce and when taken to him gave him a half sovereign saying, "There take that for keeping my seat warm."

Let no young man, therefore, despond or despair of success in his calling, because he thinks he has little ability. He may be mistaken; but if not, his one talent, if carefully cultivated and strengthened, may win for him an enviable success. If he is dull, his dulness

may be but temporary; like Oliver Goldsmith, he may be one of those plants that flower early. Like Stephen A. Douglas, when he was a young lawyer, he may be slow in grasping a people; but, as with "the little giant," who is once grasped, it may be his own fortune. *Wm. Mathews, in Success.*

NO EXCUSE ALLOWED.—A successful business man told me there were two things which he learned when he was eighteen years of age, which were ever afterwards of great use to him—namely, "Never to forget anything, and never to lose anything." An old lawyer gave him an important paper, with certain instructions what to do with it.

"But," inquired the young man, "suppose that I should happen to lose it, what am I to do then?"

"You must not lose it," said the lawyer, frowning.

"I don't mean to," said the young man, "but suppose I should happen to."

"I shall make no provision for such an occurrence; you must not lose it."

This put a new train of thought into the young man's mind, and he found that it was determined to do a thing he could not do. He made such a provision against every contingency that he never lost anything. He found this equally true about forgetting a certain matter of importance was to be remembered, he pinned it down on his mind, and it was there, and made it stay. He told me, "When a man tells me that he forgot to do something, I tell him he might as well have said, 'I do not care enough about it to take the trouble to think of it.' I once had an intelligent young man in my employ who deemed it sufficient excuse for neglecting an important task to say, 'I forgot.' I told him that would not answer; he was sufficiently interested he would be careful to remember. It was because he did not care enough that he forgot. I drilled him with this truth. He worked for me three years and during the last of the three he was suddenly changed in this respect. He did not forget a thing. His forgetting, he found, was a lazy and careless habit of the mind, which was cured."—*Christian Epiphany.*

SOME persons view their life as a race towards which streams of pleasure, wealth, and prosperity, should flow. Others view life as a spring, with an intention to pour forth freely its deepest, and sweetest treasures, for the refreshment of the world. The first class of persons, under the leadership, though perhaps unrecognized, of Satan himself, who is incarnate in selfishness, sum up their law in the words, "Give." The other class, captained by Jesus Christ, and comprehending all the helpers of the law, by the royal law summarized in the words, "Give."—*Selected.*

As goldsmiths sweep up the very dross of their shops, that no filings of the precious metal may be lost, so does the Christian, when filled with the Spirit, use his leisure intervals. It is wonderful what may be accomplished in little spaces of time, and how much made to yield a great harvest of usefulness and a rich revenue of glory to God, as he is filled with the Spirit in that respect.

LECTING AND MANAGING MEN.—Many men only think that because they work hard they hard they must eventually succeed to an extent. This does not follow. Some carry on great enterprises with little apparent effort. Their success is due to skill in efficient executive heads.

A business man breaks down trying to supplement the work of incompetent heads in departments simply because he does not know how to choose the right men. A man commanding ability does not worry himself with details. He makes out his program, and selects men who can carry it out to the letter.

Indeed, it is a sign of weakness for a man to be of the concern to tinker about little things. It shows that he lacks the insight, business sagacity, the ability to select and use men who can do things efficiently. The heads of large concerns spend little time in their offices. They travel or remain at home, but the business goes on like clockwork simply because they know how to select men who can efficiently do the work assigned to them.

A great art to duplicate one's self in business and multiply one's self many times by selecting those who are vastly superior to oneself, but who did not happen to have had the opportunity to do the thing themselves.

CANNOT BE GRAFTED.—Do not graft any seed of Life upon the tree of knowledge; for it will not grow there; an appearance of likeness of the true fruit may grow but the true fruit itself will not. My knowledge, do not make a treasury of knowledge; the understanding-part which is to be used to know the true treasury of all the knowledge of Life, which is in the life itself; and understanding which is formed, kept, and used in the life. Lay no manna by to be used in the old store-house (lest the manna should be running thither, when the true appetite is kindled after food); but receive the continual bread from the life of Life. The wisdom of the Life, strikes wisdom and understanding; and if ever it grows wiser any more, thou lovest it; it cannot possibly retain it; for that when getting up in thee, in which it is held; but only a shadow, an image, a semblance and likeness of it, which feeds the flesh; that part which vain would have it; it cannot know it; and therefore is it used to make images and likenesses of the true, that it might have somewhat. —*Penington.*

DO NOT BE DISCOURAGED.—Never be discouraged because good things get on so slowly and never fail to do daily that good things next to your hand. Do not be in a hurry, but be diligent. Enter into the sublime of the Lord. Be charitable in view of God can afford to wait: why cannot we have Him to fall back upon? Let us have her perfect work and bring forth celestial fruits. Trust God to weave a little thread into the great web, the pattern shows it not yet. —*George Burd.*

A complaint drags us down a degree toward course."

Items Concerning the Society.

FOR "THE FRIEND."

Judge Lurton remarks about the change of standard on constitutional points, "that men, their creeds and their institutions must be measured by the standards which were recognized at the time," and thus cites a letter written to one John Higginson by Cotton Mather in 1682 about Penn and the Quakers. It must be borne in mind that Mather was a graduate of Harvard, a minister of the gospel, and died in 1728, having the reputation of being the greatest scholar and author in America of his time. The letter is as follows:

"September ye 15, 1682.

"To ye aged and Beloved, Mr. John Higginson: "There is now at sea a ship called the *Welcome*, which has on board an hundred or more heretics and malignants called Quakers with W. Penn, who is the chief scamp at the head of them.

"The general court has accordingly given secret orders to Master Malachi Huscott, of the Brig *Porpoise*, to waylay the said *Welcome*, slyly as near the Cape of Cod as may be, and make Captive the said Penn and his ungodly crew, so that the Lord may be glorified and not mocked on the soil of this new country with the heathen worship of these people. Much spoil can be made by selling the whole lot to Barbadoes, where slaves fetch good prices in rum and sugar, and we shall only do the Lord great service by punishing the wicked, but we shall make great good for his minister and people.

"Master Huscott feels hopeful, and I will set down the news when the ship comes back.

"Yours in ye Bowels of Christ,

"COTTON MATHER."

B. L. WICK.

During a third trial for murder on the twenty-first of Fifth Month, 1902, in the Melbourne court, says the *Australian Friend*, an incident occurred which shows the respect paid to liberty of conscience.

"An elderly gentleman who said he was a member of the Society of Friends, and had a conscientious objection to capital punishment, brought those facts under the notice of the Chief Justice in the Criminal Court to-day, when he was summoned on a new panel to serve as a juror. 'You are quite right in bringing these facts before the court,' replied the justice, 'but I don't think it probable that you will be called to take part in any such case.' It is not at all certain that all citizens who have such conscientious objections always bring them before the court. It is said that there was one man on a jury not long ago who held such views, and in consequence of whose attitude the jury performance disagreed."

It is not argued that a person with a conscientious objection to the death penalty is blameable for voting in a verdict of murder if based upon reasonable legal evidence. To give a just and true verdict is a bounden duty. The responsibility for capital punishment must rest with the makers of the law. Yet the fallibility of all human judgment should be a deterrent. The after memory of compliance in a verdict which may have led to such an awful consequence as the death of an innocent person, could not be otherwise than a burden.

Men may well fear being carried away under such strong pressure as is sometimes brought to bear by the vehemence of counsel or by unreasonableness in a jury. In times gone by, the shape of the coat and hat relieved Friends in such cases. They carried their convictions apparent on their personal attire. The public prosecutor's "stand aside" would safeguard their consciences in the absence of the "challenge" of the prisoner.

The want of such symbols of their faith would have caused a necessity for them to verbally state their scruples.

When in earlier times the Quaker dress was the usual dress of the day, they did so express their

convictions, often to their own loss, as history shows.

In these days and countries where the value of life is too little regarded, it may be well that Friends should take advantage of opportunities to express their conscientious views, and bear their testimony to the sacredness of human life.

Friends have met with little favor in their objection to risking life in Africa, but the courts give them an opportunity, and their opinions will be listened to with attention.

The Chief Justice of Victoria honorably commended this expression, and it had approval in the court and by the newspapers.

S. P.

Notes From Others.

The *Christian Register* says there are disagreeable saints and lovable sinners. Each after his manner does harm by his example.

No woman ever sings in a choir of a Greek church. There are no organs, and no musical instruments of any kind are allowed.

The wonderful old volumes of the Scriptures in the wealthy monasteries and cathedrals of Russia are often bound in covers blazoned with jewels worth fabulous sums. The Scriptures are greatly revered in Russia, and the circulation of the Bible is free.

Senator George F. Hoar says: "I do not believe there ever was a man who attended church constantly through life, or who brought his children to church in their youth, or who was taken by his parents to church in his own youth, who ever regretted it as he looked back."

John Kelman, of Edinburgh, in an address delivered at Northfield recently, said: "The hope of the pulpit at the present time practically lies in the emergence of real prophets who can utter a voice, clear and convincing, which men shall recognize to be for them the word of God."

THE RELIGION OF A GOOD LIFE.—The real test of the average man's Christianity is found, not in what he does in church, but in what he does out of church. The best evidence of the worth of the Christian religion does not lie in the eloquent sermons preached by her ministers, nor in the rapt attention of large audiences, nor in the large enterprises pastor and people may together carry on, but in the way individual men and women live at home, and in the way in which they deal with their fellow men in the shop, the store, the school, and the court. —*Reformed Church Messenger.*

AGAINST SHOWING THE INDIAN IN THE ROUGH.—Acting upon the statement of the Washington correspondent of the *Public Ledger*, appearing in the latter paper a few weeks ago, that the Commissioner of Indian Affairs had planned an exhibit at the coming St. Louis Exposition, by which the Indians would be permitted "to dance and fight and gamble and run horse races just as their forefathers did—clad in their fantastic and highly colored costumes, with their faces painted," etc. Josiah W. Leeds sent a protest to President Roosevelt against this alleged governmental scheme for "showing the Indian in the rough," his argument concluding with the words: "Let the Government not parade, even for an assumed educational purpose, the old time Indian's weaknesses or vices. Possessing at Washington, in addition to many archaeological antiquities, a splendid pictorial collection of Indian chiefs and others attired in the traditional costumes, we may spare the red ochre and feathers on the living subjects, and excuse them from showing us how the red man can fight, gamble and run the horse races."

A reply was promptly received from the President that he had taken note of the foregoing representation, and that he had caused it to be brought

to the attention of the Secretary of the Interior. A satisfactory response from Acting Secretary Ryan, states that "the Department has for several years past positively declined to permit the participation of Indians in any exhibition having the character of 'Wild West' shows, and it is not the intention to allow them to be present to engage in such exhibitions in the future."—*West Chester Daily Local.*

SUMMARY OF EVENTS.

UNITED STATES.—A despatch from Washington of the 11th says: With the double purpose of protecting the long-suffering Jews of the Balkan States and of averting the ever present peril of the immigration into the United States of a horde of paupers, Secretary Hay has adopted the unusual course of appealing to the Powers of Europe to observe the obligations of humanity in the case of the Jews. The appeal takes the form of a State paper, remarkable in several respects, which has been dispatched to every Ambassador and Minister of the United States residing in one of the countries of Europe which were parties to the famous treaty at Berlin of 1878, namely, Great Britain, France, Germany, Russia, Italy, Austria and Turkey. The appeal states that whether considered of purpose or not, these helpless people, burdened and spurned by their native land, are forced by the sovereign power of Rumania upon the charity of the United States. "This Government cannot be a tacit party to such an international wrong. It is constrained to protest against the treatment to which the Jews of Rumania are subjected, not alone because it has an unimpeachable ground to remonstrate against the resultant injury to itself, but in the name of humanity. The United States may not authoritatively appeal to the stipulations of the treaty of Berlin, to which it was not and cannot become a signatory, but it does earnestly appeal to the principles consigned therein, because they are the principles of international law and eternal justice, advocating the broad toleration which that solemn compact enjoins, and beseeching the Powers to lend their moral support to the fulfillment thereof of its co-signatories, for the act of Rumania itself has effectively joined the United States to them as an interested party in this regard." This appeal, it is said, has been favorably regarded in Europe, and that Rumania will be asked by the Powers to answer Secretary Hay's charges of her mistreatment of Jews.

A syndicate of Philadelphia, Pa., and Chicago capitalists has been formed to develop Santa Clara Province, in the Island of Cuba, by the building of an electric railway, and developing a tract of 350,000 acres of land by American colonists, 2,000 of whom have been engaged for this purpose.

Lieutenant Peary has returned to the United States after an absence of four years in the arctic regions. He was unsuccessful in reaching the North Pole, and the most northern point attained was 84° 7', or about 260 miles south of the Pole.

According to a paper just issued by the Bureau of Statistics of the Treasury Department, the public debt of the United States is now \$12.97 per capita. The highest point reached was in 1865, when it stood \$76.93.

It appears that the number of men who are legally qualified to mine coal in Pennsylvania, and who have been furnished with certificates to that effect number 34,740. To secure his certificate a man must show that he has had not less than "two years' practical experience as a miner or as a mine laborer in the mines of this Commonwealth." Practically all of these certified miners are now on strike, and each one who refuses to take out coal compels the idleness of three other men.

A recent cable in Pennsylvania, and who have been furnished with certificates to that effect number 34,740. Practically all of these certified miners are now on strike, and each one who refuses to take out coal compels the idleness of three other men.

cine without due legal authorization, violated the law of 1878.

Internal Revenue Commissioner Yerkes has decided that where born or similar preservatives are used in butter in extremely small quantities, for preservative purposes only, the product will not be subject to tax as adulterated butter.

The announcement is made that an immense oil gusher was struck at Kotella, on the Southern Alaska coast, at a depth of 200 feet. The oil rose nearly 200 feet before the well could be capped. The oil is of good quality, and near to water transportation to the Pacific coast ports. A large body of coal was recently discovered near the same place.

There were 336 deaths in this city last week, reported to the Board of Health. This is 43 less than the previous week and 43 less than the corresponding week of 1897. Of the foregoing 176 were males and 160 females: 51 died of consumption of the lungs; 23 of inflammation of the lungs and surrounding membranes; 6 of diphtheria; 8 of cancer; 12 of apoplexy and 12 of typhoid fever.

FOREIGN.—A despatch from Washington states that officials of the State Department believe that current dispatches from China indicate a corresponding week of 1897. Of the foregoing 176 were males and 160 females: 51 died of consumption of the lungs; 23 of inflammation of the lungs and surrounding membranes; 6 of diphtheria; 8 of cancer; 12 of apoplexy and 12 of typhoid fever.

The wheat harvest in Russia is reported to be exceptionally large; barley and rice have been much above the average quantity, and grain crops are progressing favorably. Reports from Siberia are very unfavorable.

A despatch from Adelaide, South Australia, of the 19th, says: A severe earthquake experienced here this evening caused a panic. Buildings were damaged and several narrow escapes from death recorded. Many northern towns experienced earthquake shocks this morning.

Röntgen rays are now being successfully employed in Germany for treatment of animals. Professor Hoffmann, Director of the Royal Veterinary Hospital in Stuttgart, has employed them with uniform satisfaction. X-Ray pictures of animals, he says, are of highly practical value, enabling the detection of a variety of diseases. With cattle they are likely, he thinks, to play an important part.

A despatch from Berlin says: The Society for the Protection of the Interests of the German Chemical Industry, in session at Frankfurt, has unanimously passed a resolution against the prohibition of the use of boric acid for the preservation of meats, and has appealed to the Bundesrath to reverse its decision in this connection in view of the present scarcity and dearth of meat.

The Czar, who recently has been consulting peasants and nobles alike, with the view of social and political reforms in his Empire, has lately had before him deputations of the elders of the cantons and villages in the governments of Kursk, Poltava, Kharkoff, Tchernigoff, Orel and Voronezh. To these he said, after referring to the acts of violence into which many peasants were betrayed by designing men who represented themselves as his agents, some months ago: "Remember that a man gets his bread and his life from the soil, and that he must labor and thrift and by living according to the commandments of God. Repeat all I have said to you to the other people of your villages, and tell them further that I will not leave their real needs unheeded."

expressing the hope that the work of the tribune harmonize with the sublime idea which led to it. Fishment, and said a glorious result was anticipated at the Arbitration Court, namely, to facilitate the settlement of disputes between States on the respect for right.

A despatch from Manila of the 16th says: The Taal and Bataan volcanoes have been unusually quiet. Bataan volcano had been inactive for years. The residents near the Macon volcano are alarmed. No disturbances have resulted.

In the island of St. Vincent both craters of the friere were reported on the 17th instant to be active since the 11th.

The steamer which was sent by the Japanese government to the scene of the recent eruption at Taal has returned to Yokohama. The eruption had caused complete transformation of the island, and all the inhabitants and animals had disappeared.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol.

Milton Stanley, agent, Ind. \$5 for Joel Carter, Edmund Osborne and David Thomas Stanton, agent, O., for Mary P. Taber, and Grimshaw for Chas Grimshaw, Pa.; Marie Watkins, N. J.; Josephine F. Smedley, Pa.; Mrs. Herr, Pa.; William D. Smith, Kans.; Selders agent, O., for Abner I. Hall and W. M. J. Jacobson, Ia., to No. 14, vol. 77; Hans Smedley, Pa.; Margaret Jones, Canada; H. Moorhead, Ia.; B. H. Coppock, agent, Ruth Edmundson; Samuel Williams, N. J.; J. Smith, agent, Kans.; \$6 for Mary Ann Chas Sarah Ann Hinshaw and Joshua P. Smith; B. Leeds, agent, N. J., for Hannah R. Matz; John M. Roberts; Lindley M. H. Reynolds; Joseph C. Hall, O.

Remittances received after Third-day noon appear in the Receipts until the following week.

NOTICES.

The name of John M. Rasmussen, Chicago, omitted from the Receipts published on page 3, Friend, dated Eighth Month 9th, 1902.

WESTTOWN BOARDING SCHOOL.—For convenient persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.18 A. M., 4.22 and 4.32 P. M. Other trains are met when on Stage fare, 15 cents; after 7.30 P. M., 25 cents on. To reach the school by telephone, wire West Phone 1145.

EDWARD G. SMEDLEY, Jr.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters to instruction and discipline should be addressed to Wm. F. WICKERSHAM, President.

Payments on account of board and tuition, communications in regard to business should be addressed to EDWARD G. SMEDLEY, Superintendent, Address, Westtown Pa., O., Chester.

MARRIED, at Friends' Meeting-house, Fourth Street, Philadelphia, Pa., on the eleventh day of the Month, 1902, EDWARD F. BRACKEN, of Paoli, Pa., and Anna S. Bracken, of Colorado, by Virginia Lou SELLER of Colwyn, Pa., daughter of P. and C. Virginia Sellow.

DIED, at the residence of her niece, in West Chester Co., Pa., on the fifteenth of Eighth Month, 1902, DEBORAH W. SIMMONS, in the eighty-eighth year of age; a member of West Grove Monthly Meeting formerly of Upper Erusham, N. J. Her quiet walk and her death, gave evidence that she trusted in the Savior.

The Prophet and the Priest.

The prophetic and the priestly elements in religion have always contended for the ascendancy.

We read the Hebrew record with discrimination. We clearly see how the priest finally triumphed over the prophet. The prophets of Israel, from Isaiah to Malachi frequently and persistently protested against the ritualism of priest-

What purpose is the multitude of your sacrifices unto me? saith the Lord" . . . "Your sacrifices are an abomination unto me."

How shall I come before the Lord, and bow myself before the Most High God? Shall I offer with thousands of rams and tens of thousands of rivers of oil? Shall I offer my burnt-offering—the fruit of my body for the sin of my soul? . . . "Do justly, love mercy, and walk humbly with thy God."

This does not suffice to enumerate the many repeated protests against the priestly aspirations which have afflicted the church of Christ through at least three millenniums.

We naturally expect the *Gentile* world to be under the ban of so great a curse,—whether ancient or modern. But how shall we explain the inveterate tendency of professing Christians to revert to that crude and primitive method of worship, when they have the light of the knowledge of the glorious gospel of the truth as it is portrayed in the gospel of our Lord and Saviour Jesus Christ?

How can we account for the wave of ritualism which has recently swept so many of the leading members of the Church of Christ, in Europe and in America, into this age to forms and ceremonies with all the trappings of the priestly order?

And are we as a Society free from its baneful effects, when we resort to a prepared service of song or other vocal ministry? In short, are we on the prophetic, or on the priestly basis, when we go to meetings for worship to be entertained?

The priest has to perform in some outward and visible way; while the prophet has to hear and echo the voice of God.

If every Friend would seriously ask himself the question, "Do I worship on the prophetic, or on the priestly basis?" there might be an increase of spirituality within our borders.

That worship which primarily consists in reverent, silent dependence upon the invisible Source of all spiritual strength necessarily differentiates itself from one which relies upon some sound or ministry issuing from one or more voices—or perchance from a machine.

Such outward worshippers, however reverent, would the better fulfil the requirement, "They that worship the Father must worship Him in spirit and with true spiritual insight," if they clearly perceived the need of learning how to worship Him by direct communion.

We freely concede all are not equally capable of doing this without human assistance; and therefore infinite Love has condescended to supply such help in every generation,—qualifying those upon whom he has bestowed spiritual gifts for the edification of the Church. These "co-workers with God" have no spiritual or temporal rights apart from their brethren. They recognize the gift of prophecy as the apostle Peter declared it to be on the day of Pentecost. They recognize also "the gift of teaching" under the same heavenly authority with that of "discernment of spirits."

At least these three distinct gifts may contribute much spiritual assistance and comfort, but in no case are they to supersede the need and practice of each soul waiting upon God, in the silence of every thought.

The normal development and exercise of all our mental faculties is a duty no one will question; but there is a vital difference between a studied preparation and a spiritual endowment. The latter may crown and happily has often crowned the best mental abilities; and it is well when these are constantly dedicated to their highest service,—the consideration and expression of spiritual truths.

Yet the prophetic gift is in no wise de-

pendent upon any mental ability, and whenever it is exercised rightly it must be under the immediate and renewed prompting of the Spirit of Christ.

This is a fundamental distinction between the prophetic and the priestly function.

The priest has a certain prescribed ritual which he is competent to go through by virtue of a standing "ordination." And it is none the less an ordination of man when a sermon is prepared by virtue of his mental abilities and the demand of the congregation.

A crisis is at hand, and we must decide whether the prophet or the priest shall occupy the foremost place in our system of church government and practice.

The prophetic gift has largely disappeared, in its old time power, throughout large sections of our Society both in America and in England. The pastoral system has been established in several Yearly Meetings, and the cry for a spiritually baptizing ministry is heard in our streets.

What shall be the remedy? The Lord on high is still graciously disposed toward this part of his heritage. He is preparing "sons and daughters, servants and handmaidens" upon whom he may bestow his precious gifts. But they must be received and exercised in his power, and therefore ever in true humility.

If any have felt the stirrings of heavenly love in their hearts, and at times have been moved to speak "a word in season," let it be done in simplicity and discernment of a true call and commission.

This is often faint in the beginning, and the mind may at times be sorely perplexed to know what is really called for at our hands. But as there is a holy resignation and a patient waiting for the arising of the gospel stream in our own souls, and a willingness to wait indefinitely "if the vision tarry," there is apt to be an increase of the commission; and as we go on with the single desire of fulfilling the will of our Heavenly Father by keeping to "the gift" which has thus been entrusted, many a heart will be refreshed.

It requires an act of real faith, in the absence of any clear idea of what may be said, to begin to speak—trusting to that Heavenly Power which alone can make any message spiritually profitable. And yet this has often been required of those who have known the

prophetic gift to grow by faithful exercise. Certainly in so important a calling every talent ought to be brought to contribute all that it rightly can to the simple, clear delivery of the gospel message. Everything that diverts the attention of the hearer from the message should be avoided.

The ministry of gospel power and spiritual life through human instrumentality has been a great blessing in all ages. And if the priest and all that belongs to him, is not permitted to crowd out the prophet with his ministry, as has been the case repeatedly in the Jewish church and in the early and later Christian Churches—if the Society of Friends is to be maintained upon its original and true basis—we must preserve inviolate a worship based upon silence without vocal prearrangement, and cherish every gift which is exercised in the life and demonstration of the Spirit with a renewed heavenly "ordination."

And let all who are called and entrusted with any such precious gift be not too easily discouraged because sometimes they may misjudge their commission; but in humility and sincerity respond to each fresh prompting,—endeavoring to keep within the limitations Infinite Wisdom has put upon us all. J. E.

Schooling the Prophets.

[In keeping with the above remarks, extracts from a recent number of *Waymarks* also call for serious consideration, as to how far we are leaving our original prophetic basis to follow the insidious entering wedges of the sacerdotal basis, or of will-worship.]

One very important subject was brought this year before the attention of London Yearly Meeting by John S. Rowntree: this was, the need of a *prophetic ministry*, that is to say a ministry of men and women who speak or profess to speak forth a message from God, suited to the present need of their hearers. Where this is a true message, it can without prevarication, be called the word of the Lord, at that time and on that occasion.

Many months before this, the noted preacher Alexander MacLaren gave an address to the preachers of the Baptist Union, where he tentatively laid down lines, not as imperative but as desirable which, if acted on, would result in the entire dislocation of the prevailing plan, and the substitution of a prophetic ministry in its place.

The question of a prophetic ministry cannot be dealt with as if it were a beautiful Quaker thread that can be interwoven along with a lot of incongruous materials, to form a harmonious whole.

For the Church to be in a position to encourage such a ministry, it must be itself in the prophetic spirit, otherwise it will be imposed upon, and will itself impose upon the world at large: the requirements of that prophetic spirit must take the precedence of all other considerations whatever, and foremost among those requirements is spiritual discernment,—ability to try spirits, rather than words.

If any religious body of to-day can abide this test, there is no question at all, that there is a home for all who are thirsting after substance; for all who have tried those who say they are Jews of "the commonwealth of Israel," but have in the openings of Divine Light, proved them to be liars: here is Life, and here is fellowship in that against which no enchantment can prevail (Num. xxiii, 23): here the prince of this world is cast out, and the Kingdom of glory comes in.

On the other hand, any Society, if it cannot judge between sound and substance, if it cannot discern the voice of the true Prophet and true Shepherd, from the false prophet's voice, if it cannot place the judgment of Truth over the transgressing nature, even when the latter appears clothed with a form of sound words, such a Society cannot—do what it may—encourage a prophetic ministry.

A true prophet speaks the Truth from a measure of its own Life; a false prophet either preaches what is wrong in form as well as in substance, or sets forth a form of Truth out of the Life: the one gathers to Zion, the other gathers to Babylon.

Where individuals and the Church itself take heed to the prophetic Word which is not the letter, all subordinate questions of Church organization, testimony, outward walk, influence in the world and responsibility for others, are easily solved, because each individual member finds his proper work under the great Head, and is exercised with it: from this exercise springs a prophetic and living ministry. But where the ministry does not come from the operations of the Holy Word, it is a lifeless and unbaptizing one. Spiritual paralysis ensues.

It is impossible to graft the prophetic ministry on to the economy of a Church that is not gathered to this prophetic spirit, this testimony of Jesus "which is the spirit of prophecy." The [compromising bodies] may all look on it as a desirable addition to their equipment, but it will elude their grasp, and it cannot flourish side by side with a ministry of another origin. Two standards of ministry in one Society lead to confusion. A Society that encourages a prophetic ministry must as a matter of necessity discourage all other ministry; where there is a growth in the Life, that growth must overpower everything that opposes the Life, and can leave room for no other growth.

In a religious Society established on this foundation, there is no schism, no break, no want of harmony, no cause of weakness, for where the word of a King is, there is power, and the Kingdom of God does not stand in outward declarations, but in power. It is on this rock that a prophetic ministry is founded; on this it wholly depends. If we do not know where to find such a ministry, let us, at least, be so faithful as to come to abide in the Seed, to which is the promise of all that pertains to Life and godliness.

However it may be to-day, there is no doubt that there existed a powerful prophetic ministry in this country during the latter half of the seventeenth century, and during a much later period. What was the nature of its rise and progress?

First, there was in the minds of the youths, and young men who were its chief repre-

sentatives, a turning inward to the Word of God, and to the Light in which alone they saw they could serve God.

Secondly, a separation from all social engagements, where the call of the Word of Life was stronger than the call of the world, and the warrant for the work of the ministry, and from all where an imitation of the practices of old, was deemed sufficient to secure the leading of Life.

Thirdly, a meeting together with those who were like-minded for purposes of public worship, which meetings were often silent and nearly so.

There were these three stages—Concentration, Separation, Waiting, in which the prophets were schooled before they were sent forth to meet the mighty Goliaths and the roars and Nebuchadnezzars of their day.

We are not all called on to be prophets in public service, but we are all called to be exercised with the Word of Life in the Word of Christ, and were it our daily endeavor to be faithful here, the laborers in the great harvest field would be increased, and there would arise, even in our day, bright examples of a living, powerful ministry, of Prophets schooled by the great Teacher of his people, and of faithful souls who can say, "He wakeneth morning by morning, he wakeneth ear to hear as the learned." Is. i. 4. Here is the school, and here are the scholars, whose life, examples and testimony will teach and reach a lost world.

Seasons for Worship and for Information.

Our contributor under the heading "Seasons for Instruction in Truth," is right in showing that it is quite gratuitous to assume that the article entitled "Sub-Letting of Religious Meetings" animadverted on other companies, if kept in their place, which might be gathered for conference, consultation, instruction outside of any stated Friends' meeting for Divine worship. It animadverted on the substitution of these for any of our seasons for worship.

The concern was that these when they should be kept distinct, called by their right names, and no amalgamation sought between our meetings for worship in the freedom of the Spirit, and other gatherings set for special topics. On these latter we can pass no serious judgment. Each must be discerned in its own merits. The question will often have to do with confidence in the standing and character of the Friend exercised to have the company convened.

Neither was the article conceived to be applicable to any in the service of our Yearly Meeting's Committee who have apprehended their special calling lay in the line of bringing our distinctive doctrines into clearer view before the young. These have set the commendable example which we advocate, and are scrupulously declining to compromise a season for worship with a gathering called for the specific purpose of presenting Friends with history and doctrines.

Twenty-five years ago Robert Ingersoll declared in a public lecture that the Bible was an exploded book, that its sales were bound to fall off rapidly, and that within ten years it would be little read. The ten years have passed and fifteen more, and yet the Bible is not only still being sold, but is being sold in enormously increased numbers. Within the last twenty-five years six great Bible houses have been established and the sales of the book have more than quadrupled. The authority for this statement is the head of the American branch of the Oxford University Press. A book that sells up to one hundred thousand and beyond in these days is heralded as a tremendous success. It has recently been announced that "David Harum" has reached a circulation of six hundred and twenty-five thousand copies, and the presses are still running. But how small do all these figures seem in comparison with the sales of the Bible. The American Bible Society alone issued more than one million five hundred thousand Bibles last year, and in the same year the British Foreign Bible Society turned out more than five million Bibles. Other Bible companies show correspondingly large outputs. If the total number of Bibles in English alone produced in a single year were all added up the number would evidently be upwards of ten million. This is probably a greater sale than that of any other hundred books combined. Several years ago the competition in selling Bibles forced them below cost and there were rumors of a Bible trust. No such trust was formed, but prices were adjusted and no Bible house went out of business. These prices have been going down for twenty years through improved processes of production, but increased cost of manufacture has recently caused a slight rise in price. The British Bible Society sells a complete Bible for sixpence, or twelve and a half cents, and a New Testament for a penny or two cents. The American Bible Society sells a Bible for fifteen cents and a New Testament

for five cents. From these low figures, that put the Bible within the reach of the poorest, prices run up to sumptuous copies that cost many dollars. The secret process of making the famous Oxford India paper, so thin and tough and opaque, which came into use about 1875, has revolutionized the manufacture of Bibles that are compact and handy volumes. The Oxford Press turns out twenty thousand of these Bibles a week. More than forty thousand sheets of gold are used in merely lettering the volumes and the skins of at least one hundred thousand animals go into Oxford Bible covers each year. Not all these Bibles published in England and America are in English, although these statistics do not include those published in other Christian countries. The British and Foreign Bible Society prints the Bible in four hundred languages, and the American Bible Society also prints the Bible in many languages. The field in which the American Bible Society shows the most marked development is in the Philippines. For three hundred years before the American occupation the Bible had practically no circulation in these islands, but during the first year of American rule ten thousand seven hundred Bibles were distributed in them. The Bible is now being translated into five Filipino dialects. Representatives of the Bible Society report that the natives are immensely interested in this "new book" in their own tongues, and that in many villages where most of the natives cannot read, it is read aloud. It was to be expected that China would show a large falling off in the sale of the Bible after the Boxer insurrection, but the reverse has been the case, and more than four hundred and twenty-eight thousand Bibles formed the issue for China last year. It has been thought that the sale of Bibles falls off in good times and increases in hard times, on the theory that people are more religious when they are in trouble. But this is a mistake, and as business improves the Bible houses share in the prosperity and their sales increase. The fact is the Bible is the most popular book in the world to-day. In the midst of the flood of books that is constantly pouring from the press it not only holds its own, but is winning for itself an ever-increasing place. It is being bought and read to-day as never before. Let us pray that it may be read with the spirit and the understanding. "The entrance of Thy words giveth light."—*The Presbyterian Banner*.

Christ Manifest in the Flesh.

Great is the whole mystery of godliness, but especially Christ manifest in the flesh, viz., that the eternal love and light of God should dwell essentially in man; for since man might suffer his will and desires to enter into vanity and bestiality, the Lord said: "It is not good or safe for man to be alone," but promised him, "the seed of the woman," the holy principle of Divine Light and Love, which will bruise the head of the serpent in all that adhere to and follow its counsel; that is, it will destroy the works of the devil, and then all vileness and oppression depart from that man, and that saying is fulfilled: "The Lord is my strength, my safeguard and portion." And every man thus qualified is taught of God; Jehovah is his tutor, and his guide, the

mighty counsellor; so that he will no longer run after other lords, nor contend for anything but truth and righteousness, and to live a sober, harmless, innocent life in the sight of God and man, and doing unto all as he would be done unto. And such purified souls amidst all the hurries, the storms and agitations of the world round about them, do securely ride at anchor in a blissful calm, and are satisfied with their portions, and know their Centre, and to them all contention ceaseth, and there is peace on earth, as in heaven.—*Thomas Tryon*.

The Principles of Truth.

That the principles of truth are not held in the natural will and wisdom of man is a testimony that is needed to be kept closely before us. "Ye must be born again." That there is an effort in this day to do so is evident, to gain the crown without the cross. "That which is not of faith is sin." No one of the testimonies of Truth can be very long maintained except on the ground of conviction, taken up in faith, that it is required. In the felt absence of this amongst us, no manner of counterfeiting will avail. There is a representation in Babylon of all that is in Jerusalem. There would be no lack of real conviction, if there was a willingness to pay the price.

There has a wave of degeneracy overtaken the Society of Friends in the various situations. In some a tenacious holding to the letter and form, denying too much the spirit and freedom thereof, putting bands and burdens that were never intended to be borne. In some while in a goodly form indolence, unfaithfulness, not zeal enough, a resting satisfied with the form; forgetting that we are to be soldiers. In others denying the form in the Life, and departing from the principles in more or less measure, in a false idea of liberty, ceasing from the very ground upon which we were built.

Then when there is perceived an opportunity for the natural part, will and wisdom to take part and have sway, here such as are above the cross become stirred up from the very centre, which might be taken for Life, but true Israel cannot be deceived. Anything the enemy is satisfied with but the real Truth, by the way of the cross. Oh how precious this is to those who have bought it! How it has brought them down and does humble them, as they are called to sustain it by any act of obedience, realizing that if any good is done at all it must be really Christ within them,—"Thus saith the Lord,"—and feeling an holy fear lest it be not so. We cannot, cannot, reach the heart by head conviction, which man's wisdom and doings may, but it must be the Lord's spirit upon the hearts. "Be not deceived. God is not mocked."

Any organization can have activity, much going on, but none can in that way have Life, the essence which God alone gives, neither will he give it except as a witness to his own work. This cannot be except we are really his children by birth, having died unto ourselves. And there will be unmistakable marks not the high head and lofty looks, but meek and lowly, and the transforming evidence, Oh, saith my spirit, may this kind be brought forth! Such will know of no joining hand

with hand in any confederacy, but stand in their own conviction, which as it emanates from a full yielding unto the Lord will enable them to see eye to eye, and for the very reason of their not being willing to stand with any man as man, but looking unto our Heavenly Father, will they be found to stand straight together in Him. I would earnestly encourage those who would sell all that they have to buy the Truth, to be faithful; but to those who would have it some other way, *appear well*, I could only say, it will yield its very effects even; a tree without real fruit. "Ye shall seek me and find me when I will be with the whole heart," "He that entered not by the door into the sheepfold, but climbed up some other way, the same is a thief and a robber."

"Is there not a cause?" I would appeal to every one, examine our ground, in the Light, the searching one, for the day the Lord will try every one, whereon he will be judged, if from conviction and the cross he wins this work, but none other. Oh he is sick for willing and obedient ones, who are willing to humble themselves, who feel called to come apart, and be separate in spirit, and all that is felt to be not of Him, and not the unclean thing, no matter how and by any man or body of men, may own, wait, practice.

In true love for the everlasting Truth,
CYRUS COOPER,
SALEM, Ohio, Ninth Month, 14th.

The English School Question.

A friend has forwarded the following, and may supplement our recent selection of the same subject.—Ed.

The debate on the education bill, which occupied the attention of the House of Commons up to the recess of Parliament, was directed chiefly to the provisions for the control of the schools.

The bill represents an attempt to unite the English school system and to put its administration in the hands of local authorities. It deals with two classes of schools already existing, the "board schools," which correspond to American public schools, and the "voluntary schools," which have been established and maintained mostly by religious denominations. The bill puts both classes of schools upon the same footing, so far as maintenance and public cost is concerned, but it proposes to perpetuate denominational control of the "voluntary schools" by giving their representatives two-thirds of the places in the boards of management.

It was over this provision that the controversy raged, in Parliament and in the press, especially with reference to seven or eight thousand parishes wherein there are no schools, save the denominational or voluntary schools, and where the parents have consequently no choice as to the influences to which their children may be subjected. Most of these schools are Church of England schools, and Nonconformist sentiment, in Parliament and out of it, was aroused against the provisions of the government's bill.

In one sense the situation was not a new one. These schools had long been the only ones available in the parishes in question

onformist parents had sent their children home without complaint. But to make a denominational schools a charge upon rate-payers, involved the introduction of a principle.

is significant that in the vote on this ure of the bill the government majority ed to less than one-third of its normal ortions.

The bill will be taken up again after the re- next month, when it will become clear his leisure for reflection has made its sions more tolerable to its opponents or so.—*Late Paper.*

Science and Industry.

THE MAN WITH A PITCHFORK.—Now is the time that one may see on the shores of the bay at Great South Beach the industrious seagull gatherer. If he belongs to the "mainland" and conducts his business along the bay, he has with him his horse and cart; he drives his patient beast knee-deep into the water, he pitches the weed from the shore to the man. Then, when a load is made, there is a great straining on the part of the beast, a great creaking on the part of the man, and a great amount of urging and urging (if he be of an ignorant nature, such believes the most efficacious way to get a load to the top of a hill with a heavy load is to whip him unmercifully on the part of a man). If the business is being piled on the beach, the work must be all done by the man himself, he gathering the weed into heaps and then transporting it the best he may to his

place. It has been washed up of late in large quantities, for this is the time of year when it is to be most abundant. It accumulates in thick ridges along the water line, and if allowed to remain any length of time becomes unclean and offensive. So it is that property owners, who can make no use of it themselves, send the stuff away to whomsoever will cart it off. There are many who are glad to get it, for there are few better things for fertilizing fields. The weed is collected and hauled away, either to be dumped into pigpens or piled into stacks to allow it to rot sufficiently to spread. The process of disintegration gives its bulk about fifty per cent., but it is cheap and abundant that this is scarcely considered a loss. With a variety of sorts of "niggerhead" and cabbage and grasses—the "finished product" is of no little value to farmers and hucksters.

It is said that a layer of this over seed potatoes will guarantee an excellent crop, with but little care. There is no doubt about its value as an enricher of this peculiar island soil.

But for all its usefulness in this line, it is another use for some of it that gives humanity at large. That part of the weed crop which has been thrown highest on the beach, and lies out of reach of all but storm waves, dries in the sun, is washed by rains, loses its saltiness, dries again, becomes crisp and springy. The gatherer cuts this separately, presses it with his hands for that purpose into bales, such as are made of hay, and ships it to New York City, where it is used for mattresses. Thus that much of men's comfort and rest de-

pends on the labors of these seaweed gatherers, who work close to Nature and await their gifts without effort or impatience.

Away down the beach alone on the edge of the land, a black line against the white of the waves, pitchfork in hand and pipe in mouth, the lonely gatherer heaps up his weed, and saves for man's use and comfort the very waste of the sea. It is certainly not a high class of labor he has given himself to, nor one conducive of ambitious purposes. But the humble work, the mighty silence of the sea, the solitude, the expectation—all these elements go to make a man picturesque and exceptional. In the majority of cases he is a sort of human weed himself, and finds a congenial, sympathetic business in that he pursues.—*New York Press.*

COAL FAMINE AT CAPITOL.—The coal famine is causing much concern to government officials. There is just as much difficulty in getting coal for the government as for private individuals, and a failure is more serious because of the magnitude of the interests involved. Usually by this time every year the big contracts for coal for the Capitol and the immense department buildings have been not only made, but the actual work of hauling and stowing has been done.

It takes eight thousand tons to run the Capitol a year. The Senate end has a two months' supply and the House has about seven hundred tons, or enough to run till near winter. The supply for the last fiscal year ran short on account of the unusual number of night sessions. Unless the famine comes to an end it will be necessary to mix soft coal with anthracite and burn the blend in grates. This would make it necessary to put in a large number of grates, as in the forty or more new rooms lately constructed in the huge building no provision has been made for an emergency such as is now threatened.

Last year's supply of coal for the Capitol was bought for \$1.75 a ton, and the amount was seven thousand tons. It is used to heat and light the building, to run elevators, ventilate and perform a variety of service calling for power. When the bids were opened at the beginning of this fiscal year it was found that the price had gone up to \$7.50, and the contracts contained a strike clause, which relieved the bidders from responsibility in case of just such exigency as has now arisen. The officials rejected all bids, and decided to go into the open market. Contracts have been made for the one hundred and fifty tons required for the White House, at prices ranging from \$6.25 to \$6.60, but the contracts have not yet been signed. The White House is nearly out of coal.

The Interior Department has contracted for eighteen hundred tons of anthracite, at \$4.98, and twenty-five hundred tons of soft, at \$3.25. The Treasury has the largest coal bill to pay every year. It buys for the big building here and a number of other department buildings, and for customs buildings all over the country. For the buildings here in Washington seventy-five hundred tons are required. A contract was made early in the summer for this amount, at the low price of \$3.16, and the contractor gave a bond of eight thousand dollars for the faithful performance of his

agreement. In the soft coal contract there is a strike clause, but, in the anthracite contract there is none. The Department will hold the contractor to his bargain, although he will lose heavily by it. Unless things take a turn for the better in the mines, it is clear that the government will be forced to burn a good deal of soft coal, and Congress will, in self-defence, be obliged to repeal the anti-smoke law.—*Ledger.*

The Story of a Devoted Slave.

When, in 1835, Jefferson Davis, later President of the Confederacy, left the regular army his elder brother, Joseph, gave him Erieffield, a splendid plantation of two thousand acres on the Mississippi River, a few miles below Vicksburg, and a number of slaves. These latter included a growing negro boy called Ben Montgomery, whom J. Davis made his body servant. The lad was unusually intelligent, and Davis saw that in him were capabilities not common to the African race. He taught him to read and then to write, and soon he became an admirable assistant. He was not only Jefferson Davis's body servant, but also his private secretary, bookkeeper and general factotum. His penmanship was beautiful, and his plantation bookkeeping, in its simplicity and accuracy, was the envy and admiration of the countryside. He knew more of the business of the Davis brothers, except themselves, than anyone else.

After Jefferson Davis entered politics, Ben Montgomery became still more useful. When the master was on his long campaign tours, or in Washington, Montgomery had authority to open letters not marked as private, and to answer them; he had power, in writing answers, to transact any business necessary for the plantation. By this time Montgomery had come to have absolute charge of the Erieffield estate. He did not interfere with the management of the negroes, or with anything else under the overseer's purview; but the general business of the place he transacted without consulting anybody except the master.

When Jefferson Davis left Washington, in 1861, after resigning his seat in the senate, he went to Erieffield. His estate was his sole maintenance. It was certain that, during the impending struggle, he must be absent much of the time, and whom should he leave in charge of the estate? Finally Joseph Davis asked, "Why not Ben Montgomery?" and the suggestion was adopted. The usual white overseers were left in charge of the farming operations, but to the slave, Ben Montgomery, was intrusted the financial part of the business, under the direction of his master. The cotton crops of 1861 and 1862 were good, and, although there was some trouble about marketing the crop of the latter year, it was finally sent to New Orleans, and later, warehoused at Liverpool, to be sold when the money it might bring would be needed. There were not more than four hundred and fifty bales, for the south then needed corn and food supplies more than it did cotton, and so the land was devoted largely to food crops. Then, early in 1863 came the Emancipation Proclamation of President Lincoln, and with it, to the South, the equally dangerous Act of Confiscation. This latter was put into execution, wherever possible, with great energy. Treasury agents,

armed with all the forms of law, or without them, sometimes seized all property belonging to the list of suspects as soon as it came under the protection of the Union armies.

Then for the first time in his life, Ben Montgomery asked permission to visit Richmond.

"Dear Marse Jeff," he wrote, "I want to go to Richmond to see you, and I want to go right away. There is something that I want to tell you that I dare not write, so do please let me go to Richmond at once."

Jefferson Davis could not imagine what the negro had on his mind, but wrote him to come, and sent him the necessary permit for a slave to travel.

"Marse Jeff," said Ben, when he arrived at Richmond and had an opportunity to talk with his master, "you know Mr. Lincoln has issued what he calls an emancipation proclamation, and with it another proclamation confiscating the property of certain archrebels, as he calls them. Now, they are going to confiscate your property just as soon as they get a chance. Suppose you and Master Joe sell me your estates, and do it before the Yankees capture our country."

"Why, Ben," his master said, "you are a slave and can't hold property in Mississippi." "That is true," said Ben, "but you can set me free. Make out two sets of papers. Give me one set and keep one yourself. Then make out a third paper, which shall say that under certain conditions the free papers are to be canceled."

The conditions were that the Federals should capture the city of Vicksburg and the Davis estate which lay eighteen miles below.

"Why, Ben, that's an excellent idea. Let me think it over for a day or two," Mr. Davis said.

He talked it over with his brother Joseph. It was important to them that they should have the income of this estate. If the Federal soldiers should capture Vicksburg, about the first property they would confiscate and plunder would be the Davis estate. But if this property belonged to a negro, freed before the capture of Vicksburg, then, under the Emancipation Proclamation, it would be his, and could not be seized by the Federal agents. The plan promised well, and the Davis brothers, after consultation, decided to adopt it. Jefferson Davis loaned to Ben, for the purpose of making the sale, ten thousand dollars. The consideration for the estate was thirty thousand dollars, on ten years time, with interest at six per cent. Knowing that there would be some trouble about the matter, the legal papers were drawn with exceptional care. John A. Campbell, who resigned his place on the United States supreme bench when the war began, was the attorney: at the same time he drew Ben's free papers, with a clause in each that, under certain conditions, the free papers should become null and void.

Returning to Brierfield, Montgomery had all the papers promptly recorded in the proper offices in Warren County, Mississippi. Events speedily showed that he acted wisely, for in less than a week after Vicksburg fell, (Seventh Month), 1863, an agent of the United States treasury department appeared at Brierfield to take possession of the goods, chattels, and movables on the plantation, preparatory to formal confiscation of the property by the

United States. The agent traveled in state, escorted by a troop of cavalry, only to be met by Montgomery, who mildly asked his business.

"I have come," said the agent, "to take possession of all movable goods and stores on Jefferson Davis's plantation."

"Mr. Davis owns no plantation in this section of the country," Montgomery rejoined. "Then to whom does this plantation belong?" queried the astonished officer.

"These three plantations," answered Montgomery, calmly, "consisting of the Hurricane, Palmyra and Brierfield estates, are my property."

"You don't suppose that I'll believe such a lie as that, do you?" asked the agent.

"The story that I have told you is true in every respect," said Montgomery. "If you will come into the house, I will show you all the papers, and you can decide upon their legality."

The agent was a lawyer, and when he looked over the deeds, he saw that a correct legal transfer had been made. But he said, in triumph:—

"At the time this sale was made, you were a slave. You could not hold real estate in Mississippi."

Thereupon Montgomery, with a smile, handed the agent his free papers, made out and legally verified four days before the title to the real estate was passed:

"Now," said Montgomery, "this country is under the protection of the United States, is it not?"

"Why, yes," said the officer, "it is."

"And I am entitled to all the rights and privileges of a citizen of the United States, am I not?"

"I suppose you are," was the reluctant reply.

"Then, sir, under the Emancipation Proclamation of President Lincoln, and by virtue of these free papers made before that proclamation was issued, I am a citizen of the United States, with all the rights and privileges that any citizen has. You are especially enjoined by that proclamation to see that I and all my race are protected in our legal rights, are you not?"

"Yes," replied the officer, who saw that he was cornered.

"Then I request that you leave my property untouched, for otherwise I shall call upon the President of the United States to know whether or not this proclamation is more than an empty form."

The agent and his escort went back to Vicksburg. Montgomery at once addressed a letter to the commanding officer at Vicksburg, setting forth that he was a free man of color, the legal owner of certain plantations, which were specified by name; that an officer of the United States had called upon him and endeavored to deprive him of his property without due process of law, and he demanded of the commanding officer his protection and that of the United States. Still, the spoil was too rich to be relinquished by the treasury agents without a fight, and in despair, Montgomery decided upon a great stroke. He called upon the Federal commander at Vicksburg and asked that a lieutenant and guard be put in charge at Brierfield for ten days' time, and also for

leave of travel on a government boat for Cincinnati. He had resolved to visitington, see President Lincoln, and lay them before him personally. He chanced to Judge Holt, then judge advocate of the army. When he arrived in Washington, he attempted to see him, and asked to be taken to the President.

"I'm a free man, now, Judge," he said. "You have known me for many years. I am now to take me to Mr. Lincoln and tell him what my character is, for I have important business with him."

Judge Holt went with Montgomery to Mr. Lincoln.

"Mr. President," he said, "this is Ben Montgomery, who, for thirty years, has been the private secretary of Jefferson Davis."

"Private secretary?" queried Mr. Lincoln.

"Yes," said Judge Holt, "that is what it is. He is an honest man, and what he says is true. He wishes to see you on important business and I will leave you and him to transact it—and Judge Holt left them alone.

"Well, what can I do for you, my friend?" asked Mr. Lincoln, after the judge had explained.

Montgomery related what had occurred. "Mr. Davis has been very kind to me, he went on, "and I did this as much to help him as to help myself. This war is nearly over, I believe that your people will succeed. As you will do with Master Jeff, I do not know, but I am going to do my best to keep his wife and children from starving."

Mr. Lincoln was deeply moved. "Do not mean to tell me," he asked, "that you have been Mr. Davis's private secretary all these years?"

"I do not know what you would call it, Mr. President," the negro replied, "but for thirty years I have written his business letters, looked after the affairs of the plantation, carried the sums of money to New Orleans and to Cincinnati for him, and have had his fullest confidence in every way. In all his life he has never spoken to me an unkind word."

"Do you know of any other such cases, yours, Montgomery?" asked the President as he rose and paced the floor.

"No, sir, I do not," was the reply; "in doubtless, there are such cases. Now, Mr. President, what I want you to do is this: want you to give me a writing directing military and civil officers to protect me in the possession of my property."

The President sat at his desk, and then there wrote an order which enjoined upon military, naval and civil officers the protection of Benjamin Montgomery, the owner of the plantations that were named, and directed that he be given any assistance he might require for the furtherance of these orders. It was signed, "Abraham Lincoln." This was about Eighth Month, 1863.

Montgomery went home and at once showed his letter to the commander at Vicksburg, who issued orders that he should be protected in the possession of his property. The President directed the secretary of the treasury to instruct his agents to let Montgomery alone and he was not disturbed. After the war went quietly ahead with his business. He saved some money, and kept the hands pretty well together, though they were few. During the years of reconstruction, Montgomery was

h his cotton-growing, and attended close-business. His credit in Vicksburg and Orleans was equal to that of any planter country; his orders for supplies were promptly filled, and his payments were made as promised time.

1882, Montgomery felt that he was getting too old to manage properly the business estates. So a friendly suit of force was brought, and the great estate, which Davis having been dead some years, red to Jefferson Davis. He and Montgomery settled their accounts, and Montgomery, that settlement, which assured him some hundred thousand dollars, was the richest man in Mississippi. Two years thereafter he died, and no man, white or black, had been more sincerely mourned. Montgomery's funeral was attended by Jefferson Davis and by all the prominent planters in twenty or thirty miles. In an address to the grave, Jefferson Davis said: "I have in my life many true and faithful friends, none more faithful than was he whom this day have laid at rest."—*Rufus R. Wilson* "Success."

FOR "THE FRIEND."

to Know the Way Only by Walking in It.

the law of the Lord is perfect, converting soul; the testimony of the Lord is sure, giving wise the simple" (Ps. xix: 7).

the following anecdote taken from the *Christian Herald* seems an apt illustration of above testimony of the Psalmist, who to have been sensible of a higher law than that given by Moses.

T. H. W.

"I don't like the idea of your going about preaching," said the squire to a Cornish mill-boy who was a Methodist local preacher.

"I don't preach, sir."

"But you conduct the service, and go into the pulpit, and take a text and explain it. I must know you are very ignorant. I want you to consider whether a man ought to have few advantages as you have, to take upon himself the responsibility to teach others. Suppose you made a mistake."

"Now, sir, I've thought of that. I do pray every day to guide me by his Holy Spirit." The squire explained that university training was necessary for preachers who would be others.

"Squire," said the miller, looking at the squire, "is that the map of your estate?"

"The squire assented.

"Suppose you do know that map pretty well, squire? Every road, and every pathway, every water way?"

"Yes, yes."

"Well, squire, do you remember the other way was down to the mill and you asked Mary to show you the pathway through the woods? I've been thinking 't'es like this. You knowed the road 'pon the map. If I asked Mary 't'es was called 'pon the map—she wouldn't been able to tell me. But if I Mary showed you the way up the woods. You knowed the way up the map, but if I Mary knowed the way up the map in et, and if I don't know the way up the map so well as some people, bless the Lord, I do know the way to heaven by walken."

THE COUNTRY BOY'S OPPORTUNITIES.—In the country, boys dream of the city and its great opportunities. They see, in their minds, enormous stores, vast libraries and reading rooms, great opportunities for self-improvement; excellent day schools and night schools; Young Men's Christian Associations, evening universities, and other institutions where seekers after knowledge may satisfy their longings. In other words, to the country boy, the great city is a sea of opportunities.

On the other hand, the city-bred boy, who has breathed this air of opportunity from childhood, who has passed libraries and reading rooms so many times that their familiarity and commonness have taken the edge of his mental appetite for their contents, longs for the free air and wider space of the country.

If a country boy is made of the right stuff, instead of dreaming of great opportunity in the city, and longing for access to better libraries and larger schools, he will try to redeem himself from the meagreness and narrowing influences of his surroundings. Every book will be to him a precious luxury, an opportunity to open a little wider the door of his narrow life. If he is determined to get on in the world, the things that seem to hold him back will be converted into stepping stones to higher levels. Like Lincoln, Garfield, Grant, Greeley, Burritt, and the long list of our country's great men who had to struggle against far greater odds, without the advantages of the country boy of to-day, he will prove himself greater than his limitations.—*Success*.

Items Concerning the Society.

RECENT LETTER.—Living, as I do, in the midst of a people where the spirit that leads away from Quakerism (far away, I might say), so much prevails, I am often filled with sorrow and surprise, to see those in the older walks of life taken up with things that are so utterly at variance with the principles of Friends. Those who have been raised up to know what those principles and practices are, yet seem to know it not, but still think they are Friends. With sincere desires that the (Friend) paper may still uphold the standard of purity and truth in its pages, and that the editor may be strengthened to perform his duties honestly and fearlessly, I remain

Thy friend,

RECORDS OF THE KINGWOOD MONTHLY MEETING OF FRIENDS, Hunterdon County, New Jersey, compiled from the Minutes and other Manuscripts, beginning in 1744. By James W. Moore, Flemington, N. J. H. E. Deats, 1900. (Price by mail, \$1.25).

The region about Quakertown, New Jersey, was settled by Friends at an early date, some families appearing to be there about the year 1726. The Friends who were early settlers were members of Chesterfield Monthly Meeting, of Burlington Co. In the minutes of that meeting under date of Tenth Month 4th, 1729, the following is found: "Thomas Williams, Samuel Schooley and others made application to this meeting, that, whereas, their settlement being remote from Friends, they request Friends' approbation and consent to meet together at one of their houses every First-day of the week to worship God; whereupon this meeting, well knowing the advantage the people of God have in meeting together in his name, approve of their so doing until there be an established meeting over them, or until Friends see some inconvenience in their so doing." This is supposed to be the authority for the establishing of the Beth-

lehem Monthly Meeting, which afterwards became the Kingwood Meeting, the name of the township having been changed to the latter.

It is believed no better history of Kingwood Meeting can be written than that which is contained in the Minutes. These are quoted at large in the carefully compiled volume before us, and in their quaint language tell the story. "These records are interesting to thousands of persons scattered over the United States, in whose veins some of this ancient blood is coursing. Names are found here which have taken a permanent place in the Nation's history; others once prominent have disappeared from this part of the country, are entirely unknown where originally they were a power, but have reappeared in other parts of the country; others again sound strangely and are generally unknown. These records and the minutes represent the every-day life of a sturdy race; there is a vein of sadness running through them and a puritanic idea of life which opens up to us the mental frame of those of our ancestors who came to this country to escape religious persecution."

A long list of Friends' marriages, with witnesses in cases where copies of certificates have been preserved; also of Births and Burials, is followed by copies of several goodly Memorials, Friends' Sufferings for War Taxes, Manumissions of Slaves, and Certificates of Removals.

Accompanying this volume of Kingwood Records, we have received from the same publisher H. E. Deats, the number of *The Jerseyman* for Fifth Month, 1902, containing

A GENEALOGY OF THE TAYLOR FAMILY, of Monmouth County. By the late Asher Taylor of Middletown and Jersey City, and a continued portion of an account of WILLIAM BOWNE, and HIS DESCENDANTS IN AMERICA. By M. K. Reading, M. D., Aden, Virginia.

Notes From Others.

CHANG CHIH TUNG ON OPIUM.—Chang Chih Tung, recently appointed the Chinese Imperial High Commissioner of Trade, says in his book, "China's Only Hope," in a chapter entitled "Cast out the Poison:"

"Opium has appeared with frightful rapidity and heart-rending results through the provinces. Millions upon millions have been struck down by the plague. To-day it is running like wildfire. In its swift, deadly course it is spreading devastation everywhere, wrecking the minds and eating away the strength and wealth of its victims. . . . Unless something is soon done to arrest this awful scourge in its devastating march, the Chinese people will be transformed into satyrs and devils! This is the present condition of our country."

"What grand results would follow if each household, each village, each institution of learning in the Empire would discontinue the use of opium. Then would the winter of our distress be made glorious summer by the coming of better times for China. . . . In all her history China has never been placed in such frightful circumstances. From these we might be delivered if Confucius and Mencius could live again to teach the Chinese a proper sense of shame, and inaugurate a better condition of things for our country, now under the influence of this awful curse."

In the same proportion that a street brawl figures more largely in public print than a Hague peace conference, so a threatened labor trouble settled by arbitration makes less "news" than a strike among a band of bootblacks. It is for this reason that comparatively little space has been given to the fact that a long and disastrous teamsters' strike in Chicago has been ended by arbitration, and that a similar difficulty among the street-car men of Richmond, Virginia, had been averted by the same means. Neither has public attention been called in any considerable degree to the much greater

and far more significant and momentous fact than on the 1st ult. the arbitration tribunal organized by The Hague peace conference holds its first formal session at Brussels to adjudicate the dispute referred to it by the governments of the United States and Mexico over what is known as the Pius Fund Claims. The two men selected as arbitrators in this particular case for the United States are Sir Edward Fry, formerly chief justice of the Court of Appeals of England, but now retired from the Bench, and F. de Martens, of Russia, the well-known international law writer; Mexico named Pagan Guaias Cheill, a judge of the Court of Cassation of Italy, and Savornin Lohman, a judge of the highest court in Holland. These four men will name a fifth to complete the number constituting the tribunal. The assembling of this court may be well and justly regarded as one of the greatest and most epoch-making events in modern history, the turning over of a new leaf in the annals of our race.—*Ledie's Weekly*.

THE WAY TO DISARM—A few years ago it was the czar of Russia who dreamed the dream of European disarmament. Now it is the king of Italy. And again Germany, with her splendid military blade of tempered steel which she thinks no other Power can match, puts a veto on the project.

If we wait for all the nations of Europe to agree to disarm it is not likely that this generation will ever see the scheme carried out. There will always be at least one country that will think its interest lies in keeping continually in training. But why should those nations whose backs are breaking under the weight of useless fleets and regiments wait for relief until the Powers that like such loads agree to join them in taking them off? Why should not Italy, for instance, do her own disarming without asking Germany's permission?

Suppose the Italian government should say: "We are going to stop loading our people with taxes for an army and navy that have never fought a civilized enemy since Italy got her natural frontiers thirty-six years ago, and to never likely to fight another. We are going to turn a quarter of a million young men from idleness to productive industry. We are going to organize a national militia system on the Swiss model, that will give us a million riflemen for home defense at less than half the cost of a quarter the number of regular soldiers. We are going to mind our own business, and leave international high politics to those who can afford the luxury."

Would the sky fall if that were done? Would France invade Italy for the mere pleasure of getting into trouble, with Germany growling over her own frontiers? Would Austria, with the present dominions of the Hapsburgs crumbling to pieces under their eyes? Would Switzerland? Would San Marino? These are the only neighbors Italy has.

The Power that first disarms will have such an accession of genuine national strength that the others in mere self-defense will have to follow its example. But some one Power will have to have the courage to take the lead. To wait for all to act at once is to wait forever.—*Sat. Evening Post*.

SUMMARY OF EVENTS.

UNITED STATES—On the 23rd ult., President Roosevelt submitted to a surgical operation in Indianapolis, for the removal of an abscess in his left leg above the ankle, which had been formed as a result of the bruises received in the collision with a trolley car near Pittsfield, Mass. By the advice of his physicians he returned at once to Washington, where he was enjoined to remain at rest for several days. On the 28th another opening was made in the abscess.

The President in his late journey has spoken in regard to Cuba as follows: "We urge reciprocity because it is for our interests to control the Cuban market, because we are bound to place the Cubans on a peculiar standing economically when they consent in our interests, as well as their own, to assume a peculiar status internationally, and because it is fitting for a great and generous re-

public to stretch out a helping hand toward her feeble sister, just starting to tread the path of independence. The case stands by itself, and there can be no other like it. Porto Rico, Hawaii and the Philippines have relations of varying intimacy to us; and they have either been admitted without economic system or have been given some of the benefits thereof."

In regard to the tariff he has proclaimed that it ought to be revised so that provisions which foster monopoly or that work injustice to the people should be removed.

The President of the Armenian National Union, composed of 20,000 Armenians in this country, has written a letter to Secretary of State John Hay, requesting his intervention with the European Powers in behalf of the Armenians in Turkey, who he says have suffered longer and more severely under the Turkish yoke than the Jews in Roumania and also that "The Christian Powers of Europe in the Berlin treaty declared that under their charge Turkey would reform Armenia and afford the Armenians protection from the Kurds and other tribes."

The sheriffs of Lackawanna County and other counties in the anthracite region of Pennsylvania have asked that troops should be sent to their assistance in preserving order, which requests have been complied with, and practically the whole of that region is now under military surveillance. Disorders of a more or less serious nature have been reported from various parts of the strike region. Several thousand men have left the neighborhood of the mines to seek employment in bituminous coal fields in the interior. The teacher R. E. Co., it is said, has now four of its largest collieries in operation.

The pension system has cost the Government \$2,992,509,019, according to the report of Eugene S. Ware, Commissioner of Pensions, in his annual report, exclusive of the establishment of soldiers' homes. The pension disbursements from Seventh Month 1, 1790, to Sixth Month 30, 1895, \$96,445,444. The total number of pensioners Seventh Month 1st, 1902 was 399,446.

A company has been formed to make use of the water power of the Potomac river in generating electric light for Washington city and also motive power.

The Commissioner of Immigration in his annual report states that immigration in this country is steadily increasing, and urges that the laws governing it should be made more stringent in order to stop the incoming of undesirable classes.

The announcement is made that a corporation has been formed with a capital of \$200,000,000, which will include six of the largest ocean steamship lines of the world, aggregating 118 vessels and 881,550 tonnage. The lines to be merged are the American, Red Star, International, Dominion, Atlantic Transport and Leyland.

A suit has been brought by certain citizens of Massachusetts in the Supreme Court of that State, asking that a receiver be appointed for the six coal carrying and mining companies and for the Philadelphia and Reading Coal and Iron Company and the Pennsylvania Coal Company. The proceedings take the form of a bill in equity asking for a receivership, in order that the Court may appoint such persons as it may select to carry on the business of mining and supplying coal to the public, which the operations are now being conducted.

There were 442 deaths in this city last week, reported to the Board of Health. This is 86 more than the previous week and 57 more than the corresponding week of 1901. Of the foregoing 197 were males and 225 females: 43 died of consumption of the lungs; 38 of inflammation of the lungs and surrounding membranes; 6 of diphtheria; 18 of cancer; 17 of apoplexy and 10 of typhoid fever, and 1 of scarlet fever.

FOREIGN FEELING. The appeal of the United States to the Powers on behalf of the Jews in Roumania has been favorably received in England, and has elicited much sympathy on the continent of Europe. It is expected that ultimately its effect will be to ameliorate the condition of the Jews in Roumania, although the immediate effect of the appeal appears to have been to cause the Government of that country to discontinue the issuing of passports for Jews to this country, which is regarded by them as an additional hardship.

Statistics recently issued by the British Board of Trade show that during the last year not a single passenger has been killed by a railroad accident in Great Britain or Ireland. This is the first time since railroads were established in Great Britain that so fatal accident to a passenger has occurred during a year. Moreover, the number of railroad employees who were killed and wounded during the last year was much less than during the preceding years.

The Russian forces are evacuating Manchuria, and have turned over the railroad to China.

An alarming increase in the price of meat in Germany has brought forth numerous appeals from municipal and other bodies for the suspension of the stringent rules

prohibiting the importation of live cattle into the from abroad.

A report has recently been made by a commission in England upon industrial conditions in a country, in which it is stated that "the influence of socialism is not nearly so strong nor so aggressive in the United States as in Great Britain." A recent report of the New York Department of Labor shows that while in Britain at a recent date there were 1,905,000 ironists, there were only 1,600,000 in the United States and Canada for about twice the population. The absolute freedom of labor has been the chief result whereby it has won such conquests in the field of socialism. During the last decade of a century all countries industrial processes have been greatly eased during that period, but in America the cost appears to have been carried farther than anywhere. Wages, in short, are generally so good, and the men's futures so much in their own hands, that the every encouragement to do the best they can, by their employers and for themselves."

A despatch from Winnipeg of the 27th ult. says the Government has taken steps to rescue the Don Colony, around Yorktown, from the consequences of a belief that it is a sink to hold cattle or any beast of to assist in their labor, in pursuance of which the abandoned their live stock. The Government agents seized all the cattle, sheep and horses, which were at large by their owners, and the live stock will be sent west not only make money, but be a public benefit. Hundreds of thousands of dollars are being expended, in experiments intended to perfect the machinery.

The failure to obtain anthracite coal has it given a great impetus in Canada to the manufacture from peat. It is stated that the whole gas making the inexhaustible beds of bog commercial value lies in the drying process, and that the peat will invest a machine to extract the moisture from peat will not only make money, but be a public benefit. Hundreds of thousands of dollars are being expended, in experiments intended to perfect the machinery.

A heavy earthquake shock was felt at Guayaquil on the 22nd ult. On the same day another occurred at the volcano La Soufriere on the island of Vincent. It is stated as a strange fact that St. Vincent, St. Vincent and Martinique, and other islands from the seat of the recent volcanic disaster has experienced no tremors during eruptions, and faintest sounds were heard on the occasion, while earth rumblings and loud detonations have been heard so far as St. Kitts, to the north, and Trinidad the south, both about 100 miles distant.

It is stated an earthquake shock was felt in the Mexican and in other towns and cities eastward to the Gulf of Mexico.

Mount Etna shows further signs of activity, a volcano of Stromboli is still active.

NOTICES.

BARTHRINUS L. WICK has been appointed agent for the FRIEND, in the place of Lars B. Wick, deceased.

Address, Magnus Block, Cedar Rapids, Ia.

MEETING AT LANDSOWNE.—A Meeting for Worship pointed by Chester Monthly Meeting, will be held at Meeting-house at Landsowne on the evening of Month 16th, 1902, at 8 o'clock.

WESTTOWN BOARDING SCHOOL.—For convenience persons coming to Westtown School, the stage will leave Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when required. Stage fares, 15 cents; after 7.30 P. M., 25 cents each. To reach the school by telegraph, wire West Chester, Phone 114x.

EDWARD G. SMEDLEY, Secy.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to

WM. F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Secretary.

Address, Westtown P. O., Chester Co., Pa.

THE CALM QUARTER SUB-COMMITTEE of the committee of the Yearly Meeting, propose holding a meeting of worship on next First-day, the fifth of Tenth Month 2d, 1902, at 1 P. M. in the Friends' Meeting-house in Cent St. Those professing with Friends are desired to be present and all other who are drawn to attend are welcome.

our present age, *Light within, a Law*
Spirit within, Christ within, is the
ing of some, and little regarded by many;
whether they know it or not, I must
them they scoff and slight the *Chief-
treasure*, that ever the soul of any man
possessed of; they slight the *Talent* that
ath given to every man to improve, in
to our rising from our fall, and return-
to our native country, to live under the
ment of the Eternal Spirit. Whosoever
out Spirit and Light within is without
the world. Take away this Treasure,
e shall have nothing in us that is good;
all be left quite graceless! *Hugh Tur-*
Grounds of a Holy Life, 1772.

That Labor, or Employ Labor, "Come
Unto Me."

rights of labor that overthrow or forfeit
right to labor, forfeit their right to
time. Any rights of capital that oppress
welfare in his wages, do the same. Any
who for no higher principle than personal
deliberately shut off from the people the
truth that God has stored up for the homes
lives of their countrymen, stand as ene-
mies to their kind. This despotism, held over
whether by peasant or by prince, is
sought by the root of all evil, and is of the
ground offspring whence wars and fightings
arise. It may for seasons be quelled
by the self-interest from which it sprang.
This radical remedy can never be realized,
in the grace of Christ operating in the
lives of men. In the present distress, would
the counsels of men would give way to
the Spirit, that Christ might be both operator
and operative.

COMPLETE INSTRUMENTS. Sometimes a
hard rock is valued for the five per cent
which it contains, rather than cast away
because it is not wholly gold. There are agen-

cies which, without declaring the whole counsel
of God, yet do good in part. For that por-
tion of good, we forbid them not; while yet
we could desire of them much more, and deeper.
Even if they simply furnished to young
men coming to cities, moral substitutes for
worse places, they would justify their existence
and we could bid them God speed, to that
extent.

It should be observed that our contributor
under the title "Religion without Piety," does
not impeach the Young Men's Christian Asso-
ciation, or the student movement, so far as
they go in the truth; but rather the inade-
quate popular religion of various churches
which are their feeders in membership and in-
struction. The Young Men's religious asso-
ciations are represented as an index of the
lowered religious standard of churches.

Many other articles appear in religious
papers of the day, and many sermons from
pulpits, deploring this same lowered standard
of spirituality, as attributable to the mam-
mon god of the present day, to militarism, to
intellectual criticism of spirituals, and to the
mind of the flesh craving its way against the
mind of the Spirit; also they are deploring the
dearth of the ministry, and of candidates for
the ministry, and discovering a loud call for
a ministry on the prophetic basis to be re-
asserted. So our contributor is re-echo-
ing a harmonious religious concern shared by
the deeply feeling heralds of truth in many
denominations, and by some prominent man-
agers of those associations themselves.

As regards the devoted pioneer of the Student
movement, what he generally held forth
we do not know. But we have had some oc-
casion to sympathize with the student mind,
and in dealing with it to appreciate the wisdom
of the Saviour, who acknowledged that there
were states and conditions before whom his
teaching must for a time be left short of its
true fulness. "I have yet many things to say
unto you," said he, "but ye cannot hear them
now."

The exercise of our friend serves as a call
upon us and all adherents of the religion of the
cross (whereby the true Christians are cruci-
fied unto the world, and the world unto them)
now to be found daily standard bearers of the
same, holding forth the word of truth in the
midst of a crooked and perverse nation; among
whom such shine as lights in the world, and

will signally do so, when, on the enemy coming
in as a flood, "the spirit of the Lord shall
lift up a standard against him."

MOTIVE COUNTS WITH GOD.

He cast his net at morn where fishers toiled,
At even he drew it empty to the shore;
He took the diver's plunge into the sea,
But thence within his hand no pearl he bore.

He ran a race but never reached the goal;
He sped an arrow, but he missed his aim,
And slept at last beneath a simple stone
With no achievements carved about his name.

Men called it failure, but for my own part,
I dare not use the word; for what if heaven
Shall question ere its judgment shall be read,
Not, "Hast thou won?" but only "Hast thou
striven?" *Selected.*

THOUGHTS AND ACTIONS.—Our thoughts are
a more true measure of ourselves than our ac-
tions are. They are not under the control of
human respect. It is not easy for them to be
ashamed of themselves. They have no wit-
nesses but God. They are not bound to keep
within certain limits or observe certain prop-
rieties. Religious motives alone can claim
jurisdiction over them. The struggle which
so often ensues within us before we can bring
ourselves to do our duty goes on entirely with-
in our thoughts. It is our own secret, and
men cannot put us to the blush because of it.
The contradiction which too often exists be-
tween our outward actions and our inward in-
tentions is to be detected only in the realm of
our thoughts, whither none but God can pen-
etrate, except by guesses, which are not the
less offences against charity because they
happen to be correct. In like manner as an
impulse will sometimes show more of our real
character than what we do after deliberation,
our first thoughts will often reveal to us faults
of disposition which outward restraints will
hinder us from issuing in action. Actions
have their external hindrances, while our
thoughts better disclose to us our possibili-
ties of good and evil.

Of course there is a most true sense in
which the conscientious effort to cure a fault
is a better indication of our character than
the fault we have not yet succeeded in cur-
ing. Nevertheless we may die, at any mo-
ment; and when we die, we die as we are.
Thus our thoughts tell us, better than our ac-
tions can do, what we shall be like the mo-
ment after death. Lastly, it is in the world
of thought that we must often meet with
God, walking as in the shades of ancient
Eden. It is there we hear his whispers. It
is there we perceive the fragrance of his re-
cent presence. It is thence that the first vi-
brations of grace proceed.—F. W. Faber.

The Divinely Qualified Man.

[Though we might have taken liberties with some words, we prefer to give from the *Presbyterian* in its own language a sample of many cries which are freshly arising throughout the religious press, combining to say, "If by the Spirit we live, by the Spirit let us also walk."—Ed.]

The man who has a mission and who executes it, is the man whom God qualifies for it. He is not self-sect, nor self-developed. He is the prophet of a Divine call and a Divine endowment. . . .

The Church up to the present day has advanced and developed in proportion as her ministers and her members have been possessed of a Divine qualification for their arduous duties and responsibilities, and have manifested it in all the walks of life and under all the leadings of Providence.

Nor is the inspired man a thing of the past. God is still putting his Holy Spirit into human hearts and lives for individual and public benefit. It is his function to endow, to quicken and direct. It is our privilege to be divinely qualified for our life-callings. Unless we are called and energized from on high, we are of little account in God's kingdom, and our work becomes evanescent and futile. We are to ask wisdom as well as grace at his hands. He is willing and able to bestow upon us whatever we lack. His Holy Spirit is a free conferment, and he is more willing to grant it to those who ask him for it than earthly parents are to give good gifts unto their children. He who has asked and received it not, has asked amiss—not in the right way nor to the right intent.

Not only in Church work but in every day affairs and pursuits is the Divinely qualified man needed. God has a place and a service for one and all. The Spirit's inspiration extends to all relations and activities. He must give the ready and skilful execution. He must be prompt to action, and must illuminate and sustain in every sphere of service. He must cause the pen as well as the voice to fulfill its true purpose. He must put the stirring motive into the soul and the quickening energy into the deed. He must inspire the parent in the home, the laborer in the field, the letter-writer in his effort, the reader in his reading, the merchant in his traffic, the physician in his healing, and the attorney in his counsel and pleading as well as the minister in his study and preaching, the missionary in his distant and difficult ministrations, or the benefactor in his errands of love and mercy. He of one talent as well as he of many talents requires the Divine qualification to the adequate and complete exercise and improvement of what is conferred upon him for use where God directs. Thus does life assume a new meaning and all relations take on special sacredness. A fresh courage rises with every difficulty and a mastering purpose presses on to realization. God is ever present to the mind, and everything is done as in his sight, under his direction and with his benediction.

REVERENCE FOR LIFE.—If we may say that we have lost what we never had, then the Gentile world has lost that reverence for life which has long found a place, and still finds, in the Jewish economy. The time is when

men will take their gun and go killing game for pleasure. Do they know what they do? What laws they disregard, what sacred precincts they invade, what right they destroy?

It was an old English usage to consider a butcher disqualified to act on a jury in cases of murder, because his senses were blunted by reason of his calling in the matter of shedding of blood; whereas the next best educated man among the Jews to-day is the man who kills the animals for food for the Jewish community. Before taking the life of the animal, he engages in prayer and thanks God that he is privileged to take a life which is not his by right, for the supply of food for his patrons. Suppose we go in search of devout prayer amongst the men who slay our food animals; we might travel far and find little; and another thing you will not find—that is a true Jew as a sportsman. He has been taught a reverence for life which others lack, and this is to his praise.

H. T. MILLER.

BEAMSVILLE, ONT.

The White House in 1800.

The renovation of the White House at Washington, and its restoration according to plans selected by Washington himself, recall the early days of the first building.

Washington, it will be remembered never lived in it, although he officiated at the laying of the corner stone, and went all through the house a few weeks before his death.

The wife of John Adams, therefore, was the first lady of the White House. In a letter to her daughter, in the autumn of 1800, she gives her impressions of the "castle." At a century's distance the letter makes very amusing reading, but as a matter of fact, the White House could hardly have worn a very welcoming aspect to its first mistress.

"The house is upon a grand and superb scale," she writes, "requiring about thirty servants. To assist us in this great castle, and render less attendance necessary, bells are wholly wanting, not one single one being hung through the whole house, and promises are all you can obtain. This is so great an inconvenience that I do not know what or how to do. The ladies in Georgetown and in the city have, many of them, visited me. Yesterday I returned fifteen visits; but such a place as Georgetown appears! Why, our Milton is beautiful—but no comparisons. If they will put me up some bells and let me have wood enough to keep fires, I design to be pleased. I could content myself anywhere for three months; but surrounded by forests, would you believe that wood is not to be had because people cannot be found to cut and cart it?"

"You must keep all this to yourself, and when asked how I like it, say that I write you that the situation is beautiful, which is true. The house is made habitable, but there is not a single apartment finished. We have not the least fence, yard or other convenience without, and the great unfinished audience room I made a drying-room of, to hang up clothes in."

"The vessel which had my clothes and other materials has not arrived. The ladies are impatient for a drawing room. I have no looking glasses but dwarfs in the house; not a twentieth part lamps enough to light it. Many things were stolen, many broken by the removal. Among the number, my tea china is

more than half missing. Georgetown nothing."

One would think such a condition of affairs sufficient excuse for the postponement of the capitalities, but such was the executive of the hostess that a great "levee" was on New Year's day, 1801.—*Late Paper.*

The Future of War.

Jean de Bloch, who died early in 1901, a Polish banker of first importance, a man whom the Russian government turned to for advice and help in its financial operations, was a man of thought, and therefore a social and economic conditions which made it necessary for governments to raise large sums of money. His studies led him to the conclusion that the maintenance of great armies is at the root of the matter, and that in the natural progress of events, armies will bring about their own destruction.

His argument is that the immense investment in the implements and methods of warfare, the withdrawal of a constantly growing element of the population from productive labor, and the ruinous drain upon national resources for equipping an armament and keeping it "up-to-date," will make it impossible for civilized nations to continue the present military system.

It is not a sentimental argument, but the conclusion of a hard-headed man of business. His book is such a storehouse of well-arranged facts that the Russian experts command the Tsar to examine it, advised the study by every staff officer.

Bloch's last work was to begin the organization of a "War and Peace Institution" at Bern, a museum which, by means of pictures, models, charts, and other legitimate devices, should exhibit the complete horrors of war. His large minded plan was to open similar institutions in all the great centres of travel and population.

Although there is no novelty in Bloch's story that the war system must break down of its own weight, yet it is so powerfully presented that the volume containing a summary of his argument will have a wide circulation and will exert a great influence upon public opinion.—*Late Paper.*

The Goal of this World.

Who has not felt the workings of a rivalry within him, between the power of conscience and the power of temptation? Who does not remember those seasons of retirement, when the calculations of eternity had gotten a temporary command over his heart, and to which all its interests and all its vexations dwindled into insignificance before them? Who does not remember, how, upon his engagements with the objects of time, he assumed a control, as great and as omnipotent as if all the importance of eternity added to them, how they emitted from them such an impression upon his feelings, as to fix and dominate the whole man into a subservience to their influence—how, in spite of every levity of their worthlessness, brought home to him at every turn by the rapidity of the seasons and the vicissitudes of life, and the ever increasing progress of his own earthly career, the visible ravages of death among his acquaintances around him, and the desolating

mily, and the constant breaking up of system of friendships and the affecting tale of all that lives and is in motion and hastening to the grave; and comes it, that in the face of all this excitement, the whole elevation of purpose, content in the hour of his better understanding, I be dissipated and forgotten? Whence light, and whence the mystery of that which so binds and so infatuates us to life? What prompts us so to embark on the strength of our eagerness and of our faith, in pursuit of interests which we know little years will bring to utter annihilation? Who is it that throws such an air of mystery over these earthly tabernacles as to make him look to the fascinated eye of man, these places for eternity? Who is it that pictures out the objects of sense, and so defines the range of their future enjoyment, that dazzles the fond and deceived imagination in looking onward through our life's career, it appears like the vista, or the perspective of innumerable ages? He who is the God of this world. He who can make the idleness of his waking dreams in the life of reality. He who can pour a seducing mystery over the panorama of its fleeting years and its vain anticipations.

This wondrous contest will come to a close.—*Thomas Chalmers.*

A Narrative.

BY LADY SOMERSET.

as in one of the mining centres of the north of Wales one warm autumn evening, a busy air scarcely stirred the coal dust along the side-walk. On the market square a tent in which services were being held for the miners. The colliers had eaten their dinners and were about to gather for their meeting that was to take place in that town.

Flowed them down the street and watched as they turned into the tent, small stunts of men who had worked under ground from youth. On many were the signs that time was doing the terrible work which takes the lives of those who labor in the mines.

Just before the hour at which the meeting was to begin the tent was full. The same men in the same places every night and the same coming in rather late had filled the tent near the door. Some had shawls drawn over their heads and babies in their arms. As I stepped up to the platform I could not help looking down the rows to see whether a man who I missed a night was in his usual place, and soon saw him.

Through the meeting I watched him during the singing of the beautiful Welsh hymns, his cadences seem to rise and fall like the waves of a summer sea. By and by when the preacher began I saw that the man had his face into his hands, in the same way as he had sat night after night, the attitude of despair. Perfectly still he sat until the audience began to disperse, then with lagging steps he left the tent.

As very late before all dispersed who had to have a personal word with the speaker, the workers.

As with almost a sigh of relief that I

came out of the close air of the tent. The stars were shining very brightly and I had almost reached the door of my lodging when something impelled me to turn to a knot of men who were standing round and ask if they knew where the man lodged who sat every night in the corner of the tent. They told me he was a stranger and lived in a lodging house at the other end of the town. Again I felt I should like to forget the man and go to rest, and again the same feeling pressed me that I must see him that night. I asked my companion if she would mind walking with me and we set out along the grimy streets until we reached the house indicated. I knocked at the door and the landlady told me the man I sought was in the kitchen, and there, with his head buried in his hands which rested on the dresser, I found him. He did not move as I entered and when I spoke to him he did not look up. I asked him how it was that night after night he seemed weighed down with grief and to get so little comfort from the meetings he attended so persistently?

At last without raising his head he said: "How could I be comforted? I am one for whom there is no hope. I knew it all, that was said there long ago. I taught Sunday-school, I have had a happy home, I left it all. My wife does not know where I am. I forsook her and the children. Some devil pursued me and hunted me down and will drive me down to hell." There is no moment more awful than to be face to face with the agony of a human soul, and I could only feel with the Breton Mariners who utter the prayer, "Help me my God, for Thy ocean is so wide and my boat is so small;" and yet I knew that in that supreme hour there was the hope to which that drowning soul could cling and be drawn in safety to the rock of ages.

"Do you remember," I said after a pause, that when Peter had denied his Lord he shrank away from his presence, and yet do you recollect that when Christ gave the message of his resurrection he said, "Go tell the disciples and Peter—Peter who had denied Him, Peter who in spite of his boast had failed, who was unfaithful in the time of bitter trial—single him out and tell him I care for him, I love him, I died for him." Little by little the man breathed more gently, and then as I knelt by his side, it seemed to me as though the heavens had opened and some vision had come to him of pardon and peace; and almost before I had done speaking he fell upon his knees and said, "I see it Lord! I see it, I will go back."

We stayed talking till a late hour and I had to leave town early in the next morning, but I went for a moment to speak to his landlady and she told me he had left for his work by sunrise. "What has changed him I know not," said she, "but he went as one who was marching to victory, and he tells me he leaves to join his wife at the end of the week."

Lady Somerset records that several years after in a Western city in America she was accosted by this man, who asked her to go with him to his house nearby. There she was ushered into a bright room where a canary sang in the window and a gentle wife greeted her warmly; two children were there and the scene was marked a bright one in her life.

A HIGHER AND DEEPER POWER.—It is much never to show impatience, to be always the same under disappointment, in weariness and pain, when things go wrong and people are stupid and vexatious; to go on steadily, without a sharp or fretful tone in the voice, without petulance or hasty judgment, or shaken trust, or slackened diligence and effort. Those who reach that point of self-mastery and self-possession may come to be leaders of men, and do great things. But I think there is still a higher, deeper power in the patience of those who are indeed crucified with Christ, crucified to the world, and whose life is hid with Christ in God; the patience of those who, as they move about the world, may set even thoughtless people wondering where that quiet, bright grace was learnt; feeling somehow that, after all, they that are Christ's have hold of something that the world cannot give, and have found a Way better than the world's ways, and that there is reality and truth in those words which have, perhaps, the strongest power words can have to touch the springs of longing in the hearts of men, "Come unto me, all ye that labor, and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart; and ye shall find rest unto your souls. For my yoke is easy, and my burden is light."—*The Churchman.*

Religion Without Piety.

The Young Men's Christian Association at its origin claimed the respect of all sincere Christians, although Friends, if true to their principles, could not act strictly in unison with them.

When the Association was formed there was a gloomy forboding about the future of our government, and some of the best young men of the country were led to place more reliance than they had formerly done upon an Overruling Providence. Their belief that our Heavenly Father can turn the hearts of men at his pleasure, became more deep and practical, and they became willing to be humbled, so far as to seek for his help and direction.

The noon-day prayer meetings for business men and the cotemporaneous organization of the Christian Association, had a depth of sincerity about them, with which we could sympathize, though restrained from uniting in their methods for promoting devotional feeling.

The dark days of that period passed away. Not only were the misgivings about the stability of our government dissipated, but the nation entered upon a career of prosperity greater than it had before experienced. As a people we have become proud of our attainments. We are found glorying in our intellectual progress, and in the greatness of our country.

In a condition of things so far the reverse of that under which it started, I have at times been thoughtful what could be the present aspect of the Association and the demand for its continuance. An editorial article appears in a recent number of the *Outlook*, the purpose of which is to inform us of the Association's present capacity for usefulness. In doing this it tells us of the large sums of money at their control, of the millions they

have invested in buildings and other property and hence their great opportunity to act upon the minds of the people in magnifying the Christian name.

All this proceeds upon the hypothesis that talent and money can evangelize the world. This is in accord with certain lines of Longfellow,

"Were half the power that fills the world with terror,

Were half the wealth bestowed on camps and courts,

Given to redeem the human mind from error,
There were no need for arsenals and forts."

The writer tells us in this connection that the aggregate membership of the Association is very large, and this along with the statement of their costly buildings and ample equipment, he appears to see does not comport well with the idea that this large company of educated, refined, energetic young Americans, are men whose primary concern it is to "lay up treasures in heaven." Hence, he tells us that, though banded together in the cause of Christ, their religion is not of a pietistic character. The word religion has various shades of meaning. Some of these imply a character that men of the world are not ashamed to bear. But piety, whose essence is an humble walk with God, would be an inconvenient clothing for the mind of one wishing to live in subservance to earthly pursuits. As truly as the assertion that "the friendship of the world is enmity with God," the spirit that brooks no restraint in pursuit of the world's business and in the enjoyment of its pleasures, is antipodal to piety, the fruit of saving grace. It is no part of my purpose to find fault with the doings of this respectable association. So long as its members are called to no deeper experience than belongs to a religion of which piety forms no part, it is their individual concern. They may be no worse than thousands of others who have not yet realized the call to holiness as indispensable to the Christian. With them a compliance with the forms of religious usage may satisfy the demand for Divine service.

Their present attitude is understood to be a fair presentation of the standard now maintained by professors of religion. It is presumable that several of our leading sects are represented in this association, and it is because of the standard there avowed as being all that is practical in common life that this protest is written. It would appear that almost every sect in Christendom is lowering its standard of spiritual attainment, until they are induced to explain away the solemn truths uttered by Christ and his apostles, to promote a conformity with their principles.

The article in the *Outlook* proceeds to say: "There was a time when the Association was identified in the minds of many with religious work of a pietistic nature, and when its typical members were thought to be men of excellent intentions, but lacking in energy and manliness. This impression is not justified by the leaders to-day. They are wide awake practical men, religious without being pietistic." It would appear they have worked out a system of conduct as a substitute for religion, that imposes no restraint on the most strenuous devotion to all that administers to pride and ambition, and leaves its votaries in

the full tide of worldly pleasure and vanity. The same article reviews the "Student Movement," as one branch of the "Great Instrument" that constitutes its theme. There can be little doubt that this, too, originated in genuine piety on the part of a few young men. But in its extension it has embraced many, in whom but little change of heart has taken place. Some light is thrown on this wonderful movement by its association with the late Henry Drummond. He was a man in whom the virtues clustering around amiability, were naturally so dominant that it was easy for him to show forth most if not all of those traits which the apostle characterizes as fruits of the Spirit. Hence after writing the body of his essays on "The Greatest Thing in the World" and on "The Perfected Life,"—essays so excellent that one could not discredit an experience of the new birth in the writer, he replies to the assumed question, "How is this happy condition of mind to be attained?" by saying, put the virtue of loving in practice and it will become habitual. After speaking before crowded audiences of students in his own country, he made a tour through the colleges of the United States. In this, it would appear the students were eager to catch his words. He was a lucid speaker. The true inwardness of his teaching may have been mistaken. But the popular result in hearers would indicate their apprehension of a religion that involved no sacrifice.

So when the writer calls these combined movements "a great instrument," we may well concede the term. There is no doubt that these extensive combinations of influential men are working a great effect upon society, whatever that effect may be.

But the religion of the cross,—the religion that at its advent prevailed against the learning of the world,—that uplifted mankind from the depths of sin and degradation to lives of purity and happiness, and has worked the same marvellous results in every age, where mankind have passed from a state of nature to a state of grace, is different from the system they are carrying out. Happily for us, this soul-purifying religion that more especially shines in humble life, does yet command respect. In the time of Wilberforce it had been so covered with obloquy as to be treated with contempt by circles of assumed refinement. And if this tendency to popularize religion and do nothing deeper, a procedure that is wanting in what gives religion its vitality,—is now continued, the teaching of the New Testament will have been sadly perverted.

LYLOYD BALDERSTON.

CONTENTMENT.

How truly blest is he who knows content!

His life is calm and peaceful, and the light

Of sweetest happiness shines warm and bright

Across his path. His mind is not intent

On what God grants us, nor is his time spent

In vain complaining, but he finds delight

In Heaven's gifts, and walks with face as bright

As gladsome as the sunlit firmament.

He tastes life's sweetness, but avoids its gall;

He envies no one, nor is he oppressed

With those dull cares and sorrows that befall

The one who murmurs, and that wild unrest

Which makes men's souls dissatisfied, can ne'er

Rob him of sleep, nor dim his eyes with care.

—Boston Leader.

The United States as an Experiment

A writer in the *Savannah Morning News* deems that our government is as a true experiment—as inquisitive and inquiring as any sons. Whenever the government hears of a mystery, not only in the United States, almost any part of the world, it cannot until it has explained it, or tried to make it a desirable thing go right.

For a good many years it has not liked Great Salt Lake. It felt dissatisfied because it seemed such a wasted opportunity—a body of water that would not support an army. So it was determined to try if the lake could be made to sustain salt water and since it would not support fresh water fishes.

Thereupon fish experts collected the lake and healthiest clams, oysters and crabs and other similar edible creatures that they found, placed them in big tanks made for transporting fish, and loaded them on one of the great big railroad cars that have been used for the sole purpose of transporting fish. These cars are full of ingenious appliances and devices to keep the fish alive, though they may be taken clear across the continent. The water is kept running through the tanks in steady streams by pumps. There are ice coils to keep the water cold, and steam pipes to keep it warm, according to the requirements of the particular fish that are to be carried. Thus one can take snappers and other tropical fish out of their warm homes in the Gulf States and carry them to lower California. He can take mountain trout from brooks that arise by icy waters from snow clad peaks, and carry them through the hottest part of the continent without harming them. Indeed, his fish messengers possibly find the trip more comfortable than do the human passengers in the train.

Traveling at their ease in such a luxurious car, the government oysters and crabs arrive in the Mormon country in excellent condition and there was every reason to expect that they would do well in the salt water of a great inland lake. Men did not just carry them into the water, but placed them carefully into the best spots. They avoided places that were very briny, and selected coves in which fresh water streams emptied, making water brackish.

The government was much interested in the results, for it would have been a great triumph for the country if he could have raised oysters and clams and crabs, and perhaps even water fish, inland in the United States. But the experiment failed. All the creatures died. Experts had feared all along that they would.

The San Jose scale, which devours his trees, has kept the department busy. Several times it has sent men out to catch other insects that may be able to fight and destroy the scale. It imported a queer bug from Japan, several years ago, and tried to breed it and turn it loose on the trees that were infested.

Its experiments have given fruit growers the valuable knowledge that often, when they spray their fruit trees to kill obnoxious bugs, they also kill the insects that wage war with the bugs. So now a fruit grower knows that it is best to spray only at certain times and the beneficent bugs have not yet arrived.

The department has experimented with

of queer chemicals to kill both insects over fungus disease that attack crops. They found a way of covering trees with them and then smoking the insects off of them. They discovered mixtures that can be sprayed with a hose to disinfect them just as you would disinfect a house. In these experiments it has tried nearly everything from cod juice to kerosene oil.

has sprayed parts of orchards with one of preparation and other parts with another, and then studied the trees to find which was best. As a result fruit growers and others can get photographs from him showing just what the effects of different treatments were. They can get tables showing how certain mixtures should be for certain diseases. There isn't a bug or a disease that affects crops for which the agriculturist cannot get a prescription from the government.

He tried some odd experiments with oranges in the last few years. One thing attended now is to breed an orange that shall be—that is, proof against such frosts as we so frequently in Florida, often ruin the plantations in a single night. In this variety of oranges it works selecting parent stock and cultivating it in other strong plants of different species so that it strikes the right strain.

One of his men thought he had hit on such a few years ago in experimenting with a orange tree. He worked on original lines, instead of trying to improve the tree by giving it with other stock he set to work to get according to an elaborate and carefully planned plan. He loosened the ground around the tree and put in certain kinds of fertilizers which he had mixed especially. A good many experts watched the process with a ming of amusement and curiosity. But the fruit was ripe everybody, including the experimenter himself, was astonished, for oranges on the sour tree had become sweet so sweet as sugar, but sweet enough to eat.

A little story has had a sad ending. It is the story of lost mines that no one can find. A man who made the sour tree sweet has been able to repeat the achievement. The next year the sour tree bore oranges as usual. Perhaps the man did succeed in getting the right mixture of fertilizer. Perhaps there was some element of the first fertilizer that was lacking in the second. Perhaps his food had spoiled the digestive apparatus so that it has not been able to assimilate it again. There are all sorts of "perhappes" that wise men can suggest. But none of them can suggest a way to get the wonderful deed.

The experimenters did manage to cross a orange with a sweet one, and for awhile seemed that a new and valuable form of orange would be the result. But alas! the oranges were all seedless, so they could not be used to propagate more of their kind. The government commission has lost a fish. It is not a lesson to go by without asking why they play the ocean whether or not they find it. Besides asking questions the commission also sends out its own fishing vessels to look for it. That fish is wanted because it is a big and beautiful and delicious fish. It probably would mean added wealth

for the American fishing industry if the government could find it again, and new food for all its people.

The story of this fish is a real mystery story. One day a smack came into famous old Gloucester with a load of new fish such as no American fisherman ever had seen before. They were large, weighing from five to fifteen pounds each, brilliantly colored with orange spots and bright scales, and most excellent to eat, as the crew of the smack had discovered. The fishermen reported that the new fish was plentiful, and that there were enough of them on the fishing grounds to fill the holds of all the smacks in Gloucester harbor.

The commissioners heard of the catch, and its fish wise men identified the creatures as tile fish. At once the Government made ready to help the fishermen develop the new opportunity.

But, before anything could be done, before any other smack even reached the ground, a steamship arrived and reported that it had steamed for many miles through dead fish. The water, said the captain, was covered with them as far as the eye could reach. Some of the fish were scooped up and taken aboard to be examined. The description proved that they were tile fish.

The Government fitted out its own vessel, the Fish Hawk, at once, and she hurried to the scene. The ocean bottom was examined with a deep sea dredge, temperatures were taken at all sorts of depths, and the nets were used to scoop up the minute creatures that live in the sea, so that they could be examined to see if anything was the matter with them to explain the mortality among the tile fish.

But no conclusion was reached except that some unknown ocean accident had killed them. Years passed, and no fishing smack caught any more tile fish. Then, quite unexpectedly, a vessel came sailing in again with a good "fare," which is what the fishermen call a catch of fish. The Commissioners were pleased and at once sent the Fish Hawk out to look for the tile fish grounds and find the best way to catch the fish. But once more there was mystery. The Fish Hawk caught a few tile fish, but not enough to make it profitable for the smacks to go out for them. They are not going to give it up, however. They know that somewhere in the ocean off his coast there are immense schools of valuable fish, and the commissioners do not propose to lose them any more than it would lose money out of its Mint. So it is fishing as patiently as any barefooted boy ever fished.

The Government is annoyed whenever it thinks of all the deserts that are on its hands. Officers are planning all the time to change them into farms. Sometimes they try to do it by finding crops that can be grown there. This line of experimenting has led them to import date palms from the desert of Sahara in to Arizona. Other places are improved by watering them. Help has been given to build hundreds of miles of irrigating ditches. Some of them lead the water from the tops of mountains. Others lead the supply from rivers far away. In places where water is especially scarce there are locks in the ditches wherever they reach a man's land. Each lock is opened just long enough to give that particular land the water it needs. Then the next lock is

opened and the next man's land is watered, and so on.

Its ships keep the naval department thinking all the time. It is continually devising new things in lighthouses and buoys and landmarks that shall guide the vessels safely into harbor. One of the most interesting experiments is with great buoys with voices. Often when the great sea fog is very thick, no light, even the most powerful, can pierce the gloom far enough to be reliable as a guide to sailors. Now the Government thinks that if it could mark its channels with lines of floating buoys that make noises, the sailors would not need to be able to see. So it is trying queer contrivances now. Some of them toll deep melancholy bells as they roll and rise and fall in the waves. Others blow whistles with each motion that the sea gives them. Still others roar to different keys. Some of the contrivances do not depend on the waves to make them work, but are operated by electricity from shore. All are designed to roar or toll or whistle or clang so that the pilots shall be able to tell by the ear alone where they are. If successful in this, the Government proposes to line channels with them for miles from the open sea clear into the safe inner harbor of the great ports. Each buoy is to have a note of its own, different from any other in that harbor. Then, if a pilot comes into port on a dark, foggy night and can see no lights of any kind, he need merely listen. If he hears a great wailing sound on his right, he can say, "Ah, we are in the bend of the main channel, so many feet from so-and-so point. Starboard your helm!" Then he listens again as he leaves the wailing buoy behind, until he hears a whistling one ahead and he knows that he must turn again. Perhaps the next buoy he hears is tolling a bell. The next one may be tooting like a trombone. The next may be a shrieking buoy, and so on. The pilot knows just where each one of these sounding buoys is anchored. So he is as sure of his whereabouts as if he were sailing up the channel in broad daylight.

Selected for "THE FRIEND."

Which Way Dost Thou Lean?

If a tree fall toward the South or toward the North, in the place where the tree falleth, there it shall be. Eccl. xi. 3.

That there is a solemn meaning couched under this simple metaphor, no Christian can doubt. It seems to describe the change, so rapidly coming upon us all, of probation for eternal fixedness, when the awful sentence will be heard, "He that is unjust, let him be unjust still; and he that is holy, let him be holy still; and he that is filthy, let him be filthy still." But the tree will not only lie as it falls; it will also fall as it leans; and the great question which every man ought to bring home to his own bosom, without a moment's delay, is this—what is the inclination of my soul? does it with all its affections lean towards God, or from Him?

That the bent of all men in their unregenerate state, is in the wrong direction, Scripture, experience and history all unite in bearing testimony.

Man, by nature, is the child of wrath; he has inherited from his first parents, in the fall, a proneness to sin; and his distinguishing

characteristic is the absence of that love to God which is absolutely indispensable to true virtue and happiness.

Hence it follows, beyond all doubt or question, that we must "be born again," that we must undergo a radical and inward change before we can live to the glory of God in this world, or be fitted for the enjoyment of His presence in the world to come. "Except a man be born of water and of the spirit, he cannot see the kingdom of God."

WHAT HAVE WE DONE TO-DAY?

We shall do so much in the years to come,

But what have we done to-day?

We shall give our gold in a princely sum,

But what did we give to-day?

We shall lift the heart and dry the tear,

We shall plant a hope in the place of fear.

We shall speak the words of love and cheer;

But what did we speak to-day?

We shall be so kind in the after while,

But what have we been to-day?

We shall bring to each lonely life a smile,

But what have we brought to-day?

We shall give to truth a grander birth,

And to steadfast faith a deeper worth.

We shall feed the hungering souls of earth;

But whom have we fed to-day?

We shall reap such joys in the by and by,

But what have we sown to-day?

We shall build us mansions in the sky,

But what have we built to-day?

'Tis sweet in idle dreams to bask,

But here and now do we do our task?

Yes, this is the thing our souls must ask,

"What have we done to-day."

—Nixon Waterman, in C. E. World.

Science and Industry.

BOMBAST once signified the cotton that was employed to stuff garments, particularly the enormous trunk hose worn in the fourteenth and fifteenth centuries.

BETWEEN seven thousand and eight thousand packages of home grown figs are now being dispatched every week from Worthing, which is the centre of the English fig growing industry.

SCIENTISTS claim that the soil of the Everglades in Florida is the richest in the world, and would, if drained, produce marvellous crops of nearly anything planted. It is proposed to reclaim this immense tract, which covers nearly four thousand square miles, by building drainage canals to take off the water, at the same time serve as a means of transportation between plantations. Contrary to the general belief the Everglades are healthful, the water is sweet and pure, and there is almost a total absence of fevers and epidemic diseases.

THE productiveness of the banana is so great that it has been estimated that the ground that would give thirty-three pounds of wheat or ninety-nine pounds of potatoes would, as far as mere space is concerned, give four thousand pounds of bananas, and with a fractional amount of the same trouble. It has been called the "Prince of the Tropics," because it takes the same place, only to an even greater degree, in these hot countries that wheat, rye and barley take in West Asia and Europe, and that rice takes in India and China.

WILLIAM THOMPSON, now known as Lord Kelvin, a distinguished English scientist, has

lately said: "This world must depend on its water for power in the future. The supply of coal will soon become so exhausted that it cannot be profitably used for manufacturing purposes. America has millions upon millions of horse power in connection with her rivers that are utterly neglected. This power is bound to be developed in the near future. The start that has been made at Niagara Falls is only the beginning of a new era in the manufacture and transmission of power."

THERE are astonishing new agricultural possibilities of Cassava, a bushy shrub growing to about five or six feet in tropical and sub-tropical climates, its roots producing more starch per acre than any other vegetable or grain. In South Alabama, Mississippi, Georgia and Florida its cultivation is growing with great rapidity; all the more so because it thrives best in the light sandy soil which before was not worth much. As tapioca, everyone knows it. But as a fattening food for cattle, sheep and pigs (which all eat it greedily) its value is only just discovered. Experiments show that Cassava will produce beef at a little over a half-pence and pork at only a half-pence per pound. Only the roots are used, their average yield being eight tons per acre. The starch from these roots costs only two and a quarter-pence per pound, and according to recent experiments was six times better for plain and fancy laundry work than the best wheat starch at three pence per pound. The gain in using Cassava for fattening animals, as compared with the cost of fattening them by former methods is put at about thirty per cent. (on a seventy-day test.)

FARM LABOR IS POOREST PAID.—Besides the regular number of farm helpers, about one hundred thousand are employed in addition during the wheat cutting season in the grain belts. These are known as harvest hands, and are paid from one dollar and fifty cents to three dollars per day. These harvest hands are now forming themselves into unions for their own protection from overwork and low wages. Many labor unions for regular farm hands are being organized in Indiana, Ohio, Kansas and the Southwest. The young man who has made his home on the farm year after year is paid less than any other class of workers. He has had longer hours and no vacations. He has brought to his employer larger returns for the work than the coal miner, the steel worker, or the mechanic of ordinary skill. The total expense, for instance, on an acre of wheat is six dollars. Of this, four dollars and ten cents goes for horse hire, twine, seed, etc, while the remainder is paid to the two men who gather it and the one who plows the soil and sows the grain seeds. The profits upon their one dollar and ninety cents worth of labor, yield from five dollars to eight dollars to their employer. Corn is produced for five dollars and eighty-five cents per acre, of which two dollars and twenty-five cents go to the man and his team. Generally the horses are owned by the farmer, and the man is getting twenty dollars per month. The duties and the wages of the farm hand of to-day, it may be seen, are not commensurate with the profits of his employer.—W. R. Draper in Review of Reviews.

"ELEPHANT EARS."—A plant that has received very little attention as a source of food in this country is the caladium, elephant ear, *Colocasia antiquorum*, though it is not uncommonly grown for this purpose some parts of the Southern States, and it surprises some readers who know it only as an effective ornament of their lawns to hear as an article of food.

It is found oftenest in the coast region of South Carolina, Georgia and Florida, where it is known as "Tanya," a local name, probably derived from "Tannier," the West Indian name of a similar plant. In other countries, especially in the tropics, this plant furnishes food for many thousands of people. It is a very important food plant in Japan. The groves of the Gold Coast in Africa have under the name of "Eddoes." It is common to the West Indies. It is the "Taro" of the Sandwich Islands, where it is universally used as food, and from it "poi" is made by putting the roots in water till they are reduced to dough, which is then allowed to ferment for four days before eating.

In this country the tanya is cultivated to best advantage in rather moist, rich localities, and it requires a long season to bring to maturity. It is planted in rows, the plants two to three feet apart, and cultivated like other crops. It forms a large tuberous root with numerous smaller tubers clustered about it. These smaller tubers are used for the planting of the next crop.

To make them properly edible, the roots require thorough cooking, and must be boiled for an hour, after which the fibrous coat is stripped off and the rest served much the same way as we do potatoes. One who eats tanya for the first time is not likely to be favorably impressed, but on second view usually likes it better, though it is unlikely that this dish can ever compete with the potato for the favor of the American people.

Botanically it is related to the Indian turnip of our woods, and to the cultivated lily. Its virtue as a food plant is not so apparent by tasting the fresh leaves or uncooked root, but its relationship to the Indian turnip is easily recognized from the pungent, acid taste. The persistent smarting pain that even a small piece can produce remains long in the mouth and throat. The pungent quality disappears entirely on cooking, however, and the tubers may be eaten with impunity. The tanya is starchy like the potato, but compact and closer grained and somewhat lacking in flavor. It is entirely free from fibres or woody parts, and possibly might be cooked by a different method so as to appear to better advantage.—Country Gentleman.

AUSTRALIA'S BAD FORTUNE.—The grove and persistent drouth in Australia, contemporaneous with the coming of the years of excessive rain in Canada, is a subject that seems to invite scientific investigation. The collection developing in the island colony is very serious, and there is a marked decline in productive capacity of the sheep ranges. A correspondent of the *Financial Times* gives some facts of such a nature as to warrant speculations as to the possibility of the continent being blotted out as a country fit

a habitation. In portions of Western land the four-year-old cattle that are living have never yet had wet skins. The employed by the government as the council carriers have abandoned the mail con in Queensland in consequence of the aying rains from six thousand pounds to thousand pounds annually, and no mailing forwarded. Four thousand miles of and forty routes are involved. Commu- is paralyzed, the water-ways are com- dried up, and the banks of the rivers mply an exhibition of sand and stones. l correspondent wrote not many weeks hat for forty miles round the country s bare as a billiard table. Not a single of grass was to be seen anywhere, and e were dying in hundreds every day.—*To-Globe*.

The Riches of the Sea.

It is probable that few people except fisher- realize the immense value of certain s of sea. It is almost impossible to e that wide expanses of tossing foam t in the center of the North Sea should th more, acre for acre, than the green s and rich plow lands of good English . Yet it is quite easy to prove that the of that vast shallow known as the Dog- link brings in a bigger income than any area ashore which is devoted to crops or f. The Dogger is one hundred and sev- iles long by sixty-five broad—that is, an area of eleven thousand and fifty miles. All the winter long the fishing of the United Kingdom, of France, Hol- and Germany, and other countries are at n it, catching between them over four d and fifty thousand tons of fish—that is, forty tons to the square mile. Put these n pounds a ton, and it is easy to see e Dogger Bank returns an income of ndred pounds a square mile a year. uring that only seven-tenths of the land e can be profitably used for farming, the profit on the sea is plainly enough seen. The Essex coast lies patches of mud just low-tide mark which cannot be bought, able are they. To oysters they owe irth. A single acre of oyster bank on the shellfish have been allowed to grow e years old will yield eighty pounds to undred pounds worth of natives in a . Anyone who is exploring the Essex ean tell the oyster beds by the long, akes which rise above the water. There e very heavy penalty for yachtsmen who lly allow their craft to ground on mud marked in this way. All the oyster e the coast are in the hands of different tions, that of Whitstable being the exclusive. Each is extremely jealous of ers, and three or four years ago there e regular naval battle between the oyster e the Blackwater and those of Burnham. e question in dispute was the right to e up, shingle and shell from their rival's e, and use it for covering their own e beds. Young oysters—spat, as they e called—are first laid down on beds of this e stuff.

One apart from the many wrecks which e floor, there are portions of the Med- ean which are fabulously rich; one

thousand two hundred pounds' worth of sponges were taken, in 1887, from one patch of sea bottom near the island of Rhodes. The space was not more than one hundred and fifty by one hundred and twenty yards. Near Rhodes, too, is coral of great value, but much of it at a depth which is absolutely prohibitive for divers without dresses. Off Bengasi is a mass of branch coral said to have cost nine lives. These nine men went down one after another, and simply disappeared. The tenth was named John Cataris. Taking a large slab of stone in his hands, he dived into seventy feet of water. About fifty feet of rope were out when the men in the boat found it floating loosely. They began to haul back. The rope stuck, and then came loose again, and up was pulled John Cartaris, with his back scored by rows of wounds like those of saw teeth. His story was that he dived, stone foremost, into a hot dark place, and then was suddenly hurled back. His mates declare that he descended headforemost into the jaws of the huge shark which had swallowed the other nine, and, but for the great stone he held, that he would have shared their fate.

The discovery that a certain sort of sea moss can be used to clarify has added very much to the value of several small bays on the Massachusetts coast of America. At a place called Scituate there were gathered last year nearly a thousand tons of this sea moss, worth, in all, over twelve thousand pounds. Mosses make from one to two pounds a day during the season when this moss is fit to gather, and many a family has eighty pounds to ninety pounds to put by against the long, cold, stormy winter of the North Atlantic coast.—*Cas-salt's Journal*.

BEARING up against temptations, and pre- vailing over them, is the very thing wherein the whole life of religion consists. It is the trial which God puts upon us in this world, by which we are to make evidence of our love and obedience to Him, and of fitness for members of his kingdom.—*Clark*.

Items Concerning the Society.

We may as well suspend judgment concerning the Cotton Mather letter recently communicated to these columns, until proofs of its alleged forgery are found and shown.

In the account of John W. Foster last week published, after his remark "Hard things will be made easy and bitter, sweet," a subsequent letter adds that he said, "Lean on the Lord. His love is like the shadow of a great rock in a weary land."

We have received a compact booklet entitled "ABOLISHED RITES, or Spiritual against Ceremonial Worship. By A. H. Gottshall. Seventh Edition. Address "The Old Path," 250 Hummel street, Harrisburg, Penna."

This appears a scriptural argument against the prevailing outwardness of Christendom in regard to the true Baptism and Lord's Supper. "Perhaps," says the writer in his Preface, "the reader may be inclined to say, 'Why, these are the very views entertained by the Quakers.' Yes, we reply, they are, and in this part of their doctrine we lovingly follow and endorse them. Does not the Christian world in general recognize the Quakers as being a godly and spiritually minded people?"

Later on: "Though not a Quaker, nor a mem-

ber of the Society of Friends, we endorse much of their doctrine, and certainly love and respect them for the Spirit of Christ, the uprightness of life, and the peaceful and benevolent characteristics so universally attributed to them by Christians in general."

Many authors, ancient and modern, and apparently all available Scripture, are made use of in the extensive argument spread before us, and we judge that the reading of the pamphlet would be instructive and reassuring to every member of our religious Society.

A HINT ON DATES, for Readers of Old Records and History. Prepared by Gilbert Cope, of West Chester, Pa., and found in Moore's Records of Kingwood Monthly Meeting, N. J., in both the heathen and the numerical names.

OHIO YEARLY MEETING.—According to a private letter which has been received, the meeting of Ministers and Elders of Ohio Yearly Meeting was held on Sixth-day, the 26th ult., to good satisfaction. "Our aged Friend Asa Branson, now in his ninety-third year, was present."

Friends from other Yearly Meetings, with minutes, were:—from Canada Harvey Haight and companion, George Pollard; from Western, Eli H. Harvey and companion, Ezra Barker; from Iowa Yearly Meeting, Ella Newlin and companion, Susanna Ramsey; also Benjamin P. Brown from North Carolina, and several Friends, including Lloyd Balderston, Henry B. Leeds and Susanna Kite, from Philadelphia Yearly Meeting, whose company was acceptable. Benjamin P. Brown's wife and a son accompanied him.

On Seventh-day morning epistles from the five Yearly Meetings, with which this corresponds, were read, to the comfort of the meeting; and a committee was appointed to essay replies to them, if they should open. The answers to the Queries exposed deficiencies, which were occasions of much counsel being given forth.

The wet weather of First-day morning diminished the usual large attendance, yet the house was comfortably filled and good meetings were held.

"We miss Edward Stratton, and feel our loss in the decease of W. D. Smith. It was shown this year more perceptibly than ever, that the responsible duties of the Society are fast devolving upon the younger members."

The good social feeling amidst the nice company of Friends at the Barnesville school building, seemed to be enjoyed by all. Busy labor has been bestowed in installing some needed improvements in the building.

Further accounts may yet arrive.

WIDE-SPREAD anxiety has been occasioned by the accident which befel Isaac Sharpless, President of Haverford College, on his return from the West-ton Alumni Re-union on Sixth-day, the 3rd instant. The horse which he was driving, being frightened by a trolley car, became unmanageable, and President Sharpless and wife were thrown from their vehicle, he receiving such wounds in his head as to make him unconscious for two

bores. His injury, though now confining him to West Chester hospital, proves not so severe as was at first feared, and his wife escaped serious hurt.

The latter day attempts to draw out young speakers in meeting have been followed in an Eastern Yearly Meeting by such a waning in the number of acknowledgeable ministers, that loud complaints were heard in a recent Quarterly Meeting that pastors had to be imported from remote regions.

Notes From Others.

From the Philippines we are in receipt of a marked copy of *The Manila Freedom*, giving, under conspicuous headlines, the following statement:

"There is insurrection to the Papal authority among Filipino Catholics, and the Union Obrera Democratica have gone so far as to form a Filipino Catholic organization outside of the authority of the Church of Rome, named a bishop or rather President for the Philippine islands, and bishops for each province, all of which are renegade Catholic priests. The [assumed] honorary presidents of the new church are Governor Taft, Emilio Aguinaldo and Commissioner Tavera. The bishop or president of the Philippines is the former notorious renegade priest, Father Gregorio Aglipay; the executive president, Pascual Poblete. The pope is to be defied if he will not recognize this Catholic church in the Philippines. The churches are to be taken from the Spanish priests and friars and a general revolution of religious affairs is to take place."

A part of the oratory of the insurrection is eloquently represented in the paper, the best sentence of which is, "We will follow all the sacred inspirations from God, but not the injustice and mere caprice of men." Indignation against the friars is the chief burden, but the general savor of the remaining motives expressed seem to exhibit the movement as removed from that spiritual basis which is the Rock of true permanence.

BOOKER T. WASHINGTON'S recent volume on "Character Building," is made up of selections from his famous First-day evening talks to the students of Tuskegee Institute. It is said that quite apart from the literary value of these addresses—and this is by no means slight—the moral strength and earnestness of this leader of his race is nowhere else so well exemplified. The talks are on practical topics, and must have appealed with great force to the young negro men and women to whom they were addressed. These are a few of the topics: "Helping Others," "On Influencing by example," "The Virtue of Simplicity," "On getting a Home," "The Value of System in Home Life," "Education that Educates," "The Importance of being Reliable," "Keeping your Word," "The Gospel of Service," "Some Great Little Things," "The Cultivation of Stable Habits," "Getting on in the World," "Character as Shown in Dress," "Getting down to Mother Earth," and "A Penny Saved." In not a few of these addresses there is a suggestion of the real eloquence for which Booker Washington has been long distinguished, but the feature which gives them their value in their present form as well as when originally delivered, is their invigorating moral tone.

SUMMARY OF EVENTS.

UNITED STATES.—By invitation of President Roosevelt, a conference of the Presidents of several of the anthracite coal carrying railroads, and John Mitchell, President of the United Mine Workers, has lately been held in his presence at Washington with a view of ending the strike in the anthracite region of Pennsylvania.

While disclaiming any right or duty to interfere in any legal or official manner, President Roosevelt called the attention of the Presidents of the territories to the catastrophe impending over a large portion of our people in the shape of a winter coal famine," and said in justification of his invitation to those present to meet with him in conference, that the gravity of the situation con-

strained him to insist that they should realize the heavy burden of the responsibility resting upon each and all of them.

The miners offered to put their men back at work immediately, provided the operators would agree to leave the issues to President Roosevelt to decide and agree to abide by his decision or by the decision of a tribunal to be appointed by him. This offer was declined by the operators, who in their reply said: "We represent the owners of coal mines in Pennsylvania. There are from fifteen to twenty thousand men at work mining and preparing coal. They are abused and assaulted, injured and maltreated by the United Mine Workers. They can only work under the protection of armed guards. Thousands of other workmen are deterred from working by the intimidation, violence and crimes inaugurated by the United Mine Workers, over whom John Mitchell, whom you invited to meet you, is chief."

We are contending for the right of the American citizen to work without regard to creed, nationality or association. We seek to prevent this a crime, and we cannot by implication sanction such a course. We ask the enforcement of law and order in the State, that we be permitted to deal with our employees free from foreign interference, convinced that under such conditions we can fully perform our full duty to the public, our owners and to our employees. We will add to our offer 'to consider the wages claimed at the time of the strike, and make up at each colliery and adjust any grievance,' a further condition—that if the employers and employees at any particular colliery cannot reach a satisfactory adjustment of any alleged grievances, it shall be referred to the Judges of the Court of Common Pleas of the district in which the colliery is situated for final determination."

A Jewish rabbi in New York city has lately said in reference to Secretary Hay's appeal on behalf of the Roumanian Jews: "The note of Secretary Hay will for all time occupy a unique place in the history of our people. It is remarkable in several ways, but above all because the youngest country in the world thereby protests against the oppression of our people and stirs up the conscience of the nations."

The emigration from the United States into the fertile lands of Manitoba and the Northwest Territories of Canada has increased from 5,000 last year to 20,000 for the year ending Sixth Month 30, 1902. The values of the undeveloped lands in these sections of Canada are stated to be rising rapidly.

Professor Hermann V. Hilprecht, of the University of Pennsylvania, who has been abroad a year and a half engaged in excavating the buried cities of Babylon and Nineveh, has returned to this city. "We have unearthed 23,000 tablets," he said, "and the contents of these tablets when deciphered will altogether change the ideas of the world as to the state of civilization and knowledge of that early people. It will be seen that they knew then, 2300 B. C., that the earth was a globe, and that their astronomers took the same view of celestial phenomena as we now take."

FOURTEEN. The recent merging of six large steamship companies engaged in transatlantic commerce, under partial American management, has awakened the British public to the danger of losing the supremacy in the ocean carrying trade, and an agreement has lately been entered into by the British Government with the Cunard Steamship Company by which the latter will receive an annual subsidy of \$700,000, which will enable it to build the first class to its feet. The Government will loan the funds for the construction of the vessels, to be repaid in annual payments.

A late despatch from Russia says: The promulgation of the new laws for Finland removes the last hope of the Finns that their ancient rights will be preserved. It was thought in some quarters that the Czar might be induced at the last moment to intervene. New measures, will, it is said, almost "involve the complete abolition of all those securities for public and individual liberties which have hitherto existed in Finland, and which have constituted the just pride of the Finnish people."

A despatch of the 2nd from London says in reference to the bill which has been proposed to regulate the management of schools: The general body of the Presbyterian and Baptist independent ministers, at a special meeting this evening, passed a resolution calling on the Government to withdraw the education bill, and declaring: "We will do everything in our power to defeat the reactionary, tyrannical proposals of the measure, which vast numbers of loyal subjects will be conscientiously compelled to resist to the utmost, even to refusing the payment of rates."

The production of coffee in South America has increased within a short time from 5,000,000 bags to 12,500,000 bags. A congress of delegates from South American countries has lately met in New York city to

consider the subject of increasing the consumption of coffee.

A despatch from London says: Andrew Carnegie, according to his own computation made to a friend, recently given away nearly \$4,500,000 per annum. It is stated that the remarkable effect of electricity as applied to plants has been demonstrated at a series of experiments conducted by Dr. Lenstrom, of Rutgers University. Four seeds of barley, whose roots were sown in pots, the soil being connected electrically with the ground. Above the pots were suspended an insulated network of wire with a number of terminals. The electric machine was connected to the pots the electric current passed from the wire to the earth, while in others it passed in the reverse direction. For five hours daily electricity caused to pass through the soil, which was kept moist. After eight weeks the height of the plants affected by the electric current was found to be 40 per cent. greater than those to which no current had been applied. Experiments with other plants show the same result in different proportions.

Cholera continues to spread in the Philippine Islands and it is reported that the totals are 70,222 cases and 48,402 deaths. But the actual total of cases is estimated to be about 100,000, with deaths in proportion.

A despatch from Japan of the 29th ult. says: A typhoon, which reached the coast of Japan on the 28th, swept the Owadara district, near here, and overpowered many houses. Five hundred persons are reported to have been drowned.

It is said that there are 28 languages spoken in Russia and none of these are spoken by fewer than 40,000 persons. The most general is the mother tongue of 85,500,000. There are also a great number of dialects that are virtually unintelligible to outsiders. Attention is directed by the St. Petersburg Vindicator to a movement of laborers within the borders of the Russian Empire. It is calculated that 2,137,000 peasants are insufficiently provided with arable land, leave their homes in the central and northern provinces every year to work in the south.

In welcoming the delegates to the ninth congress of the International Association of Criminalists, now at St. Petersburg, Minister of Justice Muraviev said the following statement: "The publication of a new criminal law book is imminent in Russia. The Council of Empire has recently received a project for the reorganization of criminal court procedure. Important changes have been made in our penitentiary system. Suffice it to mention the abolition of deportation as a punishment of Court to Siberia, the transfer of management from the Ministry of the Interior to the Ministry of Justice; the reform of our prison system, especially prison labor; the establishment of correctional institutions, and the preliminary work in the matter of conditional sentences."

A violent earthquake shock was felt on the 26th at Terni, Italy, about fifty miles from Rome.

Reports from Mexico show that the tidal wave in the Gulf of Tehuantepec wrought damage estimated at \$700,000.

The French Government is about to lay a telegraph cable 1,500 miles long across the North African coast from Tunis to Lake Chad. A plough drawn by an camel will open a furrow thirty inches deep at the rate of one mile an hour, and the cable will be laid at the same rate.

NOTICES.

MEETING AT LANDSWOON.—A Meeting for Worship pointed by Christ's Monthly Meeting, will be held in the Meeting-house at Lansdowne on the evening of 13. Month 16th, 1902, at 8 o'clock.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will be ready leaving Philadelphia at 7.15 A. M., and 4.32 P. M. Other trains are met when requested. Stage fare, 15 cents; after 7.30 P. M., 25 cents each. To reach the school by telegraph, write West Chester, Phone 1144.

EDWARD G. SMEDLEY, Say.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in reference to instruction and discipline should be addressed to

WM. F. WICKESHAUS, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co.

circumcision gave many the name of *Jesus* imitating of *John's* Baptism hath given the name of *Christians*; but nothing can be a *Jew* or *Christian* the name of a *Saint* such, but an Heart made pure, single, up, and honest through the Mortification of called in Scripture the Baptism of the Ghost; for that is effected not by any *word* means but by our *walking* after the Ghost. "Till this is wrought, though we be a Christian Name, we cannot bring forth heavenly conversation; and so the Name is but little."—*Hugh Turford*.

A Voyage of Discovery.

He is a voyage of discovery, and they that are watchmen on the lookout are the first to discover what next is before them. But of discoveries given under heaven for each to meet and know, the highest and most precious to his true life is Christ. It is not that Christ is not near, if we do not recognize Him. It is not that He is not with us that we do not discover Him. "Have I been so long a time with you, and yet thou hast not known me?" said He. He yearns for us to turn our eyes to Him, and know Him, enjoy Him, and live with Him the true living. He, from the beginning, longed for a fallow to discover Him much sooner, and be content. "He was in the world, and the world made by Him, and the world knew Him not. He came unto his own, but his own did not receive Him. But to as many as he loved Him, to them gave He power to become sons of God, even to them that believed in his name."

bring the discovery still more near, He personally upon earth and spake as never man spake, and did as never man could do, revealed truths never before apprehended by man, and tasted death, the wages of sin, for every man. To get still nearer to all man-

kind than a condition in the flesh allowed, it was expedient that He should go away, and come again in the Spirit to quicken every man unto repentance, which if faithfully heeded, is followed by the witness of Divine forgiveness, and a following on still further to know the Lord.

A concern has pressed upon the writer for a greater willingness among us all to recognize our Lord Jesus Christ in every way, little or great, of his coming. For He often does especially present himself to each one to be owned and discovered, but the "god of this world" blinds our eyes to the chief privilege of our lives. With us, sustaining us, "upholding all things by the word of his power," He yet walks by our side as one companionless, and, except we be reprobates, is in us, but as a homeless stranger; for having eyes we see not.

He will not force our wills to acknowledge Him, but with loving kindness is drawing us; and to such as are willing and obedient to the secret monitions of Truth He will reveal Himself as they are able to bear it. In all our goings out and comings in, in all our employments, we cannot afford to be off the watch, as men that wait for their Lord, as men that would discover every token of Him in every duty, as servants, or rather friends of his that would look for Him rather than for ourselves at every turn of our course. In this alertness to recognize Him as the chief factor in our lives and daily doings, there would be many discoveries of Him in little things that have been overlooked as all his, and he that is faithful in these is the one to be trusted with those greater revelations of Himself, which crowd satisfaction to the full, when we can say "Lo, this is our God! we have waited for Him, and He will save us. This is the Lord! we will be glad and rejoice in his salvation!"

THE COLOR-WAR. — Agonizing details of Southern burning of negroes at the stake and other violent murders by lynching are forwarded to us from the London "*Daily News*." President Roosevelt, it would seem, was right in suggesting a comparison of American atrocities in the Philippines with those at home, to the greater discredit of the latter. Shall it be measured by the proportion of water-torture to fire-torture? The persecutions are fanned by, and mutually fan the color-contempt in unregenerate hearts of North and of South.

Lands of the brown have exposed us of both regions in a sin that is not sectional.

Professor Andrew Sledd, of Emory College (for whites) Georgia, says in his able paper on the negro question published in the "*Atlantic Monthly*," Seventh Month, 1902:—

"In the last decade of the last century of grace and civilization more men met their death at the hands of lynchers than were executed by due process of law. The total number thus hurried untried into eternity during these ten unholier years approximated seventeen hundred souls. He says that a mere suspicion of wrong doing furnishes ground for mob violence, that the mobs are the work of the lower and lowest classes. They make up as brutal a mob as ever disgraced the face of the earth. For them lynching is a wild and diabolical carnival of blood. The object of the mobs, he says, is to 'teach the negro a lesson,' and 'burn into his quivering flesh the consciousness that he cannot have the rights of a free citizen, or even of a fellow-creature.'"

It is perhaps idle to publish in this paper matter that will not reach the scene of the disease. But the disease is not local, for sin is not. We must reiterate that Christendom's greatest need is Christianity; and whatever legislation may do, and it ought speedily to do its best, yet it is powerless except as an echo of a Christianized public sentiment, of which the witness of the spirit of Christ in man is the root. Patiently, though obscurely, would we keep to the front the witness of his Spirit, believing that Christ crucified is the axe laid at the root of every corrupt tree. He is the spring and stream of every right reform and the antidote among men to all atrocity.

HE who is satisfied in Christ, is above the habit of dissatisfaction with lesser matters.

LET THEM LAUGH.

"Well, let them laugh!" said sturdy Johnnie Brown—

"I wouldn't mind if all the men and boys in this whole town

Should laugh and laugh and laugh,
Because I never smoke the poisonous cigarette,
nor quaff

Wine, ale nor beer!

What is there in a laugh or even in a sneer,
That any honest temperance boy should fear?

"A laugh is only just a little air noise
Mixed up to frighten weak-kneed boys
Into a course of wrong. Alas,
That any boy should fear a little gas!
A moral coward such a boy must be,
Lacking in common sense and vertebrae,
Unmindful of his highest destiny."

—*Temperance Banner*.

The Mystery of the Mammoth.

[The editor of the *British Friend* sends to us a copy of an article on the mammoth written for its columns by a competent geologist, in membership with Friends. He adds that his interest in the matter was quickened by an article in *THE FRIEND* of Sixth Month 21st. It was that which led him to get this written. We have omitted a few words for which many of our readers are not prepared.—Ed.]

It is now more than a hundred years since universal interest was aroused in this extinct elephant by the incontestable proof that its remains were preserved in a practically perfect condition in the northern parts of Siberia. This interest has been repeatedly revived. First, Mammoth bones and tusks were discovered in one place after another in nearly all parts of the northern, arctic, and sub-temperate regions. In Britain alone we may mention the finds in the limestone caves of the west, in the gravels beneath London, in the North Sea dredgings. Then came the discovery that, with the Mammoth, man was coeval. Then France gave us its very picture, graphically carved on its own ivory by primeval man. The recent discovery of another perfect "cold-stored" specimen in Siberia, by Dr. Hertz, has re-awakened public interest.

The Mammoth abounded to an extent almost incredible. The Wokey Hyæna den contained the remains of thirty, with a total of 1,300 wolves, foxes, hyænas, bears, lions, rhinoceroses, horses, oxen, reindeer, and Irish elks. Till lately arctic Siberia supplied Russia with nearly all its ivory; in two years nearly 3,000 tusks reached London. The fishermen of one English village, Happsburgh, dredged up 2,000 grinders in thirteen years of this and other elephants.

Among the many points of interest suggested we might consider three: the manner of its life; how some became subjected to "cold-storage"; and how long it has been extinct. Although the Mammoth was more than twice the weight of living elephants, its brain was decidedly smaller. This contrast is shared with others of its contemporaries, such as the cave-lion and the cave-bear. Indeed the growth of the "cephalic index," or of the proportion of brain to total bulk, is one of the most significant lines along which recent development has progressed.

From the carvings of the cave-man, and from the frozen carcasses, we learn that the Mammoth had a thick coat of black hair and reddish wool. Its tusks sometimes exceeded four yards in length, curving outwards spirally, sometimes making a complete turn. It was fond of forests, like the elephant. Pine leaves formed a favorite diet in Siberia, where the pine forests are still the most extensive known. In our country the forest land often included our present seas and channels, extending out possibly to the "hundred-fathom line," many miles beyond Ireland and Scotland. There must have been periods of comparative warmth, as even the hippopotamus frequented the rivers flowing out westwards. Our climate was then of course continental, like that of France at the present day. Hence the summer and winter would be much more extreme. These big-boned beasts were doubtless great wanderers according to the season. Therefore, though the bones of the Mammoth and his woolly rhi-

noceros comrade mingle with those of the hippopotamus, the creatures when alive may never have come within hundreds of miles of each other, remaining as far apart, say, as Paris is from Lyons, or even from Marseilles.

The Mammoth's . . . remains are found on the sea-shore at Cromer in the "Forest-bed," which represents the surface of the land just before the great access of cold overwhelmed Great Britain with snow and ice. But the earliest unequivocal signs of man belong to the period when the first great ice age had given way to a season of comparative warmth. This was man of the "Palæolithic" or "Old Stone" Age. The chief signs left by him are the massive Palæolithic flint tools, and his carvings on bone. The former are found in gravel beds, either on plateaux, or such as are deposited by our rivers high up their present valley sides. Both occur in cave deposits, usually imbedded in stalagmite, at times under layers many feet thick. These incrustations probably represent the recurrence of the long period of glacial conditions, when, possibly, the river gravels were also being washed into their present high-level terraces.

When at last milder conditions supervened, primeval man had disappeared. Instead we have man of the "Neolithic" or "New Stone" Age. Apparently this was a fresh race. They had learnt so to flake off fragments from flints that the flakes would form the smaller tools, such as arrow and spear heads, knives, saws, and scrapers.

The point of interest to us is that the remains of Neolithic man are *never more than surface deep*. In contrast to this, Palæolithic tools are extracted from under beds of river gravel, ten, twenty, or even thirty feet thick. Neolithic flint tools look as fresh as the day they were flaked. The Palæoliths nearly always possess a peculiar gloss, the result of age. Again, Neolithic man lived with the present-day creatures alone, at least in Western Europe. Not a sign of the mammoth, rhinoceros, hippopotamus, has been found, whilst the cave-bear, cave-lion, cave-tiger, cave-hyæna, etc., are replaced by their modern descendants of degenerate bodies but regenerate brains. These and similar indications compel the belief that, compared with Neolithic man, Palæolithic man and his contemporaries were exceedingly remote in time, at least in this part of the world.

But did he go elsewhere when the cold returned, or was he then annihilated? There is reason to think that the former was the case. The ice-sheet which spread out from Scandinavia west, south, and east, was after all local, though it overwhelmed most of western Europe north of the latitude of London. We know now, by the remarkable journey of Prof. G. F. Wright, that there was no equivalent glaciation over Asia. Western Europe condensed all the Atlantic moisture, then as now, and the Siberian snowfall never gathered into glaciers, even where, at the present day, the ground is frozen to unknown depths. It may well be that the Mammoth took refuge here,—and perhaps in parts of America, which it reached *via* Siberia. There is, indeed, evidence that it came back as far as Finland when the climate ameliorated, and existed there almost into historic times. With its thick coat

it naturally preferred cool climates, so did not as a rule go south of 40 degrees.

After the second great period of colder warmer period supervened, when the Siberian forests extended almost to the Ocean. Therefore the abundance of remains around Behring's Straits is quite natural. But doubtless the winters were too severe, and the ground would remain perennially, save for a few feet near the face.

We possess no direct evidence as to caused its final destruction. But there are some suggestive analogies in the blizzards of North America. The sagacious buffalo able to survive these by herding together, facing the storm. The less intelligent sheep rush before it and perish. We are reminded of the difference in Scotland between the high mountain and lowland sheep, when brought to elevated pastures. A heavy snowstorm the former to exposed points, where the blows over them. The latter huddle in sheltered hollow and are smothered.

We have seen that our mammoth was the most intelligent. A recurrence of the Siberian tundras would expose it to some of unenvied violence, especially if it wandered north during the blazing summers so far from our own. Did it act like the buffalo, or the lowland sheep? It would have sought shelter in hollows, some under lofty river banks. Overtaken suddenly by the blizzard and overwhelmed, it perished helplessly, and in spring the carcasses were swept with the ice to the Arctic Seas, and in the course of ages their remains were picked up by tens of thousands. At times the sudden onslaught of the blizzard overwhelmed it with its last mouthful unswallowed; then never melted from around it, and perished buried deep by flood deposits, ages might pass before it was released from its tomb. How this might come about we can learn from the same regions, or better yet from Hudson's Bay. The sunny slopes thaw superficially, and the mingled mud and bones slide down over the yet frozen sub-soil, like miniature avalanches. In this way snow-tomb and its contents might be as times overwhelmed and pushed upon the ice. Then, in turn, broke up, as so graphically described in Seeborn's account of the great rivers, and the ice-floes rushed onwards with ever rising flood. As this proceeded, the ice-floes and their burdens stranded. In some cases the debris above would be so thick for the sun's heat to reach the ice. Then, if only the river made one of its frequent changes of channel, the entombed mammoth could lie at peace for its thousand years.

Such is the most probable explanation of the "find" in 1799, as well as that by Dr. Hertz a century later. They may have been entombed for thousands of years. The present views of geologists would place its final extinction to a date when probably glacial extremes in Europe and America had placed to what are called normal conditions. It certainly survived many of its ancient grades, even in England: Indeed, it is in respect unique among mammals, as being the only one known to have lived through the ice epochs. G. St. Hilaire proposed, in 1800,

ce, to name it Dicyclotherium. Nor is change in place less remarkable. It has been found near Rome, and in Texas near Gulf of Mexico. These, indeed, are exceptions, but show that its capacity for adaptation to its environment was almost as flexible as man's.

Geologists are still very uncertain as to the cause of the great accession of cold. The first suggestion, however, that it was due to condensation of aqueous vapor, which previously, like a canopy, shrouded the earth's surface from earliest times, seems improbable. This must have ceased as a potent factor ages earlier. Two of many reasons may be given. First: during the glacial and the Great Salt Lake twice grew to their present area. But in the interval it was acted by evaporation to its present size. It could not have occurred without direct rain, any more than the enormous evaporation implied by the salt deposits of numerous periods in geological history. Second: a sudden entirely fresh condensation would liberate so enormous a quantity of heat, so intensely latent, that milder rather than harsher conditions would surely result. Nor is this vast precipitation have been confined so largely to the regions which are near oceans, and are wet because the evaporative moisture first comes in contact with the ground. It would have been much more widely distributed. Geologists generally will not accept this very hazy hypothesis in preference of the two which at present find most favor. These are: changes in level, and changes in the earth's orbit combined with the position of the equinoxes. Land elevation tends to increased cold, though the effect might lag considerably behind the cause. Numerous have proved that our orbit was recently more elliptic than at present. One who leans to this cause, associates the striking difference of the sun's heat in summer and winter with the question as to which is turned towards the sun when we are at it. Just now . . . it is the North which therefore has a shorter and warmer year. In the interval the South Pole claimed its advantages, which, by complex association with oceanic and aerial currents, may probably affect the climate of the pole in proportion. The greater the ellipticity the more the supposed contrast of climatic conditions. Which of these is the real efficient cause, or, rather, how much each has relatively contributed to the result, is far from decided. Nor would geologists be surprised to find cause as yet unsuspected superseded by new probability. But this is not likely to assist in the form of the "canopy" theory.

J. EDMUND CLARK.

USE DIFFERENT MEANS.—As many varieties of dispositions as there are amongst men, so many different means doth God use to bring to peace. That which is the life of one is death to another; wherefore, grace is dispensed, in common, according to the frame and disposition of men. Be careful not to imitate man's ways, except it be in their essential virtues, for the essential path which leads to God is but one and always the same. Be without attend to thy religious call, and do what God requires of thee. He who

properly attends to what passes in the inward centre of his heart, and is right sensible of his natural corruption, will renounce himself, and follow God, in that path into which He pleases to lead him; such an one remains stable in himself, and receives all which happens to him, whether inward or outward, as coming from the hand of God. He submits to God's hidden judgment, having the will of God and not himself sincerely in view. He will not be in doubt what he ought to do, and will soon overcome all obstacles, however strange and difficult they may be; such a state is of more worth than the most sublime exercises. God will not permit such a man to go astray, however dangerous his way may be.—*Plain Path.*

LIFE'S MIRROR.

There are loyal hearts, there are spirits brave,

There are souls that are pure and true;

Then give to the world the best you have,

And the best will come back to you.

Give love, and love to your life will flow,

A strength in your utmost need;

Have faith, and a score of hearts will show

Their faith in your word and deed.

Give truth, and your gift will be paid in kind,

And honor will honor meet;

And a smile that is sweet will surely find

A smile that is just as sweet.

For life is the mirror of king and slave,

'Tis just what we are and do;

Then give to the world the best you have,

And the best will come back to you.

—M. S. Bridges, in *The Christian World*.

Facing Death and the Future Life.

The greatest living English philosopher may dispose of the entire matter of the life beyond the grave by a positive avowal of his disbelief in such an existence, but that does not dispose of it, nor disprove it; nor need it disturb anyone's faith, nor disappoint his hope. This philosopher we are told, "thinking carefully over the claims of revelation, and collating them with the facts of experience and observation, has found no real grounds for expecting that if a man dies he shall live again, and he says so without apparent regret." If the philosopher can view the contingency of non-existence, or annihilation, without regret, his condition must be lamentable indeed; and one wonders whether his devotion to his favorite scientific studies and investigations has not dulled his spiritual perceptions and turned the edge of his religious faith. "If in this life only we have hope in Christ, we are of all men most miserable."

Over against the cheerless and despondent utterances of the philosopher it may be well to place the simple but equally positive testimony of several men from the humbler walks of life. A short time ago a little company of coal miners were entrapped in a mine in Tennessee. There was no possibility of escape or rescue, and the doomed men gave themselves up with uncommon fortitude, based upon their Christian hope, to contemplation of their fate and of the life beyond the grave. Fortunately these imprisoned men found a few scraps of paper and on these wrote their last messages of love and hope to those who were near and dear to them. Four of those pathetic and triumphant messages were as follows:

We are shut up in the head of the entry with a little air, and bad air coming on us fast. It is now about twelve o'clock. Now, dear wife, put your trust in the Lord to help you and my little children. . . . Woods says that he is safe in heaven, and if he never sees the outside again he will meet his mother in heaven. . . . Elbert (his son) said for you all to meet him in heaven. Tell all the children to meet with us both. . . . Ellen, I want you to live right and come to heaven.

J. L. VOWELL.

Dear Wife and Baby: I want to go back home and kiss the baby, but cannot; so good-bye. I am going to heaven. Meet me there.

JAMES A. BROOKS.

To George L. Hudson's Wife: If I don't see you any more . . . I want you to meet me in heaven. Good-bye. Do as you wish.

GEORGE HUDSON.

Darling Mother and Sister: I am going to heaven. I want you all to meet me in heaven. Tell all your friends to meet me there, and tell the church I have gone to heaven. . . . I have not suffered much.

Your boy, your friend,

JOHN HENDON.

Those who have partaken of the Spirit of Jesus Christ, the supreme consoler of stricken and suffering humanity, will accept the testimony of the imprisoned and doomed miners rather than that of the profound philosopher, who, it is feared, knows nothing experimentally of that hope which is big with immortality, and is not strengthened with the assurance that is as an anchor to the soul and that entereth into that within the veil.

Horace Bushnell once wrote a letter to a friend, who was not far from the margin of the river, in which he said:

"I hear that you are in a suffering way, and that a cloud is over your prospects of continuance. If so, I am sure that there will be no cloud over your heart and the longer, better prospects of your Christian expectation. It is a very great thing to leave this world, and yet I cannot think it a specially frightful thing. True, we make a plunge into the unknown, which is so far appalling. We do know a great deal about the matter, after all. We know Christ, which is to know pretty much everything; we know what He is and can be to us, so that if we know all about the city and the river and all the figures of paradise it would not add much to our knowledge. It comes indeed to this, that our plunge into the unknown is plunging into a sea of knowledge—the same we have been sailing in before only in a coasting way. May God be with you and help you to be lifting your sail gladly."

This note of Christian faith and triumph is infinitely better, because truer, than the despairing minor of the great philosopher. It is the word of one who counts the assertions of Jesus Christ as valuable and worthy of dependence, and who has had experiences of the things of God which justify his saying, "We speak that we do know."—*Christian Advocate*.

When the devil speaks he makes men ready and eager to accept dignities, but he makes them reject humiliations and self-abasement.—*John of the Cross*.

LOVE.

True love is but a humble, low-born thing,
And hath its food served up in earthenware;
It is a thing to walk with, hand in hand,
Through the every-dayness of this work-day world.
A love that gives and takes,
Not with flaw seeking eyes like needle points,
But, loving kindly, ever looks them down;
A love that shall be new and fresh each hour.
—J. Russell Lowell.

The Jews' Legacy from an Age of Persecution.

In the current number of a Jewish publication there is an interesting comment on the health of the modern Hebrew. Dr. Maurice Fishberg says that the most common diseases of the Jewish race are neurasthenia and hysteria, while they are less affected by contagious diseases and diseases of the digestive organs than any other people. Both these phenomena he attributes to the long continued influence of historic conditions. The highly strung nervous system of the Jew is the outcome of centuries of life in cities; while his immunity from disease affecting the internal organs is also indirectly due to these conditions.

A process of selection went on during the centuries of Jewish urban life, which weeded out the weaker and less enduring natures, preserving the nervous, alert and sensitive individuals. It is a well known fact that when it comes to epidemics of any kind, the full-blooded, vigorous people who never have known what it is to be ill usually go down before the wiry, tough, nervous individuals, and are less likely to survive the attack.

Some day a book will be written on the mediæval and modern history of the Jewish race, and the influences which have developed the unique constitution, temperament and individuality of the Jew. Among these the book of Leviticus will be given a prominent place.

Through all the hundreds of years when Jews were herded like sheep and hunted like rats, when their quarter of the city was unfit for human beings to live in, when their water supply was cut off at sunset, and the gates locked on them, the stern law regarding the preparation of food and the care of the health acted as no modern sanitary law has ever acted to preserve the people from extermination. Had it not been for the steadfast religious faith and stubborn persistence with which they held to the law of Moses, the unnatural conditions in which they lived must have killed them off. As it was, their environment destroyed only the weaker ones, while the stronger were preserved through the observance of that unequalled sanitary code, and perhaps also by the very persecution which kept the race apart from the debauchery and license of the Middle Ages.

It is not always misfortune in the long run, to be segregated, especially when the people who do the segregating are not over fit to associate with. If anybody doubts that there was enough animalism and vice and lack of moral stamina in the Middle Ages to have wrecked the Jew, had these influences been added to his other disadvantages in the race for life, he may read "Boccaccio." The Dark Ages are not nearly as pretty in history as they are in romance.

The upshot of it is that by a peculiar process

of artificial selection and race improvement, working through several hundred years, the Jew has risen from the position of an outcast to that of a leader, and there is a lesson in this for all students of social conditions. The moral of it is that in history there is nothing quite so likely to happen as the unexpected. What would Shakespeare, whose "Shylock" gives the Hebrew his due, far beyond the meed awarded by any contemporary playwright—what would even he have said if anyone had prophesied a Disraeli?—*L. L. in the Washington Times.*

Diminution of Marriages.

From a volume of short lectures by Dr. Gladden, which has just been issued we quote the following on "Social Evils:"

"A large number of the young people of the more cultivated classes seem to shrink more and more from family life, or at least to defer to later and later periods, the setting up of the home. The standards of social decency and respectability are constantly rising; the amount of money supposed to be necessary to begin the married life increases decade by decade. Young men say that they will not marry until they are able to support a wife in good style, and as the wealth of the land increases and their neighbors live more and more luxuriously, the phrase, 'in good style,' is constantly undergoing changes of meaning. Young women become accustomed in their parental homes to a certain amount of comfort and of leisure, and they do not relish the thought of beginning to live more plainly and more laboriously in homes of their own. Thus an increasing number of young men and women decline or postpone marriage. It is true that the family life does require of both men and women the relinquishment of a certain amount of liberty, the assumptions of new burdens, the incurring of pain and privation and sacrifice. The unwillingness to meet these demands is the prime cause of the diminution in the number of marriages which the census reports to us and one of the inevitable consequences is the increase of social immorality. The condition of France, a prosperous and luxurious nation, where the number of marriages is lessening and the birth rate is decreasing, and social vice is assuming appalling dimensions, points out the path in which the nation must travel whose young men and women undervalue the family relation.

"I do not believe that there is any remedy for this social disease but the restoration of a more wholesome sentiment concerning this whole subject of family life. The morality of what we call our respectable classes needs toning up all along this line. Many parents discourage the marriage of their sons and daughters under conditions which would be far more favorable than those under which they themselves set out in life bravely and happily. They are unwilling that their children should meet the responsibilities which they met and bear the burdens which they bore, and in meeting and bearing which they won their own manhood and womanhood. Many a father refuses his daughter to a young man whose circumstances and prosperity are far more favorable than were his when he was married; many a mother warns her son against alliance with a girl whose heart is as true and brave

as hers was when she set up her own life. The father and mother, in their prosperity, have lost their sense of the value of character; they have come to put far too much emphasis on the mere accidents of life. For it is not only of a man's life, but of the life of a man and a woman together, that it consists not in the abundance of the things that they possess. They can be happy and true and brave with but few things. To begin as our parents began, to live simply and frugal, to face the problems of life without flinch, to exercise their wits together over a household menage, what is this but the discipline in which all the best qualities of life are won?"

"The habitual thought of the entire community upon this subject is largely perverted by the practical materialism which prevails. The sacred function of the family is dishonored when it is made subordinate to the demands of style and the claims of luxury and of leisure. It is a good for which right-minded human beings should be willing to pay in toil and sacrifice. No great good is obtainable at a low price; and the refusal to accept marriage and parentage on these terms is a cowardly delinquency to the highest claims, which nature surely to punish."

The Condition of Forgiveness.

John Nile, of Cornwall, was many months ago convinced of sin; he attended the preaching constantly at Trelake, and a little while ago he came to this circuit he invited me to his house to preach. I went, and found a penitent destitute both of the power and form of holiness.

However, the novelty of preaching at his own doors induced many to attend, he heard with deep attention, and felt power attending the words.

But while the Spirit was poured out from on high, and several on the right hand and on the left hand were changed, poor John continued to walk disconsolate, though recently following hard after God. At length his spiritual burden was removed in the following remarkable manner:

Sitting in his house late at night, he felt a very powerful impression on his mind *to rise and walk out*. He knew not what this meant, and when he went to the door knew not what to go. The impression continuing, he went into his orchard, where he knelt down and spent some time in prayer to God. His finished, and being about to return into his house, he felt the same unaccountable impression urging him to visit a turnip field which he had at some distance. Walking into the field, he discovered something by the help of the star light, which, on a nearer approach, proved to be one of his neighbors stealing turnips. John spoke to him concerning the iniquity of his conduct, and the poor fellow, having nothing to plead in his own vindication, was speechless. He then ordered him to take up the sack (which was pretty well filled) and follow him to his house. The thief, without daring to gainsay, obeyed.

When John and his prisoner had returned to the house he made him empty his sack, and if he had got any of his seed turnips, taking two or three large ones which he had reserved for that purpose, he laid them out and ordered the thief to return the rest.

ck, and then helped him to lay them on his shoulder, and bade him carry them home to his wife, warmly exhorting him to steal no more, and adding: "If at any time you are distressed, come to me and ask, and I will give you a burden." He then shook him affectionately by the hand and said: "I heartily forgive you, and may God for Christ's sake do the same."

Having thus dismissed the poor, trembling man, he went in private and began to wrestle with God in earnest prayer. The Father mercies instantly heard him and filled his mind with a clear evidence of his pardoning him, which he holds fast to the present day. Having forgiven his brother his trespasses, his heavenly Father also forgave him.

He continues to evidence by an unblamable life the sacred fruits of that grace which he received from the hand of a merciful God. *Selected.*

John Woolman.

John Woolman, of New Jersey, in America, born at Northampton, Burlington county, N. J., of parents professing with Friends, had a tender care over him, and being good examples themselves, promoted every appearance of good in him.

About the seventh year of his age, he became acquainted with the operations of Divine love in his heart; and as he went from school to school, while his companions were at play, he went forward out of sight and sitting alone, read the 22d chapter of the Revelations: "I showed me a river of water, clear as crystal, proceeding out of the throne of God and of the Lamb," &c. In reading of which, his heart was drawn to seek after that pure habitation in which he then believed God had prepared for his servants.

The place where he sat, and the sweetness attended his mind, remained fresh in his memory for many years afterwards. This and the like gracious visitations had such an effect upon him, that when he heard boys make use of ill language it troubled him, and through continued mercies of God he experienced revulsion from it himself; and the pious reflections of his parents would recur fresh in his mind, when he happened to be among bad children.

His parents who had a large family of children, frequently on the first day of the week, after meeting, employed them in reading the scriptures, or other good books, one after the other, the rest sitting by for instruction. . . . As in his very young years, through the wings of Divine love on his tender mind, he was preserved from many snares incident to youth, until he had attained about the sixth year of his age; when, as appears by account, through unworthiness he suffered his mind to be carried away by a love of paper company, and, though preserved from profane language or scandalous conduct, he was still a plant alive which brought forth wild grapes.

Though at times he was brought seriously to consider his ways, which affected his mind with sorrow, yet by an inattention to these results of instruction, vanity was added to humility, and repentance to repentance, and his heart became alienated from the truth, and led toward destruction, "Whilst," said he

in his memoirs, "I meditate on the gulf towards which I traveled, and reflect on my youthful disobedience, mine eyes run down with water." Nevertheless, afterward, he ran greater lengths in vanity, until it pleased the Lord to visit him with sickness, which appeared nigh unto death; in which state darkness, horror and amazement seized his mind, and he thought it would have been better for him never to have had a being in this world than to see such a day of confusion and affliction of body and mind. Herein he bewailed himself, and cries ascended to an offended God, who in his mercy at length heard him, and that word which is as a fire and a hammer, broke and dissolved his rebellious heart into a state of contrition, which was succeeded with inward consolation and desires, that if the Lord would be pleased to restore his health, he might walk humbly before him. Though the first part of his desire was granted, he again relapsed into folly and vanity; of one instance thereof I take his own account, viz.: "I remember once having spent a part of the day in wantonness; as I went to bed at night, there lay in a window near my bed a Bible which I opened and first cast my eye on the text, 'We lie down in our shame and our confusion covers us.' This I knew to be my case, and meeting with so unexpected a reproof I was somewhat affected by it, and went to bed under remorse of conscience, which I soon cast off again."

But at length, through the powerful operations of Divine love, he was enabled to take up the cross, and lived a very retired religious life, until it pleased the great Author of our being about the twenty-second year of his age to commit to him a dispensation of the gospel ministry; through faithfulness thereto, he witnessed an increase of those talents committed to his care, and visited most of the American provinces at different times. About the year 1763, during the Indian war, he traveled about two hundred miles into the back parts of Pennsylvania, though attended with great fatigue of body and danger of his life, in order to pay a religious visit to an Indian settlement there; which was favorably received by the natives, and doubtless was attended with peace to his own mind, as he found many of them susceptible of Divine impressions. He was for many years deeply exercised on behalf of the poor enslaved Africans, and both by word and writing, endeavored to convince mankind of that unrighteous traffic, and injustice of keeping them in slavery.

In the year 1772 with the concurrence and unity of his brethren, he came over to England, and landed at London about the 8th of the Sixth Month.

The Yearly Meeting being then sitting he attended that meeting, in the course of which he had to drop divers weighty and instructive remarks. His mind being drawn toward the north, he soon departed from that city and by the way of Hertford, Buckinghamshire, Northampton and Banbury quarterly meetings he proceeded to the Quarterly Meeting at York, where after having attended most of the sittings thereof, he was taken ill of the small-pox, in which disorder he continued about two weeks, at times under great affliction of body, and then departed in full assurance of a happy eternity, as the following expressions, amongst

others taken down from his own mouth, plainly evidence.

One day being asked how he felt himself, he meekly answered, "I do not know that I have slept this night. I feel the disorder making its progress, but my mind is mercifully preserved in stillness and peace." Some time after he said he was sensible the pains of death must be hard to bear, but if he escaped them now, he must some time pass through them, and did not know that he could be better prepared, but had no will in it. He said he had settled his outward affairs to his mind; had taken leave of his wife and family as never to return, leaving them to the Divine protection; adding, "and though I feel them near to me at this time, yet I freely give them up, having an hope they will be provided for." A little after he said, "This trial is made easier than I could have thought, by my will being wholly taken away; for if I was anxious as to the event it would be harder; but I am not, and my mind enjoys a perfect calm."

In the night a young woman having given him something to drink, he said, "My child thou seemest very kind to me a poor creature, the Lord will reward thee for it." A while after he cried out in great earnestness of spirit, "O my Father! my Father! how comfortable art thou to my soul in this trying season." Being asked if he could take a little nourishment, after some pause he replied, "My child I cannot tell what to say to it; I am nearly arrived where my soul shall have rest from all my troubles." After giving her something to put in his journal, he said, "I believe the Lord will now excuse me from exercises of this kind, and I see no work but one, which is to be the last wrought by me in this world. The messenger will come that will release me from all of these troubles, but it must be in the Lord's time which I am waiting for." He said he had labored to do whatever was required according to the ability received, in the remembrance of which he had peace; adding, "and if that is mercifully continued I ask or desire no more." . . . Having repeatedly consented to take a medicine with a view to settle his stomach, but without effect, the friend then waiting on him said through distress, "What shall I do now?" He answered with great composure, "Rejoice evermore, and in everything give thanks," but added a little after, "This is sometimes hard to come at."

One morning early he broke forth in supplication on this wise: "O Lord! it was thy power that enabled me to forsake sin in my youth, and I have felt thy bruises since for disobedience, but as I bowed under them, thou healedest me; and though I have gone through many trials and sore afflictions, thou hast been with me, continuing a father and a friend. I feel thy power now, and beg that in the approaching trying moments, thou wilt keep my heart steadfast unto thee." . . . Upon his giving the same friend directions concerning some little matters, she said, "I will take care, but I hope thou mayest live to order them thyself." He replied, "My hope is in Christ; and though I may now seem a little better, a change in the disorder may soon happen, and my little strength dissolved, and if it so happen, I shall be gathered to my everlasting rest." On her saying she did not

doubt that, but could not help mourning to see so many servants removed at so low a time, he said, "All goodness cometh from the Lord, whose power is in the same, and He can work as He sees best. . . . My dependence is on the Lord Jesus Christ, who, I trust, will forgive my sins, which is all I hope for." . . . I believe my being here is in the wisdom of Christ; I know not as to life or death." . . . He deceased the 7th of the Tenth Month, 1772.

Science and Industry.

ANCIENT DENTISTRY.—False teeth are by no means a modern invention, as is proved from the fact that jawbones of mummies have been found with false teeth in them, and also with teeth stopped with gold. Indeed, the ancient Egyptians were no mean dentists, and in Greece the art was also practised with much skill, says Homes Notes.

There is plentiful evidence of skilled dentistry among the Romans, and many of the ancient Latin authors have references to false teeth. There is a distinct notice of them in the "Roman Laws of the Twelve Tables." The first part of No. 10 prohibits useless expense at funerals, but an exception is made in No. 11, which permits the gold fillings of teeth, or the gold to which they are bound, to be buried or cremated with the corpse.

About a couple of years ago an ancient grave was discovered near Rome. It was opened, and in it was found the skeleton of a woman with a complete set of false teeth, admirably made and wrought out of solid gold.

PERSIMMON AS AN EATABLE FRUIT.—Why is the persimmon is not more highly regarded as a fruit? True, it is difficult to get it at just the right stage to avoid the "pucker," but well ripened and frosted fruit most persons would consider delicious and worth a little trouble to produce. Possibly it is because the ripe fruit is difficult to handle.

What is known as the Japanese persimmon is more encouraging to grow than our native ones, in respect to the size of the fruit, being fully twice as large. But it will not thrive further north than Philadelphia, and even there it is uncertain. The flavor is a little less sweet, but with less "pucker."

Of late attention has been given to the improvement of our native persimmon, and it has been attended with more or less success. Some are almost, or entirely seedless, and absence of most of the puckering is noticeable. One promising variety has been named Gold Drop, for which it is claimed earliness in coming into bearing, extreme hardiness, unusually large and good shape, fine, yellow color, flesh melting, and with little pucker when ripe.

The American persimmon makes a handsome tree ornamentally considered. It has dark green leaves that remain on late in the fall. —*Mechanics' Monthly.*

TOOL THAT WORKS AS IF HUMAN.—The most highly developed of machine tools is the automatic screw machine, and, like many other contrivances for saving labor, its home is New England. It is a development of the ordinary steel working lathe, the intermediate step being the monitor lathe, in which the various cutting tools protrude from the side of a

steel turret-like thirteen inch guns from a battleship turret. In the non-automatic screw machine the turret is revolved by the operator so as to bring each tool into play, just as the turret on the old monitor was revolved to bring one gun after another into action. But in the automatic machine the work is done without human guidance.

In making screws, nuts, bolts, studs and other small pieces that must be turned, drilled or threaded for watches, clocks, typewriters, electrical instruments and other mechanisms all the operator has to do is to feed the "stock"—a long thin rod of steel or brass—to the machine. The feeding mechanism carries the rod slowly forward into the field of action. The turret advances and puts its first tool at work on the end of the rod. When this tool has done its task, the turret withdraws it, turns and advances a second tool into action. Each cutting tool around the turret has its distinct work to perform—one cutting a thread, another shaping a head, another putting on a point, another drilling a hole, still another putting on knurling. The turret automatically brings each of perhaps six tools into action, and when the work is finished the completed screw drops into a pan, while the "stock" is automatically fed forward to begin the complex operation again. A stream of machine oil pours continuously on the work to carry away the heat, and the little metal cuttings that collect in a heap under the machine.

Hour after hour this wonderful automaton goes through its cycle of operations, the turret clicking every moment as it brings a new tool forward. Small brass pieces, on which but one tool cuts, are dropped at the rate of four a second. Large screws of complicated design, upon which a whole turretful of tools must work, are cut from a steel rod at the rate of one or two a minute. So perfectly are these screw machines constructed that an unskilled workman can operate a row of them. All he is required to do is to keep them fed with "stock." In some shops girls tend the machines. —*Success.*

Culture and Religion.

As facts and doctrines form the intellectual outworks of faith, historical criticism must make good the one, and sound philosophy must so far warrant the other. But when all that argument can do has been done, it still remains true that the best and most convincing grounds of faith will still remain behind unshaped into argument. There is a great reserve fund of conviction arising from the increased experience which Christian men have of the truth of what they believe. And this cannot be beaten out into syllogisms. It is something too inward, too personal, too mystical to be set forth so. It is not on that account the less real and powerful. Indeed, it may be said that once felt it is the most self-evidencing of all proofs. This is what Coleridge said, "If you wish to be assured of the truth of Christianity, try it." "Believe, and if thy belief be right, that insight which gradually transmutes faith into knowledge will be the reward of thy belief." To be vitally convinced of the truth of "the process of renewal described by Scripture, a man must put himself within that process." His own experience of its truth, and the confident as-

surance of others, whom, if candid I feel to be better than himself, will be the sufficing evidence. But this is an evidence which, while it satisfies a man's self, he brought to bear on those who stand out the pale, and deny those things of which they have not themselves experienced.

A clear and trained intellect is one spiritual discernment quite another. The former does not exclude, but neither does necessarily include the latter. They are less of two different sides of our being, but the spiritual nature in a man is always active, it is in vain that he works at religion merely from the intellectual side. He is not awake in a deeper region than intellectual, though he may be an able or dialectician, a vital theologian or a religious man cannot be. It is only the person who has the original datum, in virtue of communion with God, on which the religious lays hold.

So soon as the "original datum" of the divine spirit is there, everything else becomes simply a matter of right reasonableness. As a thoughtful English scholar lately expressed it:—"Of all qualities which a theologian must possess, a devotional spirit is the chief. For the soul is larger than the intellect, and the religious emotions lay hold on the truth to which they are related on many sides at once. A powerful understanding, on the other hand, seizes on single points, and never enlarged in its own sphere, is often never safe from narrowness of view. For every office is to analyze, which implies that thought is fixed down to particular details of the subject. No mental conception has more no expression in words, can give that significance of any fact, least of all of the divine fact. Hence it is that mere reasoning is found such an ineffectual measure against simple piety, and devotion is such a safe guard against intellectual errors." Yes, "the original datum," that is the main thing.

And what is this but that which our forefathers meant when they spoke of man "having the root of the matter in him?" The devout spirit is not fed by purely intellectual processes, sometimes it is frustrated by them. The hard brain work and the seclusion of the student tend, if uncounteracted, to dry up the springs alike of the human sympathies and the heavenward emotions. It is said Dr. Arnold, certainly no disparager of intellect, that no student could continue long in a healthy religious state unless his heart was kept tender by mingling with children, by frequent intercourse with the poor and the suffering. —*Herald of Truth.*

SONNET—WORDSWORTH.

In my mind's eye a Temple, like a cloud
Slowly surmounting some invasions hill,
Rose out of darkness, the bright Work stood
And might of its own beauty have been proud
But it was fashioned and to God was vowed
By virtues that diffused, in every part,
Spirit divine through forms of human art;
Faith had her arch—her arch, when winds were
loud,
Into the consciousness of safety thrilled,
And Love her towers of dread foundation laid
Under the grave of things; Hope had her spire
Star high, and pointing still to something far,
Trembling I gazed, but heard a voice—it said
"Hell gates are powerless phantoms when we

The Best Winter's Schooling.

Cyrus Hamlin, in some reminiscences of his cousin, the late Vice President Hannibal Hamlin, once told about their early life in Maine. Of his cousin he said:

"In farming he beat us in the productive-ness of the acres. He had more hired help; did little. His land was better to begin with, but we put in the muscle, and were not out of the result. But in one thing we were ahead of him, as he was always ready to acknowledge. But that came by the sheer force of circumstances. Our farm tools had gone to the bottom of the sea. Our father died in our early childhood, seven months old, and my brother Hannibal was only two years and six months. We had to be self-reliant. While we were boys, and we had an ambition to be so. Our father left us a richly supplied with every implement in use. The ox yoke, the hay cart, the wheelbarrow, the cart, tongue and axle had given out. My father, fourteen and sixteen, resolved to go to their places. Fortunately there was no district school, owing to some local dissensions. With earnest labor, working in the field by day and the kitchen by night, we completed an ox yoke, to our great delight, and then turned it in boring the holes for the oxen. 'Make another,' said a neighbor, 'I will bore the holes for you.' As he came, we invented a guide for the auger, and made the holes exactly parallel, and triumph was complete. We obtained a red paint and painted it a brilliant red. It was so overwhelmingly magnificent, that it seemed as if it could equal it. So we had a tongue and axle, a hay-cart, and a wheelbarrow for potatoes. When they were complete, we had risen to a higher level of being. 'I have beat me.' I couldn't tell. But, had his environment been like ours, he would have done it much better. In later years he has said, 'Cyrus, that was the best winter's schooling you ever had.' The hard school of necessity turns out good and noble men. Circumstances make men, and such men then make circumstances. Disappointments are often blessings, necessities are mercies. The things which most untoward may prove most profitable. 'Therefore I take pleasure in inflicting reproaches, in necessities, in persecutions, in distresses for Christ's sake, for when I am weak, then am I strong' (2 Cor. xii: 10.)" *Safeguard.*

The Harvest of a Tract.

A tract, entitled "The Bruised Reed," led to the conversion of Richard Baxter. He wrote the "Saint's Key," which was blest to the conversion of Philip Doddridge who wrote "The Rise and Progress of Religion in the Soul," a book which has been translated into many languages and has led many to Christ. A critical period in his history this little book fell into the hands of William Wilberforce, the great emancipator of slaves in the West Indies, and led him to the Cross. Wilberforce wrote "A Practical View of Christianity," which was the instrument in opening the eyes of a young clergyman who was preaching a gospel he did not know—John Chalmers. Doddridge's book also led to the conversion of Leigh Richmond, and

he wrote the "The Dairyman's Daughter," which has been translated into a great many languages and has been blessed to the salvation of thousands. It is related of Dr. Goodsell that when he was passing through Nicomedia, he left with a stranger a copy of "The Dairyman's Daughter," printed in the Armenian Turkish language. Seventeen years afterward he visited Nicomedia and found a church of more than fifty members, and a Protestant community of more than two hundred persons. This tract, with God's blessing, did the work. The author of the tract himself received information of three hundred conversions by its instrumentality. It was William Wilberforce who introduced into the British Parliament "The Emancipation" act banishing slavery from the West Indies. Every student of history knows that William Wilberforce in spirit influenced American politics until the foul blot of human slavery was swept from the Republic, in the liberation of four millions of bondsmen. Only eternity will reveal all the fruits of that one tract read by the lad—Richard Baxter. It has been said that through this same line of agencies, created by the reading of that tract by Richard Baxter, the Czar of Russia received an inspiration which resulted in freeing forty million serfs.

A lady in a railway car, while it was passing some laborers, with a silent prayer to God for his blessing, threw some tracts out of the window for the men. She afterwards learned that the workman found the tracts, read them and were turned to a Christian life. A flourishing church was the result.

The sudden decease of our beloved Friend Debby Cope, of West Chester, Pa., on the 14th instant, who two days previous was engaged in her last public ministry, brings members of the Yearly Meeting under added solemnity, in view of the evidences that the Spirit of the Lord is at work among us, through death and through life and the earnest travail of many to turn sons and daughters to his salvation and service.

Items Concerning the Society.

OHIO YEARLY MEETING.—A second account, more complete than any which was possible last week, is here presented:

The Eighty-ninth Session of Ohio Yearly Meeting, was held at Stillwater, near Barnesville, Ohio, from Seventh-day, Ninth month, twenty-seventh to the following Fifth-day inclusive.

The meeting of Ministers and Elders held Sixth-day morning was considered a favored season as was also the session of Second-day.

Shortly after ten o'clock Seventh-day morning, the clerk read the opening minute and on calling the names of the Representatives found them all present except four. Minutes were read for Harvey H. Haight, a minister, and his companion, George Pollard, from Norwich Monthly Meeting, Canada; for Eli Harvey and Ezra Barker, the former a minister, from Indiana, also for Ella Newlin a minister from Iowa, with Susannah Ramsay as companion. Satisfaction was generally expressed with the company of these Friends.

A reference from one of these Quarterly meetings requesting the Yearly Meeting to interpret the clause of the Discipline regarding the affixing of monuments to graves was given to the consideration of a committee to be reported on at a later sitting.

Epistles from Canada, New England, Western, Iowa and Kansas Yearly Meetings were read. These tokens of affection and unity of purpose were encouraging to the meeting and a committee was set apart to prepare essays of replies.

First-day.—On account of unfavorable weather the attendance at the meetings for worship was not as large as sometimes, although the meeting house was well filled. Both the morning and afternoon meetings were satisfactory occasions. . . . In connection with the meetings for worship, one can hardly omit mentioning the evening collections at the boarding-school building—where many Friends lodge during Yearly Meeting week. These collections were indeed times of refreshing; when many, especially the young people were encouraged to greater faithfulness and exhorted to press onward toward the heavenly goal.

Second-day, the twenty-ninth.—The Representatives proposed Nathan R. Smith for clerk and James Walton for assistant, with which appointments the meeting united. The consideration of the state of Society as shown by the answers to the Queries was entered upon. The substance of which was about as follows:—

First: Excepting a few small meetings, unavoidably omitted, all meetings have been held and mostly well attended.

The answers to the second, fifth, seventh, and with little exception the fourth and eighth were satisfactory. It was generally felt that greater faithfulness in those particulars queried after in the third was greatly needed, and some Friends had not maintained our testimony against a hireling ministry.

On Third-day: Through the obituary notices we were informed that three elders had died. Many desires were expressed that the younger members would be willing to take up the falling mantles, and having received these mantles to run with patience the race that is set before them. . . . The quarterly meetings reported five hundred and sixteen children of school age, a majority of whom had attended Friends' school. The Minutes of the Meeting for sufferings, read at this time, were satisfactory.

The report of the Boarding School Committee was satisfactory to the meeting, and they were encouraged to keep the school on its original foundation,—not looking to any other institution as a guide, but to have the religiously guarded education of the youth their first concern.

Fourth-day morning the meeting for worship was again a favored time, in which many testimonies to the Truth were handed forth.

Fifth-day. The committee which had under consideration the reference from one of the quarterly meetings reported that they had no new interpretation to give the clause of discipline referred to, than that which had always been given it by consistent Friends everywhere.

After reading Epistles to the five corresponding Yearly Meetings a solemn silence covered the assembly, under a feeling of which the meeting adjourned. Taking the meeting as a whole we are willing to consider it one of the most harmonious and satisfactory Yearly Meetings we have ever attended.

THE caution expressed in these columns last week, has been confirmed by the following, dated "Friends' Intelligencer, Tenth Month, 10th, 1902":

DEAR FRIEND.—The "Cotton Mather letter" was a hoax—an absolute forgery, by a man named Shunk, of Easton, Pa. Its character has been again and again stated,—several times in this journal.

Very truly,

HOWARD M. JENKINS.

[The above note was received the next day, Tenth Month eleventh, and a little later on the same day the tidings of the writer's sudden death, by drowning, at Buck Hill Falls, Pa., began to be spread in this city. He had for several years conducted with uncommon ability the Journal of which he was editor—was a conspicuous standard-bearer of the cause of righteousness in those departments

of morals and benevolence which have especially appealed to Friends, and had become an historical authority highly respected not only on all matters relating to Pennsylvania and the Society of Friends, but over a wider range. The sense of their loss cast an obvious sadness on the next day over the meetings of the body of which he was so useful and representative a member,—a loss long to be felt.]

By information of commemorations to be observed on the 18th instant, it appears that the day represents the two hundred and second anniversary of the establishment of a Friends' Meeting at Moorestown, N. J., and the one hundredth anniversary of the building of the present older meeting-house.

Notes from Others.

A LITERATURE OF ITS OWN.—A denomination should have a literature of its own; not that it is to know nothing of what others think, say, and do, or to be limited in its scope of thought, knowledge, inspiration and accomplishment, but that it should have its own constructive and defensive lines of information and operation. It has its own peculiar polity, doctrine, agency, history, life, and activity, and it should keep its people as well as others informed on all these phases of existence. It has its own thinkers, scholars and institutions, and as its own they should emerge those who are able to enlighten the public in regard to what it has been, is, and proposes to be. It has its special mission in this world, and the pen is one of the greatest and most telling agents of the day for making known what it stands for and what it is doing. It holds a vital relation to the advancement of Christ's Kingdom at home and abroad, and it should be giving out instruction and help in all directions whereby this end may be accomplished.—*Presbyterian*.

There has risen a class of preachers who are proclaiming a social gospel, a scientific gospel, a literary gospel, a reformatory gospel. The cry seems to be—anything to get rid of the old Gospel, which the orthodox religion upholds and preaches. The gospel of culture and all kinds of sensational subjects are treated from the pulpits of many of our churches, while Christ and Him crucified, Christ the Saviour of the world, the atonement, conversion and evangelical repentance, are scarcely, if at all, emphasized, or even mentioned. With many there is no need of conversion; we are already divine, only give evolution a chance, and all will be well. According to their opinions, apparently Christ was mistaken when He said, "The Son of man has come to search for those who are lost and save them" (Luke xix: 10).—*J. W. G. Herold*.

SUMMARY OF EVENTS.

UNITED STATES.—On the 6th instant the entire division of the National Guard of Pennsylvania was ordered on strike in the anthracite strike region by Governor Stone. In promulgating this order Governor Stone says that in certain parts of the Commonwealth "tumults and mob law reign. Men who desire to work have been beaten and driven away and their families threatened; railroad trains have been delayed and the tracks torn up."

President Baer asserted in the presence of the President of the United States that "only the lives and property of the members of the secret oath bound order which declared that the locals should have full power to suspend operations at the colonies until the non-union men joined their order are safe."

On the 6th instant, Carroll D. Wright, Commissioner of Labor, acting in President Roosevelt, submitted to President John Mitchell the following proposal: that if he would return to the immediate return to work of the miners in the anthracite region, the President will at once appoint a commission to investigate thoroughly into all matters at issue between the operators and miners, and will do all within his power to obtain a settlement of those questions in accordance with the report of the commission." This offer was declined by President Mitchell,

as other officers have been which do not recognize the Mine Workers' Union, of which he is the official head. In his reply to President Roosevelt, he said: "Having in mind our experience with the coal operators in the past, we have no reason to feel any degree of confidence in their willingness to do us justice in the future; and inasmuch as they have refused to accept the decision of a tribunal seated by you, and inasmuch as there is no law or authority which could enforce the findings of the Commission you suggest, we respectfully decline to advise our people to return to work simply upon the hope that the coal operators might be induced or forced to comply with the recommendations of your commission."

Other conferences before high officials intended to end the strike have taken place in different places, but they have been apparently fruitless.

In a recent address in New York, Secretary Shaw, of the United States Treasury said: "Our foreign commerce, like the productive and consumptive capacity of our people, has increased more rapidly than our population. Since 1860, population has multiplied by two and one-half, while our foreign commerce has multiplied by three and one-third. Thus, our very prosperity requires the advantage of those across the seas, who supply that which we do not produce."

A late decision in the United States Circuit Court by Judge Lacombe holds that a citizen of Porto Rico is not a citizen of the United States and, as such, entitled to land here without interference from the immigration authorities, but is, the insular decisions notwithstanding, an alien within the meaning of the laws of the United States. In the year ending Tenth Month 4th the Penna. R. R. Co. has carried 19,803,869 tons of soft coal, as against 15,003,701 tons during the same period of last year, a gain of nearly 5,000,000 tons.

In reference to the steamship company lately formed in this country by the merging of six different companies, an officer of it lately said that in tonnage the International Navigation Company is by far the largest shipping company in the world. It requires more capital and will employ more labor than any maritime business enterprise ever undertaken. It will engage largely in the export, import and passenger trade of the United States. Its success, therefore, rests upon the material growth and welfare of the whole country.

In a recent meeting of the Farmers' National Congress, one of the speakers discarding the labor problem said: "One of the most annoying, difficult and vital problems of farming is to get a sufficient supply of good labor. In farm work so much machinery is used nowadays that the greater part requires intelligence and dexterity and application rather than muscular strength. Woman has taken man's place to a large extent in the school room, the store, the office, even the pulpit and the courts; why not to farms? The farmer must, indeed, much prefer seeing his daughter helping him in the field than amid the artificial, unwholesome and dangerous conditions of the city."

Of the 397 passengers who arrived at Portland, Me., on the 6th instant by the steamship *Colombian*, from Liverpool, 320 were boys and girls ranging in age from 5 to 19 years from the Dr. James Watson, who were forwarded to homes in Canada and the West.

In a recent interview with three colored persons representing a considerable body of their people in the Southern States, President Roosevelt remarked that he did not believe a man's color should operate against him anywhere, and that in appointments the character, intelligence and the esteem in which the applicant was held in the community in which he lived would be the first consideration.

In a recent case before the Supreme Court of Indiana, where a person was arrested for practicing as a physician without a license, having treated a boy who was a cripple by what is known as magnetic healing, the Court upheld only reputable schools of medicine, and decided against the practice of Christian Science or healing by faith.

Permission has been granted by the Board of Commissioners in New York City, to the Penna. R. R. Co., to carry out their plans for constructing a terminal station in that city, a tunnel under the North river, a tunnel under the city of New York to the terminal station and a third tunnel under the East river to a connection with the Long Island Railroad, which the Pennsylvania owns. It is probable the work will soon be commenced, involving the expenditure, it is estimated, of \$50,000,000.

The experimental shipment of American peaches and pears to Europe this season by the Department of Agriculture is it is stated has proved a substantial success.

FOREIGN.—At the meeting held in Birmingham, England, called by Colonial Secretary Chamberlain, to discuss the Education bill he declared that if the Government was defeated on the bill it would resign, but stated that he

had several suggestions to make towards amendment of the bill.

A dispatch from Paris says: The National Council of the French Miners' Federation has decided to make a general strike.

The committee has issued a manifesto addressed to the miners' comrades in the United States, England, Belgium and Australia, which declares its aims.

The cause we are defending is common to all, pushed to the last extremity in fighting to obtain a slight improvement in our miserable condition, no suitable remuneration, with regulation of our work in present, and legislation sheltering us against the needs of old age. We are sure you understand our cry: we leave to you the initiative in such measures of convenience to you in aiding us in this struggle.

It is stated that the French miners number one hundred and sixty-two thousand men, of whom only six thousand belong to the Federation.

The probability of a rise in the price of domestic factory coal is beginning to be seriously discussed.

A number of engineers who represent certain New York capitalists, have arrived in Santiago de Chile for the purpose of building railroads and other public works in Chile. It is said that twenty-five million dollars have been expended on railroads and other improvements.

The German Government is considering plans for the emigration of Germans to the United States to reduce them to go to the colonies, especially to those which offer inducements to desirable immigrants where German labor is in demand. The Pacific cable between Canada and Australia has been laid from Vancouver island to Fanning island, a distance of three thousand four hundred and fifty-nautical miles.

On the 6th instant, one hundred thousand tons of coal were sold in Newcastle, England, for shipment to America. It is estimated that two hundred thousand tons of coal have lately been sold from this country to America. The Pacific cable between Wales has advanced in completion of the demand from America.

More than five hundred and twenty-four thousand acres of land in the Indian possessions of Great Britain have been voted to the cultivation of tea, nine-tenths of which are in Assam and Bengal. The production is officially estimated at one hundred and ninety-one million tons and fifty thousand pounds. It is stated that the amount of tea sent to market in India is increasing and amount sent from China is diminishing.

The reports of the commissioners sent to Scotland from England to investigate trade openings have been published. They emphasize the enormous opportunities for trade in engineering, mining, agricultural and electrical machinery of all kinds, street car and ship equipments, and iron and steel constructional work.

A dispatch from Athens says Dr. Stradiotis, the guardian of antiquities, announces the discovery of new treasures, the place where, according to Plutarch, the Athenians buried their dead after the defeat of the Achaean and Theban by Philip of Macedon 338 B. C. of a mass of skeletons in a good state of preservation.

A Norwegian inventor, Captain Oscar, has patented a lifeboat, which, it is said, the Norwegian sailing society has proved a success. It is a globe to carry sixteen persons, about eight hundred a few pounds of provisions, and one hundred gallons of water. It has an air pump and water pump, and is equipped with sail and rudder. Its diameter is eight feet.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For convenient persons coming to Westtown School, the station is at Philadelphia 7:16 and 8:18 A. M., and 4:32 and 4:52 P. M. Other trains are met when required. Stage fare, 15 cents; after 7:30 P. M., 25 cents extra. To reach the school by telegraph, wire Westtown, Phone 114x.

EDWARD G. SMEDLEY, Jr.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters of introduction to instruction and discipline should be addressed to

WM. F. WICKESMAN, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

"Is the Strike Off?"

"Come ye into the vineyard, and whatsoever I will give you." Is the strike of us over, wherein we enter not into the vineyard ourselves, and them that are in it, in our hinder?

"Hinder others, and block their way, by stopping our own service, or cease to move forward. Much more when this sort of active duty is found a misery than company, and seeks to justify itself in the idleness of idlers, and obstructors of who are pressing on towards the mark prize of their high calling.

"Idleness, loss of interest in the work of the vineyard of our own hearts or humanity, dropping out of the ranks of usefulness because a tempter diverts us or if ease advises that we are faint and weary or the music of entertainment drowns all small voice of the inspeaking word, whatever may be the motive of our cessation from labor in the Lord, it makes a real strike that smites the Shepherd, to the uttering of the sheep. "For we are one of another," and "if one member shall the members suffer with it."

"I am Jesus whom thou persecutest!" was said to one who was striking at the Word of grace, and kicking against the reproofs of instruction, because he was proceeding to the least of the Lord's brethren and was doing it unto Him.

"Such was our obduracy that it required the path of the loving son of God to reconcile us by so great love, and by his life much to save us,—shall we not under a living Word if it be melted into a reconciliation of us to Him, and by his grace declare our work of rebellion and sin forever off, and

ourselves willing and obedient laborers together with Him who has bought us with a price? Is the strike of the carnal mind's enmity against God ended, the surrender to his holy will yielded, and our peace made?

For Christ is "our peace, who hath made both one, having abolished in his flesh the enmity; that he might reconcile both unto God in one body by the cross, having slain the enmity thereby."

Passive Enough to be Active.

The true Christian activity has its basis in passiveness to the Divine will. The victories of true aggressiveness have their spring in the victory of true submission, on the part of the soldier of the cross, to his Captain and Leader. He must be moved before he moves. He must be subject to orders before he can subjugate. There is not among us aggressiveness enough in the service of Truth, we admit, but it is because there is not absolute submissiveness enough to the secret behests of the Spirit of Truth. If the gospel can say, "when I am weak, then I am strong," or "Let him become a fool, that he may be wise," or "poor that he may be rich," it must likewise say, and in various forms does say, "Let him be passive that he may be rightly active,"—passive enough to be used, as a surrendered instrument of the Holy Spirit, waiting on the voice of his Word, to do it.

The writer of the following letter says that "we are too passive." We may be too passive to our fears, or to love of ease and undisturbed quietude, or to a long-enjoyed respectability; but we cannot be too passive under the hand of God and the will of Truth. For passiveness to Him means uncompromising obedience, which is the true aggressiveness of the "valiant for the Truth upon earth." The correspondent would probably join us in this view, and so we will quote his letter to the *British Friend*:

Dear Friend.—In reading thy full and interesting report of the late Yearly Meeting, I noticed my friend William Cooper, in referring to Friends in Australia, is reported to have said, "It was not to the credit of the Society in Australia that its present numbers were less than ten years ago." I regret I must admit the truth of this statement. While all the "denominations" around us can show a large increase, the Society of Friends has to record a serious decrease, and this, too, under circumstances the most favorable the Society

could enjoy. I have no reason to think the religious character of Friends in the different States here will not compare favorably with that of the "churches" around us. In all good works I am satisfied Friends are not behind others outside the Society. Then, what is the cause of the falling off? Why are we not also increasing in numbers? These are questions which have been very much in my mind for many years, and have cost me, as I am sure they have others, much earnest thought and close observation. I am more than ever persuaded that there is but one answer to be given, and it is this: We are too passive.

We have a great message for the world,—a liberty-giving message has been committed to our trust, to deliver to thousands who are needing their spiritual freedom. And it does seem to me that, through fear of offending, we are holding the message back. I have no desire to speak or think hard things, but I am deeply impressed with this thought, that we are much at fault in withholding our testimony against those things which so seriously hinder many earnest seekers after Truth, who are at present searching among the tombs of a dead theology for that Living Power which is obscured from their view by mere form and man-appointed ordinances. Our past history would justify people in looking to us as the advanced guard in the march for religious freedom. We fail in our mission to men if we slacken our zeal in that for which we believe we have been commissioned by our Divine Head.

Judging only from my many years of association with Friends in Australia I am inclined to think most persons who seek membership with us over here, are moved to do so by the good name the Society enjoys abroad, but alas! this influence, as might be expected, in time wears off, and they drop out. Whereas those who come among us, being convinced that our principles are in harmony with the teachings of Jesus, seldom lose their hold of Quakerism—seldom depart from that rest and peace they find the Society of Friends affords.

I should be sorry indeed if any of thy readers should understand me to advocate any change in our meetings "for worship." These are refreshing times for those who have attained that state in which they can partake of such spiritual communion. These holy seasons I trust Friends will guard jealously lest there should be a going back to that which pertains to the outward or lip service, from which we trust we have been delivered.

The true spiritual man and woman needs these foretastes of better things, but these meetings are more for those who have been gathered in than for those among the highways of mere worldliness, or accustomed to a religion of forms and symbols.

If we are to hold our place as a progressive

body, we must be prepared to publish abroad, by word of mouth, "the more excellent way." We cannot afford to rest on our laurels. As our forefathers have left us a great heritage, we are called upon to improve it, and leave for those who follow us the Divine truths of Quakerism, a living force in a world that ever needs them. Thy friend,

ALFRED ALLEN.
LAWSON, Blue Mountains, N. S. W., Seventh Mo. 1902.

THE DOUKHOBOR RIPLE.—The Doukhobors by their self-denial for conscience sake are a unique advertisement to this generation of a testimony for the supremacy of the spirit as against the flesh and of conscience as against convenience. Being thus a standing rebuke to the worldly mind and a worldly press, the overstrained conscience of a few is held up to the discredit of them all, with a contempt that is absent from the same popular sheets against woful sins. Calls have for months poured in upon us for explanations of recent eccentricities among that scrupulous people. Our silence, construed perhaps as an abandonment by us of their case and a confession of unworthiness on their part, has yet been the silence of a confidence that they would be vindicated. We have waited for those who could speak with authority. Material for the restoration of our readers' confidence in the Doukhobors' general worth of character is at hand, soon to be produced in our columns.

The Simple Life.

BY CHARLES WAGNER.

Within the present year a book has been published in New York, translated from the French, entitled "The Simple Life," by Chas. Wagner.

From a notice of the life of the author by Grace King, we learn that "from Paris the complex city, comes this volume of little essays, upon the simple life."

"A limpid, bubbling spring, fresh and cool from its forest source, running down one of the boulevards, would hardly appear more miraculous to the eye, nor more refreshing to the senses."

But, quoting our author, "As the fevered patient devoured by thirst dreams in his sleep of cool brooks to bathe in, of clear fountains to drink long draughts from, so in the complicated agitations of modern existence, our fevered souls dream of simplicity."

"The appeal is so obvious, direct, earnest, simple, that the reader seems rather a listener to the sympathetic words of a friend. Cheering, warning, encouraging, chiding, rising in the course of a personal talk with kindling emotion from the small subtleties of life about us to the great sublimity of life above. From our own obscure struggle to the great struggle of humanity until, within the heart, there vibrates in response the feeling of what man was, what man is, and what man may become."

"A return to the simple life is no new adoration from pulpit or press. It is a remedy that perhaps sounded as commonplace to the

man who asked what was Truth, as to the world-to-day. From time out of mind, men have been asking for bread and receiving something else. But there have been bread givers as well as stone givers, to medicants for food.

"Wagner is a bread giver, and his originality in a world full of originals, perhaps consists in this: that the bread he gives is the bread he feeds upon. The bread of the soul—the bread of life, that recurs over and over again on his pages, is with him no mere symbolical expression. He knows what it means to hunger for it, to labor for it. It is no flight of imagination for him to write of wheat thus:

"By the bread that Christ broke one evening in sign of redeeming sacrifice and everlasting communion, we can say that wheat entered into its apotheosis. Nothing that concerns it is indifferent to us. What poetry in its sowing! in the black furrows, to which laborious hands are confiding the bread of the morrow. From the day that it comes out of the earth to the harvest in the late summer, our anxious attention follows the evolution of the tender green blade, destined to become the nourishment of men. In midsummer the fields look like gold. And when the wind blows and rustles the stalks together we seem already to hear the grain running in the bushel measures. The bread sings it in fine weather; but if the horizon darkens a shiver runs through the stalks, as in the heart of the peasant."

"At last is the harvest, the barn, the threshers. Then comes the grinding in the mill, and the kneading by bakers, or housewives. The bread is on the table. Before eating it, think that it is the fruit of the labor of men and the Son of God. Take it in gratitude and fraternal love. Do not suffer a crumb of it to be lost. Break it willingly with those who have none. As the wind blows, as the fountain gushes, as the morning brightens so wheat grows, for all."

Some pertinent observations on the use of tobacco by Friends in the *Westonian* for Seventh Month led to copying these lines:

PIPES.

The pipes at Lucknow music made
To Scottish ears entrancing,
And pipes that smokers use have oft
Set all their nerves a dancing.

But nerves that dance too much while young,
In age oft break and quiver,
And opiates fail to give relief,
When weakness makes them shiver.

How shall we best our strength preserve?
'Tis well for each to ponder,
How keep the force and power of nerve
Of which age makes us fonder?

Now call the wise ones, let them tell,
Does smoking make them stronger?
Do those who earliest begin
Retain their vigor longer?

Old Germany comes forth to say
'Tobacco shall not be
Used by her troops.' If strength it gives,
Why should she thus decree?

West Point is following suit in this,
With Yale and Harvard, too;
While other colleges and schools
Unite in the taboo.

But college training all can't have,
All may in this unite,
That Wisdom, Knowledge, far excels
To robe the soul in Light.

Then Wisdom's ways may we now choose
And keep in view our guide;
Resolved no more the weed to use
We'll lay its traps aside.

*This was written in 1883, when the statement was made in regard to Germany, West Point, Harvard, Yale, &c., been recently in papers.

A MAN WHO DARED.—How a young man who went to Paris to study surgery states his principles is told in *The New Voice*. As he was bidding his friends good-by, he betrothed, obeying a sudden impulse, his friends as her parting word:

"Charlie, dare to be a Daniel!"
"Only that old saw," said he, while a look of disappointment shadowed his face.
"That only, Charlie; but it may mean a lot to you," was the answer.

The young American, the bearer of a new introduction to a distinguished nobleman and scientist in Paris, was soon received with marked kindness.

In a few days he was the recipient of an invitation to a small banquet at the residence, at which were present some of the savants of the great city.

During the progress of the feast, the young man, filling his wine glass, proposed a toast "to the wives, daughters and sweethearts of America," to which he invited a response from a youthful guest, motioning a servant to bring a glass while to fill the glass with red wine.

What followed can best be told in the man's own words:

"Mother," he wrote, "for a moment we have faced a cannon. All had risen, and in the hand of each was a cup of wine, and I had been pledged from my childhood to 'touch, taste, nor handle.' My head swam. Suddenly I heard the words, 'Dare to be a Daniel!' They shot through my head like an electric flash. Instantly my resolution was taken. I touched my white glass—a sea filled it with water. Rising, I said, and as I could for the great lump in my throat, 'I beg leave to say that the typical daughter and sweetheart of America, the purity of this, nature's own beverage, illustrates the lives they aim to lead and the dangers which they seek to avoid. Permit me to drink it in their dear names.'

"Following the example of Count Bismarck, every white glass was instantly raised."

NOT ALONE.—A good minister was recently sent to a wild and dangerous part of Australia, on an errand of duty and mercy. He ended up too poor to be in any great danger from bush-rangers or robbers, but as he came back had to bring in his saddle-bags a large amount of money, not his own, but belonging to a young man he had been sent for to comfort him. He knew that a dangerous robber was aware that he was riding along this track through the bush with all this money about him, and he got to one part of the road he felt so frightened that he thought he was not trusting as a Christian should. He wanted a quiet, so he got off his horse and stood with his eyes shaded against it—prayer.

faith and courage not to be afraid of bush-ranger robbers, and to be guarded against them. He prayed till he felt calm enough to ride on, and then he mounted his horse and reached the town in safety with the money which he had in charge.

Some time later he was once more called to visit a man on a sick bed, and he recognized him as the robber of whom he had been so afraid in his ride. This man had told him he might be able to get the money without confessing that he had followed him, in order to rob and murder him but could get no opportunity.

"Why did you not do it when I got off my horse?" asked the minister in surprise. "I did not then," said the bush-ranger. "There were too many of you." "What do you mean?" asked the minister; "I was quite alone in the room, standing with my head resting against the bush-ranger's side for a long time. You could have killed me then."

"You were not alone," said the bush-ranger. "You were standing as you describe, but there was a man standing on each side of you." "Certainly there had been no other men with the minister in that hour of terror when he was alone," said the bush-ranger. "But it is just possible that God was with him, and that his angels were guarding the robber's eyes, and showing him the danger of his duty, as Elisha's servant's angels were opened to see celestial guardians around his master. But, whatever may be the explanation, God did send his angels to warn away the robber, and by so doing he saved him from a great crime as well as the minister from death."—*The Christian*.

The Accord of Science with the Bible.

It is equally a mistake to go to the Bible for science, or to science for the historical and moral teachings of the Bible. But in each case we can go to the other for confirmatory evidence. In history and morals the Bible is our main witness, while in the realm of natural philosophy science is the main witness. The evidence for the moral teachings of the Bible may be strengthened by the analogy of nature, and as a historical witness the Bible may be cross-questioned to see if its contents conform to the natural conditions of the world. On the other hand, science may be questioned to see if its purported conclusions conform to the plain teachings of the Bible regarding morals and history. In this way I will submit some of the most important portions of Bible history to the cross-questioning which is made possible by scientific investigations.

The Bible most unequivocally makes the work of a personal God. "In the beginning God created the heavens and the earth." To this bold statement, which the philosophers never dared to make, science can make no valid objection, but must be supported by her own positive testimony. The physicists there are no greater names than those of Lord Kelvin, Faraday and Clerk-Maxwell, all of whom are, or were, devout believers in the Bible. Two famous sayings of Clerk-Maxwell voice the sentiments not only of the physicist, but of all profound students of chemistry and physics. After tracing the protean changes of matter down to the ultimate atom, which the chemist deals with all his sci-

entific methods, Clerk-Maxwell affirms that they bear every mark of being "manufactured articles," and, after having traced to its limits every variety of evolutionary theory, he affirmed with the utmost confidence that every one of them must have a God to make it work. Thus are these philosophers brought back to almost the identical opening words of Genesis as the statement of their highest philosophy.

2. The first verse of Genesis is followed by a more detailed statement, indicating that the original creation was followed by an orderly development, progressing from the simpler forms of matter and life to the complex forms which we see at the present time. This involves periods of time, even if one should restrict the meaning of the word "day" to twenty-four hours, which is by no means necessary when one considers the great latitude given to the meaning of the word "day" both in Bible and in general literature. Now it is that most striking fact which cannot be lightly disregarded that the order of the creation brought to light in the first chapter of Genesis is so closely parallel to that which is brought to light by modern science, that even the most carping critics can find but little fault with it; while a large array of our most eminent geologists, like Guyot, Dawson, Dana and Winchell, emphatically declare that the scheme is so perfect as to preclude the idea of its being of human origin.

No inspired man, three thousand years ago, could have hit upon such a scheme, according to so closely as this does with the ripest fruits of modern science. The criticisms of Huxley and others are based upon such small matters, involving such a doubtful interpretation of literary phrases, that they are scarcely worthy of notice. The production of such a scheme, so accordant with the actual facts, by a Jew twenty-five hundred or three thousand years ago, without the aid of Divine inspiration, would be a greater wonder than its production through Divine inspiration.

3. In the story of the flood the Bible indicates a period of instability in the earth's crust such as does not now exist. Hence there has been a strong tendency either to regard the story as entirely unhistorical, or to minimize the event to such an extent that it loses its significance. The Bible says that the flood was largely occasioned by the breaking-up of all the fountains of the great deep, which is a very good geologic phrase for the subsidence of the land. It also affirms that the destruction was so extensive that an ark was necessary to preserve not only Noah and his family, but the species of animals most closely associated with him.

But it is to be noticed, in confirmation of the account, that the dimensions of the ark are scientific in their proportions; its length, breadth and depth being almost exactly the same as those of the latest steamships made to cross the Atlantic. That such correctness of proportions could not have been ignorantly obtained by guesswork is shown by the fact that everybody else who has dealt freely with the subject has destroyed the harmony. The cuneiform tablets make the vessel so broad and high that it would be utterly unseaworthy while Perosus makes it twelve hundred feet broad and Origen claimed that it was one hundred and thirty-five thousand feet long and

three thousand seven hundred and fifty feet wide. What kept the biblical writer from making a fool of himself as these others have done? The simplest answer is, that he confined himself to the facts which had come under his observation.

Returning now to the scientific question of a recent abnormal instability of the earth's crust, such as is implied in the biblical account of the deluge, let me cite as evidence the well-known geological facts that all the high mountain systems of the world belong to the latest geological (the Tertiary) epoch and received their main elevation shortly before the advent of man; while there is abundant evidence that since man came into the world there have been extensive oscillations of level fitted to cause extensive catastrophes beyond anything of which we have had in modern experience.

More and more of these oscillations of land level are seen to connect themselves with the glacial epoch, which came on at the close of the Tertiary period and, continuing until after the advent of man, ended in a series of rapid changes of level affecting a large part of the northern hemisphere. The general public has yet scarcely begun to realize the extent of the tremendous shifting of forces which took place during this epoch. Six million square miles of territory in the northern hemisphere was covered with ice a mile deep, making sixty million cubic miles. This ice was formed by the accumulation of snow which represented water evaporated from the ocean and was sufficient to lower the ocean level two hundred and fifty feet the world over. In weight the ice was twice as great as the whole of the North American continent, amounting to twenty-four thousand million million tons.

Anyone who appreciates what it means to have that amount of weight transferred from the ocean beds to a limited portion of the land surface of the northern hemisphere will have such a sense of the instability of the earth's crust at that time, that Noah's flood will be easily credible from any point of view. The means for its accomplishment will be seen to be so ready at hand that the calamity will make no excessive demands upon our credulity. The means and the end will not be disproportionate. If there is any plasticity to the earth's crust, such a loading and unloading of a portion of it as occurred during the glacial period and at its close is clearly seen to be a cause capable of producing almost any changes in land level.

Still, we do not, by this deductive reasoning, prove the flood. We simply accept the evidence of the Bible, and by this means remove the exaggerated objections to the occurrence of the event which have hindered belief. The Bible narrative is brief and aimed principally at giving the moral effects of the catastrophe. Still the sobriety of the account goes far to establish its genuineness and accordance with fact.

4. In like manner, recent studies into the geology of the Jordan valley go far to confirm in a remarkable degree the biblical account of the destruction of Sodom and Gomorrah and of the crossing of the Jordan by the children of Israel under the leadership of Joshua. In both these accounts it is to be observed that there is remarkable brevity, leading to the ex-

clusion of all superfluous matter and of everything which is out of harmony with physical conditions. One who is familiar with the general tendency of the human mind to enlarge such narratives by the addition of explanatory comments and legendary surmises, cannot read these Bible accounts without being convinced that they are the records of eye-witnesses with which no one has ventured to tamper.

The Jordan valley is a great crack in the earth's surface along which the western edge has slipped down to the extent of four or five thousand feet. This is what the geologists call a "fault," and, all things considered, it is probably the most remarkable of its kind in the world. Along the line of such a fault further movement is likely to continue and be connected with earthquakes which would lead to openings in the depths of the earth. In this case the movements are in an exhausted oil and gas district, the signs of which are abundant, both in the existing rocks and in the large quantities of bitumen or asphalt which are found about Jericho and the Dead Sea.

The description of the destruction of Sodom and Gomorrah fits so perfectly to the explosion and burning of such a combustible reservoir that it could not have been invented, but must be the simple tale of an eye-witness. It is a striking commentary upon the matter-of-fact character of this description that in a recent number of the *National Geographic Magazine* Robert T. Hill, who was sent by the society to Martinique to report upon the recent calamity there, opens his report with the graphic words of this Bible story: "The Lord rained fire and brimstone and the smoke of the country went up as of a furnace."

Thus, in general it may be confidently affirmed that the Bible history is so in accord with the physical conditions involved and is so far from making extravagant demands upon our belief in the miraculous, that its credibility is supported rather than lessened by scientific cross-examination. Space forbids my showing this here, respecting the crossing of the Jordan and of the Red Sea, the experiences of Israel in Egypt and numerous other crucial instances; but all would tend in a similar manner, to confirm the general credibility of Old Testament history. — *G. Wright, in Christian Advocate.*

PUSSY AND THE ELECTRIC WIRES.—The only cats on record as investigators of electrical science have made a deal of trouble for the street railways of New York State, according to the *New York Sun*.

A cat climbed a trolley pole between Buffalo and Lockport, and tried to walk on the feed wire, that brings the power from Niagara Falls. Her tail touched the parallel wire that carried the current back to Niagara Falls. There was a flash that could be seen for miles, as the twenty-four thousand volts of electricity passed through her body, which fell across both wires and didn't drop to the ground.

This short circuited the current and caused a fuse at the Niagara Falls power-house to be burned out. The power was immediately cut off from all the lines running out of the power-house. It was two hours before the cause of the trouble was located and the charred remains of the cat removed from the

wire. In the meantime, almost all the electric railways and street-lighting plants in Western New York were without power.

The next day the pet pussy in the Utica power-house, underterred by the fate of the Lockport cat, short-circuited a fourteen-thousand-volt current, blowing out the fuses on several generators and stopping the trolley cars, until repairs could be made. As this cat was little harmed, it would seem that a cat can stand fourteen thousand volts, but that twenty-four thousand are too much.

Science and Industry.

STRIKES IN TWENTY YEARS PAST.—The report of the United States Commissioner of Labor shows that in the twenty years from 1881 to 1901 there were 22,793 strikes in the United States, involving over 6,000,000 working men and 17,000 establishments. The loss in wages was \$257,800,000, and the employers lost \$122,730,000. The general average was 1,100 strikes a year and \$19,000,000 loss annually. These figures do not include the losses sustained by businesses indirectly affected, or by the general public; neither of which can be estimated.

"HERE sit I, an Englishman, by a sea-coal fire," Dr. Johnson was heard to murmur by James Boswell after their famous "Journey to the Hebrides." The term sea coal arose from the fact that it was once wholly, and is still largely, carried by sea. Graphic descriptions of these grimy coasting collieries may be found in W. Clark Russell's nautical novels. The first discovery of coal in America was made by the missionary priest, Father Hennepin, near what is now Ottawa, Ill., while all the Western territory was still nominally in the possession of France. Nothing came of the discovery, however, nor were mining operations begun until 1813, when five boat loads of flinty coal were floated down the Lehigh and the Schuylkill rivers and sold in Philadelphia for \$21 per ton, the war between Great Britain and the United States having put an end to the importation of Liverpool coal.

The *Baltimore Sun* gives the following description of a simple contrivance to use gas in the ordinary cooking range for heating purposes:

The "converter" consists of a horizontal piece of gas pipe, about eight inches long, with two upright skeleton burners, about four inches high. An iron platform or base supports the pipe. In the horizontal pipe, which can be attached to any gas bracket by a piece of rubber tubing, there are two small holes, through which the gas passes to the burners above. Between these holes and the burner there is an open space to admit of air entering into the gas before it reaches the flame at the top of the upright burner. This gives greater heating power to the gas, which burns with a greenish flame.

The contrivance is designed for use in the firebox of a range, the flame acting directly on the lids. By a stopcock arrangement one of the burners can be cut off if desired.

By tilting the converter so that the blaze plays on the waterback the water in the boiler can be heated in the same time as with a coal fire.

— McCahan, the inventor, said the converter was not a new idea, but had been in use in his establishment for about ten years. The likelihood of a coal famine and the inability of finding substitutes caused him to make the matter public. He claims that both burners going the amount of gas consumed is only twelve cubic feet an hour.

ABOUT WALKING.—An old postman gave down the following rules for walking: "The first place you must go along with your feet pretty far apart. This is one important thing. Most persons walk with their feet close together—very close. That's all right in summer, but in winter it's all wrong. If your feet are close together, nine times out of ten the one that slips will knock the other under you, and down you go. If it doesn't get so thoroughly mixed up with it that your ankles will curl together like grape vines, before you can get them straightened out, you go. If your feet are well apart, as you should be, you have time to think, reflect or get ready before the crash comes, and perhaps save a bone. Another important thing is to land well on the ball of the foot when you walk. If you can't get the ball of your foot down first, bring it down just as soon as you do the heel, anyhow. Come down flatfoot. Every time you slip and fall, if you notice the thing, you will notice it was your heel slipped and not the ball of your foot. It is always the heel that slips. I don't know unless it is that the sole of the shoe, or the broader, gets a firmer hold."

These two rules, if you follow them out fully, will save you the price of a good pair of bottles of arnica. There are some other rules, but they are not so important. One is to keep the body limber as you go along; the legs limber at the knees, too. It is a stiff, dignified sort of a man that goes on, because he holds himself so that he is not prepared to lean quickly one way or the other and save himself.

MEMORIZING SCRIPTURE.—During the terrible persecutions of the Huguenots in the South of France, the persecution flamed against books as well as against men and women. It is an account of a single book burning. One day in 1730, the Intendant of Languedoc, M. de Frismes, escorted by four battalions of troops. On arriving, the principal Catholics were selected and placed as commissaries to watch the houses of the suspected Huguenots. At night, while the inhabitants slept, the troops turned out, and the commissaries picked out the Huguenot houses to be searched. The soldiers entered, the houses were ransacked, and all the books that could be found were taken to the Hotel de Ville. A few days after a great *auto-da-fe* was held. There the Catholic population turned out. There were the four battalions of troops, the gendarmes, the Catholic priest, and the chief dignitaries of their presence all the Huguenot books were destroyed. They were thrown into a pit the usual place of execution, and the learned man set fire to this great mass of Bibles, books, catechisms and sermons. The people laughed, the priests sneered, the multitude cheered."

And this is but a single instance. Stead

gh the long and bloody years of the per-
tion, the Bible-burning went on, together
the slaughter of the saints.

a consequence, Bibles became a scarce
in that ravaged "Church in the Des-
are in this way they offset the scarcity:

by any means, a New Testament had
ed capture and the flame, persons—often
and girls—were put at learning it. And
in some midnight, and in some cave or
ed place among the mountains, the
rch in the Desert" met for its worship,
who had memorized the Scripture recited
nd thus the Scripture was fed on by the
nd saints. We owe no thanks to the Ro-
Church that we are not thus forced to
memorizing of Scripture, but I am sure
lugenot habit is still a good one for any-
though, amid our gracious religious free-
he is not thus forced.—*Wayland Hoyt.*

What State Names Mean.

What's in a name?" asked the poet; yet
names are full of meaning, and contain
rical associations well worth remember-
For example, see what is to be found in
ame of the States:

ine takes its name from the province of
e, in France, and was so called as a com-
nt to Henrietta, the Queen of Charles I.,
was its owner.

w Hampshire took its name from Hamp-
England. New Hampshire was original-
lly Laconia.

rmont is French (Vert mont), signifying
en mountain."

ssachusetts is an Indian word, signifying
ntry about the great hills."

ode Island probably gets its name be-
of its fancied resemblance to the Island
hodes, in the Mediterranean Sea.

he real name of Connecticut is "Quon-eh-
t." It is a Mohican word signifying
g river."

ew York was so named as a compliment
e Duke of York, whose brother Charles
granted him that territory.

ew Jersey was named for Sir George Car-
who at that time was governor of the Isle
rsey, in the British Channel.

nnsylvania, as is generally known, takes
ame from William Penn, the "sylvania"
of it meaning "woods." Literally it is
n's woods."

llaware derives its name from Thomas
e, Lord de la Ware.

Maryland was named in honor of Henrietta
a, Queen of Charles I.

rginia got its name from Queen Elizabeth
e Virgin Queen."

ntucky does not mean "dark and bloody
nd," but is derived from the Indian word
n-tukee," signifying the "land of the
s of the river."

Alabama comes from a Greek word, and sig-
nifies "land of rest."

Louisiana was so named in honor of Louis

ssissippi is a Natchez word that means
ree of waters."

ree of our Indian interpretations have
e given to the word Arkansas, the best be-
cause it signifies "smoke waters," the
ch prefix "ark" meaning "bow."

ennessee, according to some writers, is

from Tenasea, an Indian chief; others have it
that it means "river of the big bend."

Ohio has several meanings fitted to it. Some
say that it is a Sawanee word, meaning "the
beautiful river." Others refer to the Wyand-
dote word, "Obeza," which signifies "some-
thing great."

Indiana means "land of Indians."

Illinois is supposed to be derived from an
Indian word which was intended to refer to a
particular class of men.

Wisconsin is an Indian word, meaning "wild
rushing waters."

Michigan is an Indian word, meaning "great
lake."

The name of Kansas is based on the same as
that of Arkansas.

Iowa is named from an Indian tribe—the
Kiowas. The Kiowas were so called by the
Illinois Indians because they were "across the
river."

The name of California is a matter of much
dispute. Some writers say that it first ap-
peared in a Spanish romance of 1530, the he-
roine being an Amazonian named "California."

Colorado is a Spanish word, applied to that
portion of the Rocky Mountains on account of
its many colored peaks.

Nebraska means "shallow waters."

Nevada is a Spanish word, signifying "snow
covered mountains."

Georgia had its name bestowed when it was
a colony in honor of George II.

The Spanish missionaries of 1524 called
the country now known as Texas "Mictexpah,"
and the people "Mictecas." From the last
word the name of Texas is supposed to have
been derived.

Oregon is a Spanish word, signifying "value
of wild time."

Dakota means "leagued," or "allied tribes."

Wyoming is the Indian word for "big
plains."

Washington gets its name from our first
president.

Montana means mountains.

Idaho is a name that has never been satis-
factorily accounted for.—*Morning Star.*

A Carpenter's Shop in Nazareth.

The little town of Nazareth has now three
carpenters, whose workshops join one another.
They are very small, and only from four to six
metres wide. The soil is not paved, and the
walls which support a flat roof, are roughcast.
As there is no light in these little shops, save
from the door, the men work on its thresh-
old or else in the street. Sitting on the ground
they make use of their feet, which they draw
close together, to serve as a vise to fix the
pieces of wood which they polish; or branch-
es of elm bent in a crook, and forming very
light carts, enough to transport small ob-
jects; or primitive yokes with four little per-
pendicular pieces, which they can put over the
heads of the beasts employed in this labor.
The tools are simple enough. Two trunks of
caroub tree or sycamore placed on the floor
make their bench. Certainly it was in a poor
little workshop of this kind that Jesus at
twelve years old, began to work.

The house of a workman in these countries
is always distinct from his workshop. A house
in Nazareth, where the workman comes at mid-
day to take his meal and return at night to

sleep, does not have a little dome like those of
Jerusalem and other parts of Syria, but has a
flat roof forming a terrace. It is, in fact,
built on the old Jewish plan. One enters by a
little courtyard, where provisions or animals
are kept; then mounting a little staircase or
gallery, you come to the single room where the
family eat and sleep, and carry on all domestic
occupations. The traditional addition to
this department is the terrace, which is reached
by a few steps, and on this flat roof of glazed
mortar the family meet to breathe the fresh
air in the evening and to spend their leisure
hours together; while in the day time the wo-
men wash and dry their linen on the terrace,
and often place upon it the grain they have
collected during the dry season.

The house in which we are about to enter is
that of a carpenter. The door is open which
is necessary to give light to the large room.
There is a little window to give air, but not
much else. At first the darkness seems com-
plete!

What strikes one most, in the singular in-
terior of this house, is the very little required
by man unless brought into contact with mod-
ern civilization. First, there are neither beds,
nor tables, nor chairs. Beds are replaced by
thick mats, which are rolled up in the morn-
ing and put away. The table, which is re-
moved when the meal is over, is sometimes a
barrel, but if not, a round bit of wood on a leg
eight inches high, on which is laid a disc of
copper or of tin and upon which is placed the
rice or vegetables for the family meal. Seats
are needless, as whether they are eating or
working, or talking, they squat on the mats
which occupy the end of the room.—*The Child-
ren of Nazareth.*

WHAT DO YOU KNOW?—Here are some ques-
tions about things you've seen every day and
all your life. If you are a wonder you may
possibly answer one or two of the queries off-
hand. Otherwise not.

What are the exact words on a 2-cent
stamp, and in which direction is the face on it
turned?

In which direction is the face turned on a
cent? On a quarter? On a dime?

How many toes has a cat on each fore foot?
On each hind foot?

Which way does the crescent moon turn?
To the right or left?

What color are your employer's eyes? The
eyes of the man at the next desk?

Write down, offhand, the figures on the
face of your watch. The odds are that you
will make at least two mistakes in doing this.

Your watch has some words written or
printed on its face. You have seen these
words a thousand times. Write them out cor-
rectly. Few can do this. Also, what is the
number in the case of your watch?

How many teeth have you?

What are the words on a policeman's shield?
How many buttons has the vest or shirt
waist you are wearing?

How many stairs are there in the first flight
at your house?

How many steps lead from the street to the
front door of your house or flat?

What is the name, signed in fac-simile, on
any \$1, \$2, \$5 or \$10 bill you ever saw?
You've read dozens of these names. Can you
remember one?—*Washington Times.*

"DOING SUMS."—Many of us remember the "sums" which we were set to "do" in the early days of school life. Some of the examples had the answers affixed, and we would try to bring out, by some means, corresponding results. It was not always easy, and sometimes it was impossible. But, alas! oftentimes the answers were not given, and that was the case with the most difficult problems in the entire list. We worked at them our very best, only to be told at last that we were wrong, and must try them again. Perhaps we knew that the teacher had a "key," in which all these knotty questions were explained in full, and "worked out" to the last figure. If we could only get a peep into that key, it seemed to us that our happiness would be complete. But no; we must work in the dark, guided only by rules that were very ambiguous, and by principles that had little meaning to us.

What a parable of life! How often, in the storm and stress of life's conflict, we have thought of those far-off school days, and of the "sum" without any answers! If we only had a "key," that somebody had worked out who knew all the problems from beginning to end, somebody who actually made the problems for our training, and therefore thoroughly understood them before hand! This very day there have doubtless come to us questions, very perplexing and seemingly insoluble, that we must find some answer for, uncertain whether they are right or wrong. O for a "key" of life! The whole of conduct and character, and civilization itself, seems to consist in solving problems.

The Master seems to have something like this in mind when he tells us "to count the cost," and he suggests that there is a way whereby life's puzzling questions may be turned to the highest advantage, and the true answers found in Him, who prepared the problems, for a purpose and will lead to the right solution.—*Examiner*.

THE PRAYER LIFE.—Prayer is a life, rather than a series of isolated acts. It is an attitude of the soul, a temper, that at times must express itself in words, but also time and again is best heard when it is silent. It is communion, and for communion speech, is unnecessary. It is often deepest and most precious when nothing is said. In fact, its highest preciousness is when such perfect understanding exists between God and the soul that silence is most eloquent speech.

Prayer is the outgoing of the soul toward God in everything it does and says. It is the home-life of the soul, of which the heavenly Father is both the source, the centre and the goal. Its eloquence is that of deeds and its breath is aspiration. It is as unceasing as breathing, and like breathing, it is an inhalation of the pure air of heaven.

Nothing in life is foreign to prayer. Everything, both small and great, are swept within its sacred circle. The centre is the soul's outgoing toward God. The circumference includes the remotest province of the individual life. Not more truly does a man live and act for his home and family than the prayer-filled soul lives for his heavenly home. Everything feeds the fires of devotion, and from them a warm glow irradiates his life.

We know a man who has made it the habit

of his life to pause in his day's work and for a moment or two give his mind and heart a chance to live with his wife and little ones at home. It quickens his soul. It makes arduous tasks light and consecrates his doings to a noble use. In just such a way the prayer-filled soul gives itself a chance now and again to live the home-life of God. . . . The prayer life is the praise life, made sacred by the intimacy of the soul with Him who calls us "not servants, but friends," and makes known to us all things He has heard of the Father.—*Latet Paper*.

VULGAR FRACTIONS.—If you will not amuse nor inform, nor help anybody, you will not amuse, nor better, nor help yourselves; you will sink into a state in which you can neither show, nor feel, nor see anything, but that one is to two as three is to six. And in that state what shall we call ourselves? Men? I think not. The right name for us would be numerators and denominators. Vulgar Fractions.

May we not accept this great principle—that, as our bodies, to be in health, must be generally exercised, so our minds, to be in health, must be generally cultivated? You would not call a man healthy who had strong arms but was a paralytic in his feet; nor one who could walk well but had no use of his hands; nor one who could see well if he could not hear. You would not voluntarily reduce your bodies to any such partially developed state. Much more, then, you would not, if you could help it, reduce your minds to it. Now, your minds are endowed with a vast number of gifts of totally different uses—limbs of minds, as it were, which, if you don't exercise, you cripple. One is curiosity; that is a gift, a capacity of pleasure in knowing; which if you destroy you make yourselves cold and dull. Another is sympathy; the power of sharing in the feelings of living creatures; which if you destroy, you make yourselves hard and cruel.

Another of your limbs of mind is admiration; the power of enjoying beauty or ingenuity; which if you destroy you make yourselves base and irreverent. Another is wit; or the power of playing with the lights on the many sides of truth; which if you destroy, you make yourselves gloomy, less useful and cheering to others than you might be. So that in choosing your way of work it should be your aim, as far as possible, to bring out all these faculties, as far as they exist in you; not one merely, nor another, but all of them. And the way to bring them out, is simply to concern yourselves attentively with the subject of each faculty. To cultivate sympathy you must be among living creatures, and thinking about them; and to cultivate admiration, you must be among beautiful things and looking at them.—*John Ruskin*.

If we let the love of unity hush the voice of truth, we shall drive out true religion. We may put off for awhile the day of conflict, but we shall thereby accelerate the triumph of a sleepless, skillful system of religious error. The silent inaction under which an unbalanced sentiment would hush all Christian boldness and zeal for the truth, is the very mood for the successful propagation of wrong doctrines and practices, which deprecates nothing more than controversy, and desires nothing more

than to be let alone to do its own work of silence under the dim shades and hushed atmosphere of wide-spread mental bondage.

There is in every true Christian heart a depth below which the love of unity ought to strike its root, and another depth where the love of truth should be found growing alone, deeper down than any other sentiment, because identical with the love of Him who is truth itself. And for the sake of this we should be willing to give up life itself, to be driven into solitary orthodoxy, beyond the bounds of any outward fellowship or communion. May a spiritual baptism of gentle and zeal united come on us in its fulness that we may neither be bitter against a self-opponent, nor abashed before a host; neither wounding charity by our harshness, nor betraying the gospel by our timidity; content earnestly for the faith, without spiritual pride or worldly prudence, and let us then draw back from our labors, even at the sacrifice of ease, property, or life itself.—*Stone*.

THE number of books in the world, according to the conservative estimate of *The New York Times*, is 3,200,000,000, or two billion per capita for the entire race. This is an astonishing record, and shows the fertility of the human brain and the vast variety of subjects, literary, scientific, political, social, moral and religious, that evokes man's thought and consideration. It is said the yearly output of books in different lands is about 1,000,000.

THE poor that are naked shall be clothed, and the soul that will strip itself of all its desires, likings, and dislikings, God will clothe with his purity, his own joy, and his own crown.

Notes from Others.

It will be a glad day both for labor and capitalists the *Morning Star*, when the principles of Christianity can be applied to the conduct of great enterprises, or even to the lesser transactions of the country store, for that matter.

Great good is said to have been done in prison State reformatories, hospitals, poorhouses, asylums, lumber camps and many other places all over the United States, by the Good Literature Exchange of Chicago.

Of late years we fancy that the term "spirituality" is much more frequently used in our pulpits than it used to be. This concession is much in itself, yet we are profoundly glad of it, and we trust our observation has been correct. We look on this change for the better, as a "shadow of good things to come." The frequent mention of spirituality in the pulpit proves to us that the current of religious thought is tending in this direction.—*Christian Instructor*.

HOW DOES THE BIBLE SOCIETY HELP ALL FOREIGN MISSIONS?—The British and Foreign Bible Society's Lists of Versions now contains complete Bibles in one hundred languages; complete Testaments in nearly one hundred others; a portion of Scripture in more than one hundred fifty others. To print these, over fifty different sets of characters are required. More than one hundred languages have been added to the Society during the reign of Queen Victoria.

In type for the blind, the Society has helped provide Scriptures in nearly thirty languages.

The Bible Society becomes more conspicuous

year as the indispensable storehouse and from which all British Foreign Missions draw their necessary munitions of war. And supplies them with no grudging hand. As Scriptures for the foreign field are granted in "missionary terms," i. e., the books needed are not free, and carriage paid, to the missionaries who remit any proceeds from copies sold defraying expenses of circulation. At best, a small fraction of what the Society expends in preparation and delivery of these missionaryaries can ever come back to it as the result of sales.

provided thousands of Gospels and Testaments for British reinforcements embarking for the Cape. In Africa many thousands of Scriptures in English, etc., have been supplied, irrespective of race or party, to the sick, wounded, refugees in hospitals and camps; to Boer prisoners at the Cape, at St. Helena, and in India and elsewhere. Only, each fresh advance in the mission field evokes an imperious demand on the Bible Society. No genuine application for a grant of Scriptures has ever been denied. No Missionary's request to print and publish a properly-illustrated version of the Scriptures in a new language has ever been refused.

The Society employs in the East, through some of its different missionary organizations, over six hundred native Christian Biblewomen. The total for last year exceeded three thousand eight hundred.

These Biblewomen are not mere vendors of books; but they are living epistles themselves of which they sell. Themselves enlightened with pure truth, they are able to enter into the hearts of men and able to meet the questions of necessities and the sins and the sorrows due to whom they sell the Scriptures."—R.

In 1804 the Society has circulated altogether thirty thousand short of one hundred and fifty million copies of Scripture, at a total cost of thirteen million pounds.

OF LIVING.—Hugh Peters, an Englisher of the seventeenth century, left as a legacy to his daughter, in the year 1660, some rules such as "Whosoever would live long and blessed, let him observe these following rules, by which he shall obtain that which he desireth." 1. Thy Thoughts be Divine, awful, godly; let thy talk be little, honest, true; let thy Works be holy, holy, charitable; let thy Manners be courteous, cheerful; let thy Diet be temperate, frugal; let thy Apparel be sober, comely; let thy will be confident, obedient; let thy Sleep be moderate, quiet, seasonable; thy Prayers be short, devout, often, fervent; thy Recreation be lawful, brief, seldom; let thy end be of death, punishment, glory."

The London Missionary Society will soon publish its "Pilgrim's Progress" in the Matebele (Central African) language.

There are forty-six distinct and separate Protestant churches in the German empire. These stand in no organized or official relation to each other, and they cooperate in no

WILLIAM ASHMORE of Swatow, China, declared that the heathenism in Asia to-day is being freed by the philosophy, the science, and—of all—the scepticism of the West.

PROFESSOR WILLIAM JAMES of Harvard University is considered the foremost psychologist of the United States, has been making a study of religious experiences. The results of his investigations have been highly commended by men of opposite schools of religious thought.

The Buddhists of Japan are taking active measures to counteract the influence which the Young Men's Christian Association in that country is exerting among its young men.

The Fiji Islands contributed last year \$25,000 to foreign missions. The first Wesleyan missionaries went to these then Cannibal Islands in 1835, facing martyrdom.

The Pacific declares the International court of arbitration, provided for by the Conference of the Hague, to be "the expression of the world's best thought and judgment. It is the morning star of a new day." The latter day glory is distinctly brought nearer, as looked at through this glass.

It is probable that there never has been so large a number of scientists of ability engaged in the search for the Supreme Being as in the century which has just closed. But they have accomplished nothing. St. Paul states that the failure to find him in his day was because it was contrary to the Divine will to reveal himself to the intellect.—E. H. Rogers.

E. H. JONES, a missionary at Sendai, Japan, writes a graphic letter to the Baptist Missionary Magazine concerning his work in that city—in which is one of the six colleges of the empire and various private and Government preparatory schools—in which he says: "Those who think the non-Christian nations are anxiously awaiting the coming of the Christian evangelist and that they will gladly accept the gospel are not well informed. All our fruit here is hand-picked.

PROFAT CHUNDER MOZOOMDAR intends, he says, to spend the remainder of his days in quiet seclusion on the Himalaya Mountains. "My thirst for the higher life is growing so unquenchable that I need the time and the grace to re-examine and purify and reform every part of my existence. The spirit of God promises me that grace, if I am alone." is one of the many reasons that Mozoomdar gives for retiring from the world.

ZION'S HERALD has the following: The worst of all heresies is the heresy of the heart, the most perilous of skepticism is the atheism of the affections.

The Chinese are now making a translation of the Bible for themselves. This work is in progress under the imperial sanction, and is being performed by two of the first scholars of the empire.

ONE of the most interesting chapters of Dr. Cuyler's autobiography just published under the title of "Recollections of a Long Life," is his section devoted to Great Britain sixty years ago. As a boy of twenty, fresh from Princeton, he crossed the ocean in an old packet. He traveled solely for recreation, but his energy and interest in the great writers made him, as he has said, a "lion hunter." He visited Wordsworth at Rydal Mount Cottage, the land of Burns, Joanna Baillie, then called the "female Shakespeare," Carlyle in his garret at Chelsea, Dickens and many others. Dr. Cuyler's remarkable memory of the conversations with these famous persons links the great names of the Victorian era more closely with the present than probably any living American could do. Dr. Cuyler was but a boy—as Carlyle said when he first received him—"You are a very young man," in his broadest Scotch. In America, too, Irving and Whittier were well known to Dr. Cuyler, as were also Greeley and other famous editors, and practically all of the great preachers, hymn writers, temperance workers and statesmen were close friends and sympathetic workers with the vigorous Brooklyn clergyman.

A YOUNG converted Jewess is said to have spent a good deal of time reading the church histories,

in order to find out at what time the Christians ceased to become like Christ. This is caustic criticism. But who shall say that it is not well merited and to the point. It is an alarming truth that so many of the professed Christians are anything but like their Master. And if you call their attention to it, they flare up and would have you understand that they are old Christians, and that they know their business from A to Z.—Exchange.

The denomination rejoicing in the name of Disciples of Christ was to hold their annual convention at Omaha last week. This body is better known as Campbellites. They are a very vigorous body of people, who have not been afraid to meet the world in debate on every occasion. In season and out of season, they are ready to stand up for their two items of creed, viz., profession of belief in the Bible and immersion. These two things are indispensable to their membership. Each one may interpret the Bible as he pleases and hold what doctrines he may choose, and still enjoy their fellowship. It is evident that these easy terms are in their nature agreeable to human nature, as requiring no adherence to the particular truths of the gospel. As a consequence this body, though comparatively recent in origin, has met with a rapid growth. Alexander Campbell, the founder of this sect, was a son of a United Presbyterian minister, in the Associate branch. He was educated with a view to the ministry in that branch of the church. But owing to a change of views on baptism his father was suspended and the result was the founding of this at present large sect.—*Christian Instructor*.

TO THE FRIEND:—General Booth of the Salvation Army, has arrived on this side of the Atlantic and will doubtless receive a cordial welcome. His methods may not commend themselves to members of our Society in all particulars, but it is good to remember that he is the largest exponent of non-sacramentalism to be found in our day. He is at the head of millions, and these are not within hail of either water baptism or bread and wine communion. "By whom shall Jacob arise, for he is small?" H. T. M.

BEAMSVILLE, Ont.

Items Concerning the Society.

WESTERN YEARLY MEETING convened with the representative Meeting at ten o'clock on Seventh-day morning the 4th instant and Meeting of Ministers and Elders at two o'clock in the afternoon. The Meeting for Worship on First-day was well attended, though not as large as usual, on account of the inclement weather. They were favored and satisfactory meetings. Meeting for Discipline commenced on Second-day morning. We had the very acceptable company of Ella Newlin, a minister from Iowa, and Susanna Ramsay, an elder and companion of Ella Newlin and some other Friends without credentials, who were very acceptably with us.

We received and read Epistles from all the Yearly Meetings with which we correspond except one. The reading of them was very satisfactory and encouraging. On Third-day morning Albert Maxwell was reappointed Clerk and Joseph Allen for assistant. A very satisfactory letter was read from our dear friend Thomas H. Whitson. Then the consideration of the state of Society was entered upon, by reading of the Queries and Answers to them, which showed that there were many deficiencies amongst us, which was a cause of sorrow to many concerned Friends, and much wholesome counsel and advice was handed forth.

On Fourth-day two public meetings for worship were held, which were much favored seasons and good order seemed to prevail throughout.

On Fifth-day we had reports of standing committees and Epistles were read, one to each of the Yearly Meetings with which we correspond, and

then we had a very solemn conclusion; and it seemed that we could all say, "It has been good for me that I have been here."

Sarah Halleck, a minister from Western Yery Meeting, accompanied by Frelove Pyle, from Poplar Ridge, has been visiting several meetings in Philadelphia and its vicinity. Harvey H. Haight, from Canada, on his return from Ohio Yery Meeting, is reported also to have had some service in this vicinity.

The Nantucket home of the late Mary Mitchell, widow of Peleg Mitchell, which strangers have been accustomed in past summers to visit at the birthplace of the astronomer, Maria Mitchell, daughter of William, is in prospect of being purchased by the "Nantucket Maria Mitchell Association," to be used as an astronomical museum. Her brother Henry donates to the association her scientific library. It was in this house, now one hundred and twelve years old, that William Mitchell reared the chronometer for the great Nantucket whaling fleet, a task which necessitated observations every day, when possible, during the year. Aaron Mitchell bought it eighty-six years ago, and sold it in 1818 to his cousin William, who sold it in 1837 to his brother, Peleg Mitchell, whose family has ever since owned and occupied it. In the yard of this house Maria Mitchell made her first astronomical observations, which pursued steadily in after years, made her distinguished, bringing to her from the king of Denmark a gold medal, which she showed to the present writer fifty-three years ago, and placing her in the professorship of astronomy at Vassar College when that institution was first opened; and at Vassar she and her beloved father passed the remainder of their days, adorning their membership in the Society of Friends.

WHAT IS IN A NAME?

To the Editor of the *British Friend*:—With all the changes and developments we are watching in the Society of Friends, one sometimes wonders how far the old name belongs to the new thing.

The name "Quakers" is so associated with the bitterness and scorn encountered by the first members of the Society, that one would gladly give it the go-by. The name "Friends" is supposed to have stood in the early days for "Friends of Truth," or "Friends of Light." May we not now leave behind these abstractions, and boldly date back to John xv: 15?

Anyone who has tried to take the place of a "hired servant" in the Father's house, and to justify his position by work done, would, I think, feel the force of that gentle message, and gladly take it for his motto and his standard, "Henceforth I call you not servants, for the servant knoweth not what his lord doeth; but I have called you 'Friends,' for all things that I have heard of my Father I have made known unto you." S. P.

SUMMARY OF EVENTS.

UNITED STATES.—After a conference at Washington on the 14th inst. in which President Roosevelt, J. Pierpont Morgan, Robert S. Bacon and Secretary Root participated, a basis of settlement of the coal strike was reached, by which the coal operators agreed to the appointment of a commission to be appointed by the President of the United States, to whom shall be referred all questions at issue between the companies and their own employes, whether they belong to a union or not, and the decision of the commission shall be accepted by the operators.

After a conference with President Root and some other conference with representatives of the coal operators, President Roosevelt appointed the members of the Commission to inquire into, consider and pass upon all questions at issue between the operators and miners in the anthracite coal fields. The Commission consists of six members, and includes George Gray, of Delaware, a judge of the United States Court. A convention of the Miners' Union which met on the 24th to consider the proposition to refer these matters to a Commission, it is expected will agree to it.

The loss to miners in wages by the strike is estimated at \$27,400,000. The total amount of relief funds received by the men on strike is placed at \$3,235,000.

It is estimated that 30,000 men have left the hard coal region since the strike began.

In a recent lecture upon the tablets in cuneiform characters lately discovered in Babylonia Professor Hilprecht said: "Hitherto the whole history of the time prior to 3000 years ago has been regarded as largely mythical; but only a moment ago we said that, in these tablets, Israel's old name had arisen from the dead to testify to the truth of the Old Testament Scriptures. 'These tablets,' he said, 'show the daily life of the people, their manufactures, manner of households, methods of training, their irrigating and cultivating systems, their customs of marriage and adopting children, and vividly bring before us life as it was in the days of Belshazzar, Nebuchadnezzar, Cyrus, Darius, Sardanapalus, and carries us back thousands of years before the Christian era.'

A recent decision has been made in the Court of Appeals in Washington in a case in which it was sought to overrule the action of an Episcopal ecclesiastical body in expelling a member. The Court of Appeals held that the ecclesiastical court had jurisdiction over the appellant and that the temporal courts had no authority to intervene unless the case had jurisdiction.

The annual report of the Commissioner of Education shows that the grand total of pupils in schools, elementary, secondary and higher, both public and private, in the United States for the year ended Sixth Month 30, 1901, was 17,299,230, an increase of 278,520 pupils over the previous year. The average attendance of each pupil for the entire number enrolled was sixty-two days for the year, an increase of twenty-four days over the previous year.

During the year ending Sixth Month 30, 1902, 648,743 immigrants arrived in this country, more than one-third of whom were unable to read or write.

Smallpox appears to have almost entirely disappeared in the United States, excepting in two or three places. One of these is Cleveland, Ohio, where, for the three months ending Ninth Month 30, there were 532 cases and 73 deaths. The chief of the Cleveland Board of Health in Fourth Month last stated that he had entirely eradicated smallpox in that city by fumigation and other sanitary means without a resort to vaccination.

A despatch from Tokyo, Kans., says that on account of the difficulty of getting hired help for the kitchen in all of the large cities, a movement has been made to import 10,000 Chinese servants from California. It is also stated that 2000 men to cut up the great corn crop into fodder are needed. A heavy apple crop may suffer for lack of pickers.

John P. Brown, secretary and treasurer of the International Society of Arboriculture, has contracted for the planting of 25,000 catalpa trees in Southern Illinois. The growing of these trees is for the purpose of supplying telegraph poles, and the Society has the contract with twenty different railroads to plant similar orchards. The Illinois Central Railway Company has arranged to plant 200,000 trees in different parts of Louisiana.

The President has directed that the army be reduced from 55,000 to 59,600 men.

The growth in the production of rice in Louisiana and Texas is very great. In 1890 the output was 75,753,856 pounds in Louisiana, and 17,919,233 pounds in Texas.

"Rarely, if ever," it is said, "has there been such a superabundance of fruit as now abounds in the New England orchards. In some localities fine apples may be had for the picking, and an offer of half a dollar a barrel for the fruit on the tree is eagerly accepted."

FOREIGN.—In a recent discussion in the French Chamber of Deputies, the Premier Combes said in reference to the recent enforcement of the law closing the schools which were not authorized by the Government: "We have reached a point in our history, the country would perish if we yielded to the congregations. We wish to arrest the monastic invasion, and depend on the support of the Chamber." The action of the Government was sustained by the Deputies.

The Paris correspondent of the *Times* says that several members of the Society for the Prevention of Cruelty to Animals having asked the Government to prevent the use of animals in the circus, the Government has declined to interfere. The Premier took this attitude on the ground that the present state of legislation in regard to cruelty to animals does not warrant action on the part of the Government.

It has been stated that thirty-five years ago there were about 2000 Protestant Christians in China. Their number has lately been estimated at 1,000,000.

According to the census of 1901, the total number of persons living in the administrative county of London was 4,536,541, showing an increase of 308,324, or 7.28 per

cent, on the number enumerated in 1891. The length of public highways maintained by the local authorities in the county of London was estimated fewer than 2017½ miles.

The International Arbitration Court sitting at The Hague in the Pius Fund case has decided in favor of the claims of the United States and that Mexico should pay the United States \$1,420,682.67 in Mexican currency. The decision of the court was unanimous.

The outbreak of eruptions from the volcano St. Pierre on the island of St. Vincent occurred on the 15th inst. The break was accompanied by an incessant and deafening cannonading. There were incandescent clouds, and the ground beneath was ejected. After several hours the eruptions gradually decreased, but the noise of the boiling water was still audible in the districts near the volcano. Rain came and fell heavily at some points, the sand falling deep, the depth increasing towards the volcanic cone, where there were showers of large pebbles and cinders.

The United States Department of Agriculture, in a survey of the crops of the world shows that a cool summer damaged grain in a large part of Europe.

It is estimated that the Dominion of Canada is in a position of sustaining at least 750,000 people. The output of briquettes in coal producing regions of the Continental Europe is estimated at more than 500,000 tons annually. Coal dust mixed with a 7 per cent portion of lime makes the ideal briquette. It is as hard as briquettes, which will answer every purpose of anthracite coal, and which have many advantages not possessed by the coal, can be turned out at a profit for \$3 a ton.

NOTICES.

WESTWON BOARDING SCHOOL.—For convenience of persons coming to Westwton School, the stage will be trains leaving Philadelphia 7.16 and 8.18 A. M., at 2.20 and 4.32 P. M. Other trains are met when regular Stage fare, 15 cents; after 7.30 P. M., 25 cents each. To reach the school by telegraph, use West Chester, Phone 114x.

EDWARD G. SMEDLEY, Secy.

The sub-committees set apart for religious work within the limits of Calm and the Western Quaker Meetings, from the committee of the Yearly Meeting propose holding a Meeting for Divine Worship in Friends' Meeting-house, at Ericldon, on First-day, the 23rd inst., at 10 o'clock, and in the evening of the same day at 7.15 in the Methodist place of worship in Coatesville. It is hoped that Friends, especially, in these places named, and all others are cordially invited to favor the work, the company and unite with them in exercising the spirit that the meetings may be held to the honor of Christ.

Bible Association of Friends in America.

The ANNUAL MEETING OF THE CORPORATION will be held in the Lecture Room of Friends' Select School, N. 19th St., N. 16th Street, on Fourth-day, Eleventh Month 1902, at 8 o'clock P. M. Friends generally are invited to attend.

WILLIAM T. ELKINSON, Secy.

DIED, at the home of his parents, on the nineteenth of Seventh Month, 1902, DAYTON J. MAXWELL, son of Mr. and Mrs. H. Maxwell, in the forty-fourth year of his age, a member of Plainfield Monthly Meeting of Friends, Indiana. By a life of piety from his early youth he won the esteem of all. He was concerned for the prosperity of Truth and the preservation of those who loved it; and his earnest thought and enlightening suggestions were often material for devout reflection. His return during a lingering illness leave abundant assurance of preparation for the change.

He was, at her home, Beethlewood, Camden Co., N. Jersey, Ninth Month 29th, 1902, CAROLINE WOOD RACON, wife of Josiah Bacon, aged sixty-seven years; a beloved member of Haddonfield Monthly Meeting of Friends. The devoted wife and loving mother having served that by a life of usefulness here on earth, we humbly trust and fully believe, has entered into that rest prepared for the people of God. Her bright, cheerful disposition, her unselfish Christian life, was a loving example to her own household. "Blessed are the dead which sleep in the Lord from henceforth; yea, said the Spirit that they may rest from their labors, and their works follow them."

—, at the residence of her mother, Debo, Chester, Pa., on the twenty-ninth of Ninth Month, 1902, DEBORAH SMEDLEY, in the twenty-first year of her age; a member of Birmingham Monthly and Chester Particular Meeting of Friends.

Praying in the Language of Conduct.

My Friend, who was passing where a woman was sinking upon her knees in prayer to scrub a floor, said to her: "Well, the faithful work is prayer, in the doing of which might as well kneel."

At himself for the moment taking in the scope of the impromptu words, and she began brightening up under them as one above their literal sense, he was moved after to contemplate the language as unto him for his own, if not for another's.

It soon occurred to him that the good remembrancer had, perhaps, given a glimpse of Martin Luther's words: "*Bene studiuisse orasse*," which are oftener quoted as a stimulus to students than to any other class, with this interpretation: "To study well, pray well." But if Luther intended his words in its classical sense, he did not confine language to study, but embraced every class of workers as with the language, "To be right-tuated in a devoted zeal for duty, is of true spirit of prayer." And see 2 Tim. ii: 15.

To observe the injunction, "Whatsoever they find to do, do it with thy might, as unto the Lord," is surely to observe the spiritual mode of prayer unto Him. In a sense of daily duty as being the Lord's work and as in his sight, it will be done prayerfully. It will be done upon the knees of submission and devotion, and with the secret shining of eyes that are looking unto Him for help and with hands suppliant in terms of faithful work,—not with eye-service as to pleasers, but doing the will of God from the heart.

Which may have been the view of the poet who said, "Oh prayer and action, ye are one." What are the faithful actions which

speak louder to heaven than words, but a rendering unto God of a measure of that life which came from Him, the Giver, and is expressed through our hands in submissive prayers of practice? As our right attitude of spirit is to "pray without ceasing," and daily toil must coincide with much of this time of prayer, to do our work with a heart uplifted to Him, puts work into terms of prayer, and prayer into terms of work.

Yes, in the doing of all right work "we might as well kneel,"—no other posture of spirit is safe but that of watching and praying. Therein we could not long be doing wrong work. How often while the inward man is kneeling, does the outward man find himself strengthened to work in good heart,—to "run and not be weary, to walk and not faint!"

The inconsistency of prayer without work is apparent. Many words are offered that our Father will keep us in the practice of certain virtues, and we are loud preachers of righteousness or of holiness to ourselves on our outward knees, and then go away unconcerned to keep our prayers sincere,—not thinking it worth while to try to be the very men and women we profess to pray that we might be. The work is his, but there is something for us to do in proving practically that we mean what we said,—that we think our prayers worth answering enough, as it were, to be helping Him to answer them. The principle is true, that we need to go to meet Him at least part way, and prove our faith by our works, or try to stretch forth the withered hand in faith, if we wish to find it true that "the Lord helps them that help themselves." So faithfulness must be the "amen" to our prayers. If we fail to supplement them with the amen of practice and earnest conformity, what if He should take our prayers at our own valuation of them?

It is trusted that nothing in the above conflicts, with Isaac Pennington's statement on Prayer, sent to us by a valued English friend, in a concern lest one of our writers had treated Prayer for the church "as though Prayer is at our own will or in our own power, or command."

Prayer is the breath of the living child to the Father of life in that spirit which quickened it, which giveth it the right

sense of its wants and suitable cries proportionable to its state in the proper season thereof. So that prayer is wholly out of the will of the creature, wholly out of the time of the creature, wholly out of the power of the creature, in the Spirit of the Father who is the fountain of life, and giveth forth breathings of life to his child at his pleasure.

The Institute for Colored Youth.

The opening of the Industrial Department of the Institute for Colored Youth during the present (Tenth) month has resulted in large classes in all the industries, with the exception of cooking and millinery. Not only are the classes large, but the work has been entered upon with much zest. The Board of Managers accept this as a good token for the race and feel assured that there is a definite need for this line of work in the city.

The work in academic lines pursued without interruption for more than thirty years past, has been suspended for the present year. The advance in public school education, especially in the direction of normal training in the great school at Thirteenth and Spring Garden streets has so changed conditions that the Board found their efforts to train teachers paralleled by the public system, with the balance as regards equipment and staff and opportunity for practice quite against the Institute. In other words the ambitious colored youth could get more out of the public system than out of the Institute. Reasons were not wanting even in the face of these facts to draw a large patronage to us, but it is a serious question whether it is right to screen colored children from social conditions that are to be overcome only as they are bravely faced.

At the same time a loud call, voiced by Booker T. Washington and his associates, for a teacher of a new type has claimed the attention of the Board. This is not a teacher in industrial lines exclusively, as is often represented. Not a little indignation is afloat at what is said to be the denial of liberal culture to the Negro under the new systems of education. The recent article by Dr. DuBois put this thought with much eloquence, but probably fails to make clear the type of training intended by Tuskegee and similar efforts. In saying the Negro should be trained as an industrial factor in society, we are only saying that this is an industrial age and the call for black and white is to conform education to meet the needs of the age. A right relation between intelligence and labor is needed for every race and in every country. It forms the basis of happiness under the Divine blessing in human society. The teacher therefore who can train pupils into this relation is needed everywhere and the whole educational system is getting recast to supply the need.

What does this recasting mean as regards

the Institute for Colored Youth? Much in many ways, but some points are fundamental and may be briefly mentioned as follows:—

Candidates for this special training should have the advantage of good High School courses as a preparation for entrance. Educators must be educated.

The special training should include a suitable home environment, with an opportunity for practice in several industries, especially in farming and in all home economies.

The style of living should be simple and practical, and demonstrate the essentials of happy home life and the possibilities of self-help and thrift.

The theoretical training should be scientific and vigorous. A teacher who is a mere formalist can have no place under the new order.

All this means for the Institute for Colored Youth a revised administration, a new course of study and a change of site. Fortunately the first step is inaugurated in securing the man that Booker Washington has pointed out as best qualified to administer such a project. Naturally he is at work on the second step and the Board of Managers are industriously pursuing the third. The new site should give the institution a farm of one hundred acres and buildings to accommodate about two hundred students. These students will come from all the States of the South and carry the training they get back into all States of the South. Hampton and Tuskegee and all institutions of this grade, will want our new teachers, as in the past the district schools of Virginia and Maryland have been glad to secure them. So the good work of the past should have larger fruition, and the best hopes of the best friends of Negro education be fulfilled.

One hesitates as he reflects that all this demands toil of mind and hand and much money. Friends supplied both in the past, but public sentiment is with them now and other purses doubtless will open at the call. Only, Friends must not hold back at this new demand for service, but rather rejoice if they can lead the advance of a great cause.

The industrial work in the city may go on. There is a distinct call for that, but the special mission of the Institute is that outlined in the will of Richard Humphreys to train teachers "in school learning and in the various branches of the mechanic arts and trades and in agriculture.

J. HENRY BARTLETT.

It is a just criticism of the lack of courtesy which too often appears in Christian homes that leads so many to remark that "our best behavior, like our best dresses, is reserved for visitors." Guests are welcomed with bland smiles by parents and children who a moment before were frowning or grumbling. The appearance of a deep and appreciative interest is worn while the guests discuss some theme which in the family circle would be treated with indifference, and perhaps with impatience. If we could have company manners at the fireside, and always hear the pleased and persuasive tones made use of in the social gathering, many homes would be far more attractive than they now are, and many people would have less occasion for complaining that they cannot abide the incivility of their brothers and sisters.—George S. Payson.

A Call for Confidence in the Doukhobors.

BY THE COMMISSIONER OF IMMIGRATION OF CANADA.

The interest taken by the public in the recent peculiar actions of a few of the Doukhobors makes the following interview with the commissioner of immigration a matter of some importance in order that the public may not be misled by what, after all, is only a set of temporary circumstances which are often met with in the experience of the immigration department among all classes of people, although, perhaps, not to the same extent of peculiarity as in the case of the Doukhobors.

Public notice has been given of an auction sale of certain cattle which the Doukhobors did not desire to keep, and which the department, acting as their agent, is now selling, and were it not that certain newspapers, for political reasons, had given the matter much more serious attention than it deserves, the occasion would have been one of general interest only. It appears to the department that so many piecemeal statements have been made regarding the Doukhobors, that the whole situation is in danger of being misunderstood, and the commissioner of immigration, in the following interview makes the matter clear enough for any person, who desires to understand the truth, to do so without much difficulty.

Speaking to a *Manitoba Free Press* reporter the commissioner said:

"The policy of the department, is sufficiently comprehensive to cover all classes of immigrants of every nationality, and every different race, English-speaking or otherwise, has to be dealt with upon their merits and according to their individual needs. The Doukhobors have been dealt with from the standpoint that they would, and do form a most valuable acquisition to Canada and are much needed settlers upon our vacant lands. When immigrants arrive in Canada they can be dealt with satisfactorily only by a careful understanding of their habits and usages so that they may be gradually conformed to our own laws and customs.

"To those who are so disposed to criticise the presence of the Doukhobors I would say that the sociological condition of these people (except the few who have lately imbibed strange notions) before coming to Canada and now must be taken into consideration, and results will prove from that standpoint alone the real value to the country of the community of Christian Brotherhood as the Doukhobors delight to call themselves. Imagine a community of agricultural peasants who, for generations, have had no literature, nothing but simple tradition handed down from father to son to guide them, and those who have been with the Doukhobors are immensely surprised to discover such excellent traits of character. It is true they have ideas which, to civilized Canada, seem peculiar, but they are peculiar and not malicious, and surely our land is wide enough, and the administration of our laws generous enough, to enable good living people to secure a chance of gaining a livelihood. Results have already shown marked success of our deep-seated belief in the final dominance of Canadian institutions and Canadian laws. Take a community who, for generations, has been at war with an autocratic government like that of Russia, and taught by

surrounding circumstances there to believe that all governments are tyrannical; the seclusion is the lot of those who disagree with religious authorities; and add to these the fact that the Doukhobors were entirely ignorant of the English language, and without book-learning were unable to understand the tremendous gulf existing between democratic Canada and autocratic Russia, and the results which are evident to an observer among the Doukhobors themselves, after their three or four years under the control of the Canadian government, and the unyielding pressure of Canadian laws and institutions, form not only a vindication of the worth of these people, but rather a delight to all true Canadians who believe, as the department does, in the final dominance of those Canadian ideals and in the welding a homogeneous population of a great and mighty land, much has been accomplished.

"The religious faith of the Doukhobors is plain and simple one, but their lack of education prevents that extensive knowledge of the Bible which is the privilege of every person who can read. Their truths are learned by heart, are passed from mouth to mouth, have been so for many years. It is, accordingly, very difficult to persuade them that anything different from what they have learned is really from the same inspired source. Those who have visited their villages say that they truly what they declare themselves to be, members of a Christian brotherhood. They all attend sunrise worship each Sunday morning with the rise of the sun, no matter how early that may be. They clothe themselves in their simplest and best, and, standing in a row, the men on one side the women on the other, each one recites the verse of Holy Scripture which was taught them as children. This is interspersed with chants or psalm-singing, and each one salutes the other with a holiness and a triple bow, recognizing the holy Trinity in the brother or sister. This is their simple faith, and this service frequently occurs from four to five hours. The Doukhobors are hospitable and kind to a degree, and the English-speaking settlers living near their villages have much reason to thank them for the sympathy and practical assistance which they have afforded, for even in the case of locusts, fire or storm, the Doukhobors have more than once given the sufferers horses and cattle and helped to rebuild destroyed houses and barns, and in every other way they have won the respect and affection of their English-speaking neighbors, when such neighbors have represented their presence on land which was formerly a range for other settlers' cattle.

"The habits of the Doukhobors are frugal, and any discrepancy between their actions and those required by our laws is not wilful, but in the opinion of those able to judge, is caused by a fear which has its root deep in the past from whence they came, where they were systematically deceived by officials, who secured their signatures to all kinds of false documents, and they have not yet got over the fear that signing any document—whether it be a list of members in the family, an application for marriage license, or an application for a homestead—may, even in Canada, result in their signing something against their conscience. This timidity is caused by their ex-

education and their sad experiences before escaped from persecution in Russia.

Many have already learned to trust Canadian and Canadian laws and the department is of opinion that Canada's laws, administered with justice and tempered with mercy, naturally secure the willing respect of all. The simple Christian faith is the faith of the Doukhobors, and this accounts for them being found so strong, self-sacrificing and true in the Quakers of England and America, which people they have freely given confidence, and who have accepted and adopted the same. One can hardly imagine any of the class such as compose English American Quakers would spend their money and ability for and with the Doukhobors if they were not a desirable class in every respect.

The present difficulty in connection with the Doukhobors in the Yorkton district (for it is only a portion in that locality are affected with the recent notions), is another instance of the teaching of a false prophet who apparently has come from among the anarchists of Russia. Directly antagonistic to the teachings of the Doukhobor community and greatly to the sorrow of the American English Quakers, this 'new teacher' has stirred the poison into the affected Doukhobors and has taught them that the Bible, which they so respected, is utterly untrustworthy, and the affected ones have followed him, and they are those who have given up the life of animals as beasts of burden.

To correct a mistaken impression, I might say that the Doukhobors never would eat meat, they being strictly vegetarians, and if they desire to give up their live stock (which is largely purchased for them by the Quakers) and thus remove the temptation to eat meat, that may surely be considered a privilege of every person under the free institutions of the British crown, and they are not to be considered unworthy citizens because they are vegetarians. The teachings of this new teacher led the affected ones to believe it to be sinful to use animals as beasts of burden, and those desiring to do so, having given up their live stock they did not want, the department have taken charge of the same, and are to sell it at public auction for their benefit.

This must not be in any way construed as a justification that even those Doukhobors who have given up their live stock are in destitute circumstances; nothing could be further from the fact; and no person who makes any suggestion that these people are denying themselves the means of subsistence, or that they are not ample means of subsistence, knows anything of the facts of the case. There are many people in the world who apparently exist without meats of any kind, and as the Doukhobors have so existed up to the present they are not likely to suffer in the future. Some of these men have earned as high as one hundred and five dollars a month at their work on the railways, and they would therefore be able to take care of themselves physically. All these people have good, and excellent ones at that, they have visions of their own growing without stint, the very villages who have given up the raising of live stock have as good crops of all

kinds of grain and vegetables as any part in Western Canada. In some cases they have from two to three hundred acres in crop around the one village. Besides this three of the villages in question are each now building a flour mill complete in which to grind their own wheat this winter; and the proceeds of the sale of the live stock is not intended to be used for the purposes of furnishing food for the Doukhobors, as they have sufficient good sense to attend to all their physical needs without government aid, and the proceeds of the sale will be expended as the Doukhobors desire for their own benefit.

The Doukhobors on the Saskatchewan River have not been contaminated by the presence of an anarchical people from Russia, and the following list of homestead entries will show the result of three years' residence in Canada under normal conditions:

The village of Petrovka has fifty-eight persons eligible for homesteading. All have entered.

The village of Terpenie has forty-eight persons eligible for homesteading. All have entered.

The village of Ispenie has sixty persons eligible. All have entered except three.

The village of Spasovka has fifty-three persons eligible for homestead entry. All have entered.

The village of Pozerewka has twenty-nine persons eligible for homestead entry. All have entered.

The village of Hawrelowka has sixty-three persons eligible for homestead entry. All have entered except a few who desire their homesteads in a township which is only now being surveyed.

The village of Troitzka has forty-five persons eligible for homestead entry. All have entered except a few.

The village of Tombovka has thirty-one persons eligible. All have entered, so that it will be evident that the affected ones are confined to a small area.

"In proof of this *Free Press* readers will recall the report in its columns that Rudolph Bach, a Montreal journalist of national reputation, has, during the last week, visited six of the villages in the Yorkton district, and reports them as progressing in every respect, and amongst the very best and most desirable people in Canada.

To this testimony must be added that of Senator Jansen, of Nebraska, who expresses the same opinion regarding others, and as these men can speak to the people in their own language, their statements must be worth attention.

"The public need have no apprehension regarding the Doukhobors. They will, in conjunction with every other class of immigrants, be guided and cared for by the department, and the department has no fear of the ultimate result. The affected ones are only a very small portion of the community, and the quantity of stock to be disposed of at auction sale for their benefit is only a fraction of what is held by these people who number between seven and eight thousand souls, and have shown such marked intelligence and ability since coming amongst us. In practically every Doukhobor village there are some of the villagers who can already make themselves well understood

in English. The tradesmen of all the towns with which they do business welcome their trade, which is an immense item in the business community and I am of the opinion that when the business men of a country welcome among their purchasers people like the Doukhobors who pay a hundred cents on the dollar, the opinion of the business men is surely worth having.

"The department is not in any way troubled over the outcome of the present situation, believing it to be merely of a temporary character, and confined to a small number."

"Have you noticed the remarks made by one of the morning papers in this connection?" inquired the reporter.

Commissioner Smith said that he had, and, so far as rescuing the Doukhobors from their folly was concerned, other races of people had need of departmental advice and assistance as well as the Doukhobors.

"The department have many thousands of dollars every year sent to them to expend for the benefit of Englishmen, Scotchmen, Irishmen, Welshmen, Germans, Galicians, Doukhobors and all other classes and I do not think it strange to have money to disburse for the benefit of the Doukhobors.

"The live stock which is now being sold, together with a much larger quantity that was also purchased for the Doukhobors, was paid for by the Quakers or by the Doukhobors themselves; and the statement that the government in any way furnished the stock in question is altogether untrue.

"I am not aware that the department has ever expended any money or given any public grants to prevent these Doukhobors from starving in the past, nor will there be any necessity for so doing in the future. The government have paid into the committee of the Patagonian Welshmen the same bonus per head as was paid in to the committee for the Doukhobors, and any suggestion that the government has paid more in connection with the Doukhobors than for any other class of immigration is altogether without foundation.

"The only assistance the government has given the Doukhobors is that given to English and other settlers in Manitoba and the Northwest, by way of advance of seed grain, etc., protected by lien upon the homestead. No such assistance was given to the Doukhobors except they had a homestead, and in every case the amount loaned has been repaid with interest."

There appears also in *City and State* the following reassuring article by Joseph Elklinton, confirmatory of the commissioner's statement:

RECENT EVENTS AMONG THE DOUKHOBORS.

The civilized world has recently been informed of a fanatical outbreak among the worthy although somewhat benighted Russian peasants. It is a fact that a few of the Yorkton Doukhobors liberated their horses and cattle, believing it to be contrary to the will of God for them to be retained in servitude. This delusion spread through a tenth of their villages, and one hundred and twenty horses with two hundred and eighty-five head of cattle were thus turned loose, for conscience' sake, and sold by the government in order that the Doukhobors might have the benefit of the proceeds.

When the sale "came off" they bought back most of their own stock, paying a high price, as the animals were in splendid condition and the bidding was lively. No one was disappointed so much as the settler who thought he was going to buy a fine animal at a low price and so take advantage of these superconscientious colonists.

I saw these horses and cattle when among the Doukhobors about three months ago, and greatly admired the care they had evidently received at the hands of their owners.

On one occasion I also saw a wagon being drawn by seven men and two boys through sloughs that were dangerous for any horse to enter, and one knew not which to pity most the minds or the bodies of these deluded men. Their faces were honest and their spirits Christ-like. When I remonstrated with them, the leader quoted: "The whole creation waiteth and groaneth even until now for the manifestation of (mercy on the part of) the sons of God."

They have probably learned a good lesson by this experience and will continue to make better use of their opportunities, for they have done marvelously well since coming to America, and the Canadian government knows perfectly well that they will eventually prove among her most desirable citizens.

This report was instigated by the political opponents of the present administration, and one marvels how quickly the press seizes upon anything so trifling and heralds it to the ends of the earth, when evils of infinitely more importance are passed over without comment or are excused. Here are a few poor, ignorant peasants on the remote frontier of the Dominion of Canada led into some absurd notions, chiefly affecting their own comfort, by a few designing men,—who did not belong to their community originally. And these held up to scorn because they were too tender hearted to be practical in all respects; whereas a war craze can sweep over our country like the fire of the prairie and bring desolation to thousands of homes and endanger the morals of the whole nation and be applauded from the pulpit throughout the length and breadth of the land as "the will of God."

The two thousand Doukhobors in Saskatchewan were entirely opposed to this interpretation of God's will on the part of their Yorkton brethren, and sent representatives to remonstrate with them and to buy up their stock when offered for sale.

There are noble souls among these people—those who "have resisted even unto blood, striving against sin," and who are willing to sacrifice any personal comfort in order to keep a conscience void of offense toward God and man.

All of their leaders were sent into Siberian exile, so they have been at a great disadvantage on this account. Only three or four in a hundred can read or write, and their community ideas keep them from developing individually as they otherwise would; but in spite of these disadvantages they are lovable.

Their women are more numerous than the men, and are often quite as capable of directing the affairs of their community. As one visits from village to village, the substantial character of these women who have suffered so much because their fathers, husbands, and

brothers have been sent into exile grows upon one. They have their Oriental ideas about the inferior position of women, but practically they show their superiority to the men, and with education their children will give a very good account of themselves.

As they have suffered so much from the hands of the Russian government, they are naturally suspicious of all governments. I did what I could to disabuse them of any wrong opinions about the Canadian government, which has done so much for them.

It is their good fortune to have secured the services of a young man who was born in Russia and educated in one of our eastern colleges in the management of a school now being started in the Saskatchewan colony.

There is hope for any people who have such a conscience as these long persecuted Russians have, and their principle of non-resistance will survive all the armaments of the world.

An illustration of the true character of these Russians was witnessed when they were seen loading up their wagons with clothing and food supplies, and distributing these gratuitously among the poorer Galician neighbors—often traveling a whole day to find those who were most in need.

Tenth Month 6th, 1902.

JOSEPH HOAG'S LETTER.—I feel like adding that it is best not unduly to dwell on past mistakes, but "leaving the things that are before, press forward toward those that are before." Also, that some of the most eminent servants of our blessed Lord and Saviour, Jesus Christ, even when far along in their Christian journey, have caused themselves and their friends concern and suffering, and had to amend their ways. One instance is related of that eminent minister of the gospel, Joseph Hoag, who was "minded" to reprove a wealthy and influential Friend near Providence, R. I., but shrank from the duty. Leaving Providence, he thought the uneasiness of mind would wear away before he reached a meeting to be held at Portland, Maine; but the suffering grew heavier, and ere he reached Portland he felt he was a castaway, his gift in the ministry gone, and his peace gone. In deep prostration and repentance he saw a little ray of light and a hope for acceptance again, by returning to Providence. It took several long days' travel, for an old man and an old, poor horse, but it was accomplished, and Joseph Hoag's Christian Armor was again brightened and ability again given to wield the sword of the Spirit aright.

Thy friend, E. L. P.

Tenth Month 6th, 1902.

THE true Christ-life is nowhere tested more severely or more continuously than in the domestic circle. And when in that sphere of duty we learn to "bear one another's burdens, and so fulfill the law of Christ," we have acquired a liberal education in the life that is life indeed.

EVERY man takes care that his neighbor shall not cheat him. But a day comes when he begins to care that he does not cheat his neighbor. Then all goes well. He has changed his market-cart into a chariot of the sun.

Science and Industry.

WHITE lead is said to be the most effective agent for mending broken crockery, and one of the few cements that resists both water and heat. Apply thinly on the edges of the broken pieces, press them together and set aside to dry. A water-proof glue is exceedingly useful for repairing marble. Portland cement is made by mixing plain white glaze with milk. Unslaked lime mixed with the white of an egg makes a good cement for ordinary work. As does also plaster of paris blended with cream with the white of an egg.

IN THE FRIEND of Ninth Month 20, 1901, a reference to the salt-fields near Ithaca, which is stated as being in Colorado. The Salton referred to is in San Diego Co., California, and not in Colorado.

The name Colorado Desert is properly applied to the desert extending along the Colorado River, but no part of it is in Colorado. As the elevation of Colorado is from 4,000 to 14,000 feet above sea level. The error in the statement that there is a part of it six feet below is apparent.—ALVA J. SMITH.

Emporia, Kan.

A YOUNG Friend (Joel Cadbury, of Birmingham, England), who had recently arrived in Philadelphia in 1820 says: "There is nothing here that I can learn only all the folk here, coal, and it is as perceptible to the taste in the air we breathe, as to the smell in Philadelphia! May thou be preserved from the nuisance! For they are not content with the smell only, but they put the ashes in the street so that we may have the full benefit of the dirt they can make!"

ELECTRICITY AS DIVINING ROD.—Electricity is now being used after the manner of the divining-rod to discover metallic veins underground. According to some particulars given in an American technical paper, wires are run across the land which is to be surveyed and the resistance between contacts placed at the ends of the wires is measured. A fall resistance indicates proximity to a vein. On a certain occasion it is stated, a resistance of fifty-four thousand ohms fell to fifty-six and there was found beneath a rich vein of copper.

ANNIVERSARY OF ANTHRACITE.—The following clipping has been sent us, from a newspaper of Second Month 1858. "On the 11th ult. the fiftieth anniversary of the first successful experiment of burning anthracite coal in an open grate was celebrated in Wilkes-Barre, Pa., in the same room where the same old grate and fire-place used by Judge Jesse Fell in the experiment. The following is a copy of the original record by Judge Fell: 'On the 11th, 1808, made the experiment of burning the common stone coal of this valley in a grate in a common fire-place in my house and find that it will answer the purpose of fuel making a clearer and better fire at less expense than of burning wood in the common way.' "JESSE FELL."

ONE of the preacher's best friends, the Boston religious journal, is the old-fashioned

despised saw-horse. It is not exactly a thing of beauty, and there are few to proclaim its excellence; but it may become a veritable horse, or nerve, and as a recreation will rival golf, or tennis, or baseball. It is a great aid to meditation. The rhythmic movement of the gently gliding saw is both a mental and physical stimulus, while the mild resistance of beech or maple is sure to induce a grateful moisture upon the reddened brow. To impart a relish to the humblest meal, the spring of the year it may be safely recommended as one of the best liver invigorators known; and as a blood purifier it is unexcelled. It can be taken in doses suited to the patient's needs.

WILDS OF EATING QUICKLY.—The *London Mirror* says: It is a mistake to eat quickly. Digestion performed in haste must be imperfect even with the best of teeth, and due mixture of the salivary secretion with the food cannot take place. When a crude mass of inadequately crushed muscular fibre or undigested solid material of any description, is taken into the stomach, it acts as a mechanical irritant, and sets up a condition in the mucous membrane lining that organ, which greatly impedes, if it does not altogether prevent, the process of digestion. When the practice of eating quickly and filling the stomach with unprepared food is habitual, the digestive organ is rendered incapable of performing its proper function. Either a much larger quantity of food than would be necessary under natural conditions is required, or the system suffers from lack of nourishment. The matter may seem a small one, but it is so. Just as a man may go on for years with defective teeth, imperfectly masticating food, and wondering why he suffers from indigestion, so a man may habitually live upon an infliction of hurried dinners and endure the consequent loss of health without knowing why he is not well, or how easily the cause of his illness might be remedied.

UNIQUE CITY OF DALNY.—At present there is being founded on the shores of the Pacific Ocean in Siberia the Russian city of Dalny. This city will form the terminus of the new Trans-Siberian and Manchurian Railway, and its site heretofore been known as Talienwan. The unique thing about this new city is that it begins its municipal life with all modern improvements. There are piers of stone and cement; a large breakwater, with no ships to be refuged behind it. The streets are graded and paved, although there is no traffic for them yet. The different quarters of the town have been laid out, space provided for parks, schools, churches, etc. Gardeners are already beautifying the parks. Electric lights and electric railways are already in operation. Not yet not a foot of land has been sold, although over six million dollars has been expended for improvements and public buildings. The population now exceeds fifty thousand, and thirty-three thousand of which are employed in building the railroad, which is to be owned by the Russian government.

It is calculated that the city will cost eighty million dollars before the present plans are completed. It is provided that when lands are sold taxation will begin, and the city's

government will be placed in the hands of a Council elected by the taxpayers, of which two members must be Russian subjects and not more than two Chinese or Japanese. The port will be an absolutely free one, as the government wishes to encourage trade.—*Municipal Journal*.

BLACK, WHITE AND OTHER INKS.—"For all ordinary writing purposes," said a man acquainted with the ink trade, "colored inks, once used to some extent, have now been almost entirely superseded by black ink. They are still made, and in many colors, and red ink is still, as ever, a standard, and various other colored inks are sometimes also used in counting rooms, as in the preparation of statements or exhibits, in which, for purposes of convenience, the several divisions are made each in a separate color. But for the ordinary purposes colored inks, as violet, have gone almost wholly out of use; black is the thing."

"Among the inks for special use might be mentioned white ink, made for writing with on black paper, and especially employed for writing cards for window displays and like purposes. Black inks are largely comprised between the blacks and the blue-blacks, the former putting on black as it leaves the pen, and the latter putting on blue and turning black. There is now used in this country more blue-black than black, and the proportion of blue-blacks sold is increasing."

"Countries have their peculiarities in this respect. In France, for example, more black ink is used; while England has long been distinctively a blue-black country. Writing ink is sold in a great variety of packages, ranging from two ounce bottles to sixty gallon casks. School boards are the chief purchasers of ink by the barrel.—*New York Sun*.

HIS WIFE'S TRIUMPHS.—It has been the lot of many men of letters to have ill health bearing them down as they struggled on toward literary achievement. Thus beset in recent times were Stevenson, Richard Jeffries and J. R. Green. Each of these, it happened, had a high-hearted wife to keep him up, even to help him with the actual labor of writing. "The Life and Letters of J. R. Green" show forth a great and sweet man; they show, too, a wife whose sympathy and fortitude helped to make his accomplishment possible.

In copying the vast amount of manuscript of her husband's books, his wife contracted writer's cramp, and was forced to stop using her right hand. This looked like a final obstacle in the way of the invalid, who did much of his thinking in bed, and could not write himself. But she set to work at once learning to write with her left hand.

One of her first practice pages, which she was about to destroy with the rest, her husband took quietly and put in his pocket. Years afterward, when ill health seemed unbearable and in discouragement he felt he could not work, he used to take out that piece of paper, a living record of his wife's triumph over difficulty. When he saw the painful, patient strokes by which his wife had learned to write with her left hand he could work on with something near to inspiration.

"I FEEL, I grieve, but, by the grace of God I fret at nothing."—*Wesley*.

THE DEATH OF THE FLOWERS.

The melancholy days are come, the saddest of the year,
Of wailing winds, and naked woods, and meadows brown and bare,
Heaped in the hollows of the grove the withered leaves lie dead;
They rustle in the eddying gust, and to the rabbit's tread,
The robin and the wren are flown, and from the shrubs the jay;
And from the wood top calls the crow through all the gloomy day.

Where are the flowers, the fair young flowers, that lately sprang and stood
In brighter light and softer airs, a beauteous sisterhood?
Alas! they are all in their graves; the gentle race of flowers
Are lying on their lowly beds, with the fair and good of ours.
The rain is falling where they lie, but the cold November rain
Calls not from out the gloomy earth the lovely ones again.

The wind flower and the violet, they perished long ago,
And the briar rose and the orchid died amid the summer glow;
But on the hill the goldenrod and the aster in the wood,
And the yellow snailflower by the brook, in autumn beauty stood,
Till fell the frost from the clear, cold Heaven as falls the plague on men,
And the brightness of their smile was gone from upland, glade and glen.

And now, when comes the calm, mild day, as still such days will come,
To call the squirrel and the bee from out their winter home;
When the sound of dropping nuts is heard, though all the trees are still,
And twinkle in the smoky light the waters of the rill,
The south wind searches for the flowers whose fragrance late he bore,
And sighs to find them in the wood and by the stream no more.

And then I think of one who in her youthful beauty died;
The fair, meek blossom that grew up and faded by my side,
In the cold, moist earth we laid her when the forest east the leaf,
And we wept that one so lovely should have a life so brief.
Yet not unmet it was that one like that young friend of ours,
So gentle and so beautiful, should perish with the flowers.

—*Wm. Cullen Bryant*.

FOR "THE FRIEND."

A Further Salutation of Brotherly Love.

[Forgetting, when judgments seem quiet, to learn righteousness.—How to observe the First day of the week.—Behavior of children in the streets.—Contrition under impending pestilence turned to libertinism later on.]

DEAR FRIENDS:—Having, as occasions offered, heretofore addressed you, with such counsel and caution as appeared needful, we are again incited by the same motives of duty, and a solicitude for our present and future mutual happiness, to revive in remembrance that the season of outward prosperity, ease and

tranquility wherewith the inhabitants of this land are so remarkably favored, through the long-suffering and mercy of infinite goodness, loudly claims adoration and reverence from every heart susceptible of the ennobling sensations of filial gratitude to the Father of mercies. And the gracious interposition of his delivering arm in the late awful day of mortality with which this city was visited, when inferior help was vain, ought also to be considered as an additional obligation unfeignedly to desire and strive, through Divine assistance, so to redeem the time yet allotted us that we may be enabled to bring forth those good fruits by which our blessed Saviour informs us his heavenly Father is glorified.

May we all therefore keep in daily remembrance the necessity of watchfulness and care, that our conversation may be such as becometh the gospel of Christ; avoiding, as inconsistent therewith, the corrupt communications, manners and maxims that many in this favored city are unhappily indulging in; which lead to the attendance of vain shows and sports, the exhibitions of the theatre, those houses, gardens and other places of public resort, evidently productive of dissipation and licentiousness, which have been so many engines of Satan to delude unwary youth and others, to alienate their affections from God, render them regardless of their duty towards Him, and finally piercing their own souls with many sorrows.

Among the many obvious marks of declension from true virtue, especially to be lamented at this time, is the increasing inattention and disregard of the solemn duties for which the generality of Christians have set apart the first day of the week. Our faithful predecessors, although they did not attribute any inherent holiness to one day above another, well knowing that every day is the Lord's day, and ought to be spent in watchfulness and fear; nevertheless, freely united with others to observe the first day as a day of rest from bodily labor and their worldly affairs, and to employ it in the sacred duties we owe unto God, and the most weighty concerns of the immortal soul. But, alas, how many professing the Christian name are sorrowfully prostituting it to purposes diametrically opposed to these indispensable obligations! Is not the great cause of religion and virtue more injured and the holy Name more dishonored on that day than on any other day of the week, by those loose and careless professors who spend it in the pursuit of sensual indulgences and vain amusements? When we take a view of the borders of this city, what reveling and rioting, wantonness and profanity are in the houses and gardens of those who thus make a gain of unrighteousness! And indeed such is the prevalence of injurious customs, that many otherwise accounted respectable members of civil community, and more moral than to be engaged in the most reproachful scenes of reveling and wantonness, are much employed in a manner not consistent with the truly rational as well as holy purposes of the day, in needlessly visiting each other and joining in unprofitable conversation, or in riding or walking merely for recreation, business or pleasure, or in collecting and feasting together; to the great oppression of those employed in their service, and depriving them of

the privilege of attending their several places of worship, which is the reasonable duty of all, without distinction of rank, station or color; but to many of these, instead of being made a day of rest and religious improvement, it is frequently so perverted as to become a day of labor and hurry than any one of the seven. On serious reflection we hope all will acknowledge that these things ought not to be. Works of mercy, humanity, or unavoidable necessity, such as visiting and consoling the sick and afflicted, or other occasions of Christian duty, may sometimes lawfully interfere with our attendance of public worship. But if habits of non-attendance are indulged from lukewarmness and indifference towards God, or want of a due sense of his manifold mercies to us, and the obligations we are under to reverence and adore his goodness, such are in imminent danger of falling into unbelief and departure from the living God. We therefore tenderly exhort all in religious profession with us to a diligent attendance of our respective meetings held on the first and other days of the week, with reverent and devout hearts, impressed with an humbling remembrance of the Lord's unmerited goodness, and with unfeigned desires to worship Him in spirit and in truth; and between meetings on the First day, labor to keep yourselves retired, exampling your families therein, avoiding unnecessary visits and unprofitable conversation, and as strength is afforded (by Him that will, if He be diligently sought unto, strengthen the weak hands), gather together at suitable times those entrusted to your charge and enjoin them the reading portions of the scriptures of truth, and other religious books. Habituate yourselves to silent meditation and contemplation upon God; that, thus under his blessing, you may be made instrumental to lead the youth and others under your care to embrace the same pious practice; which, although it is irksome to the unsubjected mind, to those who love God with sincerity will become the most profitable, refreshing and delightful exercise.

Deeply affecting also to those who are religiously interested in the well-being of the rising generation, is a disorder not only disreputable and unbecoming a people making a Christian profession, but so far a nuisance in civil society as to engage the public animadversion and care of the chief magistrate of the city—that is, the profanity and unrestrained behavior of children and youth in our streets, which must have been obvious and long beheld with sorrow by every pious observer, much desiring that this charge may not in any degree continue justly to be laid upon us. We earnestly admonish all parents, guardians, masters and mistresses of children, schoolmasters and mistresses, to exercise a vigilant care over those whom Providence has committed to their trust, restraining them more than has hitherto been the general practice, from associating in the streets or other places with those who are corrupt and disorderly; and (as stewards that must render an account) warning them against all profanity, rude and unseemly behavior. Endeavor to train them up in the knowledge and fear of God. Instruct them early in the principles of our holy religion, that their minds may be prepared to receive Divine impressions and

brought under the discipline of the crucifixion of Christ, which only can make them fruitful and honorable members of civil and iust society.

Now, dear children, we tenderly entre in the words of the apostle, that ye obey parents in the Lord, for this is right: thy father and thy mother (which is the first command with promise), that it may be well with thee.—Eph., chap. vi.

And, dear friends of every rank, may we frequently and instructively remember the solemn impressions and covenants made in this awful season, when the Lord's chastening hand was so signally evident that thousands of our fellow citizens, amongst whom many of our near connections and relatives were suddenly summoned to appear before the judgment seat of Christ—when nothing less than the interposing mercy and almighty power of our heavenly Father could have prevented this great and populous city from becoming desolated of its inhabitants. In that day the looks of the proud were humbled, the persecutor after perishing riches restrained, and the people in a general manner excited to call upon the Lord, that He would pity and spare them. But how painful is the reflection when those petitions were answered in the Lord's compassion eminently manifested, may have so suddenly forgot his works and turned again unto folly, that it appears lamentably evident libertinism, and we fear infidelity, have greatly increased since that day, and here let us caution all to beware how they suffer their minds to be drawn away by vain philosophy of this world from the serious, divine and most consolatory faith in Lord Jesus Christ, the only mediator and redeemer. Many have been the attempts of men of corrupt minds, by artful publications and fallacious arguments, to deceive the unguarded and rob them of that inestimable treasure, the hope of salvation through the Son and sent of God. These deluded a multitude of the enemy of your soul's peace would involve you in the deepest misery and distress if given place to. We beseech you, therefore, wisely to reject and bear at all times a faithful testimony against their insinuations.

And under a daily sense of our deplorable condition, and of the abundant mercies received, let us hold fast the profession of our faith in all things, studying to show ourselves approved unto God, without whose favor and blessing we can neither be happy in this life nor in that which is to come.

Signed on behalf and by appointment of the said Monthly Meeting held in the Seventh Month, 1795.

JAMES PEMBERTON

JONATHAN EVANS.

BIRDS CAN TALK.—It is not a little singular that while the so-called dumb animals have all some language of their own, a method by which each species can hold converse with its kind, it is in the feathered world alone that we find any creatures capable of being taught to use the speech of man. Certain birds only are capable of producing articulate vocal

ences, but it would appear from many authenticated instances as if they possess some measure the reasoning faculty enables them to apply their acquired speech with peculiar aptitude. The raven, the jackdaw, the magpie and the jay all be trained to imitate sounds and other words and even sentences, distinctly more familiar to most people are talking of the parrot tribe, which acquire the use of speech in far greater perfection than other of their species. The voice of the parrot is also much more human in its tones; it is not so hoarse, the jay and the magpie to shrill; but there are modulations in the parrot's notes when speaking that are sometimes absolutely uncanny in their weird resemblance to the "human voice divine." The superiority is due to the construction of the beak, its tongue and head. The parrot, too, has a wonderful memory and rarely forgets what it has once thoroughly learned.—*Young Folks.*

UNION AND NON-UNION WORKMEN.—Our country is not in taking sides with industrial wars, but we readily give place to statistics to show the *Friend* by a correspondent, leaving to the reader such conclusions as are obvious to the mind.

Recent events bring into more than ordinary interest the following information recently published by the U. S. Commissioners of Labor, Carroll D. Wright:—

The union bricklayer works 51.5 hours per week and receives an average of \$3.80 per week. The non-union bricklayer works 57.4 hours per week and receives on an average wage of \$2.17. A bricklayer's dues are in excess of \$12 a year, and he receives \$8 a year more and works 312 hours less than his non-union brother.

The union carpenter works 53 hours per week and receives an average of \$2.53 cents per week. The non-union carpenter works 58 hours per week and receives \$2.13 per day. A carpenter's dues are 50 cents per month, and he receives \$1.20 a year more, while working 240 hours less time.

The union painter works 48 hours per week and receives an average of \$2.50 per day, while the non-union man works 57 hours per week and receives \$180 per day. The union mason pays \$8 a year dues, and receives in wages \$210 more in a year and makes 468 hours more time than the non-union man.

THE PROMISE OF LIFE.—My religious discernments are in need of culture. My sense of the Infinite requires refinement. My perceptions of God must be sensitized. The more I realize the tendrils of my spirit must be drawn out, that I may apprehend the length and breadth and height and depth, and know the love of God which passeth knowledge. My religious discernments are in need of culture. My sense of duty requires invigorating. I require a keener discernment between the selfish and the disinterested; my intellectual discernments are in need of culture. The power of seeking and acquiring truth requires strengthening. A man's intellectual development is greatly helped by his moral growth. Thought expands as by a natural process when the presence of selfishness is

removed. The moral and religious principles of the soul, generously cultivated, fertilize the intellect." My social discernments need to be cultivated. My affections require enlargement and purification. They must receive purity and dignity. They must be converted from wavering instincts into fine and illumined principles. Holiness is more than spiritual freedom: it is spiritual culture. Holiness is therefore *aliveness*. This is the promise of life in Christ Jesus.—*J. H. Jowett.*

PROF. JAMES, in his "Talks to Teachers and Students on Some of Life's Ideals," says: "Action and feeling go together; and by regulating the action which is under the more direct control of the will, we can indirectly regulate the feeling, which is not. Thus the sovereign voluntary path to cheerfulness, if our spontaneous cheerfulness be lost, is to sit up cheerfully and to act and speak as if cheerfulness were already there. If such conduct does not make you feel cheerful, nothing else but inspiration on that occasion can. . . . To wrestle with a bad feeling pins our attention on it, and keeps it still fastened in the mind; whereas, if we act from some better feeling, the old bad feeling soon folds its tent like an Arab, and silently steals away."

WHICH WAS THE NARROW LIFE?—A mother once said to a popular teacher, who had been admired by her pupils for a score of years: "What a wide and beneficent influence you have exerted while I have been housed up at home managing servants, dosing the mumps and measles, and patching and darning! How narrow my life looks beside yours!"

Narrow!" cried her friend. "Only think how you have sent forth into the world every morning your flock of boys and girls full of health and cheer! What a model home you have made for your dear ones and for your friends to see!"

"It is I who have lived a narrow life rather than you. What is the slight touch which I have given to a thousand or more lives, compared with the deep determining influence, which you have wielded over the half dozen children in your home?"

"Is it possible that you can think so?" exclaimed the tired mother, incredulously.

"I know so. I have watched your children in school and out. They radiate an atmosphere of love and light, and a disposition, which, whilst they are born of heaven, were given to them by their mother.—*The Lutheran.*

If you fail in the practice of self-denial, which is the sum and root of virtue; every other way is but beating the air, and you will make no progress, notwithstanding most profound meditations and communications.

A CELEBRATED Italian used to call time his estate.

Items Concerning the Society.

JOHN G. WHITTIER.—From Theodore L. Cuyler's "Recollections of a Long Life" the following reference to Whittier is selected:

"The pleasant little town of Burlington, N. J., in which I spent my earliest ministry, was the headquarters of orthodox Quakers. I was thrown much into the society of their most eminent people, and very delightful society I found it. The wittiest Quaker in the town was my neighbor,

William J. Allinson, the editor of the 'Friends Review,' and an intimate friend of John G. Whittier. One afternoon he ran over to my room, and said: 'Friend Theodore, John G. Whittier is at my house, and wants to see thee; he leaves early in the morning.' I hastened across the street and, in the modest parlor of Friend Allinson, I saw, standing before the fire, a tall, slender man in Quaker dress, with a very lofty brow, and the finest eye I have ever seen in any American, unless it were the deep ox-like eye of Abraham Lincoln. We had a pleasant chat about the anti-slavery, temperance and other moral reforms; and I went home with something of the feeling that Walter Scott says he had after seeing 'Robbie Burns.' Whittier was a retiring, home-keeping man. He never crossed the ocean and seldom went even outside of his native home in Massachusetts.

"In the course of my life I have received several very pleasant letters from my venerable friend, the Quaker poet; but immediately after his eightieth birthday, he addressed me the following letter, which, believing it to be his last, I framed and hung on the walls of my library:

OKA KNOLL,
12th Month 17th, 1887.

"My dear Dr. Cuyler,

"I thank thee for thy loving letter to me on my birthday, which I would have answered immediately but for illness; and my friend, I wish I was more worthy of the kind and good things said of me. But my prayer is, 'God be merciful to me.' And I think my prayer will be answered, for His Mercy and His Justice are one. May the Lord bless thee.

"Thy friend sincerely,
"JOHN G. WHITTIER."

NOT ASHAMED OF IT.—It is surprising how many I have run across here in Colorado who are of Quaker ancestry; and they never are diffident about announcing the fact. I have often thought that if the past few generations of Friends had all held to their faith, what a strong, able and influential body the Society would be in this country to-day.—*Correspondent.*

PARDON TUCKER, OF JAMESTOWN, R. I.—An aged Friend in Westbury, R. I., has felt concerned to contribute to these columns a testimonial concerning a valued friend of his, who was a Friend in principle; but because not a member he is noticed here in a letter, rather than among our regular obituaries.

Pardon Tucker departed this life in Jamestown, R. I., on the sixth of Ninth Month last, at an age above four-score years. His father was Simeon Tucker, who was of marked Christian character and superior abilities, while entirely illiterate as to school learning; a most kind-hearted, sweet-spirited and loving Christian man in the Baptist connection, having withal a strong predilection for the Friends also. While not a public speaker, he was yet an earnest and deeply religious man in all the relations of life. Generally reputed in his neighborhood to be a seer, or spirit-sighted, he was endowed with ability to detect incorrect or mistaken readings of the Scriptures, while yet unable to read a word in the book. Becoming an earnest friend and admirer of John Wilbur and his ministry, he was greatly distressed when the latter was arraigned as an offender and kept for a long time under dealings; so that when he could no longer bear it, he walked away down some miles from his home back in the woods to inquire of my father, Othniel Foster, about the matter. On arriving there his first demand was, "What are you doing to John Wilbur? I know you are stoning him, for I can feel the blows!" He and J. Wilbur were, I think, about of an age, and died at nearly the same time.

Now to return to the notice of his son, Pardon Tucker, who settled on Jamestown after nearly all the sound Friends once there had left or been re-

moved by death. While a worthy, high-toned and active business man, his mind and time were doubtless much absorbed, especially in the development of property there, understanding well the laying out of real estate, and of roads and streets, and his duties as director in two banks in Newport. Yet sickness and disease came in to claim another part, a painful and disfiguring malady confining him to the house for the last few years, so that he welcomed death as an end of his sufferings.

While not a member of any religious society, Pardon Tucker was yet a firm believer in the great and important truths of the gospel as ever held by our religious Society, and often enunciated, more or less, in the pages of *THE FRIEND*, and commended to his mind and understanding as consonant with Bible truth. Looking to our holy Redeemer as the alone Saviour of all men, he was "ready and willing to go," and "thought he was going fast and rejoiced at it;" his mind being clear to the last, and bearing his sufferings not only patiently, but cheerfully; his nurse saying, "there was no repining, from first to the last," and his daughter bearing witness that more might be said, but that she "would not wish to say too much"—a sentiment which I also desire to follow.

GEORGE FOSTER.

SUMMARY OF EVENTS.

UNITED STATES.—The meeting of the United Mine workers, held on the 20th and 21st ult. agreed unanimously to the proposition made by President Roosevelt, referring the matters at issue to a commission appointed by himself, and on the 23rd instant a large proportion of the miners returned to work. The usual output of the anthracite mines is about 240,000 tons of coal a week, but it is probable that for some weeks not over half that amount may be mined. Governor Stone has issued orders for the withdrawal of troops from the coal region.

The Arbitration Commission held at Washington on the 24th inst., and after organizing decided that their meetings should be open to the public.

It is said that some sixty vessels have been chartered to bring coal from Wales to this country, some of which are now on their way.

President Baer, of the Reading Railroad Company, has issued a circular directing that if coal dealers ask more than a fair profit the company shall be bound to supply the public direct. He fixes \$6.75 as a maximum price. To compensate for increased cost of production, due to damages to the mines, 50 cents a ton is to be added to the circular prices until First Month 1st, 1903.

The Census Office has issued a statement giving a compilation of figures regarding illiteracy among children of immigrants and children of natives. The statement says: "Comparing the comparison to children in the United States, of 10 and 14 years in the United States as a whole, 95.6 per cent. of the native white children of native parents, and 99.1 per cent. of the native white children of foreign born parents are able to read and write. This surprising difference in favor of the children of the foreign born population is due largely to the fact that the children of the foreign born immigrants live mainly in the Northern and Western States, where the public school systems have already reached a high degree of efficiency, while great numbers of native white children of native parents live in the Southern States, and in that region about 10 per cent. of such children are illiterate."

A recent report of the Geological Survey contains a compilation of statistics showing the number of working days lost in strikes in the coal industry. These figures include the present year, up to date, and show that the total number of days lost for the present year is placed at 20,000,000 compared with 738,802 days in 1901, 4,878,102 in 1900 and 2,124,154 in 1899.

A despatch from Washington states that "The annual report of the Dawes Commission appointed to treat with the five civilized tribes says that if all the pending agreements should be ratified by the tribes practically all necessary arrangements will have been secured for the complete administration of the five estates entrusted to the Commission, an end entirely sought for nearly ten years. The conclusion is announced that the bitter anti-allotment sentiment of the Indians has now largely yielded to reason and time, and the five tribes are fairly upon the threshold of a new era."

A despatch from White Plains, New York, states that the remains of a girl who had died from malignant diphtheria as a result of Christian Science neglect, and a "Christian Science healer" were held by a grand jury on

the charge of manslaughter for having failed to take proper means to save the life of the child.

A despatch from Sault Ste. Marie, Mich., says the opening of the new water power plant on the Michigan side of the St. Mary's river marks the completion of an engineering work of great magnitude, which has been in progress for four years, and which has been accomplished at a cost of about \$4,000,000. This is the second water power canal constructed by the subsidiary companies of the Consolidated Lake Superior Company, the first canal being one of about 10,000 horse power, the second, the St. Mary's river, which has been in operation for about seven years.

A report has been made by Attorney General Knox on the title which the new Panama Canal Company can transfer to the United States. This he states is "good, valid and unincumbered." The Canal bill which was passed at the last session of Congress authorized the President to purchase the rights and plant of the French company, he would secure a valid title, and then to proceed with the construction of the canal after a perpetual lease was obtained by treaty from Colombia to the land through which the canal passes.

It is said that women lawyers are now admitted to practice in the highest courts in almost all of the States of the Union.

It is stated that during the Fourth, Fifth and Sixth Months of this year 616 persons were killed and 9520 injured on railroads in the United States.

A great gas well has lately been opened in Armstrong County, Pa., in which the pressure of gas has been so great that it has been impossible to curb it, and for several days a volume of more than 20,000,000 cubic feet of gas has escaped into the atmosphere every twenty-four hours; an amount it is estimated sufficient to supply a city of 10,000 inhabitants.

It is stated that more than 26,000,000 children of school age in the United States are now under temperance education laws.

In a recent circular issued by the Women's Christian Temperance Union it is stated that in regard to cigarette smoking that a very careful statistical examination has been made by educators of boys drawn by lot. This table shows the average efficiency of non-smokers is 95 per cent.; that is 95 per cent. out of 100 would probably acquire a good education. On the other hand, only 6 out of 100 cigarette smokers could hope to battle successfully against the mental inefficiency produced by the cigarette habit. Of smokers, 60 per cent. had poor memories, 40 per cent. were untruthful, 50 per cent. had bad manners, 90 per cent. were poor thinkers.

The Supreme Court of the State of Washington has decided that a Japanese cannot become a citizen of the United States.

A manual training school for the education of negro youths has lately been completed at Washington, D. C. It is named after General Samuel C. Armstrong, who until his death a few years ago was the head of the school at Hampton, Va., for the training of negro and Indian youth. He did more to teach American educators, North and South, and the men of all races, the value of hard training than any other American who has ever lived."

FOREIGN.—A despatch from Paris states that France, Great Britain and Germany have concluded an agreement providing for the military evacuation of Shanghai and their forces. The negotiations have been brought about by the extension of the open door policy, as urged by Secretary Hay. The agreement effects not only Shanghai, but the entire Yangtze-Kiang Valley, which the Powers are seeking to develop for commercial purposes."

Premier Combes of France has been encouraged by a resolution of the Chamber of Deputies to use his influence to cause both parties to the strike of the coal miners in that country to accept arbitration and has had a conference with the representatives of the labor union, and proposes consulting the delegates of the mining companies to bring about a settlement.

It is officially announced that Colonial Secretary Chamberlain has decided personally to visit South Africa and examine on the spot the problems presented by the termination of the war and the settlement of affairs in the new territory.

A group of model buildings is being erected in Pine Woods near Potsdam, Germany, as a sanitarium costing about \$2,500,000. The institution, which is now partially occupied, accommodates 600 persons, one-half suffering from tuberculosis and the other half from chronic diseases of the nerves, heart, kidneys, etc. The sanitarium was designed for restoring persons threatened with insanity. The maximum period of their stay is fourteen weeks, during which they have plenty of fresh air, good food, medical attention, and all the advantages of a holiday. The theory on which the State maintains the in-

stitution is that it is an economic duty to restore to the head of a family or any skilled worker.

In Odessa earnest efforts have been made by authorities to rid the city of the plague, among which has been the killing of a great number of rats, which believed to have had a part in spreading the disease.

Foucault's experiment for demonstrating the pendulum of the earth has lately been repeated in Paris by a pendulum 220 feet long to swing above a table with sand. The pendulum swung across the table, a trench through the sand, each swing widening the trench slightly until the table appeared to be broken.

A despatch from Rome says it has been decided to establish wireless telegraph apparatus at all stations on all passenger trains on Italian railways.

The rates for the journey through Russia or Manchurian Railroad, from the frontier on the west Manchuria, on the Russo-Manchurian frontier, has not been fixed at about \$63. The Siberian express will arrive Moscow, which may be reached by way of the Far East or the Warsaw branch.

Stanley Spencer, an aeronaut, has recently made a successful trip over London, traveling twenty-five miles in one afternoon in his airship.

King Oscar of Norway and Sweden has lately asked the question of damage referred to him for article 23 of the Convention of 1902, which relates to the United States and Great Britain in bombarding A. S. surrounding country in the Samoan islands in 1899, in order to stop the war between the native factions and prevent the further destruction of property. The claim made was in favor of the claims of Germany.

In a despatch from Rome it is stated that the Italian Government has been informed that the American navy is disposed to pass a bill excluding illiterate immigrants from the United States. Such a bill it is stated would exclude three-fourths of the Italian emigrants to America.

The proposed treaty with Denmark for the cession of the United States of the Danish islands in the West Indies has been rejected by the Upper Branch of the legislative assembly by a tie vote.

The volcano Icazo in Salvador, Central America, reported to have been in a state of violent eruption from First Month 7th, and also on Second Month 23d.

The Soufriere volcano on the island of St. Vincent reported on the 23d ult. to have been active five days, keeping the people in the Windward district in a state of continuous unrest.

There have been renewed earthquake shocks in Japan.

NOTICES.

WESTWON BOARDING SCHOOL.—For convening of persons coming to Westwton School, the stage will meet trains leaving Philadelphia 7.16 and 8.18 A. M., 2.20 and 4.32 P. M. Other trains are met when regular Stage fares, 15 cents; after 7.30 P. M., 25 cents per way. To reach the school by telegraph, see Westwton, page 114-5.

EDWARD G. SMEDLEY, Principal.

WESTWON BOARDING SCHOOL.—Application for the admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to

WM. F. WICKERSHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

Address, Westwton P. O., Chester Co., Pa.

Bible Association of Friends in America.

THE ANNUAL MEETING OF THE CORPORATION WITHIN the Lecture Room of Friends' Select School, 14th N. Sixth Street, on Fourth-day, Eleventh Mo. 1902, at 8 o'clock P. M. Friends generally are invited to attend.

WILLIAM T. ELKINTON, Secretary.

DIED, at the home of S. L. Comfort, her son, Pasadena, Cal., on the morning of the thirtieth of First Month, 1902, MARY V. M. MICHENER, wife of M. V. M. Michener, and daughter of the late John and Mary Vail, aged sixty years; a consistent member of Friends Monthly Meeting of Friends. In her short and afflicted life she gave much encouraging evidence of her mind was stayed on the Prince of Peace. Her spirit triumphed death is our joyous consolation. She is the dead who die in the Lord. Ye, saints, who rest from their labors and their works of duty, follow them.

Wherever there is a mourner, there is a mother.

Every success achieved for mere self-interest is a downward step towards failure.

To place to start from for eternal life, is where thou art.

An article by "Penn" in the Philadelphia *Eng. Bulletin*, on the city's burial places, on occasion to say thus of the Friends:— "I have sometimes thought that the Quakers' indifference to the body—forgotten usually is, after all, by most of us when this generation has passed—show sense that sacrifice of the fine feelings of humanity. The flesh and bones are to them things to be commemorated or preserved; they love only the spirit and the memory of good and useful lives, and to the strictest of the Quakers a simple headstone is a mark of humanity. The supremacy of the Inner Light as their guide of life and oracle of duty saves them from superstitious veneration of the inmates of a graveyard and fastens their thoughts on the souls of the departed and not outward emblems of sorrow and mourning. When a cemetery like Laurel Hill or the Mount and others like them, with mausoleums and columns and statuary and stones and epitaphs, are only examples of the blindness of worldly pomp.

With the recurrence of a series of Quarterly Meetings, the diary of Mary Jessup has been open to us at the following paragraph, when she was seventeen years of age: "I attended the Quarterly Meeting; Rebecca (not from America) was present, who I learned that in her early years, when she attended our Meetings for Discipline, she was to consider the great importance of the

Queries, with desires that she might come up to them in every point; and that she had found much satisfaction in these meetings. These observations led me to reflect how unconcernedly I have often sat in them. At this time a desire attended my mind that I might endeavor after greater solidity on these occasions, as well as in Meetings for Worship.

An article in the Boston *Transcript* has this to say about the Society of Friends, as their principles observed heretofore have made them factors in the betterment of their times:—

The Quakers have always had a sociological importance out of all proportion to their numbers. Never counting more than two hundred thousand of their faith in the whole world, they have had, especially in England, a large share in prison reform, the restriction and final abolition of slavery and many minor reforms which all of us enjoy, without knowing their source. In their peace teachings, in their standards of practical morality and philanthropy, to some extent even in their ideas of theology, they have always held doctrines that men of all sects or of no sect are now coming to as discoveries. The surprising thing is that they could live as a sect while the world was catching up with them.

If, as it is a fashion to assert, the Society's "Middle Ages" (when it was adhering to its testimonies), was a "desert," how could it have been blossoming with so many roses?

We are content to leave events to prove whether modern endeavor is throwing itself upon substitutes for that inspeaking authority which once made Quakerism efficient "out of all proportion to its numbers." Many an eloquent vaunter of the victories of Quakerism needs to be reminded that they are the outcome of principles which he is disparaging. As to the largely changed theory of public worship under the still unchanged name, the writer of the above article pronounces the old Quaker meeting a thing of the past. We have heard it publicly prophesied by the late Edward L. Scull, that if Friends should fail to occupy in spirit a waiting public worship, the privilege would eventually be taken away from them. Wherever now it is a thing of the past, so must those eminent fruits be.

"As I stepped upon the steamboat to leave Nantucket," said Andrew P. Peabody (then preacher to Harvard University) in a conversation with the writer, "there was handed to me by William Mitchell a copy of Bates's *Doctrines of Friends*;—'not that I aim to indurate thee,' said he, 'but that thou may understand us better.' I took the book and

have read it with deep interest, and there is not a volume in my library that I prize more highly. I believe that the various denominations of Christianity will ultimately come under a united view of Christian truth, the principles of which will be those now called Quakerism."

The Lot of the Christians in Russia.

By Michael Sherbinin, (at J. S. Elkinton's request).

Beloved Friends and Brethren in Christ. It is with a sense of awe and fear of God, before whom all flesh shall appear and all men shall give account of their words in the day of judgment, that I take up the pen to convey to you the record of some facts of which I was eye-witness and which might be interesting to you in our common cause of service to which our Divine Master is calling us.

Russia, where I was born and which received a name and form of Christianity one thousand years ago, has recently heard the Word of God and is 'arising out of a sleep of centuries. Young men and women of both the higher and lower classes begin to respond to the Divine calling, and, with hearts enraptured by the glory and sweetness of that calling, step out to Christ *without the camp* of the conventional state religion, bearing their Lord's reproach. They gather the air into their lungs and we are at the moment when the hush of conventional silence and compulsory form of speech will be broken by a triumphant song of those who have tasted the true liberty which Christ alone can give, and who as the true Israel of God have emerged out of the threatening wave of the Red Sea of judgment and of the Egypt of fleshly wisdom and tyranny of thought, to follow and serve Him who of God is made unto us wisdom and who is the Prince of the kings of the earth.

Russia realizes the necessity of public instruction, but this instruction has as its aim not so much to raise the moral level of the people as to help to bring up enlightened soldiers and officers of the state. The schools, started in the second half of the Nineteenth century, helped for the most part to corrupt people rather than to have a moralizing effect. I heard a very correct saying in South Russia, where I spent eight years of my married life: "Before our people had the public schools, a peasant could leave his plough in the field over night, but since we got these schools he can no more leave his implements in the field, because they will be stolen."

The schools went on with their educational work but the children got in them little religious enlightenment and the rich Russian landowners preferred to take managers of the German, English and Swedish nationality rather than to entrust their estates to a Russian. The large restaurants of Moscow and St. Petersburg also recruited their waiters from Mo-

hammedan Tartars, as most of the Russian waiters were drunkards and the Tartars were not drunkards and were more honest. It is for this same reason that the menials of the Imperial palaces of Russia are chosen from the Tartars.

This is also the reason why many Russian statesmen and aristocrats take as their coachmen members of the sect called "Old Believers," who do not use intoxicants, rather than to entrust their persons and lives to the "orthodox" sons of the State Church. This is also why the German and foreign banners and capital owners find the doors of Russia open to them while those doors close again upon the wealthy Russians of the same profession; and lastly this is also the reason why poor Russia, liberated by Alexander II. of serfdom, enters, if she has not already entered, upon a period of enslavement to the wealthy foreign millionaire; who in spite of the profession of patriotism heard on the lips of the Church, state and press, is much more favored in his enterprises than the sons of the land.

Time and space would not permit me to state other instances which make the following saying too true: "Russia gives her adopted children what she refuses her own children." This was true since the Slav tribes living one thousand years ago near lake Ilmen, half-way between Moscow and the Baltic Sea, sent a message to the Scandinavian princess called Varingar-Russ saying: "Our land is vast and rich but there is no order in it. Come to rule and have dominion over us." The ritual of the Greek Church is somewhat like that of the Roman Church, and in fact these two churches have much ground in common. The poor Greek priest is as much a slave to his holy image as a pagan is a slave to his idol. Perhaps there have existed holy men in the Greek Church who could pray to their God "in spirit and in truth" and for whom a picture was but a remembrance and symbol of holy events and facts or martyrs, but now-a-days, I am sorry to say, the holy image is to the priest what the graven idol is to the heathen. If a man happened to burn or destroy a holy image he is treated like a gross criminal and sent to Siberia. The same lot awaits a man if he dares publicly declare, that an image howsoever holy it may be, is and remains a wooden board with some oil paint on it. No marvel that the common people call the images *gods*, and no marvel that such dissenters as the Molokans, Doukhobors and Stundists abhor them as a weapon of the wicked one. A Russian merchant steals and cheats, and then goes to a temple and presents to it an expensive holy image with the gold and precious stones or offers other propitiatory sacrifices to the Church. A woman who owns a house of ill-fame moves with her establishment to the annual fair of Nizhni and before starting sends for priests to hold prayer and ask God's speed and blessing for her trade. A party of workmen erect a distillery where brandy will be sold to the neighboring villages, and affix a nice white cross on the front piece of the building to show that their work is done in the name of Him who triumphed on the cross over the prince of Darkness.

Surely things have come to an extreme and they cannot go further in Russia. The time of the crisis has come. The world is enthroned

on the seat of the Church, and laughing to scorn her most sacred traditions and legacy, crucifies with irony the members of that blessed Head, crowned with thorns. The great Russian poet Poushkin well expressed this irony when he saw an officer of the state who had reached his rank through theft and bribes and was adorned for his merits with the order of some cross. Poushkin's verses on account of this knight could be thus rendered in English:

O Christ, who from eternal loss
Didst save the thief upon a cross,
From a new curse now send relief
And save the cross upon a thief!

After the Russian troops returned triumphant from the Turkish War in 1877 the blood-stained banners and standards of the enemy were hung up in a large "Temple in honor of Christ the Saviour," especially erected a few years later in commemoration of the victory. The banners brought by the Russians when they returned from Paris after the fall of Napoleon, were deposited in the Kazan Cathedral in Petersburg, where they can be seen up to this day. In both cases the followers of Christ forgot that their God was not a god of bloodshed like Jason of old, to whose temple the Romans brought their trophies of war.

In the chief town of Russia, St. Petersburg, the gospel was preached by godly men during the reign of Alexander I. However it seems that the work of God in which Lord Rodstock and Colonel Pasil Pashkof were instrumental at the close of the Nineteenth century had such a lasting influence that it brought in motion all the classes like the waves produced on the surface of the waters by the propeller of some gigantic ocean steamer, waves which are transmitted to an incredible distance. The work was sound and deep and good not only in quantity but in quality. While these worked in the North, other workers labored in the South, and the vast population of European Russia was put into commotion. The conflagration was general and the persecutions, imprisonments and banishments helped as always only the more to spread the fire. Alexander II., under whose reign the movement arose, was not unfavorably disposed towards it and the prefect of Petersburg, General Trepof, showed a friendly disposition, by ordering the whole city police to help and protect the good work. However after the death of that liberal emperor, those cruel persecutions, just mentioned, broke out and several Christians, especially of the poorer classes, were deported to such barren places of the Caucasus where they were half starved to death or where they caught deadly diseases from being obliged to find their dwellings in damp and filthy huts often dug out in the mountains. These troubles have not yet ceased, and the South Russian dissenters especially are much restricted in their worship and in their liberty; but it seems now that the exodus of the Doukhobors has given the start and there is quite a wave of Southern dissenters, which carries and brings them to the shores of America. I hear that during the last two years one hundred Russian families settled in North Dakota, a few settled in Saskatchewan, Canada, and about fifty-five families have passed through Winnipeg this summer on their way to the West.

During my present visit to Winnipeg, I am spending some hours of leisure in studying the educational system and schools of the country, I have the privilege of meeting frequently with some Russian brethren who not words enough to say how their so grateful to God, whose providence brought them and their children out of this condition of thralldom, where even their wives and children would not be acknowledged by the government,—into that land of abundance and freedom. One of them, Kapoustin, told me he dreams often that he is still in Russia pleading with the Russian government to sell him the passport, without which subject is allowed to cross the frontier, and adds the brother,—"I often awake from my dream and to my great joy and amazement have to realize, that what I so much yearn after in my dreams is already a blessed reality." I quite sympathize with that fraternal as I have passed through an analogous experience in Russia and have dreamt during the year of my being settled here, at least ten times a similar dream.

My prayer and endeavor is to put your reach all the interesting facts connected with this persecution and this exodus, so that you may be able to judge what you could do in helping these persecuted friends to lead "a simple and peaceable life in all godliness and honesty."

Receive, respected friends, this short letter I promised to send you, and do not forget your prayers your humble and grateful friend.

MICHAEL SHERBIN

Letters from Doukhobors in Siberia.

EXPOSTULATING WITH SOME IN CANADA.

From a man among the Doukhobors in Siberia, to Simeon Vasilievitch Vereschagin, who lives in the village Terpenie, Saskatchewan.

DEAR BROTHER SIMEON VASILIEVITCH: I received a long letter from Evan Ersavitch Konkin, who writes of his daughter's illness and of the runaway of three Doukhobors in Siberia to Canada, and about your refusal to hold cattle. The note about the latter in sending you with this, thinking that it was important for you and all your brothers and sisters to know what Evan Ersavitch told about it.

I think that man and beast should be treated alike and to manage the work there should be one to whom God gave the knowledge, not a man. Without the management of man the animals will suffer and perish, not only in a cold climate, but in a warm one also. You make man and animals wiser and better. When the animal is let loose it gets wild and foolish. It is a sin to beat and ill-treat an animal, but there is no sin in that the animals and gives man its extra wool, milk and other things. I think that if a man also treated his animal with love, it would desire to work with man and serve him because in light work there is no suffering or pleasure, especially in regard to the animals.

Do you not know the unanswerable statement of a dog to a man he loves? And pitiful if the man, desiring to liberate, sends it away. I think that your aim which you have liberated will itself return.

you and profit by your love. Is it possible you will send it away again? If it was for the cattle to live with you and work you, then being liberated it would not be back to you. But it will surely come unless you send it somewhere far away, without your care it will probably die. So don't find it a sin to feed on milk and

base write what you feel in yourselves you remain alone before your conscience God. Do you feel that it is a sin for you to use animals for work, and to feed on milk, eggs? And why has such a thought been in the minds of your brethren? Is it from this, that being settled down and comforted materially, you and your brothers and sisters have begun to long for more spiritual food? You in your souls have begotten a desire to do good around you, and, knowing that the animals are suffering in captivity, you have desired to liberate them, that way to do, if only pretended good animals who are not at all in need of it, so doing you want to satisfy your thirst for good.

My dear brethren and sisters, why are the unexisting suffering of cattle, there is so much of real, actual suffering which our brethren are afflicted? . . . harvest truly is great, but the laborers are few."

My dear brother, to think, please, the brethren and sisters, and let us know what God has put on your hearts and minds. May God help us to do his will, and to serve as our strength will allow to forward the kingdom of peace and love.

I have given the copy of Evan Evsaevitch's and my letter to all.

Your loving

EVAN TREGUBOFF.

Get your mother and all brethren and sisters.

Enclosed is a letter of Evan Evsaevitch to Tcherkoffs.

OLEKMINSK, YAKOOTSK.

My dear friends, Anna Konstantinovna and Vladimir Grigorievitch! Letters received lately from Canada in which I am informed that one of the Doukhobors is forty days and nights, and is still alive. Being taken up with that foolish act, given up taking milk, butter, eggs, etc., and working themselves, having let loose the cattle. Where do our brethren dig out absurdity? It is a terrible and incurable disease, and compels others to suffer, being less.

Will the Almighty Father send them light, that they might heal their sickness, and stop abusing his majesty and his mercy with their unaccountable actions?

How much bitterness we have to read and find the absurd tidings and think: What, this all our hard suffering for, when there is no leaning on nothing, and instead of it they are making a heavy and grievous

heavy thoughts oppress the sore heart and lead it to suffer!

EVAN KONKIN.

Letters on the Doukhobor Situation.

From William Halstead, Methodist minister, Portage la Prairie, Manitoba. Eighth Month 25th, 1902.

"Looking back and thinking of the kind Providence of God regarding the Doukhobors, it seems to me very fortunate that they were brought to our West at the time they came, as it would have been now much more difficult to have procured land for them. It is marvelous how the land in our West is being sold and taken up. From all I hear, the Doukhobors see that it was a very good thing for them to come when they did. They have been able to get plenty of work, and have been raising stock, cultivating land, and earning good wages on new railroads, building and in helping in harvest fields. . . . The wages are \$1.75 per day and board.

"In yesterday's *Free Press* there is published a letter of thanks expressing gratitude for the great kindness of American Friends in bringing them to this country and in helping them to get a start."

Letter to a Friend from Joseph S. Elkinton.

"Many statements have of late been made in the public papers concerning the Doukhobors in Canada which have been greatly exaggerated. It cannot be denied that agitators and deceivers have wrought mischief among them by discouraging them from taking up homesteads and inducing some very strange practices, but not nearly to as great extent as is represented. There were no such sights as that they were reduced in flesh, as the papers state, when I was among them in the early summer, and my son some weeks later reported there was no appearance of starvation, nor does my correspondence from those living among them speak of starvation. It was thought when I left that as a body they were practically self-supporting, and had excellent credit with the storekeepers. The Doukhobors in Saskatchewan had ten thousand bushels of wheat for sale, and have been reported as having very generally taken up homesteads.

"The agent of the Swan River district told me that 1,500 Doukhobors living in thirteen villages had no disorder among them, except that two or three of them did not do as well for their wives as he thought they might (by sending of their wages to them).

"Whilst it is a grievous consideration that there should have been estrangement through deceivers and agitators, which has led into some fanatical excesses, they, as a body, are a very interesting people, learning the English language faster than might have been expected for the time they have had to do it in, and have done themselves much credit with their industry in the erection of their dwellings, and in their eagerness to possess agricultural implements.

"The Yorktown district has been the most afflicted by evil-designing and crafty impostors, some of whom left Canada; but with pernicious publications continue to perplex and injure. But those who have had a considerable number of Doukhobors in their employ have said they had no better class of men to work for."

Sarah Boyle to J. S. Elkinton, from Devil's Lake, Yorktown. Ninth Month, 15th, 1902.

"I believe that the men here will take up their land. The others, who, I think, must be crazy, won't take their land. Indeed, some of them made a bonfire of their harness and fur coats, and they wear rubbers, not leather; they won't drink milk, or eat butter or eggs, and some are looking for 'the coming of the Lord.' I am sorry to say that they don't believe even in Peter Verigen. The Doukhobors here are not keen on the school, and will not send their children. But still the boys say that they will come in the winter. I feel that it is a great test of patience, and even if the school work should have to be given up for a time, I dare not leave these people. No one has ever lived long enough among them to gain their confidence. I get many things in return for medicine, such as chickens, eggs, butter and vegetables; and they show me so much kindness in many ways that I feel grateful to God that He sent me here."

From J. T. Reid, M. D., of Winnipeg, to the *Montreal Weekly Witness*. Tenth Month 6th, 1902.

"Believing that this deflection of the young men (to liberal ideas and railroad workers' habits) had been brought upon their own heads as a Divine retribution for some disloyalty to truth on their own part, a few of these old men thought it to be their duty to follow still more closely the 'law of conscience,' and they therefore resolved not only to adhere to former principles, but to carry those principles to a still greater and (to us) a less pardonable extreme. They discarded the use of boots and shoes, harness and all other articles made from the skins of dead animals, and many of them went to such an unreasonable extreme as to doff all clothing made from the product of living animals. Another short step revealed to a few of the more fanatical that it was wrong to use animals for any purpose whatsoever. These few set out over the colony, preaching from village to village this new doctrine, which they claimed was a revelation from heaven. Barnum said that 'all races of men like to be humbugged.' In this crisis the action of the Doukhobors proves that to that rule the Slav is no exception. The result of the missionary tour of these few fanatical Doukhobors has been that quite recently the Dominion Immigration Department has taken charge of several hundred head of cattle and horses which had formerly been the property of the Doukhobors, but which were found wandering at will on the prairies.

"But this aberration is not 'epidemic,' only a small minority of the Doukhobors are involved. The statements of *The Illustrated London News* that 'taking no thought for the future they are making no preparation for the winter,' is incorrect. Their this year's crop of cereals and vegetables is sufficient for the sustenance of all their people for more than one winter. The statements of the *New York Tribune* that they have 'abandoned their fields' and are 'gaunt and hungry wrecks' are likewise incorrect. Those who have abandoned their horses and oxen are themselves cultivating their fields for next year's crop. If the editor of the *New York Tribune* could, at close quarters, look upon the amount of wholesome homemade bread and highly nutritious vegetables assimilated by the average

Doukhobor (their fanaticism has not by any means impaired their powers of assimilation) he could then understand why it is that they are not only not 'gaunt and hungry wrecks,' but that they are evidently so 'well fed' that in their more natural life they have been able to develop a physical organism which in freedom from acute and chronic disease, in avoidance and in power of endurance, is superior to that of the Anglo-Saxon.

"It is equally untrue that the men now 'sit around idle' and 'compel the women to do the work formerly done by the cattle.' The Doukhobor is nothing if not industrious. Both men and women are hard-working. Those of them who now do the work formerly done by beasts of burden do it spontaneously and do it gladly, for it is done from a sense of duty in obedience to what they sincerely believe to be the voice of conscience, which to the Doukhobor is the voice of God.

"We do not censure the Puritans as a class because there were many religious fanatics amongst them. To censure the Doukhobors just because a minority of them are religious enthusiasts is as unjust as the Doukhobors themselves are in judging all Canadians by the more uncivilized minority of our people whom they occasionally see on the frontiers of our civilization in the west. To censure them as a people on account of the fanaticism of their minority is as illogical as it were to class the whole American people with those who follow Dowie and Mrs. Eddy.

"In the west there are six classes of men who have at all times seemed to glory in the abuse of the Doukhobors:—

"1. The politician of a certain school whose political game is 'to get in,' and who makes political capital out of every opportunity 'to get the other fellow out.

"2. The rancher, who wants the whole earth within the bounds of his own ranch.

"3. The class who cannot appreciate the high moral tone of the Doukhobors and therefore look upon them as hypocrites.

"4. A fourth class who are so narrowly sectarian that they are unable to see any good outside the pale of their own particular creed.

"5. A fifth class whose grasping propensities in the west are being daily put to shame by the more Christian brotherly kindness of the Doukhobor, to whom Christianity is nothing if it do not include the love of neighbor.

"6. Some of the most unjust things said against them have been said by disappointed would-be missionaries who thought the Doukhobors were spiritually benighted and were anxious to enlighten them.

"Just as every Anglo-Saxon 'craze' runs its course, declines and disappears, so will it be with this fanatical exuberance of the Doukhoborts.

Visited the Doukhobors.

The following appears in the *Manitoba Free Press* of Tenth Month 29th, as a report of an interview with Frank Pedley, Superintendent of Immigration, who had left Winnipeg for Ottawa:

"Did you visit the Doukhobor Community while you were away?"

"I visited ten or twelve of their villages," replied Mr. Pedley, and found the Doukhobors to be very comfortably situated. Their

houses are well built, well arranged and scrupulously clean. In every case that came under my personal observation—and I was at pains to make very full inquiries—and from all that was reported to me, I found they had provisions for the winter. Their crops have been abundant. In addition to the revenue thus derived, many of them have been at work in harvest fields other than their own, and many have been employed on railway construction, and by these means they have been enabled to gather considerable money. In a number of instances the Doukhobors have bought modern agricultural implements, indicating that these people are acquiring Canadian methods of farming at a reasonable early period. The general reputation of the Doukhobors, too, for business honesty and integrity, is above reproach.

"The merchants and other residents all bear testimony to their promptness in meeting their financial undertakings as well as to their peaceful dispositions and industrious habits."

COXEY ARMY CANARD.

"Did you see a statement made to a city paper last week, Mr. Pedley, to the effect that a Coxeys' army of one thousand Doukhobors were marching to Yorkton to demand food."

"I heard of it," answered Mr. Pedley. "There's not a little of foundation for it. It's a yarn manufactured out of the whole cloth, as I said, they have food enough for a year, many of them for two and three years; why should they demand food."

"The Doukhobors," went on Mr. Pedley, "frequently visit and discuss matters of common interest. I noticed that this was being done while I was driving through their settlements of some considerable extent. It is possible that some of them have carried to an extreme limit some of their views regarding the ownership and working of cattle and horses by releasing them, as they did some time ago. Some of the extremists, I understand, are endeavoring to engraft their views on their more moderate compatriots, and are traveling through the settlements with this view. Whether they are prepared to go further than this in their religious doctrines is doubtful, although the matter will in all probability be decided with them at an early date. Large numbers of them are perfectly contented with their present condition, and indicated their intention of staying where they are, working their land.

MAKING HOMESTEAD ENTRIES.

"I found several cases where applications had been made for homesteading, and a growing disposition to conform in other matters to departmental regulations. Whatever may be the result of the so-called agitation, it is at present confined to only two colonies of all those that the Doukhobors have established. From information I have received I see no reason to believe it will extend further."

Extract from a letter from Laura Snider to Joseph S. Elkinton—Portage La Prairie, Tenth Month 27th, 1902.

"The money you left with me I carefully distributed among some needy Doukhobors in the hospital. It was very gratefully received. I assure you—one poor man ill with typhoid fever, with wife and family at home unpro-

vided for, was especially thankful for. "In looking over one of the hospital reports for 1900 I found to my surprise the Doukhobors ranked third in the number of patients who had been treated during the year. I presume, however, that the number has been lessened in the last two years.

"We always found the Doukhobors patients very tractable,—very grateful, and willing to submit to treatment, even though painful—knowing that it was for their own good, and always willing to do their part to hasten recovery—which was not always the case with other foreigners.

"They seemed to have confidence in a physician and nurse and exhibited no suspicion—in fact were more intelligent with regard to the value of the treatment than people from other lands. It was often hard to persuade them to stay in the hospital till completely cured—as soon as they felt themselves beginning to recover they wanted to go home, wanted to go to work. Many foreigners are too willing to stay long after recovery, feigning ailments as an excuse to remain."

Laura Snider was nurse in the Winnipeg Hospital at the time of my visiting there on my two last visits, at the hospital in Winnipeg. She is a widowed daughter of William Halstead, a minister in excellent standing among the Methodists and one who had devoted himself for the welfare of the Doukhobors. He grew up in that section of the country and was what might be called a successful farmer and could encourage the Doukhobors as one experienced in the hardships of pioneer life, as also in having reaped the benefit of steady perseverance, as he added, with a Divine blessing. J. S.

WHEN, instead of saying, "The world is not a living," men shall say, "I owe the world a life," then the kingdom shall come to power. We owe everything to God but ourselves.—M. D. Babcock.

GROWING PAINS.—"I think William suffers from growing pains this morning," said grandfather. "William is growing in grace, and it pains him very much some times."

"What is growing in grace?" asked Oscar. "Growing good; growing like Jesus," said grandfather.

"Did he grow this morning?"

"I am sure he did. He wanted very much to ride with me. He knew his little brother and he could not both go, as there was only one empty seat in the carriage. So he sat out under the tree and thought something like this: 'I always have to give up to Oscar, just because he is little. I hate this growing up.' When William felt this way he has very bad growing pain indeed. It hurt him a long time, and then he said: 'I promised myself that I would try to be strong, and kill everything weaker than myself. I had a pony and a bicycle; let Oscar have them with grandfather.'

"Why, grandfather, how did you know Oscar cried William."

"Because I have had that kind of growing pains myself for thirty years, and I know I shall never get over them till I go to heaven."—Selected.

FOR "THE FRIEND."

ODE TO THE FLOWERS.

of the earth, whose perfumes floating ever
in hill and valley, mount and prairie sod,
e in incense to the glorious Giver
In paths He trod ;

l some lone traveler o'er the desert dreary,
and disheartened, clod his toilsome way,
nted floweret may his spirit weary
Revive and stay.

sions far remote—in Arctic highlands,
where the sun beams forth with tropic glare,
ing o'er continents, and seas and islands
Your odors rare.

to the simoon's blasting breath still seething
from a furnace, does your fragrance rise,
alth and joy and thanks forever breathing
Beneath the skies.

h the fair flowers may lose their transient
glendor

fall upon the soil that gave them birth,
and their faded leaves a perfume reader,
Of higher worth.

ve not thus a solemn lesson given
than, ere yet he yields his mortal breath,
raise continual should ascend to heaven
Through life to death ?

ere the words and actions of the living,
se souls glow "brighter into perfect day,"
ke the flowers, their memory surviving
Shall ne'er decay.

J. COLLINS.

Science and Industry.

FARMING IN ALASKA.—Within the last
years the new industry of "fox farm-
ing" has been developed in Alaska. It origi-
nates in the desire to preserve the valuable
fox from extermination. The experi-
ments begun by placing twenty foxes on
occupied island. In the course of a few
some thirty islands were thus turned into
ranches. It was found that the ani-
mal became sufficiently domesticated to
wearing their keepers, and to assemble
ding places. Eight hundred or a thou-
sands are included in a ranch. At the
age a certain number are killed for
pelts. The business appears to pay very
and it is suggested that other fur-bear-
ing animals might be domesticated and prop-
erty in a similar manner.

PORTABLE FOOD.—Here is a suggestion
over the water concerning the prepara-
tion of easily carried food for use when one
is unable to be on a physical or mental strain
unable to procure food. This especial
is called meat lozenges. These are
very dissolving slowly two full ounces of
blatine (this is more often to be had
the druggist than the grocer) in a quart
of strong, well-flavored clear-meat stock,
into the boil, then cook sharply till it is
added to a gummy syrup, skimming care-
fully the cooking till no more scum
appears. Pour the liquid on plates and cool.
The may be cut across in diamonds, the
then packed in little tin air-tight

STATES PRODUCED BY ELECTRICITY.—The
interesting sight which Lord Kelvin re-
corded that he saw in his recent visit to

America, was the working of an apparatus at
Niagara Falls in extracting nitrogen from the
air. When it is remembered that the world's
food supply depends in the long run on the
presence of nitrates in the soil, a practical
method of producing nitric acid enough to re-
pair the drain of constant cultivation becomes
an important matter. By the apparatus of
Charles S. Bradley and D. R. Lovejoy, of Ni-
agara Falls, about two and a half per cent.
of oxides of nitrogen are yielded from the air
passing through. If the gases are brought in
contact with caustic potash they produce salt-
petre, if the base is caustic soda they yield
nitrate of soda. With this as a fertilizer,
land that produced twelve bushels of wheat to
the acre has been made to produce thirty-six,
and the yield of hay has been increased from
\$15 to \$28 per acre. A power of doubling
or trebling the world's food product is thus
indicated.

BEGINNING OF OSTRICH FARMS.—Fifty years
ago the domestication of the ostrich was an
idea scouted by most of the zoologists who
had given time and thought to the subject.
Their young, it was believed, could not be
raised in a state of captivity. The great de-
mand for ostrich feathers was then met by
hunting and killing wild birds, and there were
indications that the species would soon be-
come extinct. But, in the early sixties, a
French scientist named Gosse issued a pam-
phlet in which he argued that the domestica-
tion of the ostrich was feasible and prac-
ticable, and not long afterwards a brood of
ostriches was reared in the city of Algiers.
Gosse's pamphlet and news of the experiment
in Algiers became familiar to two farmers in
Cape Colony, who determined to undertake
the domestication of ostriches in South Africa.
Beginning with two birds, which they caught
and placed in an inclosure, in a twelve month
they had a brood of eighty, which marked the
birth of a new industry, which has played a
potential part in the development and com-
merce of a vast region. Large tracts of land
in South Africa, which could not be profitably
used for any other purpose, are now devoted
to this business, and feathers to the value of
\$6,000,000, from nearly 400,000 domesti-
cated birds, are now annually sent abroad
from Cape Colony.—*Success.*

THE DURATION OF A HORSE'S AFFECTION.—
The affections of a horse are not inferior to
his intellectual qualities, and, especially if
made a pet, he becomes very fond of his mas-
ter. In case of separation he remembers him
for years. But his affection is different from
that of a dog, which continues to love his
master even though the latter abuses him
greatly. Rough, unkind treatment will quickly
strange the affection of a horse. Good horse
sense discovers no particular reason why a
horse should be devoted to a master who ha-
bitually maltreats him.

The intellect and affections of a horse point
out two things so important to a trainer that
he must bear them in mind until they become
fixed habits of thought:

First. Never, under any circumstances, al-
low a horse successfully to oppose his will to
yours. If you do he will remember it and
(reasoning by experience) try it again.

Second. Always keep his affection. If he
dislikes you he has no wish to please you;
and, if his disobedience is always perfunctory,
you will make but little headway in training
him.

These two points assured, he will almost
invariably try to do whatever you require of
him—if he only knows what it is.—*David
Buffum, in Success.*

The immense demand for paper and the
great quantity of wood used in making pulp,
call for the replanting with some hardy,
quick-maturing tree of the acres denuded by
this industry. A future crop of wood must
be assured. The silver poplar or abele, an
importation from Europe, now become wild in
this country, will answer this purpose well.
It is found in every great city and is almost
the only shade tree that will survive the nu-
merous vicissitudes of city life. The suckering
is a nuisance in the city, but helpful for
planting. The tree frequently surrounds it-
self with several thousand sprouts suitable for
forest planting or it may be grown from cut-
tings of the branches or of the roots. The
silver-leaved poplar is of rapid growth under
favorable conditions. It will flourish upon
the mountain slopes of the eastern States,
increasing from three-fourths to one inch in
diameter yearly. The wood is white and sim-
ilar to that of the cottonwood. There are
many places where it would serve a good pur-
pose for lumber. In twenty years there may
be grown from 50,000 to 60,000 feet b. m.
of lumber per acre from the abele—estimating
170 trees per acre, 20 inches in diameter and
20-foot length of trunk, which it is capable
of attaining. Or considering it for pulp pro-
duction, there would be 6,500 to 7,000 cubic
feet of wood per acre.

RUSSIA'S FLOATING FARMS.—We are accus-
tomed to think that America leads the world
in farming methods. But our Department of
Agriculture is fairly distanced by the Russian
Government, which not only furnishes seed to
the farmers of the land, and recommends to
them improved ways of farming, but sends
model farms floating round among them as an
object lesson for their benefit.

These wandering agricultural experiment
stations have for their foundation, so we are
told, immense barges, holding enough pre-
pared earth to raise goodly crops. On the
deck is a comfortable building for the profes-
sors of agriculture who are in charge of the
"farm," and a smaller house for the crew.
There are vegetable patches, grain beds, bee-
hives, and so on, on each barge. Built at the
headwaters of the great Russian rivers, and
launched by the spring freshets, these barges
loiter down the streams and through the con-
necting canals all the summer long. When-
ever they reach a village, they are tied up to
the landing, the church bell is rung, and the
starosta, or mayor, leads his flock of villagers
on board, to take a lesson in farming.

The professors often give illustrated lec-
tures to the peasants. They show them how
to use farming machinery, and give them the
seeds of new plants. The visiting peasant is
dull, indeed, if he does not learn something
that will help him in farming his own little
field. After the village is satisfied with its

lesson, the barge casts loose and moves on to the next one.

When the summer is over, the crops on the floating farms are reaped, and the wood of the barges is sold in the treeless southern country along the river's mouth for enough, often, to pay the expenses of the trip, outside of the professors' salaries. So the whole thing is economical enough, after all.—*Barbara Griffiths.*

DON'TS FOR USERS OF COAL OIL STOVES.—Coal oil is a good servant, but a bad master. Treat it well, and it returns the compliment; grow careless in its use, and it may destroy life and property and cause lasting and painful injuries. In view of the winter's prospect it is well to lay down a few rules in every household about the use of coal oil for fuel. They are here summarized in a "dozen don'ts":

1. Don't fill the reservoir when the stove is burning.
2. Don't fail to have a thoroughly good stove in the first place.
3. Don't burn any oil but of the best quality.
4. Don't spill oil upon the stove, or, if you do so by accident, wipe it off carefully before approaching it with a lighted match or other flame.
5. Don't fail to fill the tank out of doors, if the stove be provided with a detachable tank.
6. Don't forget that the less oil there is in the tank the more gas there is generated from the oil, and unless the gas-escape hole in the stopper is sufficient for the escape of this gas it is likely to flame up when the wick is lighted, causing a small explosion that may have big results. The well-filled lamp is safest.
7. Don't fail at frequent intervals to boil the perforated wick tubes in soda water or lye, that the ventilation may be free, or an ill-smelling stove will result.
8. Don't try to force the wick too high, or smoke and odor will be inevitable. Some stoves have automatic wick regulators.
9. Don't expect good combustion unless you turn the wick low at first until the cylinder is heated through.
10. Don't fail frequently to scrape off the charred incrustation on the extinguished wick with a knife, to secure a clear flame.
11. Don't forget that little oil in the tank causes rapid consumption of wicks.
12. Don't set your burning stove near the draft of a door or open window, or you lose heat and gain an unpleasant odor.—*Baltimore Sun.*

DEPENDENT AND INDEPENDENT.—No class of men, as a rule, are more independent than farmers. They can stand strikes without any great loss. They raise enough to depend on for their living, and can exchange one with the other. Neighbor Thompson had a lot of hay out, help was short, a storm was brewing. A neighbor stepped in with the salutation, "Well, neighbor, I thought I would step in and see if I and the boys couldn't help you get that hay in before the rain comes on. We can put off the cultivating of our potatoes a day or two, and besides, we may get caught as you are, and a like favor from you will come good."

"Well, now, if that isn't kind of you. You couldn't have offered me help in a more acceptable time. I will certainly pay you back; and, by the way, neighbor, I see one of your road horses is lame. There is my roan in the pasture doing nothing. Send one of the children over when you wish to use him."

"Thank you! My wife was saying this morning she wanted to get to town to-day."

So it went on all through the season, each helping the other, and so it should be between farmers. The joint work, the sociability, the kindly feeling, make life more enjoyable.—*A. M. Purdy, in Tribune Farmer.*

A Terrapin Farm.

A diamond back terrapin farm, with more than fifteen thousand in stock, and worth fully sixty thousand dollars, is one of the interesting industries of Crisfield, Md.

When Washington and Lafayette were forced to eat terrapin at Yorktown because the army supplies were low; when counties in Maryland passed laws prohibiting the feeding of slaves oftener than twice a week on terrapin meat in order to save pork, and when the succulent "reptiles" were cooked for food for fowls and swine, and could be bought for one dollar an ox-cart load, no one dreamed that the day would come when the terrapin would be almost extinct and worth as much as one hundred and sixty dollars a dozen. But such is the situation to-day and in this region the most productive of the luscious diamond back of the Chesapeake, they are cared for and guarded with greater anxiety for their safety than were the slaves in the days when they protested against being gorged on terrapin meat.

Believing that good money could be made in "cultivating" terrapins, A. T. Lavalette, decided to embark in the business, and he has no cause to regret this decision. He knew the Chesapeake thoroughly, having been engaged actively in the oyster, crab and terrapin business for more than fourteen years, and there was no question in his mind but that it would only be a few years before terrapins would bring almost fabulous prices. Selecting a pretty site for a home on the shore, adjoining which he built his terrapin farm, covering about seven acres, everything was arranged to suit their habits. The farm is divided into pens, with high board fences, and wire screens cross the sluiceways. In these pens there is water, grass and sand, and the terrapin can take his choice as to where to spend his time. Plank walks high above the water and marsh are constructed over the farm, and when Lavalette wishes to feed his valuable reptiles he simply goes out on one of these elevations and clasps his hands together, making a loud noise. In an instant the terrapins come helter skelter from the sand, marsh and water and huddle under the walk where he stands while those in the other pens crawl against the wire screens and fences in an effort to get through. They sometimes crawl on one another until they are three feet thick, and occasionally there are some pretty lively fights, though a terrapin is not generally very pugnacious. They are fed on crabs, fish and meats of every kind, but are small eaters. It is seldom that a terrapin will attack any living thing larger than a fly or a small bug.

A. T. Lavalette has terrapin of all sizes. Their growth is remarkably slow, and it is estimated that at least forty years is required for a terrapin to attain its full growth. Diamond back seldom grows to be over twelve inches in length, measured by the stomach under shell. The terrapin is by nature a blooded reptile, and with the coming of the first frost he begins to locate himself in the winter, and it is necessary on this farm to keep a close eye on the weather and use all means for keeping the terrapin from freezing. The favorite place for the hibernation of the very large sizes is a few inches below the soft, oozy mud at the bend of a three or four fathom V shaped channel in the bed of a stream about the same distance from shore to shore. Thousands of such creeks penetrate the marshes and islands of the Chesapeake, and those frequented by man are instinctively selected by the terrapin for his haunts. No matter how long they may remain hibernated they never lose an ounce in weight, and come out in the late spring as gay as crickets, though for months they have not tasted food nor water. The time of hibernation usually lasts about six months. They bury a few inches in the mud, and leave at the spot they designate a small mound, in the middle of which the mound may be discerned. It is the mound on which the first attract the hunter and fisherman. During this period the terrapin is caught in the torpid state. At least ninety per cent. of those taken from the beds of deep creeks will measure from six and one-half to eight and one-half inches, with an average weight of two and three-quarter pounds, and the males, while eighty per cent. of those taken in marshes have an average weight of one pound, and measure less than five inches and are males. The latter always bed in the marshes and among the rushes of slow ponds, only venturing in cold water during the summer and warmest spring months in which time they lead a migratory life in sea of food, consisting principally of small shellfish and crabs.

The terrapin is easily tracked, and their market value being so high, the shores are dotted with hunters, and it is mainly on these that A. T. Lavalette buys. A few of the hunters still employ dogs in tracking, but a dog trained to track terrapin is seldom suited for anything else, and the result is that few dogs are kept engaged in the business. Years ago nearly every resident of the eastern shore had his terrapin dog. When along tracks and finds a terrapin he places his hand on him and holds him until the hunter comes. Dogs also locate the nests of terrapin, and the hunters take the eggs, worth but little food, but going far towards hastening the termination of the terrapin. It requires a skilled hunter to catch a terrapin with net or dredge. Nothing has, perhaps, hastened the scarcity of terrapin more than the draining of the marshes in the early spring, causing the reptiles to come from their places of hibernation under the impression that it was spring, and that it is safe for them to venture out. Thousands are burned to death in this way, and stringent laws have been enacted against firing the marshes, but the hunters evade the law by declaring the fires accidental.

le the people of this region are noted for honesty and square dealing. Lavalette no chances. He has a one room house centre of his terrapin farm, built twenty above the marsh on piles, and in this are Winchester rifles. One of his employees sleeps in the house every night, and it would be unwise for any one to go to make a raid on the farm. Large game him more trouble than thieves, as occasionally get into the pen and kill and eat young. Rats will also dig and eat the eggs, as a terrapin deposits her eggs only once a year, the breaking up of a "hatch" means a heavy loss. A. T. Lavalette it is a great error to state that terrapin are hatched by the sun's heat. The eggs are laid in wet sand and covered to a depth of five or six inches. It requires forty to forty-two days for the eggs to hatch. It is from three to five days after the hatch before the little terrapin can go around. The young receive little attention from the mother and almost from the father left to look out for themselves and along the best they can. After a few days the little fellows sport around in the water and crawl out on the sand banks as young cubs. —N. Y. Tribune.

Items Concerning the Society.

REPORT CONCERNING IOWA YEARLY MEETING.—The Yearly Meeting, held this year at Earlham, commenced the fifteenth of Tenth Month and continued by adjournments till the twentieth of the same month. Meeting of ministers and elders took place at 8 A. M. Meeting for Worship at 10 A. M., and singing for Sufferings at 3 P. M. The attendance was fairly representative. Death and other causes due to diminish the roll, but a few names were added from time to time the actual decrease of membership is not large. And it is evident that interest exists all over the body for maintenance of the distinctive characteristics of the Society. The exercises of gifted ones during various sessions were clear and emphatic in direction, and encouraging to all to faithful obedience what might appear small matters. Letters were received from all of the Yearly Meetings in correspondence, and the reading of these was occasion for marked response in evidence of great value of this means in the hand of the faithful of the Church for drawing into closer fellowship those concerned to walk in the simplicity of the truth as it is in Jesus. With Ann Hobson, a minister from Ohio Yearly Meeting, and Beulah Cameron, her companion, also Mrs. N. Brown, a minister from Kansas Yearly Meeting, and Alvin Lawrence, his companion, all who were present, were acceptably present, whose ministry and service from day to day had large usefulness in stirring up the pure mind of the Society, and reminding all of their immense responsibility for the revelation of Jesus Christ in the world, and in pleasing engagement of spirit engaging every one to come from under condemnation and enter into the liberty of the children of God. Their voices were heard in testimony, and with their spiritual power, and fresh presentation of the Kingdom of God, it manifested that citizenship therein is close following in the footsteps of the Redeemer, and sharing his fellowship. Hence, away from dependence on, or acknowledgment of, material devices of men which lead into confusion and, far apart from the revelation of the pure in heart who are perfect—marvellous revelation!—to see God. We considering the state of the Society, in-

duced by the Answers to the Queries, much seriousness took hold of the meeting. And while it was clear there was much to cause sadness because of manifest deficiencies, travail of soul was the engagement of not a few, finding expression in fervent prayer that submission to the yoke of Christ might be known by all in our holy profession. Grateful acknowledgment was also made for assurance that the cause of truth and righteousness in the earth was still measurably upheld within our borders.

A letter was received from Thomas H. Whitson, a minister of Philadelphia Yearly Meeting, and one from Benjamin Vail, a minister of the same body, expressing warm interest in this Yearly Meeting, with appreciation of having visited it on former occasions. The counsel and encouragement contained in these epistles were felt to be tokens of Christian love and deep concern for the welfare of our Zion, provoking a sense of gratitude in many hearts to God and the writers for thus remembering us.

Clarkson T. Penrose and Milton Mills were appointed Clerk and assistant clerk.

As usual the concluding session was a joint one, and proved to be a season when the heart-rendering influence of Divine favor rested on the assembly with contrition, humbling power, a fitting complement to the continuous exhibition of brotherly love and condescension prevailing in all former sessions, making separation difficult.

A. C.

WEST BRANCH, Iowa, Tenth Month 31, 1902.

Notes from Others.

THE UNIVERSITY EXTENSION LECTURES.—We have not every year been able, from the religious standpoint of Friends, to publish with the implied commendation that the act might carry, all the topics, or the expected treatment of them, offered in the program of the University Extension lectures. Now the thirteenth annual announcement is before us, showing promise of instructive courses of lectures by able thinkers and learned speakers. In a time when so much is aloft to waste it and with shallow entertainment, it is a relief to be afforded means of instruction for winter evenings, which may deepen the thought and reflection in the younger and the older. We see nothing likely to conflict with this purpose in the lectures announced to be delivered in Association Hall, Philadelphia, as follows:

"On Greece and the Rise of Rome." By Cecil E. Lavell. Six lectures.

"Some Aspects of the Greek Religion." By John H. Wright. One lecture.

"Imperial Rome." By W. Hudson Shaw. Six lectures.

"The Philosophy of Plato and its Relation to Modern Life." By Edward Howard Griggs. Six lectures.

"The History of the Republic of Venice." By W. Hudson Shaw. Six lectures.

"The Life and Teaching of John Ruskin." By W. Hudson Shaw. Six lectures.

G. Stanley Hall, in *Ainslee's*, gives what he calls "the logic of the Sabbath"—As a psychologist, I believe one day in seven should be kept holy from work and sacred to man's primitive paradise of leisure. I am no Puritan pietist or even Sabbatarian in any severe sense, but hold that this is one of the greatest of all human institutions, and that the command to keep it as a day of rest is written in our physiological constitutions. If need be, it may be kept in sleep, man's great restorer. Our nerves and brain must be refreshed, and we must start a new weekly rhythm on a higher plane than we closed the old one. The mental scenery must be changed. The brooder's overthought must have enlarged our plans and given us both momentum and direction. What form the rest cure should take differs perhaps for each person. I go

to church, but for all there should be peace, tranquility, repose, surcease of worry and relaxation. In no land should the "Sabbath" be so hallowed as in this land of hustle, tension and Americanitis.

Canon Rawlinson of Canterbury has recently died at the age of ninety. His reputation as an historian is still high. Egypt and the Eastern empires were the chief fields of his historical labors. He wrote also on Bible history and criticism.

George A. Gordon, in his lecture on "The Quest for a Theology," delivered at Yale last week, said: "The final thing to remember in the quest for a theology is that the soul in Christian experience is the foundation of theology. To be a great spiritual thinker one must be a great spiritual liver."

The religious world, says the *Boston Transcript*, rings with cries for men. Trustees of institutions and of churches say there is a growing difficulty in securing men competent to fill vacancies of the first grade. Time was when men were imported from England, but sentiment is against that course, save in a few religious bodies and under exceptional circumstances. There is at the moment needed a general Secretary for the United Society of Christian Endeavor, a corresponding secretary for the American Baptist Home Mission Society, a general financial agent for the six Congregational benevolent societies, a dean for the General Theological Seminary, and a rabbi for Temple Emanuel, New York, the greatest Jewish place of worship in the world. Tremont Temple pastorate, Boston, is vacant, and no one in sight for the place. Discussion is already being had of names for Methodist bishops. Since the removal of the pastoral time limit there is a demand for greater supervision, and because ministers who are located are determined to stay, there is a decreased source of supply for Episcopal material. Finally, there are in most of the large cities pulpits of the first grade in large numbers looking for occupants. Salaries offered by these vacant places are hardly in a single instance lower than \$5,000 a year, and some of them run as high as \$12,000. Harder conditions are coming to be attached to these important positions; conditions which make them compare in ability requirement with the great prizes of the commercial world.

A writer in the *Pacific* declares: "A new era of revelation is opening. What is wanted would seem to be a common ascent of Christian scholars to the higher levels of life and thought from which they may overlook minor differences and realize the unities of faith."

Sir Bartle Frere, formerly the governor of Bombay, has declared that the teaching of Christianity among 160,000,000 of civilized, industrious Hindus and Mohammedans in India is effecting changes, moral, social and political, which for extent and rapidity of effect are extraordinary.

The *Churchman* says: "The relation of the Bible to public education seems to be attracting attention simultaneously in all parts of the English-speaking world."

MANY FINNS COMING HERE.—The loss by Finns of their autonomy as a people to Russia caused a year or more ago a movement to send Finns to this country. The final act of the czar in taking away the last vestige of Finn peculiarity had the effect, it is said, of determining vast numbers of Finns to quit Finland, and this winter and spring at least twenty thousand are coming to these shores. Some of these Finns speak Finnish and others speak Swedish. None speak Russian, and therein lies one of their grievances. There are two churches in Finland, the Lutheran and the Evangelical. In this country most Lutherans call themselves evangelical, but in Finland they do not. Finns coming to America are seeking Lutheran connection, and

there are three large Finnish Lutheran synods. Some others, and especially those of the evangelical type when at home, are seeking union with the Congregationalists. There are now five Finnish Congregational churches in America. They are located in Fitchburg and Quincy, Mass., in Cincinnati and Ashabula, Ohio, and in New York city.

Penn's "Holy Experiment" is the subject of an interesting article by Ernest E. Taylor in the *Gentleman's Magazine* for Tenth Month. The writer gives a very clear picture of the main features of that great experiment, and brings out forcibly "the distinguishing mark of greatness placed upon Penn's government—his treatment of the natives and his relations with them over a long course of years;" those relations being based upon the natural rights of mankind—not upon the supposed interests of trade. "It is a distinct gain to have sound Quaker teaching in magazines for the general reader. Friends of to-day too little utilize the general press for promoting their conception of truth."—*London Friend*.

SUMMARY OF EVENTS.

UNITED STATES.—The members of the Commission have been visiting the anthracite region in Pennsylvania, entering coal mines, and inquiring personally into the methods of mining and transporting coal, and the wages paid. The Commission has decided that if any award is made affecting existing rates of wages, such award shall take effect Eleventh Month 1, 1902. The miners wanted the new scale of prices, one is made, to date from the time they returned to work. The operators left the matter to be decided by the Commission.

A despatch from Washington says: The rate at which the bubonic plague is increasing in California is causing alarm, and the action of the New Haven conference of Health Boards last week has served to arouse the General authorities to the necessity of prompt efforts to stamp out the disease completely. It is said that the business men of San Francisco have used their influence to keep the health authorities from publishing the facts in regard to the cases that have occurred, and have in this way aided in the spread of the disease. It is now believed that the time has come for the general Government to act.

A despatch from Jackson, Miss., says: The alarming growth of the use of cocaine among the negroes of Mississippi has caused the suggestion to be made that medical laws should be enacted for the suppression of the evil. The cocaine habit is demoralizing the race in this State, and its growth in recent years has been phenomenal. Thousands of victims may be found among the negroes.

The statement is made in Chicago that between 40,000 and 50,000 colonists have gone into the far western, northwestern and southwestern States during the Ninth and Tenth Months. The movement of home seekers and settlers has never before been so great in the history of Western railways.

The new steamer *Korea* of the Pacific Mail Company's line has been ordered to make the voyage from Yokohama to San Francisco in ten days, a distance of 4,000 miles in a straight line. This is the shortest passage between these two ports on record.

Prof. Hillebrand in a lecture on the results of explorations in Babylonia, has stated that tablets have been discovered which confirmed the Biblical account of the journeys of Abraham and the entrance of the children of Israel into Palestine.

The aggregate horse power now being developed at Niagara Falls approaches 500,000.

Nearly 6,000,000 acres of land in Northern California have been withdrawn from the area of public lands by a late order of the Secretary of the Interior for the purpose of growing forests.

FOREIGN.—A despatch from Washington says that the Chinese minister is endeavoring to induce the Powers, parties to the treaty of Peking, to consent to arbitrate the important question as to whether the indemnities to be paid them shall be paid on a gold or a silver basis. The issue is of the utmost importance to China; in fact, it is said that the insistence of the Powers upon a settlement on the gold basis would mean the ruin of the Chinese Empire, which is only ready to pay the rest of the world nearly 50,000,000 taels in gold. He has appealed to the United States for help in influencing the other Powers. Secretary Hay has met the appeal favorably, and has consented to accept the proposition in behalf of the United States if the other Powers agree to it.

The Chinese Benevolent Society, of Victoria, B. C., has received cablegrams from South China asking for relief, and for the famine stricken people. Their crop has failed in five large populated districts as a result of a drought, which has lasted five months.

A despatch from Berlin, says: Increasing pressure is being brought to bear on the Government in Germany with the object of opening the frontiers for the importation of foreign animals and a relaxation of the regulations created to exclude meat exports, or for something which will afford relief from the excessive prices of meat, which have now risen to levels which are prohibitive for the laboring people and which are seriously affecting the resources of middle-class families. The best beef retails at 44 cents a pound, and other meats are proportionately high. The wholesale prices in the German markets are from 15 to 25 per cent. higher than in those of neighboring countries.

The discovery is reported of the site of the ancient city of Gezer, in Palestine, formerly occupied by the Canaanites, the king and people of which were slain by Joshua.

Recent despatches from Yorkton, in the N. W. territory of Canada, state that several hundred Dookhobors, under the influence of religious excitement, have left their country to exclaim from view, and to live among their own people, and it is reported are moving towards Winnipeg. The Colonization Agent Speers is reported to have said on the 31st ult.: "Exhaustion, hunger and sleeplessness have rendered their condition such that they can no longer be reasoned with. I have worked night and day with the misguided people, and must confess defeat so far as inducing them to return to their homes is concerned. One thing is certain, the Dookhobors must be taken care of. I have wired the authorities at Ottawa to give the question of their condition the most serious consideration."

A despatch from Vienna says that the migration of Roumanian Jews to the United States has again commenced, and that large numbers of men are now on their way. The former parties of emigrants were mostly women and children.

The last section of the British Imperial Pacific Cable was laid at the Fiji Islands on the 30th ult. A message was received on the 31st at Ottawa, Canada, from Premier Seddon, of New Zealand, on the completion of the great undertaking.

It is estimated the cases of cholera that have occurred in the Philippine Islands since Third Month 29 last aggregate 75,000, with a mortality of 75 per cent. Some of the towns have lost 10 per cent. of their population, and the epidemic continues severe. Cholera has also caused great mortality in Japan, China and Egypt.

A despatch from Paris, says: Foreign Minister Delcasse has announced that Germany, Great Britain and France had agreed with Japan to submit to The Hague Arbitration Court the exact interpretation of existing treaties dealing with the holding of perpetual leases of property by foreigners in Japan.

Earthquakes have occurred recently in Southern Mexico, and the volcano of Santa Maria in Guatemala is reported to have lately been in a state of eruption. Dust from this and other volcanoes has spread several hundred miles over the surrounding country. For fifty-three hours the towns of Tapachula, in the State of Chiapas, Mex., was almost totally dark.

The eruption of the Soufriere volcano in the island of St. Vincent on the 28th ult., and tremors of the earth were continually felt, causing much alarm.

The Agricultural Department of Russia is taking steps which will prepare the way for that country to play an important part in supplying the leading markets with beef, in opposition to the American meat exporters. Special steamers are being built with freezing chambers, to connect between a Russian port, via the Kiel Canal, and London, with huge cargoes of fresh meat.

Prof. Hillebrand in describing the eruption of Mont Pelee on the 30th of Eighth Month, said: "I saw for the first time the column of steam and ashes rising not less than five to six miles above the summit of the mountain. It was about 1500 feet in diameter, and had a velocity of about three miles a minute."

RECEIPTS.

Received from George Sykes, agent, England, £22 3s and 9d, being 10s each for himself, Mary Ashby, John Anderson, Robert Bigland, Elizabeth M. Bellows, R. B. Brockbank, Birmingham Friends' Reading Society, E. and G. Brodribb, Horatio Brindley, J. C. B. Stephens, J. C. B. Stephens, A. J. Deewes, Thomas Francis, William Graham, W. B. Gibbins, Rachel Hall, Ann Holmes, John Hine, William Knowles, Elizabeth Knowles, Frances Kennedy, W. J. LeTall, Joseph Lamb, W. C. McCheane, David McCaughrie, Anna Moorhouse, August Marshall, Wm. R. Nash, Daniel Pickard,

George Pitt, John Sykes, Eliza M. Southall, E. Southall, J. H. Shield, Isaac Sharp, Stewart, F. B. Sainty, E. C. Thompson, Sarah Wood, John H. Walker, William Williams, de Chronosoff to No. 27, Vol. 77, and J. Ellen K. Watkins, 25d for J. A. Braithwaite 15d for P. T. Moffat; from James Hobson, 1s Ireland, £5 10s, being 10s each for Henry Edwards, Bell, William Bell, John Duguid, F. Duguid, Charles Elcock, Forster Green, P. Green, T. M. Haughton, Charles B. Lam, William White.

NOTICES.

WESTOWN BOARDING SCHOOL.—For convenient persons coming to Westtown School, the stage will train leaving Philadelphia 7.06 and 8.18 A. M., and 4.32 P. M. Other trains are met when required. Stage fare, 15 cents; under 7.30 P. M., 25 cents each. To reach the school by telegraph, wire West C. Phone 114x.

EDWARD G. SNEYLEY, Secy.

WESTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in relation to instruction and discipline should be addressed to WM. F. WICKESHAIR, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SNEYLEY, Superintendent.

Address, Westtown P. O., Chester Co.

MEETING AT LANSOWNE.—A meeting for worship pointed by Chester Monthly Meeting, will be held Meeting House at Lansdowne on Fifth-day evening Eleventh Month 20th, 1902, at 8 o'clock.

Friends' Library, 142 N. Sixteenth St., Philadelphia.

Open on week-days from 11.30 A. M. to 2 P. M. from 3 P. M. to 6 P. M.

Circulation of books free.

Among the new books are the following:

BENSON, Jane.—*Quaker Pioneers in Russia.*

CUTLER, T. L.—*Recollections of a Long Life.*

HENDERSON, C. H.—*Education in the United States.*

HENSTREET, Charles.—*When Old New York Was Young.*

HOSMER, J. K.—*Louisiana Purchase.*

MYERS, O. S.—*Stepping Stones.*

MADEN, A. C.—*Immigration of the Irish Quakers.*

Pennsylvania, 1682-1750.

PETERS, J. P. (ed.)—*Labor and Capital.*

WASHINGTON, B. T.—*Character Building.*

WINSTON, H. M.—*Literary Boston of To-day.*

WANTED. A teacher in the Friend's school for children at Tunesassa, New York. Application made to CAROLINE C. SCATTERGOOD, 626 Spruce Street, Philadelphia, or HANNAH F. CARTER, Moorestown, N. J.

DIED. at the residence of her brother-in-law, Steer, near Barnesville, Ohio, Ninth Month 7th, 1902, the eighty-first year of her age, HANNAH G. TAYLOR, beloved member and elder of Stillwater Particular Monthly Meeting. She was firmly attached to the tenets and customs of the Society of Friends. "Blessed are they whose names are written in the Lamb's book of life."

At her residence in West Chester, Pa., fourteenth of the Tenth Month, DENNIS E. CORP, seventeenth year of her age; a beloved member and sister of West Chester Particular and Birmingham Monthly Meeting. On the 12th she attended the usual Friends' meeting, in which she was engaged in a tendering communication, particularly addressing the young. Her welfare she was deeply interested. In the evening that day she wrote as follows to a friend: "The day has been short, and happy one to me, the vast, delightful and earth so beautiful. I have felt as if that has been meted out to me of suffering and pain, and that 'God is good,' and desires for myself and that our faith may not fail in the time of trial, time passes on, that the needful preparation for spirit's departure from this scene of change and pain may be perfected as us, through the power of the grace of God, to have sufficient to overcome the world; and that through mercy, we shall be safely entered into the haven of unending rest and peace, prepared for the redeemed." Her death occurred after an exhausting about half an hour of a disease of the heart which she was subject. "Blessed are those whom the Lord when He cometh shall still be watching."

CHRISTIANISM nursed by Imperialism became
in of Rome, has wrought the decline of
and is visibly producing that of France
it is feared, that of England. Can that
is an ultimate blight to other great na-
be a strength to ours?

THE BEST.—It is wrong to do anything
takes the place of something better or
for which the way is open for. A deed inno-
itself is a sin, when chosen instead of
temptation "come up higher." It is not
to be doing good things,—are they
ing us back from better things? Then
the better things entered upon become bad
as, as soon as they hold us back from get-
ting the Best. We shall never ascend to the
of the golden ladder by abiding steadfast
to midway step, nor upon the next to the
when the call is still upward.

Labor-Learners and the Waiting-Learners.
These laborers in the vineyard who waited
for the Lord, received the same reward with
those who had been waiting on the Lord in the
of being waiters in active service. The
of hour laborers, like the others in the
vine, yielded to their first call for that
service. But the Master's language repre-
sents them as standing "all the day," thus far
from work"—not necessarily idle in the
sense. The service of waiting eleven
hours for right authority, together with the
of our open service, was rewarded as being
the eyes a day's work. The waiting for his
coming that they might serve Him, was ap-
peared equally with the waiting on Him of
the earlier ones actively—the will taken for
speed, the waiting for the work.

The Lord will have "a willing people in the
of his power." It is a right disposition
towards Him, it is a responsiveness to

his will on immediate call, that He would train
and prove, dividing unto every man his work
or his waiting, as they severally need.

Thanksgiving by Grace, by Prescript, and by
Calendar.

No one who has not the anointing power for
thanksgiving, has the appointing power.

Neither can we mortals command "one of
the days of the Son of Man," or days of grace,
because we cannot command his grace.

When chief magistrates in proclaiming one
of the days of the Son of Man, and Son of God,
year after year usually escape the mention of
his name, then their implied confession that
they do not look upon theirs as a Christian
country, becomes conspicuous.

We could be glad when by grace it is in a
chief magistrate's heart to commend the spirit
of thanksgiving to his people. It would be
much more impressive, however, if he did it
when the spirit of the service was upon him in
whatever part of the year, without waiting for
a perfunctory notch in the calendar to come
round. Prayer-wheels and thanksgiving-wheels
are one in principle. Whatever thanksgiving,
however, animates one's heart on any day, let
him make the most of it, and it will make the
more of him.

Friends' Institute.

*Annual Report of the Board of Managers of the
Friends' Institute for the year ending Fifth
Month 9th, 1902.*

The work of the Institute has been carried
on very much as heretofore. The rooms have
been well patronized, both by residents of the
city and by Friends coming from nearby or
more distant points, the visitors numbering
seventeen hundred and thirty-two more this
year than last.

We are especially desirous that all should
avail themselves of the conveniences thus af-
forded for meeting their friends, etc.

The Lyceum Committee makes the following
report: "Nine meetings of Friends' Institute
Lyceum were arranged for by the Committee
the past year. One of these was omitted
on account of the Peace Conference and one
on account of the sleet storm that made the
streets unsafe for travel. The list of those
held is as follows:

Eleventh Month 15th, 1901. Roentgen Ray
Phenomena: Prof. Arthur H. Goodspeed.

Eleventh Month 29th, 1901. The Making
of a Book: J. Horace McFarland.

First Month 24th, 1902. Abraham Lin-
coln; William H. Lambert.

First Month 24th, 1902. The Mediter-
ranean: Henry A. Bryant.

Second Month 7th, 1902. Brain Paths;
Henry H. Goddard.

Third Month, 1902. A Neglected Scottish
Poet; Francis B. Gummere.

Third Month, 22nd, 1902. Tony's Hard-
ships; Jacob A. Riis.

The first lecture on this list was tendered to
the Lyceum by an interested Friend in ac-
knowledge of his appreciation of the work
of the Institute. The last lecture was made
possible by funds collected privately by mem-
bers of the Committee and admission to it
was by ticket to prevent an overcrowded room.

The attendance during the year has been
fairly satisfactory, but not up to previous
standards. Not a few Friends have failed to
get seats so frequently in the past that they
have given up the habit of attendance. In
addition to this fact, free lecture courses quite
like the Lyceum course have become common
in many centres in the city and an evening
rarely passes now, without some attraction of
this kind. This may be a signal to a new
committee to make some modification in the
future programmes of the Lyceum.

As heretofore, the Lyceum is under deep
obligations to the speakers who have so kindly
contributed their services. The programmes
have been attractive and the audiences have
been pleased to welcome such able lecturers.

For the Committee

(signed) J. HENRY BARTLETT,
Chairman.

PHILADELPHIA, Fourth Month 28th, 1902.

One important feature of the work of the
Institute is the care for young men and young
women who come to the City from distant
points, without the advantages of a large ac-
quaintance; and for these we have been in
the way of holding a reception about once a
year. In the second month of this year such
a reception was held which was attended by
about one hundred. It was a very pleasant
occasion, and the courtesy and interest shown
by the Board of Managers was much appre-
ciated by those who were present, and judging
from appearances they had a thoroughly en-
joyable social evening.

We would ask for the kind interest of
Friends and trust that our membership may be
increased.

Application may be made to any of the Board
of Managers or the person in charge of the
Institute rooms.

LET us labor to make the heart grow larger
as we become older, as the spreading oak
gives more shelter.—*Ex.*

WHAT we need is not a new compass every
year, but a determination to steer straight by
the old compass, which is the Word of God in
Christ.—*Henry Van Dyke.*

Letter from Joseph James Neave, with a Russian Reminiscence.

The Lord is wonderfully good to me and far more than compensates for any apparent loss. I seem like a water-logged vessel no longer fit for sea, moored in a little harbor just outside the desired haven, where we would be! Several fine ships have passed in since I thought I was going, with whom I sailed in former days; dear John Bellows among them; but mine is a happy lot, it could not well be more so, except by knowing that my dear relatives, friends and acquaintances, my enemies—if I have any were partakers of the same; while the film seems to thicken over the outward eyes, it seems rather as if the inward vision were clearer and beheld the dawning of God's bright eternal day wherein the shadows and sorrows of time pass away for ever; time is lost in God's glorious and ever blessed now, and the river that appeared to separate the saints militant from the saints triumphant is lost sight of in the unity and union of the whole around his throne, for there is no more death and the former things pass away for ever.

Now and then the thought will come, it is so beautiful it must be a dream or a delusion and will pass away; and I often marvel at the wonderful goodness of God toward me who am as the least in our Father's house. In this store-house there is abundance for all, and all may take what they will of his abundant grace and treasure . . . In our interviews with the Stundists in South Russia, the subject of baptism was alluded to on more than one occasion. They were not exiles, but eleven of their places of worship had been closed there and in the neighborhood by orders from the government six weeks before.

We gathered by ones, twos and threes to avoid suspicion. About fifteen or sixteen gathered in an upper room at a private house, all being men, I think, but two.

The Holy Spirit seemed poured out upon us, in a wonderful manner, bringing us all, I believe into tears and into that sweet and precious oneness known only in Christ, to the people of God, and under his constraining power many petitions,—oft short and broken—ascended to our Father and our God, and we were enabled to say through our interpreter what was on our mind towards them.

Then the host brought in refreshments which we partook of with them.

They gathered round us wanting to know our views about baptism, as they understood we held different views to them on the subject. John Bellows in a few brief and pointed remarks referred them to the experience we had just known together as the baptism for which we as a Society plead and without which no outward sign can be of value. It seemed fully to satisfy them, and I think no further question was asked; under the precious canopy of love we parted from them.

Ninth Month 21st, 1902.

"TRUST that man in nothing who has not a conscience in everything."

"The duty of physical health and the duty of spiritual purity and loftiness are not two duties; they are two parts of one duty, which is the living of the completest life which it is possible for man to live."

COMMUNION.

Thou canst not intermeddle with my joy,
I dwell so deep behind the strongest veil,
When lofty themes my active powers employ,
What kindly greetings shout their generous hail,
So well attuned my ear. I understand
The glad monitions of the Spirit's voice,
The gentle foot-fall and the helping hand
Confirm me in my high and final choice.

A double choice adorns me like a crown,
The choice from heaven evoked my frail embrace,
A double purpose makes me all his own,
Thine mine, 'tis Thine in fellowship of grace.

Ah! not in proud disdain I close the gate,
Against all comers of the human kind,
It is because I stand and silent wait,
As in his heart the well of life I find.

I dwell with Him in secret converse glad,
With Him I share the tears of rescued throngs,
And hail the hosts in shining garments clad,
Who change their prayers to shouts of lofty songs.

H. T. MILLER.

BEANSVILLE, Ont.

FOR "THE FRIEND."

TO THE MEMORY OF MARIA S. REEVE.

Her face shone with the peace and love of God,
Her careful words portrayed his attributes,
She seemed as on the Mount with Christ,
Hearing from Him the best benedictions.

We miss the true companionship of those
Who on their way, like Enoch, walked with God.
Through tranquil joys, of life's most pleasant day,
Or 'neath the pressure of bereavement's roi.

But yet the fragrance of such valued lives
Still lingers on our swiftly shortening path,
And Heaven seems near and brighter than before,
With the rewards which it forever hath.

E. P. TERRELL.

The Rowdy and Refined Way of Student Welcoming.

Every reader of the daily papers must have noticed of late the constant recurrence of telegrams and other items of information, telling of tumults and fightings between the older pupils of colleges and the recently entered scholars, or freshmen. To refer to two cases only; in one instance there were four of the students carried to a hospital to have their wounds dressed, many others having suffered minor injuries in the fracas; in the second case, while the freshmen were in the midst of a special repast, the doors were burst open, chairs broken down, dishes in great quantities broken and a disgraceful scene of tumult ensued. Yet these things appear but as a sequence to be expected of the rage for inter-collegiate games, and so to speak, the apothecosis of sport prevailing in the higher educational circles. The following extract from the Tenth Month number of *The Westernian* is pertinently suggestive as indicating the better, more dignified and sensible way of welcoming freshly arrived scholars to their new and strange field of student life:

"On the morning of Ninth Month, 10th, the annual sociable for the introduction of new scholars was held in the library. The usual rounds were made to introduce them to the teachers and to each other, and we hope that the agonizing 'newness' was much decreased by the three-quarters of an hour thus spent together."

J. W. L.

Acting a Lie.

Dolly had been told never to meddle with beautiful vase that stood on a bracket over piano. "It will break very easily," her mother said. Now, Dolly had an intense desire to take the vase down and examine it—probably because she had been told not to do so. One day, when she was alone, she made up her mind to gratify her curiosity. She took the vase down without breaking it, but on trying to put it back the bracket slipped off its nail and the vase fell to the floor, and was broken into a dozen pieces. Dolly was frightened and she stood there trying to think her way out of the dilemma her kitten came into the room and said, "I'll shut Spotty into the room, and he'll think she did it," decided Dolly, and Spotty can't tell."

So the kitten was shut up in the parlor, and when Dolly's mother came home she found Spotty there, and the vase broken.

"Do you s'pose Spotty did it?" asked Dolly. "I think she must have done so," answered her mother. "You don't know anything about it, do you?"

Dolly pretended that she didn't hear her question, and got out of the room as soon as possible. That night she couldn't sleep. "I lied," something said to her. "No, I didn't," she said. "I didn't say I didn't break it," "But you might just as well have said the voice of conscience told her. 'If I didn't tell a lie you acted one, and that's as bad as telling one.'"

Dolly stood it as long as she could, but she got up and went to her mother's bed.

"Mamma, I broke the vase," she said. "I thought if I acted a lie you would find out about it, but I can't sleep for thinking of God knows, if you don't."

Ah, that's it—God knows, if no one else. We cannot deceive Him.—*New York Observer*.

BIBLE IN FOUR NEW TONGUES.—Four hitherto unknown tongues—so far as print is concerned—are now being added to the list of languages in which the British and Foreign Bible Society prints the gospels, and of these three are for the benefit of the subjects of King Edward. The New Testament is being turned into Nyanja, for the tribes of the Shire River Bank, Nyassaland, and in this work the Livingstonia Mission of the United Free Church of Scotland, the Blantyre Mission of the Established Church of Scotland and the Myer's Mission of the Dutch Reformed Church are laboring. A version in Yalunka is nearly ready for natives of the Palaba district of Sierra Leone, and in Bugotu for the inhabitants of Ysabel Island—one of the Solomon group. Lastly, a translation into Visayan, spoken by some two million persons in the Philippine archipelago, is being undertaken. All are enterprises of great interest to philologists.—*London Telegraph*.

UNLESS truth come to you, not in word, but in power besides—authoritative cause true, not true because authoritative there has been no revelation made to you from God.—*F. W. Robertson*.

THE words we speak and the things we do are not snowflakes dropping into the water, moment white, then gone forever," but beginnings of immortalities.

Selected.

Sarah Taylor.

Sarah Taylor, of Manchester, England, was the daughter of John and Margaret Routh, of Leydale in Yorkshire. She was religiously educated, and through the merciful dispensations of the day-spring from on high, impressions were made on her tender heart through faithfulness to the manifestation whereof, in patient resignation she waited for further service and appeared in the ministry about the nineteenth year of her age, and visited London, in company with Mary.

About the twentieth year of her age she removed to Manchester, and resided with her mother John Routh. In the year 1748 she was married to William Taylor. He survived but a few months, but she often extended that they were united in a bond of truly fellowship. After his decease she remained unmarried.

Her testimony she was lively, clear and pertinently careful to wait for the opened authority of the word of life and skillfully dividing it to the people; and in her address to the Almighty, her mind was sanctified with that which gives access to the throne of grace. Under the engagement of love, with the full concurrence of her friends, she visited at several times the meetings of Friends in most parts of this Kingdom, Wales and Ireland. She was diligent in visiting the widows, fatherless, and afflicted, exemplary in attending meetings for worship and discipline.

In the infirmities of old age attended, she was, by a dropsy, confined to her bed, and mostly to her bed, she expressed to a friend nearly as follows: "I was more sensible than in this time of my afflictment and separation from my friends, in various ways in which the Lord's work appeared, and his merciful designs, with respect to individuals, frustrated, through the decree of the creature to become as passively in the hands of the potter, vessels of the Lord's own forming without any mixture of merit; some are too forward; but all come from unreduced self, and all tend to the Lord's work. We are to be formed into vessels quite emptied, that the Lord may have free course; no hesitation of activity or contrivance of the creature choose or to refuse."

After a little pause she added, "But he with human weakness who is a God of incomprehension, and he stands ready to help me look to him in sincerity. A sigh, arising from true contrition, is a sacrifice pleasing in his sight; because it is unknown preparing, and will arise as incense from the temple of our hearts, if we are directed to him."

Some friend going to her early in the morning, she mentioned a person who desired to be remembered to her, and by her. Sarah said, "I have been thinking much of him in the night and would have thee say, when thou art, that in looking at me, and the proximity of my being nearer the solemn close of some others; and having been in a good measure preserved through many exercises, he will think there is a cause to rejoice. But I have passed through more proving conflicts than present, nor ever had greater need of

watchfulness, lest the enemy should get an advantage over me; or had at any time more distressing fears of losing ground, and the great work of redemption falling short, and receiving damage, by my poor mind being turned aside to objects of inferior importance, and so the victory not to be obtained. Day and night, to be solicitous for preservation, was never more needful! Oh, that great work of redemption! 'I pray not,' said our blessed Redeemer, 'that thou shouldst take them out of the world, but that thou shouldst preserve them from the evil.' We are called to victory. All depends upon keeping close to him who alone can preserve us in the hour of temptation; then is the trying time, when the grand enemy endeavors to gain his end; it is his work to draw the mind into captivity; he wants to keep us in bondage."

Some months before her removal, she said, "I am not apprehensive my close is very near, though I feel nothing to stand in my way. I am quite resigned, and desire to be preserved in the patience, for though so feeble, and nearly worn out, a natural quickness about me, often under my sufferings, prompts to disquietude; but when thus tried I invite patience; and also pray to the Giver of every good and perfect gift, and am favored to feel its return."

She also mentioned, that as her bodily strength became more impaired, her understanding was more opened to prospects which no language was copious enough to express; in which she experienced a freedom from all the fetters of earthly connections, or objects of sense. It was as the place of broad rivers where there were no storms or tempests; neither galley with oars, nor gallant ship could pass; no work nor invention of man; but as in the ocean of Divine love, her mind was filled with silent worship, and adoration of the Supreme Being. She added, few of her early acquaintances were now remaining in this life; yet she said there were situated in several parts of the nation, those whom her mind often visited in near love, and she felt them near in the covenant of truth.

She expressed, with much tenderness, her desires that those who were entering upon a situation surrounded with dangers, might seek after the pearl of great price; and be willing to sell all, to purchase the field where treasure was hid; for it would remain when all other supports failed.

On two Friends visiting her, she said that she knew not how it might be with her, in respect either to life or death; nor did she desire to know; but it was abundantly made up by a prospect that was frequently laid open, and enlarged into a scene of ineffable glory and brightness, that at times it seemed too vast for her to bear; but as it was mercifully continued, her capacity for receiving it increased. She had been favored to behold a state so glorified, in perpetual union with glorified spirits, that at seasons she seemed in a scene of universal brightness, glory and beauty, too great for human comprehension. But she soon added with awfulness, "Yet this has not always been the case; there was a time when the heavens were as brass, and the earth as iron, and my soul encompassed as in clouds of impenetrable darkness; but since, that is mercifully removed, and the before mentioned prospect has graciously succeeded."

She had been made to view the past errors of her life, and even also to feel that judgment must pass over the transgressing nature, and upon every wrong impulse of the mind though it might not break forth into action, by giving way to which, she had often prepared herself a cup of sorrow unknown to others. She said, what she felt for her friends in religious profession, was not to be expressed; nor the strength of her desire, that those who had yielded themselves into the purifying hand of judgment might be preserved under it steadfast and immovable.

Nor could she set forth in words her ardent solicitude that those who had been, and were wandering from the fold of rest, might be given to see their dangerous situation; adding, "O, what I feel for those wanderers! Could I but gather them, could I open one of those prospects to their view, how it would stain all their worldly pursuits. Surely it would make them covet an establishment on this immutable foundation. I have often thought of those expressions, 'If the righteous scarcely be saved, where shall the ungodly and the sinner appear?' What my mind has felt for some of you of late has indeed exceeded anything that I ever experienced before."

Another time she said, "I have had deep sufferings and baptisms to pass through, but I now see with indubitable clearness, that there is a rock and fortress at the bottom; which if we cleave to, no power of darkness, however great, shall be able to move us from it long together." To a friend who sat with her she said, "The body is weak, but my mind is preserved in quietness, and seasons of consolation come unsought for; when clear prospects are opened to my view, of 'the spirits of the just made perfect,' and of the church triumphant, which words are insufficient to describe. It appears like a boundless expanse, an ocean of love, a river clear as crystal, which the vulture's eye cannot see; no galley with oars, nor gallant ship can pass thereby. There the spirits of the just, the church triumphant, enjoy full fruition; are gathered into the place of pure prayer, adoration and worship. Precious in the eyes of the Lord is the death of his saints; because in these crusts and shackles of the body they cannot enjoy perfect uninterrupted blessedness, and He wills and loves that those whom He has redeemed by his power, should enjoy perfect, unmixing happiness."

She added, "I have learned with the apostle, that it is not by works of righteousness that I have done, but of his mercy that He hath saved me, by the washing of regeneration and the renewing of the Holy Ghost. O, I would not change my situation for all the possessions of this world; nor for all the knowledge and speculation that the wise system-builders of the present age can acquire; and, whatever they may vainly suppose, it is not a delusion, nor the workings of imagination, nor of prejudice; but solid, enduring, substantial truth."

After a solemn pause, before some friends took leave of her, she signified, with a sweet calmness, the probability of its being a final farewell; then added, "But there is one thing of more importance, that I feel my mind pressed to fix upon yours; which is, that you may be gathered into entire resignation, to

abide with your great Master on Mount Calvary. Remember what he declared, that 'Where I am, there shall my servant be,' and that you know was under suffering. What I have wished for you is that you may travail for a willingness to be kept there; for what can we desire more or greater than to be where our great Lord and Master is? He knows your state and your weaknesses, and his eye is over you for good. But if, like Peter, you slide from his testimony, He may bring it to your remembrance; and though your trials may be many and severe, and you may be beset and buffeted on every hand, yet He is omnipotent, all-powerful to preserve and keep you. It is the Father's good pleasure to give his adopted children the kingdom; for his regard is to his little flock, and all the combined powers of darkness shall not be able to pluck any of his lambs out of his hands."

On the 19th of the Sixth Month, to a friend, she spoke to the following import: "On looking over my past life, I cannot charge myself with being presumptuous; but I know I have not at all times been as honest as I should have been; especially in our large public meetings for worship. When things have arisen with clearness that I should have communicated to the people, I have let the right time slip, by deliberating on my own unfitness. This is indeed consulting with flesh and blood; listening to an enemy. I have not only hereby increased my own portion of sorrow and conflict; but the blessed cause has suffered. The free circulation of life has been obstructed, when I have had reason to believe it would have flowed from vessel to vessel."

After sitting a while under the covering of a sweet and solemn quietness, she said, "O, what an awful thing is pure gospel ministry! How few understand, or are sufficiently baptized into the true nature and spirit of pure, living, powerful gospel ministry." The following day to the same friend, when taking leave of her, she said, "Thou seest dear child how I am carried on from day to day; neither seeing nor desiring to see, how the present dispensation is to terminate; but faith and patience are mercifully vouchsafed to sustain; though sometimes it seems as if they were ready to fail; and then I am deeply tried. It is a great thing to be able to say, 'I have fought the good fight; I have kept the faith.' (Oh this keeping the faith, this cleaving close to Him, who has indeed loved us freely! If some of you will keep the faith, you will be strengthened more and more, to make war in righteousness against the enemies of your own houses; and be able to lift up a standard against wrong things in others." She afterwards added, "I often visit you in that love which is wider than the ocean, and extends over sea and land, and do thou remember to keep the faith in Him who is invisible and invincible too."

On Second-day preceding her departure, she was much afflicted with pain and shortness of breath; when a relation expressing her reluctance to leave her, to attend the Monthly Meeting, she said, "I would have thee go; for though I have a trying putting on, I do not quite see the end; but it may not be long before it comes. Thou may tell Friends I do not expect to see any of them again; and give my dear love to all, for it spreads universally."

On Sixth-day morning the symptoms of approaching dissolution were more apparent; and her outward sight much gone, so that she did not seem to know those about her, but by their voices; yet her religious exercises did not cease. She frequently expressed much care and concern for a young woman in the family, earnestly entreating her to do all she could to inherit eternal life; with many other expressions of strong solicitude for her preservation.

About eight o'clock in the evening she found it difficult to swallow, and said with a strong and clear voice, "No more;" and soon after dropped the following expressions: "Be still, be still, and thou shalt soon see the salvation of thy God;" which were the last words uttered.

They were accompanied with such an evidence that they were spoken concerning herself, and that it was her own blessed experience, as greatly bowed the spirits of those present, in resignation to the Divine will. She quietly breathed her last the nineteenth of the Eighth Month, 1791, aged seventy-four years, and a minister fifty-four years.

Fruitful or Fruitless.

THE TEST OF VITAL UNION BETWEEN CHRIST AND HIS PEOPLE.

Tender, and full of deep, loving meaning is the allegory of the vine, which Christ uttered in the closing hours of his ministry on earth. After many warnings and repeated assurances, the fact of Christ's approaching death had at last penetrated the understanding of the disciples. They had thought and hoped that when Christ told them of his departure, he was speaking in parables, but now they realized that the separation was at hand. They must have been bewildered at this sudden reversal of their expectations, and, doubtless, concluded that his mission was about to close in failure. Knowing what was passing in their minds, Christ uttered this allegory, which was probably not understood at the time, but was clear to them when they thought upon it afterwards. He tells them, in effect, that it is through them that his mission is to come to fruition. His function in the future will not be as in the past, to preach to the world and to teach it spiritual lessons. The disciples are to do that, but they can only do it as they draw life and strength from Him. They are to be like the branches of the vine, bearing fruit through the power supplied to them. He will cure no more lepers, restore no more cripples, preach no more sermons. His function will be to give the disciples spiritual life that they may do for the world all that he has been doing.

The idea of responsibility presented by the allegory was very impressive. The way that Christ's work could be applied to the world and accomplish its purpose was through their lives. It was the branches bearing fruit. From the branches men might gain not only the fruit, but knowledge of the vine. Their life and work must express his character and person. How was it possible for men so ignorant and untrained to do this? He tells them, and it is his answer alone that must have kept their sense of responsibility from crushing them. The secret of their

power was their union with him. That glorious life which they had witnessed, flowed through them and would produce. By themselves they could do nothing, more than the branches of a vine could fruit when separated from the stem. He could the stem produce fruit without branches. Henceforth Christ's work was to be interdependent. They were to be hands and feet of the body of which he was the head. By them, and by them a henceforth, would men learn what he wanted that he had done for them. From changed lives, from their patience under suffering, from their self-sacrificing labors, would men learn how far above common manly must be he who inspired them, must be the candle of the Lord lighting who had never seen the sun.

The conditions of illuminations have changed. The church is still the city on a hill that cannot be hid. Unconscious men still remind her of the fact when the duce the inconsistencies of members of church as a reason for their not accepting Christ.

They expect the fruit, as Christ does when they do not find it, the reproach upon Christ himself. So we see that the essential purpose of the branches, the reason for their very existence, is that they bear fruit. If they do not bear fruit, they are worse than useless; they are mischievous, cause their barrenness leads men to be Christ's power. If men see those who by his name, manifesting none of his spirit, less of the sorrows and woes of others, grow in gain, absorbed in the business and pleasures of the world, heedless of the spiritual danger of their fellows, they draw the conclusion that Christ's power is not what he said to be and that there is nothing in religion. If Christ sees such conditions, what is his judgment? There is no ambiguity about his sentence. "Every branch in me, that beareth not fruit, he taketh away." An awful declaration of the nature of which is beyond our conception. It implies that there never was vital union with Him, because those who abide in Him do not bear fruit. So the test is established. We judge no man, but we have the right to conclude whatsoever a man's profession may be, that the absence of fruit in his life, the absence of the graces of the Christian character, "love, joy, peace, long suffering, gentleness, goodness, meekness, temperance," show that the branch is no part of the vine, otherwise the life of the vine would have produced no fruit. How consolatory too, to the afflicted Christian, is the intimation of the purpose of discipline. The fruit-bearing branches are purged, or cleansed. Why? Is their suffering capricious or the punishment of sin? No, they are cleansed or pruned for a definite purpose. "That they may bear more fruit."

Selected.

A MOTHER said she wanted her son to go to a dancing school because he was so awkward, she wanted him to be more graceful. At six weeks he had made such poor progress, she took him out in disgust and chided him. He said, "I'm sorry, mother, I'm so stupid about it, but I can't seem to do any better. I see, it's one of the things I can't pray over."

A Great Provocation.

FROM REMARKS BY RICHARD GLOVER.

I admit that the Gospel carries everywhere the same provocation, and that it has done so since the first day. It disturbs thought; it affronts pride; it troubles prejudice; and it arouses anger. I admit it. But is the provocation the same in all places? Has it been received in China from the missionaries responsible for all the trouble and contention that has arisen there? Is it the only provocation that has been given to China? I should have thought that politicians and men of commerce were pretty well versed in provocation. I should have to remember that we took Upper Siam, which was a State tributary to China; we took France took Tonquin—a part of China; we took Russia took Port Arthur and a bit of Manchuria; that Germany took Kiaochow and a bit of Shantung; and then we took Wei-hai-wei. And then a popular English nobleman came out and writes a book on "The Break-up of China." And then there came the scramble for spheres of influence, and appeals without number for concessions to all sorts of syndicates. And the whole of Northern China—the whole of that district which has been so badly devastated in this conflict—was covered with prospectors of mines and surveyors of railways, till the Chinese thought that the nations believed that China was dead and ready to be carved up amongst its hungry enemies. That is a provocation which naturally aroused the patriotism and opposition of the Chinese. The Christian missionary is a friend in times of famine, who blesses the sick with the cure of their diseases, and who is before them as the embodiment of all that is lovely, honorable, and true. The proverb that he gives is "the small dust of the devil" in comparison with the other. Then, admitting that the Gospel carries provocation, I say further that the Saviour said that there was provocation in the Gospel, and yet he ordained that we should spread it. He came, he says, to send, not peace, but a sword—to set a man at variance with his father, and the daughter with her mother. He told his disciples that they should be hated of all men for his sake, and led them to confusion and distress as the result of their work. Why did He ordain that which is so provocative? Not for want of love. When all power was given unto Him in heaven and in earth, and all love dwelt in his heart, then He chose this Gospel with its provocations as having in it an omnipotence of mercy and a power of healing which would infinitely compensate for the disturbances that it would be aroused. The Saviour chose it because He knew not merely the trouble that the Gospel would arouse, but the blessing that it would bring; and He sent his disciples forth to do that which would temporarily provoke, but permanently save and bless mankind. It is not the history of the past justified by the future's expectation? All that we see to-day in China you read of as happening in the Roman Empire in the days of Nero and Diocletian. But after that trouble wore away, and the Gospel had wrought a purer society; had produced a heavenly brotherhood. It was the light of life on the world. It replaced despair; and instead of seeing the Golden Age behind them, as they had done

formerly, they now beheld it in front, and greeted it, and worked on toward it in patience and hope. Womanhood was raised and childhood protected. The fetters were broken from the slaves, and the days of slavery were ended forever by the influence of the Gospel of Jesus Christ. Christ knew the Gospel would disturb, but He disturbed to bless and save. That is the history of the past eighteen hundred years, and it is the history of the nineteenth century.

When Carey went out to India, so far as I know, there was not a nation under heaven, except, perhaps, Switzerland, that had not slavery as an institution. But England, France, America, Holland, Spain, Brazil—nation after nation have, in this century, emancipated their slaves. For the missionaries pleaded the wrongs of the slave and fitted him for freedom, and roused the hearts of the nations to give the freedom which they sought. So that to-day there is not a single nation in Christendom that holds a slave.

Nations in the South Seas have been evangelized. Sir Arthur Gordon says of the native converts there, that they are as good Christians as the Christians at home. They were wild cannibals when the century began. In India at the present time every kind of improvement has come with missions. Vernacular education came with them. Carey taught the first girls' school that was ever taught in India, and started the first university at Fort William. He has been followed by a noble army of educationists, by Dr. Duff and by John Wilson of Bombay, and Dr. Miller of Madras, and others carrying on that higher education of young India, and impressing on its growing culture a Christian character. . .

China is prominent before us. Have we failed there? Why, it is not very long ago since our work there began—so recently, that the first Christian Church of five communicants was formed by a friend of my own. I have met with one of these first five believers, who, through a long life, did the will of God his Saviour in all things. To-day there are—before these troubles began there were—100,000 Protestant communicant Christians; gathered in spite of vast difficulties, of slanders incredible, and misconceptions of the hugest and most terrible kind; gathered through the faithfulness of men; through the truth they uttered; through the mercy which they practised. Does that look as though provocation was the only thing missionary societies gave? The Chinese are ready for the Gospel, and they will receive it if we show it to them. There are very few hearts so rich in comfort that they can dispense with the richest comfort of all. Mankind says, "Show us the Father and it sufficeth us," and has to wait till Christ says, "He that hath seen me hath seen the Father."

THERE is no such thing as utter failure to one who has done his best. Were this truth more often emphasized, there would be more courage and energy infused into sad and desponding hearts. The compensation may seem shadowy and afar off, but it is not so. It attends everyone who is conscientious, painstaking and resolute and will never desert him whatever may be the fate of his exertions in other respects.—*Great Thoughts.*

A Question of Rights.

When Julia Fairchild came home from college at twenty-one the world looked bright before her. She was young, strong, and keen-witted; she had a fair share of beauty, and was the petted daughter in a wealthy and luxurious home. As the years passed, however, she began to realize that she was missing something—something that other girls with not half her advantages seemed to win with scarcely an effort. She was in the society at home; she had travelled much, and was acquainted with charming and cultured people in many countries; yet somehow she never touched more than the outside of it all. Two or three friends she had, but scarcely more; girls never "ran in" to see her as they were continually doing with other girls whom she knew; as for young men—the briefest duty calls were all they ever paid her.

"I don't see why it is," she said, in a moment of rare revelation to a friend. Then instantly she changed the subject, her pride angered that she betrayed her pain. "By the way," she went on, "I met Judge Haven yesterday. I had wanted for a long time an opportunity to tell him what I thought of that matter. I know that he is an old man, but I had my rights, and I let him see that I intended to assert them. He didn't answer a single word—he couldn't."

She spoke with keen satisfaction; she had no conception of the cheapness of her triumph. The judge was an old man and she a young girl, and the matter one of the slightest importance. But she had asserted her "rights." It was her perpetual attitude toward life. It was not strange that few people discovered that behind her continual aggressiveness dwelt a warm heart and unswerving loyalty.

The secret of the charm that wins love never can be wholly defined, but one element is always discoverable—the tact and sympathy that make those about one happy. Madam Recamier, old, impoverished, blind, was yet sovereign over hearts. A remark in her memoirs is significant. When darkness had fallen upon her, her great pleasure was to have some one read aloud; yet invariably she chose for the reading not what she cared for most, but what would give most pleasure to the reader or the other listeners. She would rather miss something herself than to have others miss something upon her account.

"The best thing about having rights of our own," says George MacDonald, "is that, being our rights, we can give them up." It is a sentence that challenges the test of life.—*Youth's Companion.*

DIVIDED ATTENTION.—Goethe's motto, "Wo du bist, sei alles!" (Wherever thou art, be all there!) offers an excellent one for people who seem totally destitute of the power of concentration, says a writer in *Success*. The mental reservoirs of many earnest, enthusiastic workers are like a leaky dam, where most of the water flows out without going over the wheel and doing the work of the mill. Their energies are dissipated by being scattered over too wide an area; consequently their well-intended efforts are barren of results. Energy must be conserved. The manager of a large establishment, a very promising young man, recently declined the offer of a director-

ship in two leading banks in his town. In giving his reason for declining he said that if he sapped his energies in too many directions, he could not make a great success of his regular business. Every little leak in the mental reservoir lessens by so much the stream upon the wheel of life. Mind-wandering is one of the most subtle and dangerous of these leaks, and it is one of the greatest enemies of effective work. A habit of worrying about things that cannot be remedied, crowding the thoughts with petty anxieties and jealousies, taking up one thing after another and not bringing anything to a conclusion,—these are leaks in our mental reservoirs that are draining reserve power. The man who does not learn, early in life, to focus his efforts to centralize his power, will never achieve marked success at anything. The waste of life occasioned by trying to do too many things at once is appalling. No one is large enough to be split up into many parts; and the sooner a man can stamp this truth on his mind, the better his chances for being a profitable member of society.—*Shoe and Leather Facts.*

Science and Industry.

Sugar exists not only in the cane, beet-root, and maple, but in the sap of 187 other plants.

HEALTH AS A DUTY.—A wise man who chose to pose as a fool once said that "health is the primary duty of life." Yet the majority of us do not consider health a duty. We think it is a gift from God, a piece of good luck, what you will, anything but a requirement laid on mankind. We exact of man that he be kind, that he be honest. If he is not either of these the more shame to him; but if he is unhealthy we count him unfortunate, and let it go. It would be better to regard health as a duty. We inherit some of our trouble, to be sure, but nature is on our side, fighting for health, and most of our illness is brought about by our own indiscretion. Let us shoulder the new responsibility. We should live wisely and temperately in all things, neither overeat nor overdrink; we should keep away from intoxicants, and, above all, we should not allow ourselves to worry about anything, because that harms us physically as well as mentally. We should regard an act that is likely to interfere with our well-being with some of the abhorrence due to a lie or a theft, which is a blow at character. This is the part of wisdom; it is also the part of morals. If a man is sick he will more easily yield to temptation; all the moral and mental are closely affected by the physical, and with good health to his aid one is able to face with fortitude all the various problems of life.—*Woman's Home Companion.*

Eggs are valuable remedies for burns, and may be used in the following ways: The white of an egg simply used as a varnish, to exclude the air; or, the white beaten up for a long time with a tablespoonful of fresh lard, till a little water separates; or, an excellent remedy, is the mixture of the yolk of egg with glycerine, equal parts, put in a bottle and corked tightly; shake before using; it will keep for some time in a cool place. For inflamed eyes or eyelids, use the white of an egg beaten up to a froth with two tablespoon-

fuls of rose water. Apply on a fine rag, changing as it grows dry; stir two drams of powdered alum into the whites of two eggs, till a coagulum is formed. Place between a fold of a soft linen rag and apply. For a boil, take the skin of a boiled egg, moisten and apply. It will draw off the matter and relieve the soreness in a few hours. They are considered to be one of the best of remedies for dysentery. Beaten up slightly, with or without sugar, and swallowed at a gulp, it tends by its emollient qualities to lessen the inflammation of the stomach and intestines, and by forming a transient coating on these organs, to enable nature to resume her healthful sway over a diseased body. Two, or at most three, eggs per day would be all that is required in ordinary cases; but since egg is not merely medicine, but food as well, the lighter the diet otherwise and the quieter the patient is kept the more certain and rapid is the recovery.

BREAD CRUMBS.—The cleaning of the pictures in the Houses of Parliament, London, has all been done by means of a perfect cloud of bread crumbs discharged through a tube by compressed air. In the London atmosphere pictures are attacked by fog, soot, sulphuric acid and other products of coal combustion, which reach even pictures covered by glass. The crumb treatment is claimed to be the only effective way of removing soot and dirt without injury to the pictures.

At West Point the cadets use bread crumbs to clean the white stripes on their uniforms, while for removing soiled spots on wall-paper the most widely advertised wall-paper cleaner cannot do the work more thoroughly or satisfactorily than a stiff dough made of bread crumbs, with a half cupful of gasoline added to a quart of water. Make it into a ball and rub the paper with it. When it gets soiled on the outside, fold it inside, and continue until the entire surface is gone over. Care must be exercised not to use the gasoline in a room where there is a flame of any kind.

Some California women never travel without a jar of prepared food, carried against a possible emergency. It is made of bread or cracker crumbs rolled fine, then sifted and thoroughly moistened with olive oil. This preparation contains all the elements of nutrition, while the blandness of the oil allays irritation in cases of stomach trouble.

THE MANUFACTURE OF PINS has become such an industry in the United States that the mills of this country practically supply the world with this needed article, and yet the demand is by no means a small one, says *The American Exporter*. Pins cost only a trifle nowadays, where they were very expensive. In 1900 the 75,000,000 people in the United States used 66,000,000 gross of common pins, which is equal to 9,500,000,000 pins, or an average of about 126 pins for every man, woman and child in the country. This is the highest average reached anywhere in the use of pins. Ten years ago we used only about 72 pins each.

The total number of pins manufactured in the United States during 1900, the census year, was 68,889,260 gross. There are forty-three factories in all, with 2,353 employees. The business has grown rapidly during the

last twenty years, for although there were forty factories in 1880 they produced half as much, employed only about half capital and only 1,077 hands. There has been a considerable increase in the number of men and children employed in pin factories late years, which is an indication that the machinery is being improved and simplified and that its operation does not require so much of an order of mechanical skill.

Hooks and eyes are a by-product of making, and are produced at most of the factories from material that will not do for the output of hooks and eyes in 1900 1,131,824 gross.

Pins and hooks and eyes are turned on automatic machines in such quantities that the cost of manufacture is practically limited to the value of the brass wire from which they are made. A single machine does the whole business. Coils of wire, hung on reels, are passed into machines which cut into proper lengths, and they drop off in receptacle and arrange themselves in the form of a slot formed by two bars. When they reach the lower end of the bars they are squeezed between two dies, which form the heads, and pass along into the grip of a steel instrument, which points them by pressure. They are then dropped into a solution of sour beer, whirling as they go, to be cleaned, and then into a hot solution of oil, which is also kept revolving. They receive their bright coat of metal, and are pushed along, killing time, until they have an opportunity to harden, when they are dropped into a revolving barrel of bran sawdust, which cools and polishes them almost at the same time. Because of the oscillation of the barrel they work gradually down to the bottom of the barrel, which is a metallic plate divided into slits just big enough for the body of the pins, but not big enough for the head to pass through. Thus they are straightened out in rows again, and, like well-drilled soldiers, march along toward the edge of the bottom, slide down an inclined plane, still hanging by their heads, until they reach strips of paper to which they are introduced by a curious part of the machine. The first they know of is that they are all placed in rows, wrapped up and on their way to the big department stores, where they are sold at from five cents to ten cents a gross. A machine is expected to throw out several thousand gross an hour.

"What is bird's-eye maple?" That is a question which just now seems to be baffling not only people who use furniture made of particular wood, but even woodworkers themselves. In a recent number of a woodworking magazine an article was published which stated that bird's-eye maple was not a peculiar maple, but simply ordinary maple cut in a certain way. In a recent issue of the *New York Times* that statement is refuted. It is there stated on the authority of a wood-worker, that bird's-eye maple and curly maple are both cut from the logs of the rock maple tree, *Acer saccharinum*, in which a beautiful, lustrous grain is produced by the sinuous course of the fibres. This tree is not at all the common hard maple. It is a hard maple, but it is of little gnarls called eyes. Men looking for bird's-eye maple logs go through the stanc-

and pick out the bird's-eye maple trees for them from \$30 to \$50 a thousand in the woods. Ordinary hard maple logs worth only from \$6 to \$7 a thousand feet, would be impossible to cut a piece of veneer in it from a common hard maple log, would be equally impossible to cut a bird's-eye maple log, no matter how you cut it, that it would not show the eyes.—*Scientific American*.

Distribution in the Province of Quebec.

FROM AN ADDRESS BY A. L. THERRIEN.

In 1820, the Montreal Auxiliary Bible Society was organized, there was not in Quebec a French-Canadian Protestant, and I think there were half a dozen in the United States; but this evening, as a representative of the French-Canadian Protestants of Canada to the American Republic, I bring to you the joyful greetings of forty thousand!

Amongst the various agencies used of bringing about this glorious result, I do not hesitate to name as one of the most efficient the society under whose auspices we met this evening, and its parent, The British and Foreign Bible Society.

In Henrietta Fuller and Louisa Roussey their beautiful country of Switzerland for the shores of the St. Lawrence River, and their divinely guided steps towards the historical parish of Lacadie, their marvelous success in that place was largely due to a which had preceded them, published by the same society and distributed by the Montreal Auxiliary. In a humble farmer's home, a small book, for two years, had been used by the missionaries' arrival, and in a place wherein the light of that bible had shone, was started Feller Institute, which has already educated over four thousand French-Canadians in things secular, divine, and which, with other institutions of the same kind, has been and is still, a source of light radiating throughout the whole continent.

In the same missionaries found their way to the old parish of St. Pie and the neighboring township of Milton, where through the work of hundreds of precious souls were brought to the knowledge of the Truth, and two French evangelical churches now stand. They there again were preceded by a society published by The British and Foreign Bible Society, which bible had prepared many to receive them.

The beginning of the Sabrevois Mission, which is also glorious, was largely due to the presence of a bible from the same source, which had found its way into a family distinguished for its respectability, which in years has been an honor to our French Protestantism, and which has given to the old Church of England four of its faithful ministers.

And believe that if the whole truth was known, we would find most of our French Protestant interests similarly indebted to these noble societies. What could the various religious organizations operating amongst the people have done had not these bible societies generously furnished them the literature which enabled them to carry on their work?

Joseph, the son of Jacob, had a dream and it came to pass! Nebuchadnezzar had a dream and it proved to be a prophetic sketch of the world's history. John Newton had a dream whose significance cannot be disputed. Now, a French-Canadian farmer, forty years ago, had a dream also. He saw a man enter his house, and solemnly take out of his pocket a small book, which he deliberately opened, and as he did so the house was filled with the effulgence of a heavenly light. Three weeks later this dream was realized in that identical home by the entrance of a colporteur and the blessed book he carried. And what took place in this home was repeated in hundreds of French-Canadian homes into which the bible brought light and life.

A young man came into possession of a bible distributed again by the society we here represent. He loaned it to an intelligent French-Canadian, who read it day and night. He and his numerous family were soon after turned to Christ, and two hundred and seventy-five persons are known to have been brought to the light through the influence of that bible. And it was only three weeks ago that I had the privilege of attending the dedication of a fine chapel built on the land owned, in his lifetime, by that same farmer, and in which now worships a regularly organized evangelical church.

My parents were staunch Roman Catholics; my mother being one of the few persons who could read in the parish in which I was born. She knew her catechism by heart and taught it to the children of the neighborhood, but never had she seen a bible until she had reached the age of forty-eight years. When a colporteur entered the house with bibles and testaments she was almost frightened out of her senses. But the missionary spoke so kindly that she felt disposed to talk with him. "I shall secure a bible from my own priest," she said, "and when you return I shall convince you of your errors out of it." With great difficulty she secured from the priest the loan of a new testament. She read it with the most intense interest, and by-and-by she was wont to shut herself up in her room and weep and sob like a child, and why? Because she had come to the conclusion that in order to follow the teachings of that book, she must sever her connection from the church she had loved so much, in which her sons were singers in the choir, and attendants at the altar; she must part with relatives and friends, and face a whole Roman Catholic community, there being no Protestants for miles around. But when the sacrifice had been made, she felt as if a mountain had rolled away from her heart, and oftentimes did she say that never had she known before what it was to have in her soul the peace of God, or to be free from the fear of death and the day of reckoning.

My grandmother was one of the most devout Romanists in the City of St. John's. She spent a great deal of her time on her knees, and attended most faithfully to her religious duties. And yet her last words were these, "Oh that I knew where I was going to spend the first day and the first night after I leave this world. Oh, that I knew that I was going to Purgatory, then would I know that eventually I would reach Heaven." On the other hand, a sister died at the age of twenty-

three years. She had been educated and converted at Feller Institute. Her death was most triumphant. Peace and heavenly joy filled her soul. She longed to be with Jesus, and many were the words of cheer and comfort which she spoke to those she was leaving behind.

Christian friends! What made the difference between the death of my grandmother and that of my sister, if not this, that while the former had "a zeal of God, but not according to knowledge," the latter had both the "zeal" and the "knowledge."

Notes from Others.

Zion's Herald thinks the machinery of religion is of little use without the power from on high. Not statics but dynamics represents the church ideal.

In a remarkable degree the work of Palestine exploration is confirming the whole of the Old Testament history and the prediction of the prophet, "Truth shall spring out of the earth."—*Episcopal Recorder*.

President Eliot of Harvard University says: There is no safety for democratic society in truth held or justice loved by the few; the millions must mean to do justly, love mercy and walk humbly with their God.

Archbishop Ryan in his address at the Lake Mohonk conference urged that "Philanthropy cannot succeed unless humanity is illuminated by Deity, that love to God as seen in Jesus Christ must move men and women to be servants of mankind for his sake."

A Chinese mandarin who has filled a book with extracts from the New Testament is reported as saying that if the people who professed the religion of the New Testament were to live in accordance with its precepts that religion would spread over the whole world.

The "seven world riddles" are given by Du Bois-Reymond in his celebrated address delivered in the year 1880, viz: (1) The essence of matter and energy; (2) the origin of motion; (3) the origin of life; (4) the apparently purposive arrangement of nature; (5) the origin of sensation and consciousness; (6) rational thought and the origin of language; (7) the question of free will.

The twenty-eight hundredth sermon by C. H. Spurgeon to appear in *The Metropolitan Tabernacle Pulpit* has just been issued. Since 1854 a new sermon has been published every week, and Passmore and Alabaster inform us that there are still enough unpublished manuscripts to continue the paper for some years. All of the back numbers are in print, and there is said to be a steady demand for them. He, being dead, yet speaketh.

No one ever suspected that Joseph Scriven had any poetical gift until a short time before his death. A neighbor was sitting up with him, and while the patient was asleep accidentally found a manuscript copy of "What a friend we have in Jesus!" and read it with great delight. When Scriven was questioned about it, he said he had composed it for his mother. He sent her a copy to comfort her in some great sorrow, and had kept this copy for himself, never intending that any one else should see it.

Some time later a Port Hope gentleman said to him: "Mr. Scriven, it is said that you composed the hymn, 'What a friend we have in Jesus!' Is it so?" He replied, "The Lord and I did it between us."

The hymn is undoubtedly one that will live.—*Word and Work*.

The first Bible printed in America was made for the benefit of the Indians. It was Eliot's translation, and was issued at Cambridge, Mass., in 1663. The Germans had the benefit of the next Bible, which was printed in their language at Germantown, Pa., by Christopher Sauer, in 1743. So the Indians and the Germans were supplied first, and it was not until 1782, according to Harper's Encyclopedia of United States History, that Robert Aitken, a printer and bookseller of Philadelphia, published the first American edition of the Bible in English. This was in quarto form. The first folio form in English was printed at Worcester, Mass., in 1791, and bears the imprint of Isaiah Thomas.

The Southern Presbyterian church is very conservative on the question of women's right to engage in Christian work. Some good women lamenting the cold state of religion in their congregation, agreed to meet weekly in the church for prayer. On one occasion these good women were holding their prayer meeting when a man dropped in to enjoy the meeting. The women felt that they could not proceed with their meeting in the presence of a man, and one of them went to the parsonage near by for the pastor, who came in and closed the meeting as they supposed in a scriptural manner.—*Christian Instructor*.

Not every one charged with the "leaven of the Pharisees" is as frank in his avowal of assumed superiority as was Rabbi Simeon, son of Johai, who was accustomed to say: "The world is not worth thirty righteous persons such as our father Abraham. If there were thirty righteous persons in the world, I and my son would make two of them; and if there were only twenty, I and my son would be of the number; and if there were only ten, I and my son would be of them; and if there were only five, I and my son would be of the five; and if there were but two, I and my son would be those two; and if there were but one, myself should be that one."

That is Phariseism, whose center is self, for whom the worlds were made, and in whose interest every thing is supposed to move. No wonder the Lord warned his disciples to take heed and beware of the leaven of the Pharisees. The man or woman who will not hear others patiently, who will not be advised by others, whose way is the only right way, is in danger of Phariseism, if not already in the ranks of the Pharisee. The true disciple of Jesus, on the other hand, is one easily entreated, severe with himself but gentle with others, humble, forgiving and kind—the very opposite of the self-righteous Pharisee.—*N. H. Christian Advocate*.

Items Concerning the Society.

Samuel T. Pickard, Whittier's literary executive and biographer, will sell a great many of his manuscripts and books for the benefit of a fund for the restoration and care of the poet's birth-place at Haverhill and his home at Amesbury.

Joseph S. Elkinton during a few days past, has again been in Canada, to be consulted by Government officials at Ottawa concerning the unsettling of a section of the Donkohors. It appears it was not found necessary for him to proceed further, and that an early return home was permitted.

SUMMARY OF EVENTS.

UNITED STATES.—The Commission appointed by President Roosevelt to adjust the differences existing between the anthracite miners and their employers have spent several days in personally visiting the mines and making inquiries in various neighborhoods. The commission has received from the miners a statement of their grievances and their demands. The Commission has agreed to meet at Scranton on the 14th, to take the testimony of the miners. The individual operators, of which there are about seventy in the anthracite region have agreed to abide by the findings of the Commission.

The amount to be paid to the troops lately sent to the anthracite region will amount to nearly \$1,000,000. This does not include subsistence, transportation, etc., which will amount to several hundred thousand dollars.

On the 4th inst. elections occurred in 42 States. The general result does not appear to have materially changed the political composition of Congress, though Democratic gains are reported in many places. In Pennsylvania, Samuel W. Pennypacker, the Republican candidate for Governor, was elected by a majority of 1,000 votes. The Republican Governor Odell of New York was re-elected. While a dense crowd in New York City was watching the election returns on the evening of the 4th instant, an explosion of fireworks occurred by which 12 persons were killed and about 80 injured.

Reports from the Bureau of Statistics show that the coal production of the United States has quadrupled since 1880, when the output of the remainder of the world was not quite doubled. The three great coal producing countries of the world are the United States, United Kingdom and Germany. These three countries produce practically 80 per cent. of the world's coal.

The annual report of the Commissioner of Navigation shows that on Sixth Month 30th, 1902, the documented tonnage of the United States was the largest in its history, comprising 24,273 vessels, of 5,797,902 gross tons. The increase over last year is almost wholly in large steel steamers. The report prints at length the agreement of the transatlantic merger, and its fleet of over 1,000,000 tons and says: "The organization of so great a navigation company under American auspices is, however, the most important step toward the establishment of an influence of the Americans on the ocean which has been taken since modern shipbuilding plants were developed in the United States."

A despatch from Denver says: Invalids must have a certificate from a physician before they can get on a train in Colorado after Twelfth Month 1st. The certificate must say that the bearer has no contagious disease. The roads have had a great deal of trouble with sick people afflicted with contagious diseases getting on trains. Conductors are supposed to watch such cases, but, sometimes it is impossible for them to detect contagious diseases. The idea is to have all the roads adopt the physicians' certificate scheme, and thereby protect passengers who desire relief from the presence of hacking consumptives.

Official reports show that there are now 500 cases of typhoid fever, and treatment in Philadelphia, and the same figures are given by Dr. Benjamin Lee of the State Board of Health in 1900 is again applicable in certain sections of the city, viz: that no Schnylik water shall be taken into the mouth unless it has been boiled.

It is stated that a company has been organized in Boston, Mass., with a capital of \$300,000, to manufacture railroad ties and paving blocks from leather. The ties and paving blocks are made of leather scraps.

Sixteen thousand tons of anthracite arrived in New York on the 9th instant from Great Britain by four steamships.

The available cash balance in the United States Treasury Seventh Mo. 1st, 1902, was the largest net balance in its history. It amounted to \$82,187,361.

Morris C. Lockwood, an inventor of Vineland, N. J., maintains that he has discovered a cheap process by which peat can be converted into fuel briquettes for below the cost of mining coal. Lockwood, after investigation and experiments, declares that in Atlantic County are hundreds of acres of the finest peat bogs in the world, running to a depth of fifteen feet.

A despatch from San Francisco says of the Indians residing in Alaska, etc.: "At least 25 per cent. of the natives along the Arctic coast have died from measles, and there seems to be nothing to check the death rate. Two years ago the devastation began, and it has continued since. When the natives began to wear civilized man's clothing and drink white man's whiskey, then began their decline. Diseases unheard of attacked them, and not knowing how to care for themselves, the people died rapidly. Pneumonia, rheumatism, grip and every conceivable ailment made their appearance among them and spread along the coast with appalling results."

A telegraphic message has lately been sent from Boston around the world by way of the recently completed cable from Vancouver across the Pacific to Australia. The actual time consumed was thirty-nine hours and twenty minutes.

According to a plan of the Chicago Housewives' Association holding mails for the benefit of the poor, the diplomas issued by the association in order to secure positions in the homes of members of the organization. The rules regulating the granting of the diplomas are to be definite. The formal testimonials will be granted to a maid only after she has been in one family for a year

and has performed her duties with a certain dexterity. Real parchment will be used, and the will be described as "satisfactory," "good" or "exceedingly efficient." Graduate "cooks," "waiters," "ladies' maids" and "landresses" will be the ideal household servants.

A Brooklyn firm of coffee dealers and sugar re said to be feeding one hundred horses used in its upon molasses. Each horse will eat from ten to pounds of molasses every day, the cost being at ten cents. It is said that the horses thrive upon fare.

FOREIGN.—The Emperor William of Germany has been paying a visit to his uncle, Edward VII of

W. J. Wilson, an explorer of the Canadian Gey Survey, has returned with his party from a tour the unexplored country to the southwest of Jame the reports of the discovery of a large river running between the Albany River on the south and the picket river on the north. The newly discovered has a course of over 800 miles, and near James vides into two branches emptying into Hudson Feral new lakes were also discovered by the explorer.

The movement of the excited Donkohors among their villages appears to have been stopped by the tina Government.

The Philippine Commission has appropriated \$2, in silver to purchase rice to avert the famine which appears to threaten many provinces in those island wards of 20,000 tons of rice are reported to have purchased.

A despatch of the 6th from Lisbon, says: A earthquake shock has been felt at Guarda, in the vince of Beira, and at other places. The earthquake is of less life, and many houses have been de

Official statistics show that owing to the drought when harvest in New South Wales this year is very poor. The shortage is estimated at 11 bushels. Queensland and other States of the Federation in Australia will probably also have very poor crops. A large emigration of persons to Argentina is lately taking place. Of 90,127 persons who went that country last year 58,343 were from Italy.

The volcano Kilian, in Hawaii, is again becoming active.

An expedition for exploring in the antarctic has lately left Scotland on the steamer *Scotia*, under leadership of William S. Bruce, who has had a long experience in such researches. The *Scotia* is provided with a complete set of instruments for oceanographic meteorological research. Kites will be used for photographs of bird's-eye views, and cinematograph-keeping records of the movements of animals in Self-recording meteorological instruments for the regions of the atmosphere are provided.

A despatch from London says that an epidemic measles is prevailing in the peninsula of Kamot which ten thousand persons have died, and some have been nearly depopulated.

The English language is hereafter to be system and practically taught in the national preparatory of Mexico, in accordance with the prescriptions in a decree by the President of the Republic. The first prescribes that "the professors of English must preference to teach the pupils to speak and to instruct the students in the acquisition of vocabulary and phraseology sufficient for daily use the expression of ordinary events and generalities." It is considered that the English language necessary for business in Mexico as well as the Span

man disciples and by them alone" that this is
to be done, then Quakerism has all along been
a mistake, and its meeting houses, where free
from donative conditions to the contrary,
should be promptly handed over to the Romish
or some other sacerdotal system. Indeed under
our professed name a sacerdotalism is al-
ready forming, which may land there.

We appreciate the grounds of fear which
our brethren of other persuasions have in re-
ferring all church-growth and enlargement of
Christ's kingdom on earth to human endeavor.
For it is thought human faithfulness might
relax, if prominence should be given to the
truth that "the work is the Lord's, the power
is his," and "a manifestation of the Spirit of
God is given to every man to profit by," and
for our labor not to be in vain it must be "in
the Lord." There is a fear that if the Divine
Spirit is relied on as sufficient for the whole
work of Grace in men's hearts universally,
Christians will lie idly by to let Him do all,
and so ours will be a Christianity of dwarfs
and weaklings.

That human nature takes advantage of all
visible loop-holes to escape the work of the
Lord and the cross of self-sacrifice, is evident
enough. None of this hanging back, however,
comes from the doctrine. "Without Me ye can
do nothing," but from the same Deceiver that
would pervert the good of any doctrine. If
he can keep men out from under Divine au-
thority by pushing them on ahead of it, or
detaining them to wait continually behind it,
his purpose is equally served.

But the doctrine that requires a hearing of
Christ's inward voice in order to execute it,
requires unrelenting faithfulness in the work
appointed. No better workmen, even unto
martyrdom, have been found than in the ranks
of Quakerism, where, as laborers together
with God, they were girded to high endeavor
through a living sense that their mission was
Divine.

FOR "THE FRIEND."

The Ending of the Yorkton Doukhobors' Pil-
grimage.

A letter from Joseph S. Elkinton, dated
Eleventh Month 10th, 1902, contained the fol-
lowing: "At the immigration office (Ottawa)
I had the reading of a long telegram from
Frank Pedley (Superintendent of Immigration)
to the Minister of the Interior from Yorkton,
where he arrived at noon yesterday with the

remaining Doukhobors (who had gone on the
pilgrimage as far as Minnedosa—one hundred
and fifty miles southeast of Yorkton) and (he)
was making arrangements to send them back
to their village early to-morrow morning, and
did not anticipate much difficulty.

"He and Charles Spears arrived at Minne-
dosa just in time to save some from being
badly if not fatally frozen, as night before last
was bitterly cold. The newspapers have atro-
cious accounts of a struggling time to get
them on the cars, but Frank Pedley's telegram
stated the en-training took about forty minutes
—without requiring assistance of an extra
mounted policeman. . . .

"I feel thankful they (the Doukhobors) are
all, or very nearly all, likely to get back to
their homes where they can be fed with their
own provisions.

The Superintendent of Immigration said, in
a later telegram, he did not think the Doukhobors
were likely to make another effort of the same
kind, as the last tramp had proved so
disappointing."

A Second Tunessassah Boarding School.

Now that the fanatical Doukhobors (never
more than a small fragment of the whole com-
munity) have safely returned to their homes
their friends can take up the work of educa-
tion in good earnest, as this is the best way
to help them out of their errors.

A modern school house for the accommoda-
tion of forty day scholars and twenty boarders
is in process of erection at Petrofka on the
western bank of the beautiful Saskatchewan
River—the most desirable site I found while
visiting the Doukhobor colonies last summer.

A competent manager has been secured and
he writes, under date of Eleventh Month 7th,
1902, "I am more than ever convinced of the
need of this school among the Doukhobors, and
feel sure that with the Divine blessing, it will
go very far towards solving the chief prob-
lems."

The Saskatchewan Doukhobors have been
greatly tried with their brethren of the York-
ton colonies for their unwillingness to take up
their homesteads and still more on account of
their late fanatical acts in turning their animals
loose and following false teachers on a
pilgrimage.

I felt a crisis was at hand with these York-
ton colonists when among them four months
ago and I told some of them their mental con-
dition was more critical than their physical sit-
uation had been three years ago.

Friends came nobly to their relief when
their outward needs were to be supplied, and
shall we now draw back in this hour of greater
need?

All who have come into contact with the vast
majority of these peasants are impressed with
their sterling qualities, and the Canadian gov-

ernment is well assured of their thrift and moral character—in the face of all the misrepresentations so industriously circulated of late by the newspapers.

The Saskatchewan Doukhobors promised me to send their children to such a school if Friends would build and conduct it, as we did our own schools at home.

The entire cost of this building will not exceed twenty-five hundred dollars for its construction—eighteen hundred dollars of which has already been donated.

It will require probably two hundred dollars more to furnish it and such a model will be much appreciated by the Doukhobor women and girls who are quick to learn American ways.

The whole educational problem is admirably stated by my friend Cornelius Jansen, who has this work in hand, when he says it calls for some wise young Friends who will dedicate their lives to it in a whole-hearted manner as others do in their "college settlements" or as the Boarding school at Tunesnessah has long been conducted—with this difference, however,—the Doukhobors are much further on the road to civilization now than the Indians are, even after so many years of labor.

C. J. further states: "An English-speaking man and his wife will be needed in the domestic department, in order that the Doukhobor children may learn by actual object lessons our way of cooking, living, etc."

The opportunity to enter into this field of educational work is now clearly set before our society. Will we rise to the occasion or allow others to take our crown?

The Presbyterians and Second Adventists and even the Mormons are trying to find a place among them, but so far the Saskatchewan Doukhobors have expressed a decided preference for Friends.

The late unhappy events in the Yorkton colonies show how susceptible some of them have been to false teachers, and the only way to prevent the repetition of such fanaticism is to live out and teach correct ideas among them.

Their children are exceedingly bright and interesting, and I never saw a more inspiring school or class of children than when surrounded by some thirty or forty of them in front of Grandmother Verigen's home.

They grasped even mature thoughts when interpreted in the Russian language and asked questions that showed they were thinking seriously.

Any one going among them must have regard to their customs and sense of propriety and treat them sympathetically, or they would better stay away.

When once their confidence is gained and they realize it to be true love which actuates their friends, they will respond liberally.

I never felt more nearly overwhelmed with kindness than on one or more occasions, when they bestowed more than I could comfortably receive at their hands.

We must remember their former condition in Russia and how long they have been deprived of any literary education, and so study them psychologically as well as religiously.

If this preparation is supplemented by the constraining love of Christ and a willingness to learn from as well as teach them, success is assured.

JOSEPH ELKINTON.

"Aca-Nada."

The first discoverers of Canada were Spaniards, who, finding no trace of the precious metals, and a snowy, inhospitable climate, said, "Aca-Nada"—"Nothing there"—since abbreviated into "Canada."

Years passed by, and English settlers

Trod that bleak and wintry shore,

Claiming God's unfailing promise

To the reaper and the sower.

And the harvest wave, outspreading

Gleaming fields of glorious gold;

Range the herds in grassy pastures,

Feed the lambs within the fold.

Now the waifs and strays of England,

From the city's dens impure,

From the lanes and from the alleys,

Where the fever stalks secure—

Come to ask for strength and succor,

Come to breathe the fresher air

To the plains of "Aca Nada,"

And they say not "Nothing there."

Are there hearts that seem so hardened,

Bored in chains of wintry frost,

That in careless mood we pass them,

Thinking labor there were lost!

Let us pause—although no treasures,

Gold or silver, meet our view,

Ere we say the "Aca Nada,"

Love and faith might prove untrue.

Sow the seed in trust and patience,

God will send his blessed rain;

We shall reap a glorious harvest

From the fields of golden grain.

Ay, full oft the "Aca Nada"

Of the faithless heart's despair,

Proves God's Acre, rich in blessing,

Overpaying all our care.

—London Christian.

MANY of the names that are most prominent in the calendar of saints are there because their owners did exactly what the Doukhobors have done, spurned the wisdom of the world, and gave up all for faith.—*Daily Express* (Canada).

Selected.

Elizabeth Drinker.

Elizabeth Drinker, wife of Daniel Drinker, of the city of Philadelphia, being drawn in gospel love to visit the meetings of Friends in this nation (England), arrived here about the Seventh Month, 1793. After visiting the meetings in the city of London, she proceeded into Kent, Sussex, and the western counties as far as Falmouth, returning through Bristol to London. Though frequently tried with indisposition of body, she was strengthened in her gospel labors to the comfort and edification of many, being concerned to wait for, and move under the fresh arisings of Divine life.

In the Fourth Month following, though in a declining state of health, she visited the meetings of Friends in Hertfordshire, etc., but her complaint increasing, she stopped at Staines, in Middlesex, nearly six weeks. While at this place she expressed to a friend an apprehension that her time would not be long in mutability, and at the same time mentioned, that as she sat in the meeting on First-day morning, though she had nothing to communicate to others, and part of the time felt low and discouraged, yet towards the close, her mind was comforted in the fresh revival

of those expressions of the prophet Habakkuk: "Although the fig-tree shall not blossom, neither shall fruit be in the vine; the olive shall fail, and the field shall yield no meat; the flocks shall be cut off from the land, and there shall be no herd in the stable; yet will I rejoice in the Lord, I will joy in God of my salvation."

She reached London the eighteenth of the Sixth Month, where for some time she appeared under great conflict of spirit; very desirous, if consistent with her Master's will, to return to her beloved connection in native land. But this trying dispensation permitted to pass over; and some time after her dissolution, she seemed relieved from anxiety respecting them; and was favored to bear her sufferings with great patience, and true Christian resignation and acceptance in Divine appointment.

She attended several meetings under bodily weakness; and her last public testimony was at Westminster Meeting, where she was up with these words, "Precious, very precious in the sight of the Lord is the death of saints;" on which she enlarged instructively and encouragingly.

During her illness she was led to speak constructively to those about her; at one time nearly in these words: "To look back at the world appears trifling and vanity; and when trials come, and the storm be permitted to beat as against the wall, it is good to turn to the Lord, who in gloomy seasons, is the protector of those that fear Him." After encouraging those present to greater dedication, she said that the highest anthem that could be sung was, "Thy will be done." At a time she said she believed it was right, she had given up all and left home; and was for life or death she must leave.

The last few days of her life she was engaged in supplications, uttering many broken sentences, which though not fully considered, were expressive of the state of her mind, and breathed the language of devotion and praise. When near the close of her spirit seemed supported above the last afflict; and with an animated countenance said: "Oh, the beauty! the excellent beauty the beautiful prospect in view." Then she put up her hands she appeared for some time in sweet, silent adoration; after which she spoke but little, and with difficulty; yet she appeared sensible. She expired in the evening of the tenth of the Eighth Month, 1793, quietly that it was scarcely known when she breathed her last; and her remains were interred at Bunhill-fields the fifteenth.

TRUE REFINEMENT.—The truest test of refinement is a uniform regard for the welfare and interests and feelings of others. This a refinement which is by education, but in case the sure indications of refinement are the same. You can recognize the difference between those who have and those who lack refinement, by their bearing in a crowded street car, or in a market, or in a throng, or in a highway, than in a drawing-room. A person of true refinement takes up the less room, claims less concession, and is readier to position than an unrefined person. This in which a man carries a cane or an umbrella in a crowd settles the question in his

again the keeping of one's market-basket the way, or out of it, at the busiest martour, is an infallible test of the bearer's grain. And so in many other minor matters. It is worth one's while to desire reagent and to know and to crave its evidence, or, after all, true refinement is but the extension of the spirit of the Christian life. Unselfish thoughtfulness of others is a growth of the religion of Christ. Each loving others better than himself, each not his own but another's good, marks dwelling and the outgoing of the spirit the servant of Christ, instead on exemplifying master's spirit. — *Parish Visitor*.

FOR "THE FRIEND."

The Mammoth Mystery and Canopy Theory.

The writer of the following paper is entitled for its interest and for fairness' sake, to bring against the seeming rejoinder to his article. But while according such opportunity in the present number, we must suggest to parties desiring further discussion on this, a transfer of it to scientific sheets, for such purposes.

This periodical is conducted in behalf of primitive Christianity as revived in the early times, or in any present day witnesses to truth and the truths which gathered the Friends. And while we throw in bits of popular scientific interest and other suited to family reading, we can afford no arena for courses of debate, even richer on our fundamental doctrines and theories considered as mooted questions.—

I have read with great interest the adverse criticism upon the Canopy Theory, by J. and Clark, an English geologist. It is my duty of any one who is drawn to the exploitation of a new theory to welcome closest scrutiny by competent and accredited experts. At the same time it must be noted that the exponents of a new theory are the proper ones to caution the critic in this stepping. In the present case I have to me a letter from the able editor of the *American Geologist*, N. H. Winchell, Jr., who having read one of my books on the "Ancient Theory of World Evolution," is free to this unsolicited statement: "I have no objection to a vapor canopy even down to recent ice times." (Italics mine.) I must confess, however, that I have omitted the courtesy of asking his permission to thus use his name. I look over the very many additional facts, commendatory and otherwise, received in the last twenty-five years on this deeply interesting subject, it is very animating to see how greatly the odds still lie on this side of the Atlantic. So fortunately a vast neutral ground is impossible for any critic, however able for his work, as I suppose, to get away into the field of Canopy thought by reading of the Suggestion published in THE FRIEND of Sixth Month 21st, 1902. For this I feel it incumbent upon me to prepare the general view of the subject, and ask criticisms do not vault to conclusions unless they have a correct understanding of what the Canopy Theory implies. It will then be my greatest pleasure to abandon this thought, the

moment it can be shown to be an untenable one.

It was suggested in the article aforesaid that some of the lingering remnants of the primitive vapors sent to the terrestrial heavens from the igneous earth, may have fallen as grand installments in the polar or extreme temperate regions of the earth, by which the glacial epochs were produced, and arctic mammals incidentally buried suddenly under great snow avalanches from a *supra-aerial* source of snows. My critic's misunderstanding is very plainly expressed in his remarkable statement that a "final condensation of aqueous vapors, which had previously, like a canopy shrouded the earth's surface from earliest times seems impossible" as a cause thus suggested. Again he says further: "Such a sudden entirely fresh condensation would liberate so enormous a quantity of heat, previously latent, that milder rather than severer conditions would surely result."

No one can doubt that a "condensation of aqueous vapors" into continental volumes of snow, in the atmosphere, competent to bury the arctic animals in glacier graves would evolve an "enormous quantity" of heat, but what philosopher can for a moment conceive that aqueous matter revolving as a Jupiter-like canopy about the earth for unknown time in the loftiest limits of the atmosphere where the temperature would register a degree of cold far below the zero point, would in falling through the air become a "final condensation" adequate to form milder conditions? If condensation did not take place in the region of inveterate cold, are we to suppose it would in the lower air? It certainly would not on this side of the Atlantic.

A canopy anchored to the lofty terrestrial skies and largely composed of aqueous vapors, primitively hot, implies that condensation took place as in the cold of telluric-cosmic space. Such aqueous matter could not fall without entering a warmer region. I need not tell my readers, that under such circumstances "milder conditions" could not result. Such vapors already condensed brought down the cold of the skies with them, and "severer conditions would surely result," and I suggest that such snow falls must have taken place repeatedly, thus to place the earth and its tropic life again and again in cold storage — to bring the oceans back.

Again my critic cites "two of many reasons," for discrediting the Canopy Theory. As I have never known even one out of many cases not to fail when brought to the test, I will also try to prepare these two for the rubbish pile of geologic thought. He says: "First during the glacial period the Great Salt Lake twice grew to ten fold its present area. But in the interval by *evaporation* to its present size. This could not have occurred without direct sunshine."

In the first place the canopy theory presupposes *annular world conditions*. The canopy which to-day surrounds the planet Saturn presumes that it came down from the rings that surround that world. The striated and belted appearance of this, and the great banded canopy of Jupiter, as well as the motions of both of them, force us to the conclusion that such world appendages are the *orderly wreck of slowly declining rings*. This suggestion has been

before the world for more than a quarter of a century as the one chief element of the canopy theory. And to-day I presume no eminent astronomer doubts that the earth once had a Saturn-like annular or ring system. An immeasurable succession of earth canopies is implied as inevitable in the declination of rings.

Saturn's canopy must eventually fall, as is conceded by all physicists, and "direct sunshine" result on the surface of that world, and here we simply learn the one great lesson taught from the skies that Annular World-making is not to be called a thing that "seems impossible." It seems rather that rings and their resulting canopies have made the "Ages." These are the Titanic way-marks which those potent factors in strata-building may have impressed as an imperishable record in imperishable stone. Thus the Great Salt Lake may have had repeated opportunities to grow to "ten fold its present area" by grand instalments of snow and water from the one great *primitive Fountain* or source of waters. And again it may have been reduced to its present size or even to nothing many times by "evaporation" under "direct sunshine;" for, after one canopy fell, a long period of years may have elapsed before the next one eliminated direct sun power again.

But what right has my learned critic to say: "Evaporation" could not have produced this result "without direct sunshine?" Does not the atmosphere absorb water from ocean and lake in the absence of solar energy, as on a cloudy day? Is not one-half the sphere warmer in the day time than it is at night even though it were mantled in vapor? Does a green-house roof, though painted any color, prevent solar heat being thus operative beneath the covering? A world canopy is a world roof, and a green-house world is the ever implied result, and as the air in a solar-heated green-house is warmer in the day time than at night, so, too, the atmosphere in a canopied world would be warmer in the day time than at night. Now this necessitates the alternate absorption of watery vapors or "evaporation" during the day and the inevitable fall of dew or mists at night.

Then, too, a canopied earth, for all practical purposes, must have been a rainless and stormless earth. Rainless for the simple reason of abated "direct sunshine" upon the earth's surface; in consequence of which air currents had become so much less operative, that rains were reduced to a minimum. It is the active commingling of air currents of different temperature that insures rain. For these reasons the lakes of the whole earth had a double opportunity to grow less and less in size. For these reasons also, it would seem the earth in a geological sense, ought to have as many salt regions as it had lakes, and most geologists would be glad to know why so much of the modern world was checkered with salt marshes.

Great Salt Lake then is very far from being a witness against a canopy concealed sun. Correctly interpreted the great many "salt deposits" of numerous periods in geological history" are in the world's court to-day, and for the future, as witnesses of canopy world-making.

Again, is it not a little puzzling to find such vast lakes, and all abounding waters, during

the glacial period? Geologists have become so familiar with the way-marks of impelling floods, and swollen streams, rushing from the very bosom of the glacier, that the illustrious Dana called these inter-glacial floods "Deluges vast beyond conception." As I see it, a remaining canopy, or a succeeding canopy is necessary to account for this exceedingly rapid dissolution of continental glaciers. It seems that the glacier must have been put into a hot-house world to make the vast floods and vast lakes of the inter-glacial epochs, and a hot-house world roof is a very natural solution of the strange problem. It seems impossible for glaciers to melt into floods without it.

My critic is pleased to call the canopy theory a "very hazy hypothesis," and considers "changes of level" as more adequate. The venerable and venerated Cuvier of last century was plainly not very far afield when he stated that the Arctic mammals were suddenly entombed in their graves of snow, and that the same snow mantle that covered them covered a semi-tropic north-world, and had kept it in the embrace of the glacier all these centuries. The very many additional mammoths found, since that of 1734, so well preserved as to become the food of animals; the Herz mammoth, and the Wilju rhinoceros, with food in their mouths, as well as food undigested in their stomachs; all are emphatic endorsements of the views of that great naturalist. Several of these mammoths have been found in Alaska. The natives of that country are known to have rendered the fat and used it in their lamps, and specimens of this rendered fat are now in the Smithsonian Museum at Washington. So that "Suddenness" is the epitaph written all over the Arctic graveyard. No wonder my critic is forced to say "Geologists are still very uncertain as to the real cause of the great accession of cold."

Again the very generally accepted astronomic theory that "changes in the earth's orbit combined with the precession of equinoxes" is cited as the cause of this accumulation of snows. Reduced to simple terms, the earth was carried away from the solar fires and got so cold it became covered with snow. (Here again the epitaph of the Arctic cemetery is altogether ignored). But why should our friend so soon forget that the "condensation of aqueous vapors would liberate so enormous a quantity of heat that milder rather than severer conditions would surely result?" Would not snow formation evolve as much heat when thus produced, as otherwise produced?

The plain truth is that it requires work to make snows; and to work, nature's engines must have heat; and when geologists and physicists make the earth colder in order to cover it with snow, they simply take the fires from the furnace to make the engine work. If the furnace fires of the molten earth did not start nature's vast engine to do this work, where shall we find an agency that is not a little "hazy?" As the canopy implies, the snows fell, and the earth grew cold as a pure result. Orbital change and precession imply that the snow-making fires went out, and the earth grew cold, and somehow, by hook and crook of nature's ledgerdomain, got covered with snow. This is the theory which "geologists generally favor in lieu of the very hazy canopy hypothesis." But it is decidedly reinvigor-

ating to be told: "Nor would geologists be surprised if a cause as yet unsuspected superseded it in probability."

Amongst the very many manifest misconceptions of the annular or canopy theory, contributed as evidence in stock against it, is the claim that the primitive vapors formed in the molten earth, "must have ceased to act as a potent factor ages earlier" than the mammoth-period. This statement has the air of an empirical guess. I cannot see why it "must." As it is my constant aim to avoid guessing, when confronted by a problem of this kind, and to buttress my claims by acknowledged testimony, I would next attempt to show how very far we have wandered from the truth, by admitting the unwarranted assumption made by geologists of half a century ago, that the fire-formed waters all fell back to the earth at the close of archæan time.

The true theory must explain all geological puzzles, and I have yet to find one that the annular theory of world-making cannot explain. We have access to a vast fund of evidence which, as I see it, proves beyond a doubt that some of the earth's primitive vapors lingered on high, as a world-controlling canopy for a long period of years after man came upon the scene. By digging into the old fossil beds of human thought we find a history that must be admitted to the witness stand—a history that is so thoroughly saturated with canopy thought that the most ordinary thinker cannot fail to see the unerring order and grand intent.

ISAAC N. VAIL.

PASADENA, California, Tenth Month 28th, 1902.

TRUTH IS WISE.—A Christian writer of two centuries ago was asked this same question: Is it ever right to tell lies? He replied to the effect that he who tells a lie throws in his lot with him who is the father of lies, and must take the consequences, but he that tells the truth puts himself under the protection of the God of truth, and He will not forsake him. Throughout the terrible persecution against them the early Friends told the truth. They did not even try to hide the fact that they were meeting together for worship though they knew that if it were known it would subject them to the most cruel treatment that might be fatal. It was their persistent truthfulness as much as anything else that gained them their liberties. When officers of the law found out that all they had to do was to tell the Quaker to go to prison and that he would go there, and if necessary inquire his way to it, it became too apparent to everyone that these people were neither dangerous to society nor evilly disposed for the persecution to continue. The moral effect of such conduct, though it brought great suffering at the time, must have been powerful to aid them.—*Interchange.*

"To us, dearest mother, who are in health and vigor," wrote James Hinton, "you are scarcely less useful now in your example of cheerfulness and patience and thoughtfulness for everyone, showing us how infirmity should be borne, than you were in the old days when we were the feeble ones. It would be a pity if the relation of parent to child were not so inverted before it ceased; it would lose almost half its use and a great part of its delight."

Prayer of James Logan.

Bearing date 1732 (following a meditation addressed to his soul).

Oh my God and Gracious Father! In infinite mercy bestow on my poor afflicted this Divine sense; visit it with the touch of Thy love, bear it up through all the temptations that would overwhelm it, by a firm dependence upon Thee. When troubles surround me, temptations invade me, let me boldly and resolution say, God, the Lord of all things, the Supreme Ruler of the Universe is my God and Maker, on whom alone I depend. To this will I submit in all things and therefore he cannot forsake me. O gracious Father, guide me by Thy Divine Providence, support me in my dependence upon Thee. I do nothing on earth, not even exemption from any visitation whatsoever that Thou thinketh to deal to others. I crave only that I may enjoy the sense of thy love and regard thy soul, and that this, if it be Thy Divine pleasure, may be always in a degree superior to my sufferings. I shall then undergo all that cheerfully, and instead of being afflicted and impoverished by outward visitations, I shall be enriched by the greatness of creatures in trust of blessings, thy love in my soul, in comparison of which nothing besides on earth is worthy to be named. O gracious Lord, give me thy inward peace in thee and I will give up every other consideration. O gracious God, who art the Ruler of this universe, whom thou hast created, in which nothing is manifested but by the permission of thy Divine will and of which I am a very small and inconsiderable part, on whom nothing more is incumbent than to act according to the statutes wherein thou hast placed me, according to that sense and understanding thou hast pleased to bestow upon me according to the best of my ability. O Lord enlighten my understanding and make me more and more sensible that it is my duty wholly to acquiesce in thy dispensations. Thou hast hitherto graciously good unto me, conferring on me thy outward blessings much beyond my desert, and I have now but a few short threads left out my life, before I am by thy laws established decree of nature to be gathered up here unto thee from whom I at first proceeded. In this small remainder, O gracious God, enable me to run that course thou hast set before me with joy and thankfulness whatever visitation may prove, and with a due preparation to thy will to embrace thy dispensations with cheerfulness, and even with grateful acknowledgment for the innumerable mercies with which I have hitherto been favored without the least repining at what thou hereafter suffer to be dealt to me, though agreeable to my weakness or natural inclination, which still continues to reign too strongly within me. O gracious God, in thy infinite mercy eradicate and destroy these iniquities and cleanse my heart. Direct my will, purify my inclinations and let thy Holy Spirit guide and teach me to know that only a perfect resignation and submission is my duty, and that no more is required of me, than to act my part in my station, and obey thee with a pure intention, with a dependence on thee, and without contriving or carving out anything for myself, but what by the course of thy providence thou thinks fit to dispense.

O Lord, this thought deeply in my heart
strengthen me in the belief of it.—That I
am a servant engaged to follow a mighty and
powerful Leader in the work or business to
which He is pleased to call me, who points
out to me what I am daily to perform, and that
I have no other knowledge of, nor concern in
the great and mighty designs of my Maker,
to know Him to be perfect in all things and
a sure rewarder of all who are faithful
to Him; that it is my place to consider only
the immediate task and cheerfully to perform
without further reasoning or inquiry into
it is entirely hid from me, and in all things
to confide in the conduct of my Master
in the issue of what I am engaged in. O
gracious God, strengthen me in these thoughts
the sum of my duty here.

FINISHED PRAYER OF JAMES LOGAN, 1732.

O gracious God, Creator and Ruler of the
universe, as I am thy production, brought
into being and made a part of thy creation,
and by thy power and without any concur-
rence of mine and am therefore what thou art
pleased to make me, I return the most humble
and sincere acknowledgments to the Divine
Father for the sense thou hast given me of
my condition here, that I am wholly to depend
on thy will to wait on thee for thy assistance
in all things, that there is a way to all
that thou art truly seeking thee to attain the
fulfillment of thy creation, which is to be united
to thee, but that there is an enemy perpet-
ually combating us and endeavoring to divert
us from thee aside from our duty to thee.
Therefore, O gracious Father, as I can do
nothing of myself or without thy support,
I humbly pray thee so to guard and direct my
thoughts that they may be wholly fixed on
thee that they may rest and acquiesce in thee,
and that I may entirely submit in all things
to thy dispensation without the least repining,
cheerfully embrace whatever thou art
pleased to deal out to me and those thou hast
given me, with thankfulness as the effect of
thy holy will. Purge my heart O Almighty
God.

Tenth Month 28th, 1902, (by a de-
pendent.)
James Logan, born in Ireland in 1647, ac-
counted Wm. Penn to America as his secre-
tary in 1699. He became secretary of the
province in 1701, afterward chief justice, and
member of the Council. He acted as gov-
ernor about two years (1736-8). He was a
man of considerable learning. The Loganian
series of about three thousand volumes, which
descended from him, is now included in
the Philadelphia Library. He died in 1751.—
"Meditations on his Soul," preceding these
papers are said to be very sweet and strength-
ning.—Edj.

It is the temptation that is likely to be
tempted to the poor working girl who comes
to the city for employment. If professing
Christian women were attired without orna-
ment plainly and neatly, how they could help
the girls by their example and influence to
avoid womanhood above vain dress, also that
their character needs no such attractions,
could make such sensible godly dressing
attractive, and save many a girl from fall-
ing.—*Herald of Truth.*

THY LAW.

It is Thy law that from the sky
Withdraws the silver awning;
It is thy law that sends the light
Of long, slow summer dawning.
It is Thy law that brings the wind
Where fragrances have slumbered,
That fills the air with darting wings
And hum of bees unnumbered.
It is Thy law that heaps the moss
A green and velvet pillow,
That lifts the leafy forest-side
In billow after billow.
It is Thy law that throbs with life
And crowns the year's sweet story;
It is Thy law that bursts the bud
And brings the rose in glory!
It is Thy law that buoys the soul
Far over all annoyance,
In vision of supernal power
Bending to summer's joyance.
It is Thy law that lets Thine own
Feel heavenly strength attend them—
Great peace have they that love Thy law,
And nothing shall offend them!

—Harriet Prescott Spofford.

A Dream of Truth.

I dreamed that I was on my way to school,
when suddenly I noticed a great crowd upon
the green. People were hurrying to and fro,
and when I asked what all this commotion was
about, a girl said:

"Why, don't you know? It's Measuring
Day, and the Lord's angel has come to see how
much our souls have grown since last Measur-
ing Day."

"Measuring Day!" said I; "measuring souls!
I never heard of such a thing," and I began
to ask questions; but the girl hurried on, and
after a little I let myself be pressed along
with the crowd to the green.

There in the center, on a kind of throne
under the great elm, was the most glorious
and beautiful being I ever saw. He had white
wings; his clothes were a queer, shining kind
of white, and he had the kindest yet most
serious face I had ever beheld. By his side
was a tall, golden rod fastened upright in the
ground with curious marks at regular inter-
vals from the top to the bottom. Over it, in
a golden scroll, were the words: "The mea-
sure of the stature of a perfect man." The
angel held in his hand a large book, in which
he wrote the measurements as the people came
up on the calling of their names in regular
turns. The instant each one touched the golden
measure a most wonderful thing happened.
No one could escape the terrible accuracy of
that strange rod. Each one shrank or in-
creased to his true dimensions—his spiritual
dimensions, as I soon learned, for it was an
index of the soul-growth which was shown in
this mysterious way, so that even we could see
with our eyes what otherwise the angel alone
could have perceived.

The first few who were measured after I
came I did not know; but soon the name of
Elizabeth Darrow was called. She is the
president of the Aid for the Destitute Society,
you know, and she manages ever so many other
societies, too, and I thought, "Surely
E. Darrow's measure will be very high in-

deed." But as she stood by the rod, the in-
stant she touched it she seemed to grow
shorter and shorter, and the angel's face
grew very serious as he said: "This would
be a soul of high stature if only the zeal for
outside works which can be seen of men had
not checked the lowly, secret graces of humil-
ity and trust and patience under little daily
trials. These, too, are needed for perfect
soul growth."

I pitied E. Darrow as she moved away
with such a sad and surprised face, to make
room for the next. It was poor, thin, little
Betsey Lines, the seamstress. I never was
more astonished in my life than when she took
her stand by the rod, and immediately she in-
creased in height till her mark was higher
than any I had seen before; and her face shone
so, I thought it must have caught its light
from the angel, which smiled so gloriously
that I envied poor little Betsey, whom before
I had rather looked down upon. And as the
angel wrote in the book he said: "Blessed
are the poor in spirit: for theirs is the king-
dom of heaven."

The next was Lillian Edgar, who dresses so
beautifully that I have often wished I had
such clothes and so much money. The angel
looked sadly at her measure, for it was very
low—so low that Lillian turned pale as death,
and her beautiful clothes no one noticed at all,
for they were quite overshadowed by the glit-
tering robes beside her. And the angel said,
in a solemn tone: "O child, why take thought
for raiment? Let your adorning be not that
outward adorning of putting on of apparel,
but let it be the ornament of a meek and quiet
spirit, which is, in the sight of God, of great
price. Thus only can you grow like the
Master."

Old Jerry, the cobbler, came next—poor,
old clumsy Jerry; but as he hobbled up the
steps the angel's face fairly blazed with light,
and he smiled on him, and led him to the rod;
and behold, Jerry's measure was higher than
any of the others. The angel's voice rang
out so loud and clear that we all heard it,
saying: "He that humbleth himself shall
be exalted." "Whosoever shall humble himself
as a little child, the same is the greatest in
the kingdom of heaven."

And then, O, my name came next! and I
trembled so I could hardly reach the angel,
but he put his arm around me and helped me
to stand by the rod. As soon as I touched it
I felt myself growing shorter and shorter, and
though I stretched and stretched and strained
every nerve to be as tall as possible, I could
only reach Lillian's mark—Lillian's, the lowest
of all, and I a member of the church for two
years! I grew crimson for shame, and whis-
pered to the angel: "O give me another
chance before you mark me in the book as low
as this. Tell me how to grow; I will do it all
so gladly, only do not put this mark down!"

The angel shook his head sadly: "The re-
cord must go down as it is, my child. May it
be higher when I next come. This rule will
help thee: 'Whatsoever thou doest, do it
heartily, as to the Lord in singleness of heart
as unto Christ.' The same earnestness which
thou throwest into other things will, with
Christ's help, make thee to grow in grace!"

And with that I burst into tears, and I sud-
denly woke and found myself crying. But O,

I shall never forget that dream! I was so ashamed of my mark.

Do any of my readers know any girl who throws more enthusiasm into every other thing than into the most important of all—the growth of the Christian character?—From the “Measuring Rod,” by Delia Lyman Porter.

The Spanish Peasant Teacher.

God has many unheralded but successful workers in his kingdom. He is not limited to any one method of operation, or to any fixed order of ministry. He raises up agents for the accomplishment of his purposes, when, where and how He pleases. He adapts his instruments to the character of the people to be reached and to the time and circumstance of the work to be done.

For instance, Spain needs a pure gospel. The Romanists will not give it. The priests oppose all evangelistic movements. Workers are sent from other lands, but they are few in number and receive scarcely any encouragement in the land of the Inquisition. God, however, shows how He can meet the need and provide the suitable workmen from among the people themselves. Nor does He go to the ranks of the learned and the influential, but chooses a peasant in the person of Francisco Gutierrez, whose simple life and effective ministry are full of interest and suggestiveness.

Up to 1870 he was under the power of Romish error, darkness and superstition; but that year God opened his eyes to see Jesus as his only Saviour, and to turn from Roman Catholicism to Protestant Christianity. His conversion was due to his reading the Bible. He imbibed its spirit and was impressed by its teaching. His zeal for it was all-consuming. He embraced its truths simply and fully.

His devotion to the gospel sent him out to tell its story of love, grace and mercy to others. He knew nothing but the Bible. That, however, was all he wanted, and admirably answered his purpose. He talked so much about what it said and was so anxious to have his friends and neighbors enjoy the salvation which it revealed that men said that it was turning him mad. He denounced sin and Romanism with so much boldness and in such terrific terms that people fled from him and his preaching, and concealed themselves in their houses.

So fearless and faithful assailant of Rome could not long escape her persecution. He was summoned before both civil and ecclesiastical tribunals; but he stood true to his convictions, and God came to his rescue. He was not daunted in the least by opposition; but as he had opportunity continued to preach the gospel and to expose the delusions and sins of the papacy. During these dark and trying days of his ministry, of the few whom he had won to his side, some returned to the Roman fold, and others were afraid to own that they were his friends. At last one morning he found himself in the little room where he was wont to hold his services, without a single hearer. This would have damped the ardor of an ordinary man, but it only intensified the zeal of this peasant preacher, and showed him to be a man equal to emergencies. Opening the door and windows, he preached to empty pews at the top of a very strong voice, saying, “If they won’t hear me inside, they

shall hear me outside.” God rewarded his zeal and faith. His pluck and earnestness attracted the people. Gradually they picked up courage, and men and women came within his house again, and conversions followed. Notwithstanding the growing resistance of priests and their supporters, he succeeded in founding a Christian church “in his native town of Tznatoraf, on the slopes of the Sierra Nevada.” Now there are forty members who meet in Francisco’s house for religious worship. In five other places in his native province there are bands of Christians who claim him as their spiritual father. Through his labors one hundred persons have been brought to Christ.

After about twelve years of zealous work, he, in 1888, fell a victim to the cancer. With ill-health, and pain, and suffering for nearly a year came supporting and ripening grace. His last words were:—“I am saved; I am saved.” He was buried in a Protestant cemetery amidst the tears and grief of his converts and others.

Nor has God forgotten to raise up a successor to carry on the work thus begun. It continued under the care of Juan Tavera, who labors without compensation as pastor at Tznatoraf. He has “at his side an elder of tried faith and considerable experience.”

DISCERNMENT.—It was the declaration of the blessed Jesus, “I am the Way, the Truth, and the Life.” I believe that the Society of Friends was gathered from the spirit of the world by the influence of this Son of the Father, who is the head of the Church, the “way, the truth and the life.” He bestowed upon this people the excellent gift of discernment, to be exercised in the transactions of the church, and also the invaluable gift of sound gospel ministry. The faithful Friends of an early period were inspired to form a code of discipline to regulate the conduct of members by. Deep inward dwelling under the influence of the Holy Spirit, was and is needful to be realized by all who minister or are active in the affairs of the church. I apprehend that all who assume the title of Friends may put on sackcloth and mourning under a sense of the deplorable diminution of the spirit of discernment.

Hence a lifeless ministry has spread, and an unwarrantable activity in other members of Society. I have long felt it my duty to bear an unflinching testimony against a lifeless minister. In the language of the prophet, I will say, “Come, my people, enter thou into thy chamber and shut the doors about thee until the indignation is overpast.” Let us be still and hearken to hear what He, the Spirit, saith.—*Mary Pike.*

WONDERFUL OLD MEN.—Men of thought have often been distinguished for their age. Solon, Sophocles, Pindar, Anacreon, and Xenophon were octogenarians. Kant, Buffon, Goethe, Fontenelle and Newton were over eighty. Michael Angelo and Titian were eighty-nine and ninety-nine respectively. Harvey the discoverer of the circulation of the blood, lived to be eighty. Many men have done excellent work after they have passed eighty years. Lander wrote his “Imaginary Conversations” when eighty-five. Isaac Walton wielded a ready pen at ninety. Habermann married at eighty, and was working at

ninety-one. Michael Angelo was still painting at giant canvasses at eighty-nine, and Titian at ninety worked with the vigor of his thirty years. Fontenelle was as light-hearted at eighty-eight as at forty, and Newton at eighty-three worked as hard as he did in the middle of life. Conararo was in far better health at ninety-five than at thirty, and as happy a sandboy. At Hanover Dr. Du Bois still practicing as a physician in 1897, his daily rounds at the age of one hundred and three. William Reynolds Salmon, M. R. S. of Conbridge, Glamorganshire, died in 1891 at the age of one hundred and six. At the time of his death he was the oldest known individual of indisputably authenticated age, the oldest physician, the oldest member of the Royal College of Surgeons, England.—*Camber’s Journal.*

The Emperor and the Psalm.

In the year 1812, Stephen Grellet, when then travelling at his own charges as an evangelist, in connection with the Society of Friends, spent six months in Russia, as he happened to be in the capital when the emperor seized the people consequent on the increasing currency that Napoleon, with the French army, was at Moscow. In those days there were many persons of high rank attached to the court of the pious Alexander I. He was the Saviour’s disciples indeed, and among these was Stephen Grellet’s friend, Prince Alexander Galitzin. While the emperor, who was quite as agitated as his subjects, was looking after the troops who were to go against the invaders, Prince Galitzin was as cool and undisturbed as ever he had been in his life, and happening to have some repairs in progress at his palace, he continued to attend the workmen as though nothing unusual in the wind. Some even insinuated that he must be disloyal, or unpatriotic, and therefore himself was anxious for an explanation. “Galitzin, what are you doing?” he said. “What means all this? Every one pretends to flee, and you are building.”

“Oh, I am here in as sure a place of safety as any I could flee to,” replied the prince. “The Lord is my defence, in Him I trust.”

“Whence have you such confidence?” said the monarch. “Who assures you of it?”

“I feel it in my heart, and it is also the divinely inspired volume,” answered the prince, as he directed his master’s attention to the Book itself.

It so happened that the volume accidentally fell from the prince’s hand but without being closed. It lay open at Psalm Ninety, and by the emperor’s permission Galitzin read the passage aloud. Grellet tells us how Alexander I. “stood for a while like a man astonished,” and then repaired to the cathedral to attend a short service before leaving with his soldiers. Psalm Ninety—one was again read in his hearing by the officiating minister, after the service the latter was asked who had selected that particular chapter. The minister replied that nobody had directed him, but that he had prayed over the matter, and had a portion of Scripture suggested to him which would encourage the emperor’s heart; he apprehended that what he had read was the message. The emperor then went off to the army, and, feeling the heavy responsi-

esting on his shoulders, he desired in the evening to have something from the Bible read to him. Without any direction, the person appointed to do this service turned at once to Psalm Ninety-one.

"Who told you to read this?" asked the emperor, probably feeling by this time that the guardian angels were actually about his path. "Has Galitzin told you?"

The reader declared he had held no communication with the prince; but on hearing that he should have to read to the emperor he had prayed to be directed to the right passage, and the consequence was he had selected that particular psalm. Its fitness for the occasion had commended it to all alike.

"The emperor felt astonished at this," says Stephen Grellet, "and paid the greater attention to what was read, believing that this must be of the Lord's ordering, he was there very solemnly and tenderly impressed, and from that time he determined, morning and evening, to read privately a chapter in the Bible."—*Sunday at Home.*

THERE are thousands of men to whom immediate success rarely comes; they are met with constant failure and disappointments; they struggle with scant reward and scantier recognition from the world. The sweets of success are never theirs; the struggle, the labor, and the long deferred hope are their daily experience. Such men may not miss the crowning of life; it may be theirs to pluck from failure an immediate flower of noble character.—*Ibid.*

The Law Feeble Where the Home is Lax.

The Seattle Humane Society is preparing a bill to present to the legislature, forbidding the sale to small boys of pernicious publications, aimed especially at cheap novels of what has come to be known as the "blood and thunder" variety. The purpose is commendable. Evil which it aims at exists and is a real and terrible one. But one may have doubts as to the efficacy of the method of reaching it.

There is one spot where the power of the law stops short. It cannot take the place of the work of the family. The obligation of the parent to the child must be discharged if the parent or it will remain forever unfulfilled and cry to heaven through the agonizing throats of ruined lives. Nothing but the unswerving watchfulness, the wise suggestion, the authoritative of the home can assure the development of that character without which the life is derelict and the individual life not worth living.

It is where duty fails in this country and in this time. If we were asked to mark the place of danger, the crevice in the great dyke of our institutions that keeps out the sea of crime and shuts in the fair tilled fields of civilization, we should unhesitatingly place a finger on the decline of family restraints, the weakening of family discipline, the privilege of the law to the young of doing substantially as they please and growing up with such habits and thoughts as their associations had created. It is the parent of crime and the principal source of degeneration of the race. The prisons and reformatories of our country to-day have a population recruited

from its youth, not because of hereditary taint or uncontrollable criminal impulse, but because of a neglected childhood that grew up in the slum and the gutter or on the pavement, until it became like all the worst that surrounded and tempted it.

The growth in the publication and circulation of pernicious printed stuff follows the decline of supervision and restraint within the home. It was smaller in volume and obtainable with more difficulty in the old days, not because human nature was different or the restraint of public opinion more valid, but because the market for it was restricted by the watchfulness of the home. The child had no opportunity to cultivate a depraved taste, because all its ways were guarded. No such books as those now under protest could find their way into its hands save by stealth and at the risk of great punishment and shame still harder to endure. Youth is essentially modest, and shrinks with wholesome fear from the first steps upon forbidden ground. But when it is left to go its own ways, form its own associations, choose its own amusements, and select its own mental and moral food, it will do as the still younger child does when left to itself; absorb a poison as greedily as a food.

Here the state is thoroughly impotent. We have seen that it cannot prevent the use of cigarettes by undeveloped children, no matter what regulations it puts into effect. If the parent exercises no control over habit the child will find ways and means to gratify appetite. It is even more true of matter made food for the mind. The easily stimulated imagination and unformed taste of the child will run to these vicious tales of crime; and they, in turn, such is the infernal lust of gain in the world, will be supplied to it by agencies open or surreptitious as the need may be. Between youth and its corrupter stands only the protection of the home; the love, the care, the tender guardianship, the immense sense of responsibility of the parent. Where that fails there is no substitute unless it should be supernatural. And we need to revive and to exalt it in our country if we are not to feel the somber effect in the decline of manhood and womanhood and the dishonoring of the state.—*Seattle Paper.*

Items Concerning the Society.

It will be of interest to many Friends who were interested in the reading of *The United Friend* during the period of its publication, to learn that its editor, Charles Francis Saunders, is to sojourn now for nearly a year in California, with his wife, to whom (Elizabeth Moore Howell), was married on the 11th instant, at her residence in Philadelphia.

Says the *Intelligencer*: "Of one hundred and forty-five meeting-houses within the limits of Philadelphia Yearly Meeting, one hundred and two remain in the possession of our [Race Street] branch of Friends; twenty-three are in the possession of the other branch. [i.e. "Orthodox"], and twenty are yet in the possession and occupancy of both."

The Christiansburg Industrial School at Cambria, Va., which remains the outcome of the service formerly conducted in the Southern States by the Friends' Freedman Association of Philadelphia, is taking an increasing hold on the interest of many Philadelphia Friends. We note that within

the past two weeks the institution has been visited, first by President Isaac Sharpless and his wife, and next by Jane W. Bartlett and her sister, Mary Lydia Wetherell; who have returned apparently impressed with much faithful labor carried on there, and with the evident promise of a future good to multiply among the colored people of that region, as Friends will by their means rise to the opportunity of promoting the work.

The *Boston Transcript* says: "Tremendous changes are making in American Quakerism. It was said once by Cardinal Rampolla that the most remarkable thing about Quakerism was the manner of reaching its decisions. Quaker meetings for business have heretofore had, not a presiding officer, but a clerk. Parliamentary law was not observed. All spoke who wished to do so, and the clerk recorded at the last the sense of the meeting. If this sense was not unanimous nothing was done. Any opposition at all has been sufficient to prevent action. The recent Five-Year Meeting, by which American Orthodox Quakers came to be one religious body, adopted for the first time parliamentary law, had motions and seconds, and took votes to reach decisions. This is a radical departure, and came not without some protests. Some Philadelphia Friends of the old stamp are saying the end of Quakerism has come. All others are reaching out after further innovations. Some meetings for worship in the East are just now adopting singing. Instruments are not yet introduced, but these have long been in meetings in the West. To the Quaker mind all these changes are most startling."

Notes from Others.

Experience shows that where moral preaching surpasses the place of the spiritual, even moral life declines, and Christian activity greatly suffers.

Paterson Du Bois says in the *Watchman*: "Many Sunday-school experts are now pleading for a return to the practice of a generation ago, the memorizing of Scripture."

It is estimated that there are one billion heathen in the world, and that Christians are giving at the rate of one-tenth of a cent a day for their enlightenment.

In six different portions of New York City the Mormons have been granted preaching permits. Every pleasant evening they hold preaching services on the street. The subject of polygamy is seldom broached. Their speakers are very tactful.

The London *Spectator* says an interest in Christian doctrine will be revived by nothing but the widespread practice of Christian morals, and of the increase of their influence. There are surely many hopeful signs of this.

Twenty-five years ago there was not a Christian in Central Africa. To-day three hundred native teachers proclaim Christ in the villages every first day.

There is nothing extraordinary in the outbreak of zealotry on the part of a section of the Doukhobors, except its time and place. The history of religious movements in the world shows many similar examples. The Doukhobors have shown an exalted contempt for the wisdom of the world, for what are regarded as the necessities of life, and for the conventions of society; but some of the first Christians did the same thing, or something very similar.—*Canada Paper.*

The next meeting of the New York State Conference of Religion, to be held in New York City, Eleventh Month 18-20, will lay emphasis on the need of an ethical revival, in view of the present

crisis in morals, in business, politics, the church and the family.

Edward A. Horton says the great question in the United States—and it is a growing one—is how to obtain sufficient religious and moral education for the young people to match and make useful the intellectual training of the public schools.

SUMMARY OF EVENTS.

UNITED STATES.—An answer has been filed by President Baer, of the Reading Company, with the Anthracite Strike Commission, in which many of the statements made by President Mitchell, of the Miners' Union, are denied. The industrial mine operators have also filed replies in which they charge the United Mine Workers with responsibility for the murders and beatings in the anthracite region during the strike. They announce that they will bring evidence to show the losses of life and property to be direct results of the methods of the Union.

The Commission resumed its sessions at Saratoga on the 10th, and will probably be occupied at several days in hearing the testimony of different parties.

The annual report of the First Assistant Postmaster General urges that in view of the success of the rural free delivery system and its future necessities, the recommendation for \$12,655,800 in the estimates for that purpose is reasonable.

The rural free delivery system the report says, has become a permanent feature of the postal service, and has increased the postal receipts and improved conditions wherever it has been put in operation. No deficiency, it is stated, will be created by this service.

In a recent address in New York city President Roosevelt said in reference to "trusts":

No patent remedy can be devised for the solution of these grave problems in the industrial world, but we may rest assured that they can be solved at all only if we bring to the solution certain old time virtues, and if we strive to keep out of the solution some of the most familiar and most undesirable of the traits to which mankind has owed untold degradation and suffering throughout the ages. Arrogance, suspicion, brutal envy of the well-to-do, brutal indifference toward those who are not well-to-do, the hard refusal to consider the rights of others, the foolish refusal to consider the limits of efficient action, the base appeal to the spirit of selfishness, whether it take the form of plunder of the fortunate or of oppression of the unfortunate—these and from all kindred vices this nation must be kept free if it is to remain in its present position in the forefront of the peoples of mankind. On the other hand, good will come, even out of the present evils, if we face them armed with the old humane virtues; if we show that we are fearless of soul, cool of head and kindly of heart; if without betraying the weakness that cringes before wrong doing, we yet show by deeds and words our knowledge that in such a government as ours each of us must be in very truth his brother's keeper.

A gift of one hundred thousand dollars has recently been made to the University of Pennsylvania by Edward W. and Clarence H. Clark towards founding a professorship in Assyriology, of which Dr. Herman V. Hilprecht will be the first incumbent. In a recent lecture the latter said that the more extended the researches the greater proof also was found of the truth of the Old Testament scriptures. By a series of illustrations he showed that even the bricks discovered testified to the truth of the scriptures, incidentally corroborating the passages in the eleventh chapter of Genesis, including the one, "They used bricks for stone," the bricks of this period resembling stones in nearly every respect.

A. J. Cassatt, the president of the Pennsylvania Railroad company, has decided that the employees of the company shall have their full share of the prosperity which the railroad is enjoying, and in accordance with this policy has ordered that one thousand thousand employees of the company be given an advance of ten per cent. in wages, dating from Eleventh Month 1st. The announcement of President Cassatt's policy was made at the regular meeting of the Board of Directors and was adopted without discussion and ordered to be enforced immediately.

The Reading Company has also decided to increase the wages of its employees by an addition of ten per cent. This will affect about eighteen thousand men and similar advances have been voluntarily made by some other Rail Road companies.

Samuel W. Pennypacker was elected by a plurality in the late election in Pennsylvania for Governor of 142,340.

The Department of Agriculture announces that experiments which have been made for some years now appear to be successful in growing an orange which can flourish

in regions two hundred miles further north than the varieties commonly grown in Florida. This has been accomplished by crossing the Japanese trifoliate orange, an ornamental tree, with the common varieties successively, until a fine fruit capable of enduring extreme cold has been produced.

The Assistant Secretary of Agriculture has recently made a statement to the Department, did not accept Professor Koch's theory that tuberculosis could not be transmitted from animals to man.

"Experiments," he said, "which we are now making indicate that the disease can be very readily transmitted when the conditions of the subject are suitable."

So great has been the freight traffic on the Pennsylvania Railroad that a dispatch from Pittsburgh says: Some hundreds of yards of buildings are blocked with loaded freight cars. In the local yards the siding and tracks are jammed with solid trains of freight, which are shifted and reshifted to enable trains to get through. Hundreds of cars of perishable freight have become a total loss on account of the congestion.

The twenty-third annual report of the Training School for Indian Youth, at Carlisle, Pa., shows there are 1073 Indians at school, representing eighty-eight tribes. It is contended that in no other institution in the world are there so many different nationalities as are gathered here to be taught to speak one language. During the year 489 boys and 439 girls remained out during winter attending district and other Americanizing schools, earning their board with their work out of school.

The quality of the work and buildings are noted as first at Kweilin, Kwangsi, causing great loss of life and property. The fire spread and burned several hundred houses. Many Chinese were burned to death. The fire burned houses all around the Christian Alliance Mission, which was unscathed. The result is that many Chinese have since come to the missionary to be baptized.

Germany has agreed to the American proposal to submit the question of the Chinese Exclusion Act to be payable in gold or silver to The Hague Tribunal, provided that only that feature of the protocol be included in the arbitration.

The President of the Liverpool Chamber of Commerce has recently stated in reference to the experiments of growing cotton on the West Coast of Africa. "We sent out one hundred tons of American seed and divided it among all the British West Coast colonies. The results have been most satisfactory. The crops matured in ninety days, and in quantity and quality were quite equal to those of the parent stock. The only question is whether we can make the natives work as so to put big plantations on a commercial basis. The native wages are four cents a day. But I am personally afraid that a number of years will elapse before we can make the West Coast of Africa a serious competitor of the American Southern States. We are sending out Americans to teach the natives cotton growing, and must wait and see how the experiment turns out."

The late war in South Africa has shown we have cost England \$228,000,000. A further sum of \$8,000,000 has been granted by the House of Commons towards the settlement of the country. The Colonial Secretary says in making this measure said that in giving "I will not call it compensation, but assistance to those who were our former enemies we should clearly state what are the reasons. The reasons are humanity and policy. Humanity first, because we do not wish, under the British flag, that any one should be subjected to the misery which these people would otherwise have to suffer. But policy, because, as we have said over and over again, we have got to live together and want to live together. We hope that we shall live together as friends."

The condition of the peasantry in Southern Italy, by excessive taxation, and the losses caused by the outbreak of phylloxera, etc., has become so miserable that more than 100,000 of them have left Naples during the present year.

The Canadian Commissioner of Immigration has lately said: "We expect next year to place 100,000 emigrants in Western Canada, and we shall probably draw a third each from the United States, the United Kingdom and the rest from Europe."

A recent despatch from London, says: The Indian Secretary, in submitting the Indian budget statement in the House of Commons pictured the increasing prosperity of India, in spite of the ravages of famine, and said the only item showing a decrease in revenue was opium. The income for the current year was so ample that the Government had decided to make a special grant of \$7,500,000 for the relief of the sufferers from drought and famine, and the Secretary expected that the surplus would still exceed \$8,500,000.

A famine appears to be imminent in Finland. The barley and oat crops in the North have been ruined

by frosts following an extremely cold summer, and the damage has been increased by great floods swamping the fields before the harvest was got in. Thousands of families are suffering from starvation and attendant diseases. In many places the peasants have been forced to sell everything they possessed in order to obtain food, and are eating bread made of the bark of trees. About 18,000 persons have emigrated this year.

In a recent decision in the Provincial Civil Court in Viena it was held that a marriage between a man who describes himself as having no religious faith and a woman who said she belonged to the Protestant church was invalid on account of the differences of religion between the contracting parties, in spite of the contention submitted by the woman's counsel that such marriages are perfectly legal.

The steamer *Luzon* reports that great earthquake shocks have considerably changed the harbor of Ocosingo, Guatemala, and while in the neighborhood of San Beni was covered with ashes from the volcano of Mount Quimado.

A dispatch from Rome of the 13th, says: The volcano on Stromboli Island, off the north coast of Sicily, has commenced a regular eruption. A colossal column of fire is rising and incandescent stones are being emitted from the craters. Many houses on the island have been destroyed.

A dispatch of the 13th from Auckland, New Zealand says: According to advices received here from Ap Samoa, via Tonga, a volcanic eruption has broken out on Savai and set fire to several buildings. The people are in a panic. Six craters are reported to be emitting smoke and flames. In one village in the vicinity the earth covered two inches deep with ashes.

According to a dispatch from Sydney, N. S. W., an extraordinary red dust storm has been experienced in Victoria and New South Wales. Darkness enshrouded city of Melbourne at noon on the 14th, and balls of fire fell from the sky and set fire to several buildings. The people were thrown into a state of panic. A similar cloud of red dust is coming like a pall over the city of Sydney and many towns on the same day.

German motor boats are now plying on the Dead Sea, forming a line of communication from Jerusalem to Ke the ancient capital of Moab, whence caravans start across the desert of Arabia.

NOTICES.

WESTWON BOARDING SCHOOL.—For convenience persons coming to Westwot School, the stage will train leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when regns Stage fare, 15 cents; after 7.30 P. M., 25 cents each To reach the school by telegraph, write Westwot School 114x.

Withdrawing of "Religion" from Schools by Competing Religions.

Without the religious incentive it is doubtful whether education, as a concern of parents for their offspring, would be pursued on earth. Learning for children's and others' welfare is the Source of all Good; and so it is of primal origin. By education is meant the development of what is good or best in man, in view to fitting him for a higher service in the future. The highest state is in which religion promises, and so all forms of religion demand some training of their subjects for the prize of their promise. A father is said to some of us, "We always meant our daughter should be better than we were;" her parents are delighted that their aspirations even now seem realized. Centuries ago, another echoed the real, but somewhat darkly obscured, yearning of every parent, "I have no greater joy than to see my children walking in the truth." Even when an error is taught to a nation as truth, its sons seek to conform their children to it, because it is error, but because they have been persuaded it is the truth. A parent, because he is a parent, wants his child trained the best, and therefore for the religious. Even if religious doctrine be divorced from schools, still schools are sought unto for the betterment of the mind as they will give enlargement of it for higher things. The exclusion of religious doctrine from public schools is not because all classes and sects desire religious truth inculcated in their children, but because of a jealousy of some that may not be of their own ecclesiastical faith. These practically say, "Unless it is our brand of doctrine that is taught, none shall be taught." Then when the Holy Scriptures are though most largely recognized in civil-

ized lands as the highest literary storehouse of religion and righteousness, are cast out from the schools, along with vocal prayers and hymns, the same who have conspired to banish all these vestiges of religious expression turn round and arraign the public school system as devoid of all religious element and "dangerous because godless." But at whose bidding were they stripped of intended means of religion? By the same who denounce the schools for this condition of the complainers' making. Such is the usual respect returned to those who surrender religious principle, by those whom they have accommodated.

Since now it has come to pass that public education has in its outward form become by law mostly secularized, there seems no recourse for religiously concerned parents but to the setting up of denominational schools in which their religious views may have free opportunity. This need has long been anticipated by the Society of Friends, whose religious doctrines, from near the time of its origin, have been safe-guarded in schools founded by Friends "for the religious and guarded education of their children." In no other schools would our religious principles have been a definite accompaniment of education. Had these specific views been made and kept more definite to the minds of youth, the spirit of our doctrine would not have been replaced by the wind of doctrine so much as now appears. Not now would large and major sections still holding the name of Friends on the very grounds from which Friends first came out, be excusing themselves by saying "We have been converted by our converts!" They, admitted as members unconvinced of that which gave the Society a distinct right of existence, have drawn us under the same non-convincement to meet them more than half way, or the whole of the way.

An eminent investigator of the religious life of children tells us that the child in his early years, up to twelve, will implicitly believe any form of religion that is taught him. This is his age of credulity, of undoubting receptivity. Between twelve and sixteen a doubting condition comes up. This is the critical period which the Jesuits, the shrewdest of all educators, take in hand, to shape the faith of youth into settled Romanism. Here the natural doubts need to be met, and parried, or

turned into courses of conviction, and guided into such establishment that "when he is old he will not depart from it." The unsettled time is the best settling time for the understanding teacher to fix the bias upon beliefs. It may be doubted whether our trainers for Friends' doctrines are thus wise in their generation. Therefore it may not be doubted why the general discernment of doctrine and testimony among us has become so nebulous.

The abolition of the Bible and of stated doctrine from schools need not leave so great an unspiritual vacuum in their nurture and influence as our zeal for the letter might fear. "The kingdom of God is not in word but in power." And the power of an endless life in a Christian teacher makes him or her a priest unto God of the universal priesthood of believers, that will not fail of a religious ministry. Though the printed Bible be in sight or not, yet as it is often said, "A Christian is the one," Bible that the majority of people will read." A school, in its established respect for a truly Christian teacher, will learn to esteem the book and the Christ of which he or she is a living epistle, and as there will be no concealment of the fact that such a teacher is a lover of the sacred Scriptures, such commendation of them will be attractive to their contents, and by no means so tiresome as the perfunctory reading of the Bible often is. Yet we deem the frequent reading and learning of the Scriptures indispensable to the true purposes of education. But the absence of them is not wholly irreparable where in living editions of them the life represents the letter and adorns the doctrine.

It is refreshing to observe the advanced spiritual ground on which education is placed by lecturers who have investigated the inner history of the child's mind. Many of their utterances seem like Quaker sermons reproduced.

Also a large class of the teachers in the land are religiously concerned. They would never have taken up such a work except under spiritual aspirations in themselves and for the elevation of others. They may have no technical profession of a special religion, but they have a measure and manifestation of the Divine Spirit and so of Him who came not to please Himself. Instrumentally "a little child

shall lead them," and spiritually He who was the holy child Jesus. Through such spirits in education public schools are, in an undercurrent of life and motive, more religious in a Christian sense than appears on the surface. We cannot speak so highly of the contaminating associations of youth with youth bred in contaminating households or neighborhoods. Even in schools set for a guarded religious education, these are the chief hane of influence. But what seems foul ground is no discouragement against the planting of the seed. As the seed is cleaner than the ground, so will the harvest be, in its coming up higher. The seed is our ground for courage, and the good seed is the Word of God, primarily neither a Book nor formulated dogma, but the Life which inspired the Book and is the witness for the truth of doctrine. These seeds of life lodged in the inner being of children, will in their true development yet require the Book and discern sound doctrine.

The Strenuous Life.

There are men, and plenty of them, who start the business of the day, or thinking about the business of the day, almost as soon as they are out of bed, and keep it up with scarcely an interval until they turn in at night. The business telegrams and letters brought to the bed room in the morning and the continuation of mental labor and worry into the small hours of the next morning, until sheer inability to go on compels a reluctant halt for sleep, are evil modern phenomena that occur too often. And the hurried mid-day lunch is not worse for the digestion than it is for the mind, which is thus cheated of its due pause for rest. This is certainly not the way to get most work done in the long run. The men who have put most work into their lives and been able to keep on longest at it have been men, like Gladstone, who knew the full value of absolutely banishing work from their minds for some time every day. In the height of political excitement Gladstone could always contrive to shut out politics and official business for an hour or two while he read Greek or a story.

One may seek his relaxation with a tennis racket or a bicycle, another with a book, another in talk (not about business); but complete relaxation in some form every man should have every day. And an entire and absolute holiday, long enough to count, is no less indispensable every year. The meaning of "rest" varies with the individual; to one it is rest to climb the Alps or cycle fifty miles a day, to another to lie under a tree or on the beach. But in some form the rest is inevitable, unless the breakdown is to come. The hour from which business is entirely excluded every day, the weeks from which it is entirely excluded every year, must never be neglected by the man who means to last.—*London Express*.

ALAS! if my best Friend, who laid down his life for me, were to remember all the instances in which I have neglected Him, and to plead them against me in judgment, where

should I hide my guilty head in the day of recompense? I will pray, therefore, for blessings upon my friends, though they cease to be so, and upon my enemies, though they continue such.—*Corper*.

The Spoiled Child.

This article is not meant as a plea, nor even as an excuse, for the spoiling of children; but it is a protest to parents against spoiling a child and then blaming him for being what he becomes through his parents' mistakes.

We hear in these days a great deal about the ingratitude and lack of respect of American children toward their parents. That the parents themselves are to blame in most instances cannot be denied by any one who will take the trouble to study the cause of this state of affairs. When fathers and mothers realize that lack of discipline comes nearer to cruelty than to kindness, we shall have fewer children who have not learned to respect old age and who do not know the beauty of the Fifth Commandment.

The mistakes most parents make is in being too unselfish. Unselfishness in a parent, carried beyond a certain point, encourages selfishness in the child. Fathers and mothers work and save and deny themselves for the benefit of their offspring, consoling themselves with the hope that when the little ones are grown their reward will come; but it too often happens that when the sons and daughters reach the stage where it is possible for them to make life easier for their parents they have become so accustomed to seeing father and mother "doing without" that they never even realize that this condition of affairs ought to be reversed. The one argument in favor of boarding schools for children whose parents are living is that in them a child learns to take his chances with other children. At home his parents love him whether he is cross and surly or sweet-tempered and affectionate; at boarding school he soon discovers that if he would be loved by his teachers he must be lovable; if he would win friends among his companions he must show himself friendly.

It is not fair to a child whose parents have allowed him to grow up selfish that the world should blame him because he is so; but the world does just that. It is too busy to probe below what we seem to be, to learn what we are; and when it finds a man or a woman who is selfish, who expects too much of it, it does not argue the matter—it simply lets that man or that woman alone.

This is why parents should look beyond the present moment in dealing with their little ones. We all desire for our children, when they shall have become men and women, happiness, success, power. Shall we not, then, do all we can to fit them to fill the positions we crave for them? Do we not all know people whose power to control others is lost through inability to control themselves?

The greatest kindness we can do the little ones, who may owe the happiness or the misery of their after lives to our direction of their earlier years, is to instil into them that mastery of self which is the foundation of a well-balanced nature, and without which no man or woman can attain to a high degree of development—physically, mentally, or morally.—*The Household*.

FOR "THE FR"

At a Meeting for Sufferings held in Philadelphia the 15th of ye 4th Mo., 1779, the following Epistle was communicated to Meeting, and the seasonable advice it contained being well approved, is earnestly recommended to the serious attention of Friends within the compass of the Yearly Meeting for Pennsylvania and New Jersey.

An Epistle from the national Yearly Meeting, held in Dublin, by adjournment from ye 3d Day of ye Fifth Month, 1779, to the 7th of ye same, inclusive. To the Monthly and Quarterly Meetings, and other Meetings of Discipline of Friends in Ireland.

DEAR FRIENDS AND BRETHREN:

We have, in this our general assembly deeply affected and humbled under the solemn view and feeling of the declined state of many in our Society from the Life and of pure Religion; and that humble, self-conviction which it leads into; and this concern we have been freshly made sensibly of the great loss and hurt to both individuals, and the Society in general, have sustained by letting out the minor affections after great things in this life; of the professors of Truth, as it is in departing from under the discipline of the cross, have let up an high and aspiring that affects ostentation and show, and after many superfluities, to gratify their ambitious cravings of the unworldly in them; the noble simplicity of manner, habit, and deportment, which Truth itself still leads into, hath been much defiled; the plainness of apparel which distinguished our religious profession is by many despised, and the testimony which has been called to bear against the unworldly fashions of the world has been as a under foot; the mind, not limited by the girdle of Truth, hath coveted an evenness; the wedge of gold and the Babylonish garment have been the objects of inordinate desire. And one example after another, and the lesser fondly copying after the greater, an evil emulation hath gotten in, provoking one another to love and good report, but vying with each other in the grandeur of their houses, the order and provision of their tables, the richness of their furniture, the gaiety of their own dress, and that of their children, contrary to the self-denial, the humility and meekness prescribed by the law of Christ, in which they profess to live, and the constant tenor of the salutary law of the Society they profess themselves members of, from the beginning to this very day.

Every superfluous thing occasions a profusion of expense; and superfluity of expense requires extensive, and frequently extensive and precarious engagements in trade, to support it. And when their own families, and too frequently keep up dishonourable suits of the property of other men, till insupportably ensues to the ruin of themselves and families, the loss and damage of their estates, the reproach of Truth, and the trouble of friends, who are concerned to see good order amongst us.

It is an undoubted truth, that the same principles which doth not frequently recur to its principles will go to decay; if then we

to our beginning we shall find, that from beginning it was not so; in a postscript to my epistle from the Province-meeting at Sedmont we have this lively description of the effect Truth had in that day. "Then they great trade was a great burthen, great concerns a great trouble; all needings, fine houses, rich furniture, gaudy el, were an eye-sore; our eye being sin to the Lord, and the insinuing of his Light on hearts, which gave us the sight of the ledge of the glory of God; this so affected minds, that it stained the glory of all thy things, and they bore no mastery with it. The divine principle of Light and Grace was still the same, and would work the effect in us, if we were obedient thereto! even introduce gradually, by the operation of its divine power, the new creation in Jesus, whereby man, returning from all, would be placed in dominion over all creatures.

are therefore, dear Friends, impressed with a zealous concern of mind, in this day of when "the judgments of the Lord are in earth, that the inhabitants thereof may be righteous."—Isa. 26:9. As this me of danger, uncertainty, and distrust, most earnestly desire that friends may let moderation in all things appear, that who have launched out extensively in all with as little delay as possible, set contracting their engagements therein moderate compass, and instead of risking reputation of Truth, the peace of their minds, and the welfare of their immortal souls, in grasping at things beyond their power in order to provide for superfluous expenses reduce their wants and expenses within limits and bounds of Truth, and then a trade with frugality and industry will be sufficient.

love of money is a sore evil, "which some have coveted after, they have fallen from the faith, and pierced themselves with many sorrows."—1 Tim., 6:10. Let Truth itself therefore, dear Friends, date and limit us in our pursuits: "A life consisteth not in the abundance of things which he possesseth."—Luke 15. And the limitation and order pre- scribed by him who is the Truth, the Way, and the life, is this: "Seek ye first the kingdom of God and his righteousness, and all these things shall be added unto you."—Mat. 6:33. Who have transgressed this holy bound- ary and reversed this heavenly order, in giving preference to the pursuit of earthly possessions, have in themselves, or their offi- cers, furnished a verifying proof of the falsity of the Almighty by his prophet, who looked for much, and so it came to pass that when ye brought it home, I did upon it: Why? saith the Lord of Hosts, because of mine house that is waste, and ye have not built it for me."—Hag. 1:9. Let those, whom Divine Providence hath blessed and blest with abundance of the blessings of this life, ever bear in remem- brance, that "the earth is the Lord's and the things thereof."—Psal. 24:1. And that we are accountable stewards, each for his share, of the manifold mercies we receive at his hand. Let them then as good stewards use the same with a due regard to the pointings

and limitations of Truth, not indulging them- selves in any thing wherein is excess; and thereby setting an evil example to others whose abilities cannot well bear the expense, and yet from the depravity of human nature may be tempted to copy after them. For those of the foremost rank in Society, by the assistance of Divine Grace, may do much good; or neglecting it, by the influence of their example occasion much evil therein. We therefore earnestly desire, that those who are thus favoured may seriously co-operate with our concern in setting a good example; and we hope it will have a happy influence on others, who may be discouraged from aiming at expense unbecoming their circumstances, when they behold those, who have it in their power, decline it through their regard to Truth, and for preserving inviolate the testimony of a good conscience toward God; the experienced apostle very pathetically, in his directions to Timothy, points out the particu- lar duty of this class of Christians: "Charge them that are rich in this world that they be not high-minded, nor trust in uncertain riches, but in the living God, who giveth us richly all things to enjoy; that they do good, that they be rich in good works, ready to distribute, willing to communicate; laying up in store for themselves a good foundation against the time to come, that they may lay hold on eternal life."—1 Tim. 6:17, 18, 19.

Finally, Brethren and Sisters, as example must accompany precept, if we be sincere toward God, we desire especially that ministers, elders, overseers, and other active members in the Society, may seriously, in the first place, set about this necessary work of retrenching and reformation where needful; that their nearest connexions, their children and fami- lies, in regard to the point of view in which their partners in life and parents are placed, may lay to heart the evil consequences of their deviating from the simplicity of Truth, and the pernicious influence of their evil example; that these, and the children the Lord hath given them, being as signs and good examples from the Lord of Hosts, they may go forth strengthened by the cleansing of their own hands and those of their families, and so be enabled to say to the flock, "Follow us as we follow Christ." And that parents heads of families, and all friends, each in their proper places, may be engaged to wash their hands in innocence, and be qualified to encompass the Lord's holy altar, that the "offerings of Judah and Jerusalem may be pleasant to the Lord, as in days of old, and as in former years."

In the extendings of that real affection, which desires your present and everlasting well-being, we salute you, and conclude.

Your Friends and Brethren.

JOHN GOUCH, Clerk.

THE Bible illustrates the best elements of historical writing; and every page gives proof that its writers wrote in the conscious presence of the living God. Its biographies are matchless; this difficult species of writing is here seen to perfection. Truth dominates every part; infirmities and excellencies are faithfully portrayed. This fact is an evidence of its inspiration; uninspired writers would

have denied or concealed the sins, and would have magnified or created the virtues of their heroes. Its influence or language is wonder- ful; it has fixed the form of our language, and it ennobles and exalts every language into which it is translated.—Robert Stuart MacArthur.

Livable.

A neighbor, speaking of another, called her "livable."

"Livable?" repeated her listener, "Livable? That must be a local word. I don't think I ever heard it before."

"It may be local," was the answer, "and it may be bad, and it may be good; but it's just what I mean. She's *livable*. She's been brought up in a large family, and she's had to be, if she meant to be comfortable herself and let other folks be comfortable, too. There were more livable folks when I was a girl than there are now, and I think the large families had a good deal to do with it, though of course not everything."

"There were plenty of people then who never got their corners worn down, no matter how many brothers and sisters they had; but even when they rasped, those days, they got along together after a fashion."

"Nowadays! Sometimes it stumps me fair and square why the nice people I know in nice families can't seem to stand each other's little ways."

"I don't say it is not so; when the doctors say they can't, and it generally ends in doctors, I suppose they truly can't. It's nerves, and nobody understands nerves unless the doctors, and I'm a long way from being sure that they do."

"But just count up sometime the families where there's always one member mysteriously off visiting, and then the number of folks you know that separate when they'd naturally stay together, if only they could hit it off—lone sisters and only surviving bachelor brothers, and mothers and only daughters, and all sorts of family remnants that ought to be each other's best comforts. But as soon as they try living together, one of them gets nervous prostration, or is ordered off quick to travel somewhere where the climate don't agree with the other one."

"They're fond enough of each other, generally, and they aren't generally ugly-tempered. They're just not livable."

"It can't be endured always, and it can't be cured sometimes; but I'm firm in believing it could be often prevented. If, when folks first began to harden in their own little 'ways,' and fret over the 'cranks' of those they care most for, they'd stop and think where they were getting to, nine times out of ten they'd pull up in time, and get their nerves and feelings and foolish frettings tight in hand before they ran away with them! And outside the great, deep foundation virtues, if I had a daughter, the little virtue—if it is a little virtue—I'd choose for her, would be just that—being *livable*. It's an all-round, lifelong blessing to whomsoever it concerns."—Late paper.

FEW THINGS AND MANY.—Christ's call to special service comes to us when we are engaged in the faithful discharge of our ordinary work. This is a lesson written large across

the page of Scripture. It was when Moses was feeding his father-in-law's flocks that he was called to be the leader of Israel; it was when Gideon was threshing his wheat in the wine-press that he received his commission to destroy the Midianites; it was from the sheepfolds of Bethlehem that David was called to the throne; it was from their boats and their nets that the apostles were called to evangelize the world. How important is the lesson this teaches us! Faithful discharge of the task nearest us, however humble it be, is the best preparation for the greatest work God can call us to. The man who thinks his present work beneath him will never rise above it.

FOR "THE FRIEND."
HYMN OF PEACE.

Lo! the era is dawning by prophets foretold,
When love's sacred ties shall the nations enfold,
Earth's millions no longer shall hurt and destroy,
But bleed deeds of kindness their hands shall employ.

Peace, peace, beautiful peace,
The world shall rejoice in this beautiful peace.

The glad hosts are coming that ne'er shall retreat,
Behold on the mountains their beautiful feet,
There's glory for mourning, there's gladness for gloom,
And the wilds of the desert with roses shall bloom;

Peace, peace, glorious peace;
The world shall rejoice in this glorious peace.

The world's bloody carnage is nearing its end,
When men shall their spears into pruning hooks bend,
The lion and lamb together shall feed,

And the leopard and bear, little children shall lead,
Peace, peace, wonderful peace!
The world shall be glad in this wonderful peace.

A high court of justice the world shall maintain,
Through which all the nations shall victory gain,
There's a glad day coming when carnage shall cease,

And man be restored to an Eden of peace.
Peace, peace, wonderful peace!
Mankind shall rejoice in this wonderful peace.

Oh! the world has grown weary with bloodshed and wrong,

It longs for the strains of the jubilee song,
The glad day is nearing when carnage shall cease,
For Immanuel's realm is a kingdom of peace.

Peace, peace, wonderful peace!
In Immanuel's realm is a wonderful peace.

MAHLON OLIPHANT,
WESTBRANCH, Iowa., Eleventh Mo. 17th, 1902.

HE who hath appointed thee thy task will proportion it to thy strength and thy strength to the burden which He lays upon thee. He who maketh the seed grow thou knowest not how and seest not, will, thou knowest not how, ripen the seed which He hath sown in thy heart and leaveen thee by the secret working of his good Spirit. Thou mayest not see the change thyself, but He will gradually change thee, make thee another man. Only yield thyself to his moulding hand, as clay to the potter, having no wishes of thy own, but seeking in sincerity however faint, to have his will fulfilled in thee, and He will teach thee what to pray for and will give thee what He teaches thee. He will retrace his own image on thee line by line, effacing by his grace and gracious discipline the marks and spots of sin which have defaced it.—*Edward B. Pusey.*

THE MID-WEEK HOUR.

Only a few of us gathered in
From the worldly jar and worry and din,
To the midweek hour of prayer;
With laggard steps from a snowy world
We turned, our hearts grown sad and cold,
Burdened with toil and care.

The angels of Love and peace came near,
And hushed all clamor and strife and fear
In the hearts of the gathered few;
A heavenly presence filled the place,
Revived each soul with renewing grace,
And awakened hope anew.

Then crosses that seem too hard to bear,
And losses that burdened life with care,
Grew light in faith's bright rays:
So best the joy of the sacred hour
When hearts respond to the Spirit's power,
In the joy of prayer and praise.

As back to the work of the world we went
Each heart was on willing service bent
The blessing of love to share;
With souls revived, and hearts made strong,
The power of the word to pass along
From that holy hour of prayer.

—S. Jean Walker.

The Clear Vision of Mononcue, the Wyandotte,
About Liquor Selling.

When Judge Raymond, the appointee for the new judicial district of the United States Court in the Indian Territory, made his first charge to the Grand Jury the other day, he drew their particular attention to the Government statute prohibiting the manufacture or sale of intoxicants in the Territory, and, telling them it was his belief that a very large proportion of all the overt crimes were due to strong drink, asked them to make inquiry faithfully as to every violation of this liquor statute, and present an indictment against every offender.

In my library there is a book written by James B. Finley, and published in Cincinnati, nearly fifty years ago, entitled "Life Among the Indians," or "Personal Reminiscences and Historical Incidents Illustrative of Indian Life and Character."

Pastor Finley was a Methodist, residing for years subsequent to the notable Treaty of Greenville, among the Wyandottes, located in the region between the Manmee and Scioto rivers.

It is remarkable how often the subject of liquor drinking, as a baneful factor in the work of Christianizing the red man, darkens the course of the narrative. I will select two passages only. They relate to the covert, Mononcue, a remarkable man, earnest in exhortation and prayer.

"Late in the evening we reached the Lower Rapids of the Maumee River, and forded it just above the principal rapid. We rode ten miles that night, and put up at a public house kept by a man who had made a profession of religion."

Before retiring to rest after an exceedingly arduous travel, the guests rendered thanks to the Almighty for his loving kindness and care. The narrative continues:

"My old friend (Mononcue's) soul was fired with his theme, and he prayed as if the heavens and the earth were coming together.

"When we arose from our knees, he and Gray Eyes went and shook hands with all in

the house, weeping and exhorting them in Indian, to turn to God, believe and live.

"We had a good meeting, for many of the family wept."

"After we retired, brother Mononcue said me:

"Is this man religious?"

"I said, 'Yes, I believe so.'

"How can this be," said he, 'while he keeps and sells the fire waters? I think that religious men were to love God and all men, and not do any evil; and can there worse evil than the keeping and measuring out this destructive thing which makes men evil and leads them to commit any crime, murder?'

"I told him it was a great evil and sinful. I could not see how any man could be so bold and practice it; that it never did any good, but was always productive of the worst crimes."

"He then replied that all such ought to be kept out of the Church, or turned out if they were in and would not quit it.

"I agreed with him in sentiment; so, after prayer, we spread our blankets and commenced ourselves to sleep."

On another occasion, lamenting the murders and murders that had occurred among his tribe, the Wyandottes, because of their water brought to his people by the white men, he pertinently asked: "What good can it do men to make and send out poison to kill their friends? Why this is worse than our Indians killing one another with knife and tomahawk. If the white people would hang them all that make it and sell it, they would soon get it off, and then the world would have peace."

Well, here is an untutored Indian, who, in his guilelessness, is persuaded that the liquor business is worse than the old-time tomahawk, and that those who hand out to our fellow men that which steals away their lives and leads them to commit murder are abettors of the evil deed, and if justice had its place should be hanged.

So summary a corrective as that I do not endorse; but, were the good Mononcue living, I have no doubt he would heartily thank Judge C. W. Raymond, who at Mt. Gretna, is not far distant from the reservation of the Wyandottes, on the upper waters of the Neosho in the northeasterly corner of the Indian Territory. Would not Mononcue also say "I agree," to that conviction of the Methodist Conference which affirms that "the liquor traffic cannot be licensed without sin." It is a happy presage for the Indians of a tribe that the training school at Carlisle stands for Total Abstinence.—*Josiah W. Lusk in The Redman and Helper.*

THE SIMPLICITY OF GREATNESS.—Many years ago the licentiates of Princeton Seminary were in the habit of preaching at a great some distance from that place. Among the habitual hearers, was a sincere and humble, but uneducated Christian slave called U. Sam, who on his return home would try to tell his mistress what he could remember of a sermon, but he would always complain that the students were too deep and learned for him.

One day, however, he came home in good humor, saying that a poor "unlearned" man, just like himself, had preached that day who he supposed, was hardly fit to preach

ite people; but he was glad he came for
e, for he could remember what he had
On inquiry it was found that Uncle
"unlamb" old preacher, was Archibald
der, who when he heard the criticism
was the highest compliment ever paid
preaching.—*Selected.*

Science and Industry.

NEW STAMPS.—For the first time since
the Post Office Department, with the
issue of the new series of stamps now in
ation, will make use of the American
one of its designs. This will be a part
of a two-cent stamp, which, by the way,
has little resemblance to the one now
in use. The familiar portrait of Washing-
ton will be succeeded by a photograph taken
of Gilbert Stuart's famous painting. The
of Washington, so long known to the
using public was drawn from Houdon's
cast. Let the public, then, soon take
a view of the likeness of Washington.
It is doubtless more than any other im-
age upon the popular mind.

Experts think that this new two-cent
stamp, with its superb likeness of Washing-
ton, draped flags, its wreaths of laurel
in the lower corners, and the general
effect of text and artistic effect, together
with the remarkable excellence of the mechan-
ical work, will make this the finest postage
stamp ever produced. Every effort has from
the start been made to have this series a type
American achievement in the engraving art.
The stamps for four stamps of the new series
are already being completed; the denomina-
tions are two, four, eight and thirteen cents.
The designs are distinctive and are said
to be of rare artistic merit. It is noted that
the stamps, now brought into the stamp for the
first time since 1863, were then used on a den-
omination which the public rarely ever saw—
a fifty-cent.—*Boston Transcript.*

PURIFICATION OF RIVER WATERS.—
The issue between Chicago and St. Louis,
arising from the opening of the Chicago
Sanitary canal, through which the sewage of
Chicago is conducted to the Mississippi River,
and the Plains and Illinois rivers, is based
on the condition in the minds of the people
of St. Louis that there will arise effects detri-
mental to the water of the Mississippi River
at St. Louis. The whole dispute centers,
there, about the old moot question as to
how far a distance it is necessary for a river
to flow in order to purify itself.

Now known from chemical analysis and physi-
cal experimentation that a varying degree of puri-
fication takes place in a river. In early days
it was thought to be due to aeration, and
the bubbling of water down mountain sides
was the basis for poetic typification of
it. The experiments of the Massachusetts
State Board of Health have shown that
there is little or no effect upon the con-
dition of organic matter in water—that is,
the organic matter is not assisted in its oxidation
by aeration in the air. It was also found
that the highest degree of activity in oxida-
tion processes is to be found in quiescent or
stagnant waters. It then became clear that
purification in a sluggish stream is far
less effective than in a swift current, and

that dams and other impediments have a ben-
eficial effect upon the condition of water in
river channels.

The promulgation of these facts led to an
entire change in the ideas concerning the dis-
tance necessary for stream purification, and it
is now understood that no hard and fast rules
can be set for guidance in determining the
purifying power of any water-course. A Royal
Commission, appointed to inquire into the con-
ditions of England's rivers, reporting to the
English Parliament in the early seventies, held
that no stream in the United Kingdom was
sufficiently long to effect its own purification.
The familiar and oft-quoted principle is that a
stream purifies itself in twenty miles, but how
this distance was ever determined or who was
responsible for its general acceptance is a
matter of doubt; certain it is that the state-
ment is entirely wrong in the majority of
cases. Pettenkoffer, Hering, Stearns, and
others have given formulae which are undoubt-
edly true for the rivers upon which these gen-
tlemen worked, but which can in no wise be
accepted for rivers in general, and it remains
for the investigator to determine by actual ex-
periment the purifying power of each stream
with which he has to deal.

The work of examination of the surface
waters of the United States, recently inaugu-
rated in the Division of Hydrography of the
United States Geological Survey, in co-operation
with the various college laboratories
throughout the country, will be useful in the
determination of the self-purifying powers of
many of the interstate rivers. These results
will be highly beneficial to the municipalities
and corporations which may be looking toward
the establishment of sewerage systems and
purification works.

During the coming winter it is expected
that M. O. Leighton, hydrographer of the
Geological Survey, will take up this work
upon various rivers in Indiana and Illinois,
and will so far as possible extend this research
to the streams which at the present time are
of great interest to the inhabitants of the
Mississippi Valley.

WINTER HOME STUDY.—I wish that many of
our farmers would adopt a plan of winter
home study that would interest the children
along the lines tending to improved agricul-
ture. I have spoken several times of Professor
Hodges' new book on "Nature Studies," and
once or twice have made reference to
Professor Comstock's "Insect Life." Consider-
able of the work suggested in these books
can be done in the winter, as well as in the
summer, especially if you begin about Eleven-
th Month, when farm work is slackening.
Make a thorough study of what Comstock has
to say on orchard life, and brook life, and
pond life, and roadside life, and then next
summer complete the work out of doors.
There really is no reason why every farm
should not be a college. There is no reason
why the boys should run away, or be sent away
to a distance to pick up facts which are occur-
ring right under their noses at home.—*E. P.
Powell, in Tribune Farmer.*

THE ADVANTAGE OF KNOWING HOW.—There
was given in Chicago, on Tenth Month 13th,
a wonderful exhibition of the advantage of

knowing how. Some children are so unlucky
as to be born with their hip-joint out of its
socket. Of course unless the joint can be put
in place such children are cruelly crippled for
life. This misfortune had happened to the
little daughter of Armour. He learned that
the surgeon who succeeded best in these hip-
joint cases was Professor Lorenz, of Vienna,
so he opened negotiations with Professor Lorenz,
and was able to induce him to come to
Chicago and put little Lolita Armour's hip to
rights. He came and did the operation. The
next day he went to the College of Physicians
and Surgeons, and there in the amphitheatre,
with eight hundred doctors and students look-
ing at him, he did for nine afflicted children
the same service he had done for Armour's
child. The newspaper account of how he did
it describes the unconscious child brought to
him, the "large projection at the hip-joint
caused by the head of the dislocated femur,"
and the corresponding depression in the groin,
"deep and discolored, with the surrounding
flesh shrunken and unnatural in appearance,"
showing where the head of the bone belonged.
Then, the despatch says:

"The surgeon took the leg in his hands,
drew it up at right angles to the body, and,
holding it, paused to say: 'The manipulations
I am about to make might with ease break the
bones of the leg. It is not necessary to break
bones, however. It is only necessary to know
how to handle them.' A series of rapid, deft
turns, twists, and pulls followed. Suddenly
the surgeon paused. He held the leg in one
hand and pointed with the other to the spot
where the dislocation had been so apparent.
The spectators then saw the culminating point
of the operation. The ugly protrusion was
gone; the depression beside it was gone, too,
and except for the discoloration of the flesh,
the entire hip appeared like the other. The
eight hundred onlookers broke out in applause.
No knife had been used, nothing had been
done, as was formerly believed indispensable
to prepare the socket for the presence of the
dislocated femur. Knowledge, skill, a certain
amount of daring and precision of movement,
which showed a knowledge to a hair's-breadth
of how far to move and twist, had wrought
what medical men say will be a cure. It had
taken five minutes."

We all clap our hands with the eight hun-
dred who saw that miracle of skill. How it
happened that a surgeon from Vienna could do
what no surgeon in Chicago knew how to do
is not explained. But it has so happened,
and enviable the privilege of Dr. Lorenz in
discovering to his American brethren a pro-
cess so merciful, so efficacious, and appar-
ently, so simple. There seems to be no doubt
that the operation is efficacious. Dr. Lorenz
says that the cure is permanent in every case
when the bandages are taken off.—*Harper's
Weekly.*

BURNING MILLIONS IN STAMPS AS FUEL.—
The coal strike has led to a strange spectacle
in a government department in Washington.
D. C., says the *Christian Herald*. It appears
that in spite of the high price of coal, it has
cost the government less by \$150 than usual
to maintain the fires in the furnaces of the
Bureau of Engraving and Printing. To make
this saving, however, fuel has been cast into

the furnaces for which the government paid several million dollars. Beginning with Seventh Month, 1901, when the stamp tax on bank checks and telegrams was abolished—and other stamp taxes have been repealed this year—wagon loads of unused stamps have been sent to the Treasury for redemption. In an ordinary way, these would have been destroyed in the furnace provided for the purpose, and the heat would have been wasted, but with the scarcity of fuel it has been decided to utilize them. The stokers sandwiched a layer of fifty thousand dollars' worth of government securities between two thin layers of coal, and at the end of a month it was found that nearly a ton a day had been saved through the use of the high-grade fuel. Since the redeemed securities must be destroyed, it is well that the heat generated should be turned to useful account. Paul's natural energy, diverted into persecuting Christians, was afterwards converted to missionary labor.

To Mend Family Manners.

Family manners are apt to suffer from too much candor. We speak with great plainness in the circle of our own kindred; we comment too freely on foibles; we express the contrary opinion too readily and with too little courtesy. A slight infusion of formality never harms social intercourse, either in the family or elsewhere.

Beyond this too common mistake of an overbluntness and brusque freedom in the manners of a household, in some of our homes there is a greater fault, even a lack of demonstration. There is the deepest, sincerest love in the home—the brothers and sisters would cheerfully die for one another if so great a sacrifice were demanded—but the love is locked behind a barrier of reserve. Caresses are infrequent, words of affection are seldom spoken. It may be urged with truth and some show of reason that in the very homes where this absence of demonstration is most marked there is complete mutual understanding and no possibility of doubt or misgiving, and, so far as it goes, this is well. But often young hearts long unspeakably for some gentle sign of love's presence, the lingering touch of a tender hand on the head, the good-night kiss, the word of praise, the recognition of affection. Older hearts, too, are sometimes empty, and many of us, younger and older, are kept on short rations all our lives, when our right is to be fed with the finest wheat, and enough of it, too.

Another suggestion which should not be overlooked is the importance of politeness to the little ones. To snub a small laddie needlessly, to order about a child on errands here and there, instead of civilly presenting a request as one does to an older person, in each case is an invasion of the rights of childhood. The child on whom everybody practices politeness will in turn be himself ready to oblige and agreeable in manner, for the stamp of the family is so plainly to be seen in every one as the stamp of the mint on the coin, and it is as indelible for time, and why not also for eternity?—*Margaret E. Sangster.*

It is not the condition which makes miserable, but the want of God in the condition.—*I. Penington.*

FRAGMENTS OF PRAYER.

Infinite fragments of prayer,
Gathered from every clime,
Make an environment rare,
Sanctified tributes of time.
Tinges of eloquent tears,
Fresh from the toil and the strife,
Breaking away from the fears,
Rising to rapturous life.
Wreaths of a beautiful form,
Dressed in the beams of the light,
Rise in the freshness of morn,
Bound for the throne that is white.
Breath of Jehovah's might,
Spirit of love sent down,
Chains of unbreakable light,
Binding the King to his own.

H. T. MILLER.

BEANSVILLE, Ont.

DR. JAMES HAMILTON draws an instructive lesson from the snows and icicles of winter. He says: "On a winter's day I have noticed a row of cottages with a deep load of snow on their several roofs; but as the day wore on large fragments began to tumble from the eaves of this one and that other, till, by-and-by, there was a simultaneous avalanche, and the whole heap slid over in powdery ruin on the pavement and before the sun went down you saw each roof as clear and dry as on a summer's eve. But here and there you would observe one with its snow-mantle unbroken and a ruff of stiff icicles around it. What made the difference? The difference was to be found within. Some of these huts were empty, or the lonely inhabitant covered over a scanty fire, whilst the peopled hearth and the high-blazing faggots of the rest created such an inward warmth that grim winter melted and relaxed his grip, and the loosened mass tumbled over on the trampled street. It is possible by some outside process to push the main volume of snow from the frosty roof, or chip off the icicles one by one. But they will form again, and it needs an inward heat to create a total thaw. And so, by sundry process, you may clear off from a man's conduct the dead weight of conspicuous sins; but it needs a hidden heat, a vital warmth within, to produce such a separation between the soul and its besetting iniquities, that the whole wintry incubus, the entire body of sin, will come away. That vital warmth is the love of God abundantly shed abroad—the kindly glow which the Comforter diffuses in the soul which He makes his home. His genial inhabitation thaws that soul and its favorite sins asunder."

A STORY is told of an old gentleman, who lived in a large house, and had everything he wanted and yet he was not happy. When things failed to please him he would get cross and speak sharply. His servants all left him, and he was in great trouble. Discouraged, he went to a neighbor's to tell him of his difficulties. After listening to his story the neighbor said, "It seems to me, my friend, it would be well for you to oil yourself a little." "To oil myself? What do you mean?" "Let me explain. Some time ago one of the doors of our house had a creaking hinge. It made such a disagreeable noise whenever it was open or shut that nobody cared to touch it. One day I oiled its hinges, and since then we have had no trouble with it."

Making the Most of His Life.

They who *live longest* do not necessarily make the most of life. Long life is desired, provided the years are all filled with that which is good. But an empty life can be redeemed from vanity by length of day, life filled with good fruit is better than a long life. Jesus, who made more of life than other did not live long. His life was short by violence while he was yet a young man. A life poured out in blood for the cause of righteousness is far better spent than one which has been carefully guarded and preserved even down to old age at the expense of righteousness and truth. In order to make the most of life it may be necessary to lay it down as a sacrifice.

One who finds most pleasure does not necessarily make the most of life. Some men there is nothing better in the world than to have what they call a good time. They know that day lost which does not bring them any social delight or worldly gratification. But the wise men agree that mere pleasure should be sacrificed to some higher good. They who live in pleasure are dead while they live in Jesus, whose life was a perfect model, never again after pleasure. We do not know that he ever sought it for a moment. It was his meat and drink to do his Father's will and to finish the work which was given Him to do. The approval of a good conscience and the approval of the Heavenly Father are infinitely superior to all worldly pleasure.

The man who makes the most money does not always make the most of life. Money is not to be despised or thrown away. Money is a means of great good when properly used. But a "man's life consisteth not in the abundance of the things which he possesseth." A millionaire may live a narrow and unsatisfying life. His millions will be a millstone about his neck unless they are used for a good purpose in the world. It is better to be rich in good works, rich in faith toward God, rich in character, than to be rich in gold and silver.

It is thought by some that *learning* is the thing that makes life rich and grand, but one may be learned without making much of life. Learning is a good thing. The study of science affords wonderful satisfaction, and things contribute more to the enrichment of life than a well-stored and a well-disciplined mind. But knowledge and learning are not the principal thing. Some men are wiser and stronger without learning than others are. It is Jesus who is not a learned man according to the standards of this world; yet he has opened his mouth and spake, such streams of truth and wisdom proceeded from his enlightened mind that his learned enemies were confounded. "Whence hath this man these things, having learned?" Peter and John were learned fishermen, yet they made the disciples richer by their wisdom. John Bunyan was not a learned man according to the standards of this world, yet what scientist or philosopher ever did so much as he to enlighten the world. The wisdom that cometh from above is superior to the wisdom of this world. It is not the scientist but the saint, which lives the life which is life, indeed. It is not the philosopher but, the Christian, that brings the light of the world. It is not the scholar

ood man that makes the most of life.
Advocate.

The Pinehurst Tea-Farm.

BY MARY R. BALDWIN.

"his tea has a delightful flavor," says the
tr who has dropped in for a call upon her
who has just returned from a winter's
in South Carolina.

she tastes again of the cup offered for
ment, she adds new words of praise,
the hostess explains, to the surprise of
her, that the tea was a product of her
country, grown at Summerville, S. C., on
Pinehurst farm. Perhaps there are others
who have not learned of the successful culture
in this section of the country who may
be interested in hearing some of the facts re-
lated to the industry and of the beneficent
results of the great undertaking.

Experimental years with the plant be-
gan eighteen hundred, when the French
Count de Micaux sent out some specimens at
Middleton place, ten miles from Pine-
hurst. Other attempts were made in the years
following, but without success.

When it was told that in the years just before
the United States Government sent
these seeds for distribution in the South-
west, but the conflict between the North
and South made it impossible at that time to
draw the attention or energy for the enter-
prise. About 1880 the National Department
of Agriculture set itself to undertake to estab-
lish a business of growing the tea-plant, but
unfavorable circumstances and a certain
hesitancy with reference to the outcome
of the commissioners against it, and so
the Government gave it no more thought.

In private individuals took up the pur-
sue and tried the chances on a very small
scale and found such encouragement that the
tea was gradually enlarged until it em-
braced sixty acres and the annual crop is at
least five thousand pounds of tea.

Numerous problems were presented at different
stages of the experiments, even after success
was assured for the enterprise. One,
whether the tea could bear a very low tem-
perature possible for the climate in which it
grew, was solved in 1889 when the ther-
mometer fell to zero. The other important
question was the question of labor, or, rather,
the ability of success financially when com-
pared to the high rates paid to the pickers in
the country with the low ones of China and
India, but that also has been settled through
the use of machinery and late devices in agri-
cultural implements, and the employment of
women and children in the picking.

So that the demand for the tea of our own
country is greater than the supply, the in-
centives for extending the area for its cul-
ture are multiplied. Then the United States
Department of Agriculture has at last com-
pleted the help of the man, Dr. Charles N. Shep-
ard, who has persevered through discourage-
ment that would have disheartened one of
our fiber, and the help given by the Govern-
ment in the form of money is timely and
well used wisely for new experiments in the
industry.

One must visit Pinehurst and take a ride
into a portion of the tea farm, and wander

along the avenues of its beautiful park, and
then enter the lecture room of the attractive
building in its bower of beauty, to get at the
meanings of tea-growing in our country. . . .

After exploring the park on the beautiful
morning and surrendering to the magical
charm of its rare beauty, one was somewhat
prepared upon entering the lecture room for
a new surprise in listening to Dr. Shepard's
account of the gradual growth in the tea cul-
ture. One could not help from the very first
of this lecture deciding that he spoke with
authority and that his enthusiasm was of a
sustaining quality.

He explained the needs and habits of the
plant from the seedling on. In the choice of
variety he stated that the locality had much to
do with the choosing, certain plants pro-
ducing well in their own climate doing much
less in others. The tea-planter having se-
lected the right sort for his ground and air,
produces as fast as possible a healthy, strong
bush, four or five feet high, and then begins
his pluckings, and from this first picking, as
he expressed it, "the struggle goes on be-
tween him and the plant." The successive
crops are called "flushes," and the quality of
the tea depends upon the age of the leaf.
What is named the "Pekoe tip" is the end of
a tender shoot, and this makes a high grade
when properly cured.

After the interesting story had been told
the audience was invited to visit the machin-
ery rooms, and later the parlors, to be re-
freshed by a cup of the Pinehurst tea, served
in dainty cups, which by the large company
was pronounced delicious. Packages of the
same brand were for sale, the proceeds to be
given to one of the charities of the vicinity.—
Advocate and Family Guardian.

MISTRESS OF HER WORK.—The Student, a
little paper published at Hiram College, of
which General Garfield was once president,
prints the following letter written by Lucre-
tia Garfield to her husband some years ago,
and originally designed for no eye but his. It
might be helpful to many another whose lot is
one of hard work:

"I am glad to tell you that, out of all the
toil and disappointments of the summer just
ended, I have risen up to a victory, that sil-
ence of thought since you have been away
has won for my spirit a triumph. I read
something like this the other day: 'There is
no healthy thought without labor, and thought
makes the labor happy.' Perhaps this is the
way I have been able to climb up higher. It
came to me one morning when I was making
bread, I said to myself, 'Here I am compelled
by an inevitable necessity to make our bread
this summer. Why not consider it a pleasant
occupation and make it so by trying to see
what perfect bread I can make.' It seemed
like an inspiration, and the whole of life grew
brighter. The very sunshine seemed flowing
down through my spirit into the white loaves;
and now I believe my table is furnished with
better bread than ever before. And this truth—
old as creation—seems just now to have be-
come fully mine, that I need not to be the
shirking slave of toil, but its regal master,
making whatever I do yield me its best fruits."

To know about Christ is one thing; to know
Christ is quite another thing.

Selected for "THE FRIEND."

"DRAW nigh to God, and He will draw nigh
to you. Cleanse your hands, ye sinners, and
purify your hearts, ye double minded."—
James iv, 8.

"Humble yourselves in the sight of the
Lord, and He shall lift you up."—James iv, 10.

It remains to be a solemn truth, that noth-
ing can draw to God but what proceeds from
him; and whatever may be the eloquence or
oratory of man, if it be not the gift of God,
under his holy anointing, which always has a
tendency to humble the creature and exalt the
Creator, it will in the end only scatter and
deceive. It has long appeared to me that true
vital religion is a very simple thing, although,
from our fallen state, requiring continual war-
fare with evil to keep it alive. It surely con-
sists in communion, and at times a degree of
union, with our Omnipotent Creator, through
the mediation of our Holy Redeemer. And
seeing these feelings cannot be produced by
eloquent discourses or beautiful illustrations
of Scripture, but by deep humiliation and fre-
quent baptisms of spirit, whereby the heart is
purified and fitted to receive a greater degree
of Divine influence; seeing it is produced by
daily prayer, by giving up our own will, and
seeking above all things to do the will of our
Heavenly Father, surely there is cause to hope
that those who are convinced of this, and who
have tasted spiritual communion through this
appointed means, will never be satisfied with
anything, however enticing, which, if not
under the influence of the Holy Spirit, may
well be compared to the "sounding brass or
tinkling cymbal."

Eleventh Month 17th, 1902.

A YOUNG college student, who was under
religious impressions, was confused by the
suggestion, that he could not tell whether he
should continue faithful to the end. While
in this state of mind he called on one of the
professors, and spent some hours with him in
conversation. When he was about to go home
the professor accompanied him to the door,
and observing how dark the night was, pre-
pared a lantern, and handing it to his friend,
said "George, this little light will not show
you the whole way home, but only a step at a
time; but take that step, and you will reach
home safely." It proved the word in season.
As George walked securely along, bright-
ened by the little lantern, the thought flashed
through his mind, "Why can I not trust my
Heavenly Father, even if I can't see my way
clear to the end, if He gives me light to take
one step."

Charles Spurgeon relates, that when at Col-
lege one very rainy day, the window of the
room in which he was sitting overlooked a
public square in which stood a pump. To this
pump a man came with a yoke and two buck-
ets for water.

In the course of the morning, he came a
dozen times, and Spurgeon concluded that he
was a water carrier, who fetched water for
other families than his own. This man seemed
to him an illustration of a gospel minister.
He needs to go to the Source of living water,
not only for his own wants, but that he may
receive for the refreshment of others.

A MAN'S own good breeding is the best se-
curity against other people's ill manners.

A YOUNG man once expressed to Dr. Franklin his surprise that a wealthy man of their acquaintance should be more assiduous in the prosecution of business than any of his clerks. To illustrate to his friend the fact that care and anxiety about wealth generally increase as it goes, the doctor took an apple from the fruit basket and presented it to a little child who could just toddle about the room. The child could scarcely grasp it in his hand; he then gave it another, which occupied the other hand. Then, choosing a third, remarkable for its size and beauty, he presented that also. The child, after many ineffectual attempts to hold the three, dropped the last on the carpet, and burst into tears. "See there," said Franklin, "there is a little man with more riches than he can enjoy."

GREAT BRITAIN brews annually three hundred and forty-five million dollars worth of beer.

Items Concerning the Society.

Meetings for religious worship for its members (which all who are interested may attend) are appointed by Western District Monthly Meeting, Philadelphia, to be held at its meeting-house on Twelfth Street below Market, at 7.45 p. m., on three Fourth-day evenings, namely, Eleventh Mo. 26th, Twelfth Month 3d and 10th.

An interesting exhibition by lantern slides and lecture, of the Doukhobors in various aspects of their present condition in Canada, was given in Friends' Select School building on the evening of the 21st instant, by Joseph Elkinton, who himself took the photographic views during his last summer's visit among that people.

Henry T. Outland, of Rich Square, N. C., has been paying a religious visit in these parts, attending Quarterly Meeting at West Grove on the 21st instant, and appointed meetings in Reading, Pa., on the following First-day afternoon and evening, besides the meeting at Malvern in the forenoon of the same day, attending Burlington and Bucks Quarterly Meeting on Third-day, and expecting a meeting at London Britain, Pa., on Fourth-day, P. M.

The meeting-house at Raysville, Indiana, was subject to a dynamite explosion recently, because prominent members had successfully resisted the encroachment of the liquor interest in its neighborhood.

SUMMARY OF EVENTS.

UNITED STATES. A number of witnesses before the Anthracite Commission has been going on. Prominent among these has been John Mitchell, President of the Miners' Union. A physician gave it as his opinion before the Commission that 90 per cent of the men engaged about the mines at the age of fifty years are afflicted with some form of rheumatism. The effect of particles of coal getting into the lungs of the men, he said, was that it brought on bronchial troubles, and eventually a peculiar form of consumption. Another physician testified that a comparison of fatalities on all railroads of the United States with those in the anthracite fields shows that 2.5 per 1000 railroad employees are killed annually, while 3.5 per 1000 employees were killed in the anthracite industry. An effort has been made to attempt to adjust the differences between the miners and their employers outside of the Commission, and an adjournment of that body to the 2nd proximo has been made.

The independent coal operators in the anthracite region have appointed a committee to look after their interests in connection with the possible adjustment of the differences between the miners and the coal railroad companies.

The annual report of the Chief Examiner of the Civil Service Commission, shows that during the last fiscal year there were 60,553 people examined in and for the

classified service, of whom 40,569 passed and 13,298 were appointed, promoted or transferred. The Commission held competitive examinations in every State and Territory except in Alaska.

The growth of socialism in this country during the last ten years has been very great. During the late election 400,000 men in various parts of the United States voted as Socialists. This increase is attributed largely to the immigration of illiterate persons from Europe.

A recent dispatch from Berlin says: The manufacture of machinery for compressing coal waste and lignite into the so-called "briquettes," of which enormous quantities are used in Germany, have organized a syndicate for promoting the exports of this machinery to the United States, and have sent an engineer to America to explain to mine owners how to make estimates of the costs of plants and describe the processes of manufacture. The syndicate is importing samples of American coal waste and lignite to analyze them and to test the machines with them.

Commissioner of Indian Affairs Jones, in his annual report, estimates that the Government, from its foundation to 1890, spent \$845,275,290 in fighting, subduing and controlling the Indians of the country, and \$240,000,000 for the education and care of their children. Twelve thousand Indians, he states, have been dropped from the nation roll, being wholly self-supporting.

The mild weather lately prevailing in Massachusetts has resulted in ripening some strawberries and raspberries in the open air near Marshfield, and at Standish village several pear trees have begun to blossom for the second time this year.

It is announced that the Pennsylvania Railroad, in order to relieve congestion on the main line between Philadelphia and Pittsburg, will build a low grade freight line from the Susquehanna river to the Delaware, which it is expected will be completed in about two years. The new road is part of an extensive plan for shortening its line from Pittsburg to Philadelphia, and which includes the building of cut-offs between Harrisburg and Pittsburg that will greatly lessen the time between those cities.

Robert E. Peary, the Arctic explorer, has made a public map of newly discovered country in Northern Greenland, with the names given to various places. The farthest point North reached by Peary, which is the point of land furthest North on the globe, has been named after Morris K. Jessup. It is a cape, and juts out into the ice from the very northernmost extremity of the island of Greenland.

Dr. B. B. Washington says: Professor Wiley, Chief of the Bureau of Chemistry of the Agricultural Department, will begin a series of experiments on twelve young men in the employ of the Government for the purpose of testing the physiological effects of the use of meat preserved with borax and other chemicals. The experiments will be made with a view to deciding what basis there is for the objections of the German Government to American meats, on the ground that the borax or other chemicals used in their preservation are injurious to public health. The twelve young men selected are volunteers, and all are young and vigorous.

Booker T. Washington, lately speaking in Cleveland upon the work of the Tuskegee Institute said: "In the present condition of my race, industrial education in connection with mental and moral training is of the highest value. The most fact that through our twenty-two industries we give our students the opportunity to help themselves is of great importance."

The sand blast has lately been applied to cleaning the walls and pillars of the east front of the Treasury Building in Washington with very satisfactory results. The sand blast removed the dirt and a thin layer of stone, making the pillars look as though new.

There were 418 deaths in this city last week, reported to the Board of Health. This is 3 more than the previous week and 6 more than the corresponding week of 1901. Of the foregoing 217 were males and 231 females; 52 died of consumption of the lungs; 86 of inflammation of the lungs and surrounding membranes; 8 of diphtheria; 20 of cancer; 17 of apoplexy, and 14 of typhoid fever.

NOTES.—The announcement is made that a new transcontinental railroad is to be built in Canada, extending from ocean to ocean: and that the construction of it will begin as soon as the necessary legislation can be obtained from the Canadian parliament. The new line, it is stated, will have mileage of about 3000 miles, and the construction, including equipment stations, bridges, ships and other facilities, will involve an expenditure of from \$75,000,000 to \$100,000,000. According to the present arrangement, the new system will run through that portion of Northern Ontario known as New Ontario, starting from North Bay or Gravenhurst, Ontario, and extending through

Manitoba, the Northwest Territories and British Columbia to Bute Inlet, or Port Simpson, B. C., as later determined upon.

The King of Portugal arrived at Windsor on the 10th inst. from France to pay a visit to the King and Queen of England.

Intense cold was reported on the 18th inst. throughout Europe. In Austria winter has come unprepared early. Fourteen degrees Fahrenheit are recorded in Vienna, and the weather is still colder in Bohemia and Galicia. Sliding is general in Austria and Switzerland, while in southern Russia an intense frost threatens the wholesale destruction of the winter crops.

A despatch from London, says: The shops here of excellent figs, plums and grapes at low prices in California. The success of the Californians is attributed to their unique skill in packing, whereby the fruit here intact. The Officers' Magazine says California shipments of plums in the Tenth Month aggregated 1,000,000 tons over the previous record.

It is stated that an Australian scientist has found that soft fruits can be sent on long freight journeys without decaying, if they are first fumigated with formal gas or methane, and then carefully packed.

The Colonial Secretary of South Africa is about to visit the Cape Colony, and the view of becoming personally acquainted with the condition of those parts of the country which have lately been the seat of the Boer war. He lately said in a public address he hoped to see representatives of every political section in South Africa. He then could learn more in three days than in a year's study of dispatches in the blue books. He believed he would be met in that way, and that he would gain a friendly view of the King's new Boer subjects.

A fresh eruption of the volcano Stromboli on the 17th, accompanied by a terrific explosion and flow of lava. It was visible from all the northern Sicily, the flames rising from the volcano illuminating the surrounding sea. The volcano Kilæus is reported broken out in the most violent eruption for the past years. It has shown mild intermittent activity since the outbreak of St. Pierre.

Cholera is reported to be spreading rapidly in the East. At Jaffa there have been fifty-seven deaths in the disease is raging in neighboring villages. Complete returns of the mortality are available. In the stricken districts are in a sad plight, and needed everywhere.

The destruction caused by recent volcanic eruptions in Guatemala is reported to have been very great. Thousands of persons are said to have perished. Near the Santa Maria volcano had opened and for more than twenty-four hours were in constant eruption. It was in continual commotion, shaking down buildings causing much destruction. All the territory around it, San Felipe, Pueblo Nuevo and Retajales were under ashes. Many of the plantations were buried under five to seven feet of debris.

NOTICES.

WESTWIND BOARDING SCHOOL.—For convenient persons coming to Westwind School, the stage was trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when near Stage fare, 15 cents; after 7.30 P. M., 25 cents. Contact the school by telegraph, wire West Coast Phone 114x.

EDWARD G. SMEDLEY, N. Y.

WESTWIND BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKESMAN, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent, Address, Westwind P. O., Chester.

CORRECTION.—The year of James Logan's birth should have been stated on page 119 as 1774 instead of 1775.

MARRIED, at Friends' Meeting-house, Horseshoe, Eleventh Month 13th, 1902, JOHN H. THOMAS, of Dale, Chester County, Pa., and MARY ANNA LUDWIG, of Horseshoe, Pa.

DIED, at her son's residence at Norristown, Pa., Eleventh Month 13th, 1902, EMMA H. BROWN, in the eighty year of her age; a member of Norristown Presbyterian Church, Eleventh Month 13th, 1902. Friends, formerly members of Freshman Monthly Meeting of Friends, N. Y., were firmly attached to the doctrines and customs of Friends, and died in the triumphs of a lively "Blessed are the pure in heart, for they shall see God."

Fragmentary Service.

Many of us are lamenting that we bring no tribute to perfection. Life is all broken up by multiplicity of ways to turn, this way one moment, that way the next, and what we accomplish is bits and fragments. The well-rounded work of others ought to be a pleasure to us to admire, but it adds a burden to our dissatisfaction with our own.

We have a right to blame ourselves for this display of imperfect and frustrated service, if we have chosen for ourselves complexity of living, instead of simplicity. The single eye on the one Guide would do a few things well, rather than a multitude of them for the wastebasket. "One thing I do," said the apostle on single aim, and in this determined singleness of heart more lasting and effective work was thrown out for the church of all ages, than aught which seems to stand now as the work of any apostle. He "labored more abundantly than they all."

Our humility is at fault if we aspire to be a cyclopedia rather than a single article. No one would buy a cyclopedia written throughout by one author, for it would be impossible for one man to make himself an authority on every subject. Wise publishers now employ a specialist for each article, and so the completed work is received with confidence. Let us be willing to stand as the single article that the Maker made us for, sound and strong in the simplicity of a unit. It is better to be looked upon with confidence for the one thing we are good for, than with admiration for a dazzling variety of chaff. The simple life is, fulfilling its simple lot, the productive life. In distributing the bread of life the Master sends out no complete, well-rounded loaf to a disciple to minister unto those to whom he is to hand bread, but fragments only, of his own

breaking off, dividing unto each severally as He will. Faithfulness with these fragments in life is all that is required of any of us. It is honor enough from Him to be assigned any fragment of service from his own hand. Shall one, because it was not a full loaf, trample the crumb under foot, and secede to the desert with wounded dignity? "The Lord giveth grace unto the humble, but resisteth the proud." No, He proves our faithfulness by littles and by fragments; and when found faithful in a few things, we are made rulers over more.

A hungry world needs our crumb-service, if crumbs are handed us to give; our fragmentary service, our unfinished bits to dispense, if we are shut up to no larger opportunities. Faithfulness with our one talent, or our broken end of a talent, is what the Master smiles on with the joy of the Lord, which He will bid us to enter into. "Seekest thou great things for thyself? Seek them not." But thy greatness will not be measured by the things thou dealest with, but by thy faithfulness in them. "A little thing is a little thing, but to be faithful in the least thing, is a great thing."

We feel a desire to speak high courage to burdened hearts who find none but the fragmentary services possible amidst their necessary interruptions, or their hedged-in lives. Their ministry to children under their care is as large, if as faithful in singleness of heart to the Lord, as is the ministry of a bishop to thousands. Their crude ejaculations in prayer which leave no sentence complete, may rend the heavens as stronger supplication than the most finished periods of the silver tongue, that never fails of good form. And if their lives, by circumstances over which they have no control, seem broken into shreds and bits of service, yet so that it be as unto the Lord, they may have the joy of feeling that if they must thus be broken, it is upon the Lord's altar that they are broken, acceptable as a whole sacrifice, and complete in Him.

The Larger Home.

In the same house of various rooms, upper and lower, the inmates may have their several calls to be engaged in this apartment or that. A father may continue in his unfinished work while his companion goes to a room above for rest or further service; children may separate below or above to special apartments for different interests; yet none of the household be

homesick one for another, because all feel they are occupied in their places; and though some are out of the others' sight for the time being, yet all regard themselves as happily together in the same home. It is the fatherhood and motherhood of it all, and not the building, that makes it the home.

In our Father's house there are many abodes, and a Provider has prepared a place for each home-mate. One thing these desire of the Lord, and seek after, that they "may dwell in the house of the Lord all the days of their life, to behold the beauty of the Lord and to inquire in his temple." In his inscrutable Providence, in the secret of his tabernacle, hidden for a season, one from another, they yet feel at home under the same Fatherhood, and can trust him for the good keeping of loved home-mates called to this sphere or that. He who has prepared a place for each in our Father's house, so that, receiving us to Himself, where He is, we may be also, is our bond of contentment in our several lots and places, — the same Lord both of those who may be dead and of those who may be living, as included in the Divine house and presence. It is ours who may seem left below for a season, to be faithful to the same power and presence, the same life of Christ that binds us all as one family of God, and quickens us together with Christ, on earth and in heaven. For the faithful occupants of both, whether here below or there above, are but living in different rooms of the same eternity!

1 Peter i: 7.

O, how good and true is God,
In all He doeth.
Even severity from Him,
Is blessedness.
The faithful cannot perish in his hands,
However handled.
And time is sure to justify
Thy ways, O Lord!

D. P.

ENGLAND, Tenth Month, 1902.

ABEL.

The thirsty earth has drunk her primal draught,
And tongues new-born lift up their piercing cry;
O eloquence of blood, by first-born shed,
O pang of mother's heart! to taste with tears
The bitter fruit, when second-born is slain.
A lonely creature on the plains of heaven,
Bringing new wonders to the angel host,
Forerunner of a throng, yet incomplete.

H. T. MILLER.

BEAMSVILLE, Ont.

Counsel to our Members as Citizens.

Our religious Society having always acknowledged the benefits of civil government, we have not the least intention of impairing or lessening its salutary obligations, nor of debarring our members from the orderly and innocent exercise of the privileges and immunities to which, as citizens, they have an undoubted right. And knowing that it is incumbent on us, in common with others, to bear our part of the public burdens, we have ever been willing to render such services for the support of legal authority, as may not be repugnant to our Christian principles; but it is our fervent desire to inculcate the necessity of continual watchfulness unto prayer, that no part of our conduct, or the ardent bent of our spirits, may manifest that we do not sufficiently regard the weight and importance of our testimony to the dominion of the Messiah, the Prince of peace; whose power being over all, his real subjects look with hope and confidence to Him, who alone, in the midst of the strife and confusion which may be in the kingdoms and governments of this world, can persevere in a calm reliance upon his almighty arm, and a living faith in his protecting Providence.

Although it is not our business or inclination to engage in the discussion of subjects which peculiarly belong to the management of the affairs of government, yet knowing that much excitement does at this time agitate the public mind, we cannot but feel very desirous that the members of our religious society may be preserved upon the only sure foundation, which has been the hope and stay of the righteous in every generation—that they may be guarded against encouraging the unstable, deceitful spirit of party, by joining with political devices, or associations, however speciously disguised.

The peaceable exercise of the right of suffrage, Friends have always left to the private judgment of the members; but it is repugnant to our religious profession to be concerned in any measures which violate the order and peace of civil society, under the pretext of redressing grievances, or maintaining what are considered infalienable rights. As we cannot join in any such measures, we believe it is safest for our members to refrain from political associations, which will lead them into connexion with those, whose sentiments and habits are prejudicial to a religious life, and may eventuate in acts diametrically opposed to the peaceable nature of Christ's kingdom and of our testimony thereto.

The invariable tendency of political pursuits, is to engross the attention of those who devote their time to them, frequently drawing them to taverns, so that they often become disqualified for the necessary duties of life, suffer great loss in their temporal business, and above all, in a proper concern for the salvation of their immortal souls. The instability and faithlessness very observable in political combinations, frequently involve the parties in disappointment and chagrin; destroying the peace and serenity which appertain to the Christian life, and unfitting the mind for the enjoyment of Divine approbation.

At the same time we do not wish to interfere with the judicious and guarded use of

their civil rights, we feel concerned to remind our beloved Friends of the danger of being drawn into the vortex of party strife and contention; and also of the obligation we are under, to walk in all respects conformably to the purity of the Christian character. Remember, that we are bought with a price, of no less value than the precious blood of Christ; and are solemnly called upon to glorify God in all things—to show, that being redeemed from the spirit of the world, its fluctuating policy and customs, we are joined to the Lord in a perpetual covenant, never to be broken. Respecting his disciples our Redeemer said: "They are not of the world, even as I am not of the world." If we are thus redeemed and joined to the Lord, the primary object of our desire and pursuit will be, to exalt and spread, by the aid of the Holy Spirit, the kingdom of the Messiah upon the earth; and by the salutary influence of virtuous example, we should also contribute to the preservation of order, and the strength of civil government.

We deplore, in common with our fellow-citizens, the distress in which many are involved; but we desire that our attention may be directed to the primary cause of all our difficulties and embarrassments. The Holy Scriptures declare, and experience confirms the declaration, that it is righteousness which exalteth a nation, but sin is a reproach to any people. When we reflect upon the vices which prevail in our land—the libertinism, both in principle and practice, which abounds—the infidelity and even atheism, in some instances openly avowed—the injustice and oppression which the native inhabitants of our country, and the descendants of the African race have suffered and continue to suffer—the inordinate feasting and revelling, so openly and shamelessly practised, by which the bounties of our merciful Creator are wasted and abused—the sports and diversions, in which so much precious time is squandered, and the sacred name dishonored, we need not be surprised that distress and confusion should be permitted to overtake us.

In the general consequences of these vices, in every thing which affects or endangers our beloved country, we are all deeply interested. As members of a religious body, professing belief in the inward manifestations of the Holy Spirit, we are especially bound to examine the nature and influence of our example, whether our lives and conversation are a standing protest against the iniquities which are in the world; or whether we are giving countenance to corrupt principles and practices. We believe that the call of the Lord to the members of our religious society is, to withdraw, in a greater degree, from the pursuit, and even from the desire of accumulating wealth—from the surfeiting cares and pleasures of the world, its maxims and policy, and sincerely to gather to the teachings and requirements of his Spirit, clearly made known in the heart. To this Divine leader our primitive Friends were gathered; by it they were made quick of understanding in the fear of the Lord, and wise in things pertaining to the heavenly kingdom. It was this which opened the Scriptures, and prepared them, from living experience, to bear those precious and unchangeable testimonies to the truths of the Christian religion, which have exerted an extensive and

salutary influence in the world. Of our responsibility is exceedingly great, has been given and much is required. The Lord of the vineyard is looking for proportionate to the gifts he has bestowed. But if we should sell the blessing for gratification of the carnal mind, in buying up the fading treasures and comforts of this world, or for the love of fame and distinction amongst men, we shall suffer irretrievable loss, and fail to answer his purposes, in retaining the testimonies which our forefathers faithfully bore, even in the midst of persecution; and which we believe will be suffered to fall to the ground.

(To be concluded.)

MORAL OBLIGATIONS OF DEBTORS.—The following question was proposed to the Christian Union:

A conscientious, zealous Christian, head of a family, fails in business, and gives up to his creditors, but still leaves debts unsatisfied, the amount of his original capital. He is released from further obligations by the law, gets a start, accumulates barely capital enough to run his business, and thereby support his family economically. Does his Christian duty require him to surrender this capital to pay old debts. Will his refusal to do so deprive him from future happiness beyond the grave?

The editor replies:

This is a hard question. We are not at liberty to decide what shall keep a man out of heaven. But, in the first place, let the solvent debtor clear his mind utterly from the delusion that the human law can ever absolve him from his obligation to pay honest debts. He is a debtor as much as ever,—the difference being that the law gives him a respite, not his creditors the control of his property. Now the question is thus reduced to a simple one, we can see that such a man has no more right to refuse payment than he would if he had had if the law had never intervened. The absolute necessity of his family excuses him from the payment of debts, he is excused. But a court of bankruptcy must not be allowed to keep a Christian's conscience; if a say this is hard, we say that honesty is often hard, and it were well for men to consider what the consequences may be before they incur debt. It is hard for all debtors to pay, no doubt, but what of the creditor whose money was lent?

THE LORD OUR KEEPER.

(Psalm cxli.)

Up to the hills I'll lift mine eyes;
O, whence shall come mine aid?
My help shall from the Lord arise,
Who heaven and earth hath made.

He will not let thy foot be moved;
Thy keeper will not sleep.
Nor sleep nor slumber shall He take
Who doth his Israel keep.

The Lord thy faithful Keeper is;
Thy shade upon thy right.
The sun shall smite thee not by day,
Nor yet the moon by night.

The Lord shall keep thee from all ill;
The Lord thy soul watch o'er;
Shall keep thy going out and in,
Henceforth forevermore.

—E. A. Collier.

Rags and Tags and Velvet Gowns.

"There was a new boy at school yesterday, 'n he had great patches on his knees; 'n when I choosed up the boys didn't choose him; 'n he got red, oh! as red as fire; 'n he said away 'n stood lookin' off over the top of the ships. Served him right, I say." Ted had been rattling on in this fashion for at fifteen minutes; and mamma, who was reading up for her next club paper, hardly heard a word; but this last caught her attention and she looked over the top of the book with a little start.

"Perhaps he was watching for his ship to come in," said she, quietly.

Ted could have seen the rest of her face could have done some thinking before he said any more.

"His ship! 'Tisn't likely a boy like him would have a ship—is it now? Course he can't help the patches, p'raps," said Ted, condescendingly, "but he oughtn't to come to a school with us. Harold Winston said it wasn't suitable; and so did all the other boys. He ought to go to the public school where the other patches are."

Mamma's eyebrows went up in a fashion that would have alarmed Ted if he had happened to look at her, but he was stroking the velvet knees of his own velvet trousers.

"I used to know a boy who wore patches." "You, mamma?" cried Ted.

"Yes. I used to play with him every day. Patches and bare brown feet, and a hat with any brim."

"Was he a nice boy?" asked Ted, doubtfully.

"I think, taking everything into consideration, he was the nicest boy I ever knew," said mamma, with an emphatic little nod. "And I ought to know, for I went to school with him for years."

"'N when the boys choosed up did they give him out?" asked Ted.

"Oh, dear me, no!" said mamma, decidedly. "They wouldn't for the world have done anything so impolite."

Ted looked blank for a moment. Then his face grew red, oh! as red as fire.

"His ship hadn't come in then," continued mamma; "but it has since. He owns a big ship now."

"W-w-hat's his name?" sputtered Ted.

"John Hartley Livingston."

"Uncle John Livin'ston?"

Mamma nodded. "All boys who wear patches—and bare brown feet—don't become big men; but I fear they are more apt to become something worth while than boys who wear velvet suits, because they are used to hardships and dirt and disagreeable things. When you amount to something have a great deal of hard, disagreeable work to do."

"This is my best suit, anyway," cried Ted, twisting in his chair. "I don't always wear velvet. You know I wore it 'cause it was Friday and speakin' day."

Mamma went back to her book, and Ted lay away and lay down on a fluffy white rug with his feet on the seat of the sofa—a favorite position of his when he wanted to think.

Monday night he came home greatly excited and stood before his mother with his feet pressed.

"The boys choosed again, 'n I choosed the

patched boy, 'n they wouldn't let him play. 'n we went off 'n played mumblety-peg by our two selves," he cried, the words fairly tumbling over each other. Then he uncrossed his feet and swung the under one forward. There was a jagged hole in the knee of his trousers. "'N I want that patched," he cried, with a defiant ring in his voice. "'If you please, mamma," he added, in gentler tones.

"Very well," said mamma, soberly, but her mouth was smiling behind the book.

"The boys have all come 'round, mamma," Ted announced, cheerfully, a week later.

"Harold Winston came 'round to-day. He held out two days longer 'n any of the rest, 'n he did hate to give in, but he got tired of walkin' 'round all by himself."—*S. S. Times.*

The Age of Miracles.

Anne A. Preston, of Wellington, Conn., relates nearly as follows what she heard expressed at a small meeting in a certain rural retreat in the summer.

One day a sweet, refined young woman related to us this wonderful experience. As she arose from the bank of moss where she had been sitting and stood leaning gracefully against the trunk of an evergreen tree which spread its broad arms and overshadowing foliage above the devout little company, and began talking in low, sweetly modulated tones, the thought came to me that her life must have always flowed in a current as even her gentle voice, and that she must be out of place in that particular meeting, where the participants had always a subdued rather than an exalted demeanor.

Her soft, rose-tinted cheeks were like carmine as she turned and began very gently and a little timidly to say:

"I have not been a Christian very long and have had so little religious training that I have no fitting conversational phraseology at command—the Scriptural phraseology, my sisters, that comes so abundantly and easily to your lips in your remarks and in your prayers—and I have to tell my little story just as I would tell any other story.

"I tell it because I feel that many people talk about the Holy Spirit when they do not understand his work in the world, and because I believe that all Christians who will may receive manifestations of the presence and power of the Holy Spirit right now in these matter-of-fact days that are miraculous, only they do not regard them as such. They shut their hearts against his strivings, and so prevent his help and make it impossible for him to answer their prayers that they may receive the gift. Let me tell you what he has done for me:

"I have a brother much older than I am, an invalid and a cripple from birth, who, on account of his perverse temper, which, of course, was sharpened and embittered by his sufferings, has been all his life a trial to all who come in contact with him. Although it was almost an impossibility to live with this poor brother and not show resentment, and even quarrel with him, it is with deep regret and shame that I confess that from my earliest childhood I had been in a state of continual ferment and rebellion on account of his constant petty annoying.

"After the public profession of my Master

by following in his ordinances I supposed I should feel differently toward my unfortunate brother and his most provoking ways, and had no doubt that I should get along with him much better. But to my great grief and disappointment I did not. I was just as continuously and grievously vexed at his fault-finding, his irritability and bitter speeches, as before.

I brooded upon this, to me, strange fatality, that my otherwise peaceful and peaceful life should be so shaded by this poor boy, whom I fondly loved as a sister does a brother and whom I longed to comfort and help, and to make better, both in heart and in body, but who would not be helped by any one and whose only delight apparently was to be in a state of contention with one or all of the family." Then she related how in meetings which were appointed her heart was so tendered that she accepted Christ as her Saviour. From that time "I could see that Henry watched me closely, so as to note any change that might have been wrought in me as affecting my attitude toward him, and he tried every way in his power or that his ingenuity could devise to irritate me, thus hoping to make me give him a sharp answer so that he might have the opportunity of taunting me about my religion.

"Although nearly every day, and often many times a day, I would be greatly exasperated and ready to make almost any bitter, sharp retort, some kind, gentle words would rise to my lips.

"Poor Henry would look with disappointment and surprise; but his surprise was not greater than mine. The words I would have spoken remained burning like coals in my heart, but I had grace given me to turn my brother's stinging words with a soft answer.

"My mother was now in feeble health, and the task of reading to and amusing my brother devolved upon me. I tried to devise means and plans whereby I might escape this cross until I came to be nearly insane. I did not then realize that the religion of Jesus Christ, the abiding presence and aid of the Holy Spirit, would, in this my extremity, do still greater things for me, and this healing, cleansing power be visited upon the soul and body of my brother.

"One morning, just at this juncture of affairs, poor Henry was even more exasperating than usual, and before I really knew it I was answering him back in the old dreadful way.

"'Ho, ho!' he cried, 'the good effects of your religion have been just about as lasting as I expected. A worthy follower you are of the meek and lowly Jesus, who answered his enemies never a word!'

"His sarcastic laugh when angry, was exceedingly irritating to me, and turning from him as he sat leaning over the arm of his rolling chair I ran from the room overwhelmed with shame and humiliation over the fact that the religion of my precious Saviour had been brought to reproach. Entering the parlor I beheld the family Bible which always lay upon the centre table, but in which, I am confident, I had never before read a word. Now my tear-suffused eyes fell upon the passage, 'My Spirit will not always strive.' I read no further. The truth flashed over me, giving me a positive shock, that the Holy Spirit had been striving with me and I had not recognized Him

nor made Him welcome as I should. He had been trying to lead me to be patient, gentle, and Christ-like, but I had so utterly neglected his gentle call that perhaps He had now left me! Inexpressibly grieved, I mechanically opened the Bible again and read: 'The last state of that man shall be worse than the first.'

"Dear Lord, O Holy Spirit!" I sobbed, 'come back, for Jesus' sake. I will resist Thee no longer.'

"Returning to my brother's sunny room, I said as coherently as I could that I was sorry for my display of temper and for my hasty words, that the Saviour was not to blame nor my religion; it was only that I had failed to realize the abiding presence of the Holy Spirit in my heart. Now I had made Him welcome there and hoped I should not again be tempted to retort, but should pray rather that he might believe, accept, and receive the blessing.

"The taunting smile faded from his thin, pale face, and he said quite softly—the first apologetic or repentant words I ever heard him utter—"I am sorry, too, I alone was to blame; I have always been to blame. Sometimes I have wanted to tell you so and to ask your forgiveness, and that of our mother and of all the family, who have always been making sacrifices for me, but I have always resisted the impulse. Sometimes I feel so badly in my mind that I am ill for days. Oh, sister, can it be that the Holy Spirit is striving with me? I believe in Christ as the Saviour, and since you confessed Him before the world I have longed to do so, but I am so unworthy, and bad thoughts come and crowd out good impulses. What can I do?"

"I believe that good impulses are always the suggestions of the Holy Spirit," I said. 'welcome Him, and you will be healed in soul, and let us hope you will be healed in body.'

"And, dear friends, this wonderful thing happened: my brother was converted that very day; and shortly after our dear parents, who were what is called secret Christians and had never given us children any religious instruction, were turned and openly acknowledged the Master.

"Since that time our Henry has been pleasant, gentle and sunny in disposition. He thinks of Christ's love and of the good that even he may accomplish, instead of his own ills. And, strange as it may seem, his physical health is better, and his malady, which was largely a nervous affection, is disappearing. The physicians who have always considered his case as incurable now give him great encouragement that he may yet be entirely well. People say the age of miracles is past, but is not this a miracle? The Holy Spirit abideth in our household now and gives us grace and strength for every hour. When I heard the announcement for this meeting given out I felt that I must come and publicly acknowledge my gratitude."

She went away that afternoon, and I did not seek to learn her name or residence; her story, however, made a deep impression on my mind, and I was confident that I should in some way learn of her progress in the Christian life. Many months later I was attending a large convention in a beautiful city where there is a large educational institution.

Looking from the window of the house

where I was delightfully entertained, I saw a Chinaman pushing a wheel-chair in which was riding an invalid with most interesting face and wonderful eyes, who was animatedly chatting with a charming young woman who walked briskly by the side of the chair.

"It's my young lady!" I exclaimed, and my hostess, noticing my excitement, said:

"It is Professor Blank's son and daughter. Interesting, are they not? He never used to see any one outside the family. Intimate acquaintance even did not know of his existence. But he was converted. His morbidness disappeared under the influence of the Holy Spirit. He became interested in teaching Chinamen, who went to his room for lessons, his sister assisting. I don't know how many have been converted through their influence. It is a wonderful thing. It makes me feel that we do not make enough of our spiritual lives."

Science and Industry.

A WHALE of fifty tons exerts one hundred and forty-five horse power in swimming twelve miles an hour.

A FENCE nearly two hundred feet long at Livingston, Mont., is made entirely of horns of the elk, more properly called Wapiti. These animals, like the others of the deer family, shed their horns once a year and grow new ones. The old horns are found in large numbers in the forests and are used for various commercial purposes.

NEMESIS OF THE TARANTULA.—That deadly pest of the Southwest, the tarantula, whose bite is certain death to both man and beast, has at last found its nemesis in the form of a small wasplike insect that is found quite numerously in some regions.

The discovery of a tarantula killer will be interesting news to all residents of the Southland. The wonderful phenomenon is no more than the black wasp with silvery wings, which is common in this locality. Henceforward he will be known as the tarantula killer and will be known as a blessing to mankind by all who are afraid of the tarantula.

The female wasp keeps a close lookout for the tarantula, which keeps just as close lookout from fear of the wasp. The latter lights quickly on the tarantula, stings it once, which produces a drunken stupor, and then drags the lifeless victim to a grave previously prepared to receive him. It must be remembered that the tarantula is not yet dead, just dead drunk, but he coils himself into a kind of knot and when safely deposited by the wasp in a desired location the victim has a sorry appearing aspect.

Underneath the tarantula the wasp digs another hole, and in this she makes herself at home until she has laid her quota of eggs, and in due time the young tarantula killers show themselves and then begin to feast on the prostrate body of the tarantula. The remains are sufficient to keep the young wasps in food until they are large enough to hustle for themselves. This statement results from close study made of the matter by a farmer residing near Guthrie, who became interested in watching the movements of the wasp and kept a close watch afterwards learning therefrom

the facts above given. This should explain the black wasp with silvery wings from their execution at the hands of the human enemy.—*Chicago Chronicle*.

THE GENERALSHIP OF A CAT.—The manner of herself which a cat shows, when she has been caught in a position from which there is no escape, she calmly sits down to face the threats of a dog, is a marvelous thing. Many have seen a kitten on the steps of a doorstep, attacked by a dog ten times her size, as apparently self-possessed as if she were in her mistress's lap. If she turns all and runs down the street, she is lost; the dog will have a sure advantage of her. Even if she is, if he could get up courage enough to chase her on the spot, he would be able to make short work of her.

"You dare not touch me and you know it!" is what her position tells the dog. But she is intensely on her guard, in spite of the air of feint content. Her legs, concealed under her fur, are ready for a spring. Her claws are sheathed. Her eyes never move for an instant from the dog; as he bounds wildly from side to side, barking with comical fury, the glittering eyes of hers follow him with the keenest scrutiny. If he plucks up his courage she is ready; she will sell her life dear. She is watching her chance and she does not miss it. The dog tries Fabian tactics and withdraws a few feet, settling down upon his fore paws.

Just then the sound of a dog's bark in the next street attracts his eyes and ears for a moment, and when he looks back, the kitten is gone! He looks down the street and starts wildly in that direction and reaches a high board fence just as a cat's tail—a monstrous tail for such a little cat—is vanishing over the top of it. He is beaten. The cat shows not only more courage than he had, but great deal more generalship.—*Exchange*.

THE PRAISE OF THE PUMPKIN.—In the memories of men and women who have lived their three-score and ten years the chronicle of the noble pumpkin has been cherished.

In pioneer times peaches and pears were unheard of; apple trees had to be grown, and the principal fruit of that period was the faithful pumpkin. The time when pumpkins ripened was a time of general rejoicing. The crop of pumpkins was always to be relied on; every country loft contained a wagonload of pumpkins, and every village householder bought them by the dozen. They did not freeze in log houses. Pumpkins, as elderly women can testify and as the old cookbook shows, were as popular as the splendid apple is now. Stewed pumpkin was an everyday dish, fried pumpkin also; pumpkin butter, pumpkin jam and pumpkin preserves were always made. Pumpkin bread was a notable pioneer delicacy and a New England cookbook gives a recipe for Poston brown bread into which a cupful of cold stewed pumpkin was to be stirred. Pumpkin pies were, perhaps, more toothsome then than now, and pumpkin pudding was also much relished. Dried pumpkin was universal. One elderly Indiana man recalls that he could hardly find his way to bed in the fall, so thickly hung the strings of drying pumpkin in the loft of his father's house.

cut in strips and threaded, then hung over the stoves, near the fireplaces or from the beams all over the house.

Children had rare sport when pumpkins were put in jack-o'-lanterns were made and put in places to scare other children, causing cheap and plenty, too. Sometimes one of jack-o'-lanterns would suddenly gleam out along the top of the log house or on a

Whitewash pumpkins on the vines in the cellar also considered the essence of exquisite humor. Whitewashed pumpkins hid in a haystack were called "a mare's nest."—*Indianapolis Journal*.

Some Notes on American Friends.*

I have long had a desire to visit America, but I might see for myself something of Friends as they exist in that great country, the history of which as a set of individual Stars, largely self-governed, runs back only 130 years, while when still in subjection to the British Crown, its chronicles date back 150 years further.

Practically throughout the whole of that continent Friends, "commonly called Quakers," have held themselves in evidence, founding, controlling the destinies of one State for 75 years, with considerable success, while largely contributing to the political and spiritual life of some of the others, maintaining a position, in respect of numbers and influence, of no mean order. But in 1826 came a great separation, when the Society of Friends in America was split into two sections of almost equal numbers, called, respectively, Orthodox and Hicksite. Into the merits of the controversy, which caused this disastrous split, we have no need to enter. Largely based on Unitarian principles, it was led by a powerful and named Elias Hicks, who thus gave his name to one of the two henceforth distinct parties.

This has been the only division among Friends in America the later history and present position of the Society would be a more readable contemplation; but (in a zeal which is probably a recoil from the Hicksite position) the central tenet of Quakerism—the illumination by the Divine light of every soul of man—was largely overlooked, and the orthodoxy that was current in the evangelical churches around became the recognized standard. A period of great creaturely activity intervened, when silence being relegated to a corner of the temple of worship, human arrangements assumed an importance previously unknown, and even the ordinances (so called) were not by some deemed out of place. Those who held by the old ways this condition of things was very painful; but it had the apparent merit of success, inasmuch as hundreds, yea thousands, were drawn within the compass of the Church as professed followers of the Lord Jesus Christ; though in many, if most-cases, it is doubtful if they ever understood beforehand what the Society of Friends stands for, or what is its real testimony to the world. To Friends concerned to

his article seems to present a fair opportunity to ourselves and others from the standpoint of an un-observed from Australia. Such a view need do us harm. A few of the passages we are not prepared to publish here; others we might modify.—Ed.

maintain the old order this was deplorable; and eventually led to cleavage in several of the Yearly Meetings, though by minorities. Not, however, that these minorities represented the full strength of Conservative Quakerism; many remained to leaven the Progressive camps.

Through all these later trials Philadelphia Yearly Meeting has remained outwardly a united body. It was not without its Progressive element manifesting sympathy with the aims of those of like spirit elsewhere; but patience was exercised, wiser counsels prevailed, and Philadelphia has remained one, yet at the cost of cutting itself aloof (officially) from all other Yearly Meetings, including even London, recognizing none, though refusing none. It is a unique position, the resultant of various forces, and marking, probably, the line of least resistance. One can well hope that the result might be the preservation of all that is best in the Quakerism of the past; though we have ever to remember that the hand of time cannot be held back, and "the old order changeth, giving place to new." "It is not for man to dwell alone;" and it must be conceded that Philadelphia Quakerism has not inclined to adapt itself to the changing order of modern times. One of the saddest features of Philadelphia Yearly Meeting has been its regular record of loss, year by year a decreased membership, and [at intervals] meetings laid down. This was the chief exercise of the last Yearly Meeting at which it was my great privilege and pleasure to be present. It lay as a heavy burden upon the minds of all, and resulted in a special committee appointed to take the facts of the case into consideration and adopt such steps as it may be divinely guided into to cope with them. One earnestly hopes that a service may result which shall not alone vitalize its own membership, but shall be an object lesson to all Yearly Meetings; and restore our beloved Society to the place God assigned to it in the Church and the world. Quakerism with a narrow outlook does not seem equal to this, possessed though one feels it to be, of deep reserves of spiritual power and influence; but the hope of Philadelphia Yearly Meeting is in the abundance of earnest young life it possesses, in its association with those deep reserves of spiritual power. . . . The strength of this young life is its zeal for spiritual freedom, its earnestness in all good works; its fervent belief in the guidance of the Holy Spirit; its firm acceptance of the headship of the Lord Jesus Christ in his Church. But the younger needs the older as a power house from which to draw experience and strength. . . .

But it is not only within the limits of Philadelphia Yearly Meeting that the abstinence of some Friends, concerned for the upholding of the ancient testimony, as they conceive it, is felt as a great loss. All the Yearly Meetings of Friends in America are looking to Philadelphia to lead them into the possession of all that is best and best worth saving in the old faith. They feel they need Philadelphia; and may it not be that Philadelphia equally needs them? Let us picture the case of these Yearly Meetings, particularly the more western, which, not content with the old name of Friends, have branched out as "the Friends' Church," and have otherwise so far departed from the traditions of the Society as to choose

themselves "hiring" pastors, after the manner of other Churches. On this, other "abuses" have followed; pre-arranged services, instrumental music, and (what is even more foreign to our testimony) baptisms, and communion services. To the eye of an old Friend this is practically to abandon all for which the Society has stood for the past 250 years; but let us, as in duty bound, examine the position of these Western Friends, and particularly that of those who (while they have sympathized with and appreciated the living force there has been behind this movement, and have seen fit to adhere to it) have yet not bowed the knee to formalism, or sacrificed what they have held to be the essential principles of our Society. Look at the condition of the West, a rapidly growing population drawn from all corners of the earth, engaged in reducing its waste places to subjection; they have been missioned by men called Friends who have felt a call to labor among them for a period, and have rushed into the Church not by ones and twos but by hundreds. Presently they have been left to their own resources, ignorant of almost everything except the rudiments of Christianity, untaught in Friends' doctrine, untrained in Friends' discipline, and yet with a love for the name of Friend which in some cases is almost pathetic. Their manner of life gives them no leisure for the detailed work of building up a Church, and yet something must be done, so they choose one of their own number, for want of a better, who has shown some special gifts as they consider it, for this ministry. It is his duty to watch over the flock, not necessarily to preach, but to live among them, to uphold the cause of Christ in their midst. Holding himself ready for the performance of any duty devolving upon the body, which, from the nature of the circumstances, the body could not otherwise fulfil, he nevertheless in no way releases any other member from any rightful obligation possible of fulfilment. Where possible, a small salary has been given; in other cases a small plot of land to be cultivated, free of rental; in few cases sufficient return to render a man clear of the labor of his own hands; in some no direct payment whatever. And if we look to results as shown by the ingathering of units to the Church, it would appear as though up to a certain point the plan has been eminently successful. Good Quakers, as Quakers understand themselves, could hardly be expected to be made after this fashion; and yet (overlooking mistakes, extravagances, and the un-Quakerlike conduct of some of those men who have gone forth into those waste places "preaching the word") there has been a decided leaven of Quakerism operating throughout. While the more pronounced "heresies," such as baptisms and communions, may be put down not as the work of meetings but of individuals, and that chiefly within the limits of one Yearly Meeting. It is doubtful whether until the West has been settled down and people have acquired some time for leisure, the system of "pastorates" [will] be dispensed with. . . . Their mistakes have been made from lack of knowledge rather than from design. Show them what true Quakerism is and they will follow after it; for nowhere

* Then the showing of it is at present defective, if the will to follow after it stands ready. But to us the most

are ministering Friends of the old order more gladly received than among these people. Their efforts also in the cause of education—the education of their own young people from the religious, as well as, and apparently in advance of, the secular side, afford food for thought to Friends whose circumstances have been more favorable. No sacrifice has been spared toward the end of providing schools and colleges. Hard-working farmers have handed over their farms as mortgages to the denomination's colleges, paying annually the current rate of interest thereon; in every possible way they have shown themselves prepared to bear the burden of their children's education. Such a state of things is now actually in progress in Kansas in connection with Wichita College. How one wishes one could bring together Philadelphia and Kansas as the two extremes of the system, the ideal and the potential (though perhaps only yet in embryo). Here on the one hand is wealth, education, refinement, and a depth of spirituality shut down and confined,* and eating its own heart out, as is sometimes said; there on the other hand is poverty, ignorance, lack of refinement (using the words relatively) but withal a deep, earnest spiritual longing. Oh! to close the circuit that they may become one even as their One Master has desired they should be. If the lapses, or I would rather say the inconsistencies, which Friends of the old order deplore among Western adherents, are to disappear, it can only be by the spread of knowledge of better things. Herein lie opportunities of service which may enfold results commensurate with those effected by the great apostles of our early history. The world has not had enough of Quakers; it is asking, always asking, for more, though not knowing that it asks; and when baptized men of our communion go forth to “do the first works” the Spirit of God will fall upon their hearers as it fell at the beginning, and our Quakerism will arise and shake itself from its sackcloth and from the dust which has been accumulating about it for two centuries past. “If ye know these things happy are ye if ye do them.”

In conclusion, let me say I have only had twenty-eight days at my disposal to “do America,” and to see Friends. It is all too little, even though every moment were devoted to the main object in view. At best only a “bird's-eye view” is possible; and in attempting to describe what has been seen, and making deductions therefrom, I must warn my friends to accept them only as the opinions of an individual laboring under great disadvantages. Where, with much fuller knowledge before them, people are led, according to the bent of their minds, to take divergent views, it behooves a stranger from the outside to speak with bated breath. Nevertheless I have earnestly desired throughout to see without prejudice and to write “in the fear of the Lord.”—*William Cooper, in the Australian Friend.*

Sin is too dull to see beyond himself.

—*Tennyson.*

widespread lack, eastward and westward, seems to be in the way to follow true Quakerism.—*Ed.*

*The spiritual enlargement of some lives in their strenuous out-of-sight exercises and promotion of good can not widely be known or come abroad.—*Ed.*

Stephen Grellet and William Allen's Bible Lessons for Russian Schools.

In the year 1818-19, two distinguished members of the Society of Friends—our countryman, Stephen Grellet, and William Allen of London—were on a religious visit to the north of Europe, and spent some time in the Russian Empire, and were received with remarkable kindness and cordiality by the Emperor and by members of his family and court.

During their various engagements, they visited a school which had just been established on what is known as the Lancasterian plan,—more immediately for the benefit of the military department, but with a view to extend the system throughout the country. In the school were Russians, Calmucks, Tartars, Cossacks, etc., from various parts, fitting themselves to become teachers in the several regiments. Upon examining their reading-books, they were grieved to find lessons of a very corrupting tendency. With exemplary fidelity to duty, they repaired to the depository from which the books were distributed, and found among them such as inculcated impious and deistical sentiments.

They had obtained sufficient knowledge of the views of those in authority to satisfy them that a reformation in this respect would receive support; and the opportunity seemed favorable to introduce suitable lessons into the schools, and through them to inculcate the principles of vital religion, and so to promote piety, virtue, morality and justice over all the vast empire, silently rebuking vices and immoralities, and carrying the knowledge of salvation by Jesus Christ to many thousands then wholly ignorant of it. Much prudence was needful to avoid awakening the hostility of the ecclesiastics; and to this end it was determined to confine the selection of lessons to the simple language of Scripture.

With the aid of three or four kind friends, and by devoting part of some of their nights to the work, they soon had the lessons in readiness for the printer. A gentleman in Leeds (England) came into possession of the two French Bibles out of which the lessons were culled and pasted into a book, arranged under proper heads. On the leaf opposite the title-page of one of them is a memorandum, made by the original owner of the Bibles, as follows:—

“One of the Bibles out of which selected lessons were cut and first pasted on blank paper, by Stephen Grellet and William Allen, when in Petersburg, in the winter of 1818-19,—wherefrom lessons were printed for the use of Russian Schools, and since adopted by the British and Foreign School Society in London.—*SAM'L STANFIELD.*”

We have it on the best authority that this work, though so humble in character, was, in effect, truly great and blessed. At one of the interviews which Stephen Grellet and William Allen had with the Emperor, they adverted to the book they had prepared, and to the motives which prompted the undertaking. The Emperor said, “You have done the very thing that I was anxious should be done. I have for a long time contemplated how that mighty engine, general public education, might be used for the promotion of the kingdom of Christ by bringing people to the knowledge of the dear Redeemer and to the practice of

Christian virtues. Send me immediately what you have prepared.”

This volume of Scripture Lessons, informed, was (at least for several years) extensive use in the schools of the Empire,—in Greece, Italy, France, Germany and Spain, as well as in England. Large editions have been printed in this way, for use in the public schools.

The “American Sunday School Union” urged to publish an edition to supply a number of industrial Home Schools in New York and elsewhere, and also for the schools established in various parts of the country for freedmen. The expense of the plates was kindly borne by the liberality of members of the Society of Friends; and the selection was just as it was made by the original compiler, except the omission of a few duplications. *Preface.*

Bishop Whipple's Horse Bashaw.

Every boy will want to know about a tale that did noble missionary work in Minnesota. Bishop Whipple, the Episcopal Bishop of Minnesota, owned him, and we will let him tell in his own words about one of his narrow escapes from a blizzard, in 1861, and how his horse was. He had to drive across a prairie thirty miles to the Agency, and twenty-three miles there was not a house all the way. A great storm came on and a less night settled down, and though he could usually find a trail almost equal to an Indian, he felt that he was lost. We now give a own account of it, as it appears in his book, “The Lights and Shadows of a Life in the Episcopate.”

“I kept my horses headed in the direction which I thought to be that of the Agency. I said my prayers, threw the reins over the dash-board, let the horses walk as they would and curling myself up under the buffalo hoped that I might weather the night.”

“Suddenly Bashaw stopped. I was content that the wise fellow had struck a landmark, for he knew as well as I did that we were lost. I jumped from the sleigh as I could just distinguish in the darkness something under the snow that looked like a huge snake. It proved to be an Indian trail. The Indians always walk single-file to avoid an ambush, and in the loam of the prairie the trails are several inches deep. Bashaw followed it, and when his mate was inclined to turn out he put his teeth into his neck and forced him into the path.”

“Mr. Hinman, in charge of the Agency was so sure that I had started that he kept a light in the window, and when Bashaw saw it he leaped like a hound from his kennel. When we reached the mission and Bashaw, comfortably stalled, turned his great eyes upon me, his whinny said as plainly as words, ‘We are all right, now, master.’”

“Bashaw was own cousin to the celebrated Pachin. He was a kindly fellow and had every sign of noble birth—a slim, delicate head, prominent eyes, small, active ears, large nostrils, full chest, thin gambrels, heavy cords, neat fetlocks, and was black as coal. He was my friend and companion for over fifty thousand miles, always full of spirit and as gentle as a girl. The only time I ever touched him with a whip was on the brink of a precipice,

the path was a sheet of glare ice, and the wagon began to slide, I saved us to h
ash, but the blow hurt me more than it
ash. He saved my life when lost on
fairie many times.

summer heat and winter storm he kept

PLEDGE PERIL.

(Is. viii: 12, 13; xxviii: 20; xx: 1.)

AN APOCALYPTIC.

ro the Lord, ye wanderers in sin!
shall ye find no elsewhere than within
Except by faint report.

Still Satan will resort
to outward aid for strength to stem
angly satanic stratagem.

Still Satan will resort
to means by which to overturn
r's order in the things which Christ concern

Reject such refuge short,
content in God's advancing day,
tion's course still recklessly to stay,

And in Truth's outer court
with the seers who upon sins forgiven,
by contrast a mere human heaven. R.

City Houses in Summer.

Abright, motherly woman in one of our
ern cities who was about to close her fine
for the summer, bethought her of sev-
er independent young women, all of them
the graduates and self-supporting, who
spend the summer in stuffy offices and
more stuffy lodgings. To these she went
a simple business proposition. For the
of their uncomfortable little rooms she
and turn over to them her handsome home.
She explained that she would rather keep the
open in this way than to close it. She
that her house and its furnishings would
less from the careful use they would
ave than from the usual two months of
and lack of sunshine and fresh air.

Je young men jumped at the offer.
e pooled interests, got their breakfasts
dippers, and divided the housework. Oh,
luxury of those wide, cool halls, the beau-
tifully-appointed bath-rooms, the book-filled
ary, the big drawing-rooms, the pleasant
abers, the dainty linen and table appoint-
ments! Some of the young women had
ottomed to just such homes in the past.
The mistress returned in the fall she
and her house awaiting her in perfect order,
as she had stepped out of it. She had
a kindly, thoughtful deed in a way which
could be accepted gratefully and without a
n of patronage.

Another city the owner of a handsome
who spends his summer in the White
tains, but wanted his servants employed
his horses exercised, offered the house to

an aunt, courteously extending to her the
privilege of entertaining. She invited a sis-
ter, a nurse, to spend the summer with her.
For the past two summers a Brooklyn family,
instead of closing and burglar-proofing their
house, have given the use of it in summer to
a middle-aged couple who board.—*Good House-
keeping*.

Items Concerning the Society.

On last Seventh-day our friend Joseph S. Elkinton proceeded to the attendance of the funeral of "an elder worthy of double honor," the aged Jesse Tucker, at North Dartmouth, Mass., the father-in-law of Job S. Gidley, whose voice, in company with J. S. Elkinton, first welcomed the Doukhobors on their approach to the shores of America. By the grace of God our friend Jesse Tucker, a noble monument of it, was what he was. Through trying seasons he stood staunch for the Truth as com-mitted to the Society of Friends to hold of clear mind and strong though unassuming talent, of that gentleness in which Divine love makes its servants great, and of a wisdom from above which is "first pure, then peaceable, gentle, and easy to be entreated, full of mercy and good fruits, without partiality and without hypocrisy." And the fruit of righteousness was sown in peace of him that made peace, and was a godly savor of it throughout a neighborhood which will long miss such an exemplar of the typical Quaker character. His Yearly Meeting, held at Westley, R.I., which has been so sorely stripped of late, will feel the loss of his righteous wisdom in its chief councils, even if others are found soon coming up into like growth in the same grace.

Anna Warner Marsh, widow of Thomas William Marsh of England, and daughter of Yardley and Hannah A. Warner, formerly of Germantown, Pa., is paying a visit to her relatives in this country, including some meetings in their neighborhood, she being in the station of minister.

It seems a hopeful sign of something good awaiting the future of our religious Society, that companies of our younger members for mutual help in acquiring an acquaintance with the primitive history and doctrines of the Society are voluntarily forming in several neighborhoods of Philadelphia Yearly Meeting. Seasoned with true spiritual exercise on their part, this movement will in many reach deeper than the intellect.

Haddonfield Quarterly Meeting, usually the most numerously attended and not the least interesting, also the last in the series of these Quarterly occasions, is stated to be held on Fifth-day, Twelfth Month 11th at 10 A. M., at Moorestown. Train leaves Market Street Ferry at 8.20 A. M. Trolley service every half hour, leaving Camden 8.33 and 9.03 A. M. Time required to make trip by trolley, 55 minutes.

Margaret and Rachel Irwin of Manchester, England, the latter frequently heard in the ministry, daughters of Robert Irwin, who recently deceased, having for nearly two months been visiting their friends in and about Philadelphia, propose soon returning to their native country.

Notes from Others.

A work of unostentatious liberality has been prosecuted among the Armenians by Professor Rendel Harris, the well known Orientalist, a member of the Society of Friends. Some few years ago he, with his wife, made a tour through Asiatic Turkey, paying particular attention to Van, Sasun, Harput and Diarkebir. The impressions he received saw the light in his book, "Letters from Turkey." Writing a book was not enough for this devoted man, and making public the needs of

these persecuted people, he undertook the duties of almoner. For six years this work has been going on, and Professor and Mrs. Harris have issued their sixth annual report. They have distributed nearly \$9,000 during the past year. We notice that no expenses have been charged against the fund. These have been cheerfully borne by the almoners. Great good has doubtless been done by this charity. We are pleased to call attention to it, as its quietness and genuine helpfulness has refreshed our hearts.—*Episcopal Recorder*.

A SIGNIFICANT CHANGE IN RUSSIA.—Since 1880, Constantine Pobiedonosteff has been Procurator General of the Holy Synod in Russia. He has just resigned his office. The Holy Synod is one of the four great executive boards or councils of the Russian government, and has entire control of ecclesiastical affairs. Probably this man has the strongest intellect of the statesmen and ecclesiastics of Russia in his time. He was originally a teacher. He believes the tendencies of modern times are in the wrong direction, contributing toward the overthrow of all proper relations of subjects to government, and to confuse all orders in society.

Pobiedonosteff is now seventy-five years of age. He was the son of a university professor in Moscow, educated in a government institute of law, and became a teacher there. He resigns on the ground of advanced age. It is considered that by this act the greatest enemy of anything approaching representative government passes from the scene, and that more liberal views may be expected to prevail. The latter is not very probable, for the more that a despot in Church or State concedes, the more insatiable for concessions his subjects become.—*Ibid*.

A new feature of the Philadelphia Tent Work undertaken this year was that for the seventy thousand Italians in Philadelphia who are un-reached by any gospel agencies. Thousands of these people attended the tent meetings, where gospel pictures were thrown by the stereopticon upon a large screen.

John Elliott got the title of "Apostle of the Indians" because of his self-sacrificing labors among the tribes of red men in the forests of Massachusetts. He mastered their language, reduced it to writing, and then translated the whole of the Bible into it. Three thousand copies of it were printed, and many of the Indians read its words in their own tongue. Those tribes have melted away, and now none of them exist. For more than half a century but one man has been able to read John Elliott's Bible. The book itself is now a great curiosity. It has become very rare. Only a few copies of it are known to exist. Any one of these will command a high price—five hundred dollars or more. The book is useless now, except as a memorial of the work that was done, and of the man who was mainly instrumental in doing it. We must not conclude, however, that because the book has become a dead language, that it was a vain expenditure of time and strength and money to produce it. No one can tell the number of the poor red men that were led to the Saviour of sinners through its instrumentality. The day alone will reveal what was accomplished by that volume. The word which it contained has returned unto God, but it has accomplished that for which He sent it.—*Christian Instructor*.

The enormous force of public opinion is a danger to the people themselves, as well as to their leaders. It fills them with an undue confidence in their wisdom, their virtue and their freedom. It may be thought that a nation which uses freedom well can hardly have too much freedom; yet even such a nation may be too much inclined to mistake prosperity for greatness. Such a nation seeing nothing but its own triumphs and hearing nothing

but its own praises, seems to need a succession of men like the prophets of Israel, to rouse the people out of their self-complacency, to refresh their moral ideals, to remind them that life is more than meat and the body more than raiment.—*James Bryce.*

"If one looks for any reward or returns for labors spiritual he should keep in mind the law, that those alone attain good who do it; that in things of the spirit it is possible to hoard one's self poor and give one's self rich, as the old proverb has it."—*Leader.*

One of the strongest evidences that the writers of the Bible were guided by a wisdom altogether superhuman is to be found in the fact that none of them attempted to reduce theology to a science, not one of them tried to systematize spiritual truth, says the *New York Witness*.

With all Christians opposed to it, and all reformed Chinese pledged against it, the abolition of footbinding is said to have become a plank in the reform party of China. Recently the Empress Dowager issued a decree against it—another straw to break which way the wind is blowing. The wife of Archibald Little says it looks as if her prophecy that by 1905 it would be rare to see any child along the seacoast of China having to undergo the agony of footbinding were in a fair way of being accomplished.

Heed and remember, O aspiring youth,
"Success in error means defeat in truth."
Better, by far, to linger at the base,
If to achieve the height means soul-disgrace!
—*Susie M. Best, in Success.*

SUMMARY OF EVENTS.

UNITED STATES—The attempt to settle the differences between the mine operators and their employees, outside of the anthracite Commission, has failed. The individual operators presented a protest against any adjustment being made at this time, insisting that the principles involved were so serious and affected so many interests that it was necessary now to have the Commission hear all the facts and pass its judgment upon the whole controversy. The presidents of the coal carrying roads, upon considering this protest, concurred in refusing to proceed with private negotiations. Hearings before the Commission, it is announced, will be resumed at Scranton, Pa., on the 31st inst. The President has sent a letter to a prominent citizen of Charleston, S. C., in which he deals with his attitude on the negro question. The President maintains that his endeavor has been to be of use only to men of high character and good capacity, whether black or white, and that he never said he would not appoint reputable negroes when objection was made to them on the ground of color alone. In his letter he says: "It seems to me that it is a good thing for every standpoint to let the colored man know that if he shows in marked degree the qualities of good citizenship—the qualities which in a white man we feel are entitled to reward—that he will not be cut off from all hope of similar reward."

The second session of the Fifty-seventh Congress began at Washington on the 1st inst.

The annual report of the Comptroller of the Currency states that the aggregate banking power of the world is estimated to be 3,400,000,000 pounds, of which the United States has the wonderful power represented by 2,187,000,000 pounds, or nearly one-half. It is also stated that "in the latter half of each year the problem is presented to the banks to furnish currency needed to handle from 2500 to 3000 millions of bushels of grain, 8 to 10 million bales of cotton, and a corresponding quantity of other farm products. The total port of Boston requires for the year 1902 will not be far from 5000 millions of dollars."

Secretary of Agriculture Wilson has issued a sweeping order, directed to the managers and agents of railroads and transportation companies of the United States, stockmen and others, notifying them of the establishment of a quarantine of cattle, sheep and other ruminants and swine in the New England States, and prohibiting the exportation of such animals from the port of Boston for further orders. Recent investigations by the Department of Agriculture disclosed the fact that what is known as foot and mouth disease exists to an alarming extent in Connecticut, Rhode Island, Massachusetts and Vermont, and

Secretary Wilson has said that this is the most serious matter the Department has had to handle for some time; but that all the resources of the Department would be employed in stamping out the disease. He declared that if it should spread west of the Hudson River it would be nothing short of a national calamity.

A visit to this country has been made by Alfred Mosely, of England, accompanied by representatives of twenty-three of Great Britain's trade unions, for the purpose of investigating manufacturing and mechanical processes and the relations of capital and labor.

Among the reasons for the prosperity of the United States appear to be the following: Here machinery is used to the fullest extent; old machinery and methods are discarded regardless of cost; everything is thoroughly systematized; operations are carried on with the greatest economy because of their magnitude and specialization; and there is an intelligent class of labor and in the main cordial relations between labor and capital.

It is said that thirteen hundred fires were caused in New York City last year by parlor matches. The discovery of this fact has led the city authorities to prohibit the storage or sale of parlor matches after First Month, 1903. Sulphur matches and safety matches must take the place of the more convenient but more dangerous parlor match. It is said that Sweden and France have also prohibited the use of matches similar to the parlor match.

A telegram from the 26th of Reading, Pa., says: Last night a roaring noise was heard in the northwestern section of the city. It proceeded from thousands of wild geese on their way down the valley, following the Schuylkill river. Many of the birds were shot by residents of Riverdale. The geese changes their course and flew back toward the city where many were easily captured.

A flow of natural gas has been opened by boring a well near Scotland, Westmoreland Co., Penna.

The Seed Division of the Department of Agriculture has made a change in the form of putting up seeds for mailing to the country. Heretofore this has been done by a large force of clerks. Now it is to be done entirely by machinery. Sixteen machines have been set up in a building rented by the Department near the main building, and with a force of 100 women it is calculated 30,000 packages can be filled in a day. The plant is expected to put up over 40,000,000 packages in the course of a year.

The colored population of Philadelphia is now stated to be 70,000 and in the past 20 years this city has gone from the tenth to the second place in regard to negro population among the cities of the Union. New Orleans only exceeding it.

There were 454 deaths in this city last week, reported to the Board of Health. This is 6 more than the previous week and 44 more than the corresponding week of 1901. Of the foregoing 216 were males and 238 females: 59 died of consumption of the lungs; 71 of influenza; 10 of the lungs and surrounding membranes; 7 of diphtheria; 17 of cancer; 19 of apoplexy, and 12 of typhoid fever and 1 of small pox.

FOREIGN.—A despatch of the 28th ult. from London, says: The Board of Agriculture has closed the ports of the United Kingdom against the importation of animals from Maine, New Hampshire, Vermont, Massachusetts, Connecticut and Rhode Island. The order takes effect from the 1st inst.

Cargoes arriving in the meanwhile will be the subject of special investigation.

The exclusion of American cattle has caused a feeling almost amounting to consternation in the shipping and meat trades. Fears are expressed that the interdiction may be extended to imports from other United States ports, which would result in a general rise in the price of meat, as one or two steamers have large refrigeration space for dead meat.

The growth of American trade with China and the increasing popularity of American goods in that country are shown by two official statements which have just reached the Treasury Bureau of Statistics.

Cotton goods and flour are the items of importations from the United States which show the greatest gain.

China is said to be deriving advantages in the way of geographical position, transport rates and improved machinery.

A despatch from London of the 26th, says: The continued decline in the price of silver causes much comment in financial circles. According to the best informed houses, it is regarded as being directly due to China's flooding the market with silver in payment of the indemnity.

In Manila, on the 28th, silver was sold at 270, making a dollar in silver worth about 37 cents in gold. The decline in silver has seriously affected business transactions there.

The Muirhead system of wireless telegraphy has been experimented with on the steamer *Idamore*, last arrived in Baltimore from England, and the operator, Blenheim, stated that he had received messages at a distance of 1000 miles at sea.

The Morse alphabet is used in transmitting messages and the characters are recorded on a paper ribbon.

The British warship *Sparrow* shelled five South Island villages lately to punish natives for killing a white man who had professed Christianity.

The Soufriere volcano on the island of St. Vincent again in eruption on the 26th ult. In addition great discharge of ashes a volume of hot water, 2½ wide was ejected, doing great damage.

The volcano of Mont Pelee on Martinique is reported to have been in a state of violent eruption on the 1st ult.

It is stated that on one of the islands of Hudson Bay have been discovered the remnant of a lost tribe of man. Sixteen persons make up the community, know nothing of metals, and it is supposed they saw a white man until recently. They build their houses from the bones of whales.

NOTICES.

Received from James Hobson, agent, Ireland, 10 Susan Williams, Vol. 76.

A MEETING FOR WORSHIP, to which the public is invited, had been appointed to be held in Friends' Meeting House, Ninth and Tattall streets, Wilmington, Delaware, on First-day afternoon the 14th inst., at 3.30 o'clock.

A MEETING FOR WORSHIP is appointed to be held in Millville, N. J., on First-day the 7th inst., at 10.30 A. M. Train from Market street ferry at 9 a. m.

WESTWON BOARDING SCHOOL.—For convenience of persons coming to Westwonton School, the stage will train leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when required. Stage fare, 15 cents; after 7.30 P. M., 25 cents each. To reach the school by telegraph, wire West Chester Phone 1144.

EDWARD G. SMEDLEY, Sup.

WESTWON BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to

WM. F. WICKERSHAM, Princip.

Payments on account of board and tuition, and manumissions in regard to business should be forwarded

EDWARD G. SMEDLEY, Superintendent.

Address, Westwonton P. O., Chester Co.

Friends' Library, 142 N. Sixteenth St. Phila.

Open on weekdays from 11.30 A. M. to 2 P. M., and 3 P. M. to 6 P. M. Also on evening in which Friends' Institute Lyceum Meetings are held from 7 P. M. to 7.45.

Transmission of Energy to Willing and Unwilling.

It is not for the disciple to choose what direction of the "energy of the Holy Spirit" he should adopt for his line of service, but it is for him to submit unreservedly to be adopted and directed by that energy and power. This guides him into all the truth concerning his department of service, as "the good man's orders are ordered of the Lord, and He delighteth in the Lord's way." If we read, as we do elsewhere, that "the missionary energy of the early Friends is in striking contrast to the quietism that came over them in subsequent years," and then, stimulated by this approach, assume a missionary energy, we are brought to the confusion of him who cried, "Nevertheless let me run!" Happy that man and all disciples, whom the Divine missionary energy chooses, and they surrender to the operation of his power, "to will and to do of his good pleasure." Happy they who surrender to the preaching energy of the Holy Spirit, to obey it though with stammering tongues, as He requires it. So the teaching energy, and the teaching energy, and the shepherd, of stewardship of means, counsel in affairs of state, of minding one's house well. The manifold grace of God is his energizing in various directions, gifts of callings, dividing to each man severally as He will. Happy and a success is he whose line of endeavor coincides with the Divine direction for his energy and the Divine energy of his mission. Our authority has no foundation in what Friends did or later Friends do; but in the same Spirit who directed the valiant for the Truth in their day, that

He may select and direct our specific missions for our day. What form our present day mission shall take, it is not for this sheet to urge. Only a revival of the old-time, uncalculating submission to the direction of That which blew them where He listed, is the need of our present day and present Society. We can trust the Head of his own Church for his developments in service and practice.

But very willing we should be if this Divine energy should drive out more servants from their ceiled houses into the by-ways and hedges, to compel the wanderers in empty professions to come in. A bishop has lately said that "endowed churches are like endowed people. They settle down to an apathetic enjoyment of comfort." A devoted minister, poor in temporal means and concerned for the support of his family, was observing with us lately instances of one here and another there breaking up their homes in their native places in the compass of Philadelphia Yearly Meetings, and moving, and then again moving to other localities, as resident sojourners for the cause of Truth,—regarding that as errand-servants of Christ they had here no continuing city. "And I should not wander," said he, "and, indeed, I have been expecting, that much more of this manner of service would in days that are near at hand be called for of members of this Yearly Meeting, and will be done by them if they are faithful, like our early Friends, to their heavenly calling." Let us not shut our eyes and hearts to this "missionary energy" of the Holy Spirit, simply because it is possible to call it by that name. He will have, in the day of his power, a people that is willing. Do not let us fear to be servants of the Power at home, because as we learn obedience it may call us abroad. But rather fear Him who when we are called from homes in the body, may call us to none in heaven.

The Leaning Towards Finery.

A recent editorial of a contemporary has the following statement, "It can be safely said that there never was a time when Friends thought less of dress or fashion than now, and that in this respect the new Friend is not below the ancient standard." Upon what basis of facts such a statement could be made we are not aware. The action of meetings in dealing with the subject might be cited as ev-

idence, but as these evils were corrective in their nature a diminution in them might indicate an unwillingness to receive the correction quite as much as "less thought" on the subject of dress. The question would seem to be, after all, more a matter of opinion than of fact, and we have found after some inquiry amongst intelligent Friends a positive disagreement with the statement quoted. One Friend with University training and considerable residence amongst Friends in three western and three or four eastern states, is quite emphatic in maintaining the contrary statement.

Concern, however, in regard to the warrant for the statement seems to us of less account than some other considerations on the subject. Granted for argument that "there never was a time when Friends thought less of dress or fashion, than now," does this prove the other half of the statement "that the new Friend is not below the ancient standard" in these matters? Is it not truly a question of the *quality* of the thought devoted to the subject? On the one side we have Dame Fashion with thoughts of vanity, on the other the conscientious Friend with thoughts of simplicity and sacrifice. We are not forgetting the truth of some other statements in the editorial in regard to set forms of dress. True, the Society has never prescribed any. Some Scripture principles, however, might rightly have a bearing on a choice of the forms of simplicity as against the forms of fashions. It seems clear that one or the other must be chosen, as dress after all is a matter of form.

The multiplication in Friendly circles of diamonds, of bright feathers and showy flowers, and of rich laces for trimming is naturally enough noted by the critics who write of the "passing of the Quaker." There are those who feel bound to deplore these signs of decline, although thankfully accepting other manifest signs of progress. It seems wholly needless, in protesting against the evil in a fixed form of plainness, to have gone to these extremes, and much is lost in Quaker character when it becomes obscured in worldly finery. Fifty years ago a very sensible discrimination seemed to prevail with Friends in these matters. We quote from one of the best known writers of that day—"We ought to distinguish between clothing and ornament. Clothing is

intended to cover and protect the body; ornament to beautify it. The former is necessary * * * the latter is altogether needless for the body, and evidently *hurtful* to the mind." And again, "But we are not so foolish as to object to beauty, under any of its forms, merely because it is beauty; we disapprove only of such a misapplication of things supposed to be beautiful, as is attended with an evil effect on the human mind."

The plain injunctions of Scripture must still have some weight in regard to dress. Paul writes very clearly to Timothy (1 Tim. ii, 8-10) and Peter (1 Peter iii, 1-4) reinforces all that Paul says. As has often been pointed in both of these passages we have a positive injunction as well as a prohibition. So there can be no doubt of their intention. Scripture simplicity therefore in the Society of Friends should not be put aside because of some apparent failure in the past to find a wholly rational expression of it. John Ruskin is most emphatic on the Scripture side of the subject. Writing of the zeal displayed by the women of England against criticism of the Bible he says, "The Bible tells you to dress plainly, and you are mad for finery." *

WATER BAPTISM. A Pagan and a Jewish Rite, but not Christian. Proven by Scriptures and History. Confirmed by the Lives of Saints who were never Baptized with Water.—James H. Moon, Fallsington, Pennsylvania, 1902.

The above is the title of a well-printed booklet, which makes no claim to speak for the Society of Friends, or to be connected with any religious denomination. It is for the relief of the author's individual concern, to meet individual charges and questions which he has had to bear, from men and women who have declared to him that the avoidance of water baptism must necessarily be in a deliberate disregard of the plain commands of the New Testament.

In showing the more excellent baptism, or that proclaimed by John the Baptist and by Christ as Christ's own, and ordained by Him to supersede the baptism of water, the author has not failed to use much diligence in the examination of every known treatise on Baptism, including all the known writings of those called the Ante-Nicene Fathers, that he might "take away the first in order to establish the second."

The conciseness, terseness, and lucid directness of his expression in planting the steps of his unrelenting proof, are the results of a study by which he seems to have gotten his points well in hand, and so could condense them into a small treatise which wastes few if any words. The brevity of his full sentences will hold the popular ear, as the style of a disquisition would not. If dust is thrown over

the strong framework of proof to becloud it, it will be by harping on minor points of criticism or learning, which we have not thus far observed, but which the letter of all texts and statements is open to, and usually by men out of sympathy dwell upon as if the main issue.

The treatment of the whole subject is given under the following headings in their order:—"The Commission."—Paul's "Commission."—Water Baptism in History as a Pagan and Jewish Rite.—John's Baptism.—Water Baptism and Christian Baptism.—Baptismal Grace.—Water Baptism and Circumcision.—Water Baptism after Christ in Apostolic Times.—Water Baptism after the Apostles' Time.—Conclusion (in which the whole treatise is condensed into a Summary). On nearly every page the margin is boldly printed with Scripture references.

In standing upon our higher plane of Christian Baptism, we do not covet to invite controversy, nor to unsettle others where settlement will not follow; but we do deem it at least a kindness to render a clear answer to those who earnestly inquire of us the grounds of our position. That question is entitled to a response. We are in receipt of letters of inquiry on our view of baptism, which this book will save us much time in answering. While it does not appear as a Friends', or any sectarian book, yet we deem that many Friends may be thankful for the service done them personally by its conscientious preparation. Others, bound hand and foot by vested interests, will refuse to be convinced, no matter what is proved. But as an answer to those who wish to be answered, the book seems to the present reviewer effectually to vindicate all spiritual-baptists against the charge of coming a whit behind water-Baptists in reverential conformity to the expressed ordinances of Christ. Nay, it exhibits them as rendering a superior obedience.

Political Incorruptibility.

Fellow secretary with Milton, under Cromwell, was Andrew Marvell, who after the Restoration was returned as a member of Parliament. Naturally he took his seat on the opposition benches. As he was a person of influence, the ministry was desirous of getting him to act with them, and to this end used all available influence, of which bribery was not the least. These means failing, the chancellor resolved to make him a visit, in hope that personal entreaty aided by all the eloquence he could command might prove effectual. Ascending therefore to the garret, which for poverty Andrew made his lodging, he set forth how much more good he might accomplish if he cast in his influence with those "who were carrying on his majesty's government," etc. As a clincher to his arguments he slipped, as he went downstairs, a piece of paper into Andrew's hand. It was a draft on

the treasurer for a thousand pounds. He called back, when summoning his body to Andrew said, "Tom, my boy, what did I have for dinner to-day?" "Why you remember that little shoulder of mutton you had to buy for you." "Yes, yes. Well, Tom, lad, what are we to have for to-morrow?" "Why, sir, you know you told me to lay the bone and we would have a dish of so." "Quite right, quite right." Turning to the expectant chancellor he said, "Do you see that! Andrew Marvell's dinner is provided for him,"—handing back the draft—"these things to those who want them. I am here to serve my constituents."

Indian Aid Association.

The work of the Associated Executive Committee of Friends on Indian Affairs has been carried on during the past year in ten different missions or stations, of which four are in the northeast corner of Indian Territory are established among the Modocs, Seminoles, Ottawas and Wyandottes, respectively. The Indians in these stations are largely of mixed blood and are further removed from original conditions than those among whom the Choctaw missions are scattered. These stations are known as the Otee, Iowa, Shawnee, Pappoo and "Big Jim's Band" Missions; the latter being the last established. The work of our Executive Committee, as is well known to many present, has been practically confined to the Skiatook or Hillside School, located in the Indian Territory quite near the boundary line of Oklahoma. We have in the customary appropriation of funds to the management of this School, we have received monthly reports of the condition of the establishment and some correspondence usually taken place monthly between members of our committee and our friend Eva Watson, who has the principal share in the management of the work.

The condition of the School continues to be prosperous. The total enrollment of scholars for the past year has been an average of 88. In the average attendance 38 were Indians and 44 were white scholars; those below at the School numbered 25. The money paid for their tuition was \$2.

The enrollment in the Eleventh Month was largest, by three, since the School was started. While it is noticeable that the attendance as a whole has increased, we note that there are now more white than Indian children in the School, a reversal of the conditions two years ago. Many of the children have also a low percentage of Indian blood in their veins. The gradual entrance of whites into the School (partly allowed for the purpose of paying expenses), is also partially occasioned by a race admixture. To quote from a recent letter of our friend, John Nicholson:—

"The difficulties arising from contact with evil-disposed whites have increased."

"Much attention is given to the whites the hope of lessening the evils arising from their presence."

"The work has therefore become a very mixed one, with that for the whites taking the lead in some cases."

We give extracts from a letter from J. Watson, which we think will throw some light on the school life.

the states, "that there is a regular detail school work, changing each month, arranged for the scholars, which takes about one of each one's time daily." "The boys with the washing and the girls with the ironing."

It is our intention to carry on the work as well as it is done in an ordinary family of the same size, as possible, only such appliances as would be found in a thrifty family elsewhere."

The children, when coming to school, are fully deficient in regularity of life; they come to bed at pleasure, eaten what and when they liked."

The School is sought by many, because of its simplicity and purity of the home life that endeavor to uphold, and the regulation of that that we strive to secure."

We fall far short of our ideal, but yet are encouraged to think much good has been done through the agency of the School."

We are still twenty miles and more from school that lasts for more than four months, and are filling a place that would be unkind otherwise."

Our Sabbath School and Meeting are having an excellent influence on the community these could not be maintained without the school."

We have eight or ten former school girls are creditably married and settled, that we get great pleasure in meeting and hearing them; several of our boys, too, are good men, straightforward and earnest."

The Committee would state to this meeting that its treasury is practically empty, the amount shown as a balance in the Treasurer's report being already pledged for part of the next payment to the School. Many of the former friends who formerly supported this cause have deceased; this, we hope, will be a generally recognized fact by our young men and women, who, coming into positions of great responsibility, will find themselves unable to contribute to our funds.

On behalf of the Committee,
CHARLES EVANS, Sec'y.

One who profess to be the initiated do not know that we are living by something beyond the letter, "if we do not keep the faith," how can we expect others to seek it?—Ex.

TO BAD THINGS.—"Shall I give you a rate?" said Mark Guy Pease. "There was a man walking in the highway, and he fell down. No doubt it was partly his own carelessness. He, however, insisted that it was his accident. But the trouble was that when we went down he stayed there, and spent all his time telling everybody who would listen what happened. Some shook their heads and others, and that made him angry. Some sympathized with him and that made him sad. Then there came a simple man, who asked, 'How long have you been here?' It was ten, twelve, fifteen years or more. The simple man took his head. 'I am sorry, very sorry.' 'Yes,' said he who was down, 'it is a terrible thing to tumble down.' 'That may be,' said the simple man, 'but there is one thing a thousand times worse.' 'What is that?' 'Why,—not getting up again!'"

And he who overcomes shall eat
Of hidden manna, pure and sweet;
The food the Lord alone can give;
Bidding the soul to taste and live.
And thou wilt have a name unknown,
Engraved upon a pure white stone,
Whispered to thee by lips Divine.
O precious secret! His and mine.

—Faith Holden.

FOR "THE FRIEND."

Thoughts on Meetings for Divine Worship.

On the way to attend New Garden Midweek Meeting, held at Winona, Ohio, we viewed the north and south road through the valley containing the little town, and counted eleven vehicles carrying Friends to meeting, six more had either turned in or were not yet in sight, while almost as many Friends were within walking distance.

When seated in the house the teacher with her interesting school of twenty-seven children, all but four of whom are members, quietly took their places. Seven more had recently gone to the Barnesville Boarding School, and most of the twenty-four under school age are often at meeting. Excepting a few elderly men, each man had left a life of physical toil, mostly upon a farm of his own, to meet for worship on that bright Fifth-day morning. Those not acquainted with Friends express surprise that hard-working, busy people should leave all, in such fine weather in the busy season, to assemble themselves together for what may prove to be a silent hour. They know full well that even the promise of a prepared sermon with skilled musicians and trained singers would not gather others week after week from their outward affairs. This attitude of the popular mind comes from a misapprehension of the nature of divine worship. Priestcraft, rite and ceremonial have become identified with their notions of church worship. The precious promise to those, even the two or three, gathered in our Saviour's name, that He would be in the midst of them is almost forgotten. In their reliance upon a paid master of ceremonies, they do not know of that living silence in their meetings where the life, as it rises and fills each waiting vessel, overflows from one to another.

Robert Barclay compares the blessing of such a meeting to many candles lighted and put in one place: they do greatly augment the light and make it more to shine forth. So, when many are gathered into the same life, there is more of the glory of God, and his power appears, to the refreshment of each individual, for that he partakes not only of the light and life raised in himself, but in all the rest.

Isaac Pennington compares the warmth of life to a heap of fresh and living coals, warming one another, inasmuch as a great strength, freshness and vigor of life flows into all. Living ministry in such meetings finds living hearers, and who of them could think of allowing trivial affairs, or even pressure of business to hold them from their share of the blessing? As we abide in that power, that so marvelously manifested itself in the gatherings of early Friends, we can adopt the words of the apostle to the gentiles who knew what it was to feel so abased as to count himself the chief of sinners, and what it was to abound in Grace, when he said, "I beseech you there-

fore, brethren, by the mercies of God that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service."

The exercise of our late Yearly Meeting on account of a lukewarm state amongst us is alluded to in the following closing minute.

D. S.

"On considering the State of Society, our dear absent Friends were brought to our remembrance, with desires that they also might be made partakers of streams of Divine consolation. Although it may at times be difficult to leave our business and take our children to attend midweek meetings, and may even seem that a positive loss would be sustained in material things and be a sacrifice to our comfort, yet, it being a sacrifice, which the Master requires of us, we certainly can trust Him, who is able to "bless the little or blast the much," and that in a spiritual as well as a temporal sense, "our bread shall be given us, our water shall be sure." But if we turn from intimations of duty, even though they may appear small, there is great danger of the enemy leading us away, farther and farther, until the plaintive language may be applicable, 'The summer is past, the harvest is ended, and we are not saved.'

"The faithfulness of our forefathers in promulgating and maintaining the testimonies of truth, have borne fruit to his praise, and we are now benefited by their faithfulness, 'Other men labored, and ye have entered into their labors.' Yet this does not excuse us from faithfulness on our part, but rather should incite us to further endeavors in the cause, 'which is dignified with immortality and crowned with eternal life.'

"The testimonies of Friends in plainness of speech, deportment and apparel was felt to be in accordance with the Apostolic injunction, 'Whose adorning, let it not be that outward adorning of plaiting the hair and of wearing of gold or of putting on of apparel,' but let it be the hidden man of the heart, even the ornament of a meek and quiet spirit, which is, in the sight of God, of great price." May we be enabled to draw our supplies from Him, who bringeth forth out of his treasury things new and old, and who can alone enable us to maintain these things, not in the oldness of the letter, which killeth, but in the newness of the Spirit, which giveth life.

"With feelings of thankfulness for a fresh extension of Divine favor, during the various sittings of this Yearly Meeting, turning as we trust the hearts of the fathers to the children, and the hearts of the children to their fathers, we now solemnly conclude, to meet at the usual time and place next year if permitted so to do.

"NATHAN R. SMITH, Clerk."

HARM DONE BY CALLING OURS A CHRISTIAN COUNTRY.—One of the greatest hindrances to the spread of the gospel in heathen lands is the ungodliness manifest in nominally Christian lands. The vice, drunkenness and immorality prevalent in town and city are heralded far and near in Islam countries as evidence of the failure of Christianity to evangelize the nations in which it has its seat. It is said that educated Moslems in India take note of the wickedness of Great Britain and

faithfully report its moral condition to their co-religionists, who use it with terrific effect in counteracting the efforts of Christian missionaries in their work of evangelization. No doubt a distinction should be made between true and nominal Christians, but the Moslem mind is slow in recognizing and acknowledging it as we do. Thus it is in heathendom generally. Japan and China have their representatives in America, and they see much among us that is hard to reconcile with our Christianity, and they send home what they observe and hear that is adverse to our religion. The news spreads rapidly to our injury among those of their countrymen whom our missionaries seek to enlighten and to save. There are also Englishmen and Americans residing in India and China and other pagan sections who lead lives that are a like reproach to the Christian name. "Let him that nameth the name of Christ depart from iniquity. *Ex.*"

Josiah Coale.

Selected.

Josiah Coale, born of a family of good repute among men, near the city of Bristol, was convinced of God's everlasting truth through the powerful ministry of that servant of God, John Audland, about the year 1655.

The word of life pierced Josiah to the heart, and wrought effectually to his salvation and redemption. He walked for a time under deep judgment, and mournfully, so that he became a grazing stock and wonder to his former acquaintance. But God's arm was strong, and plucked up every evil plant, and purified him, and made him fit for the Lord's use, and an able minister of the everlasting gospel of Christ Jesus; an incessant laborer, few more spent in God's service.

His soul seemed wholly bent to the renouncing the name of Christ; and the enemies of Truth he ever accounted his enemies.

His declaration was to the ungodly like an axe, or hammer, and sword sharp and piercing, being mostly attended with an eminent appearance of the dreadful power of the Lord, and the cutting down many tall cedars, and making the strong oaks to bow, but to the faithful and diligent who minded the things of Christ more than their own, oh! how soft and pleasant were the streams of immortal life that ran through him to the refreshing of those! It was his life and joy to be speaking the word of the Lord, and not his own words; and many thousands were living witnesses to the power, virtue and efficacy of his ministry; but, above all, he was terrible to the sowers of strife, secret backbiters, and such as rend the holy body and in their own selfish spirits set themselves over their brethren, by feignedness and deceitful appearances, to the destroying the simple-hearted.

In his conversation, his kindness was so mixed with seriousness, and his familiarity with a staid and exemplary behavior, that he was an honor to the truth and therein a confirmer of his holy testimony and weaker brethren. He was hardy, valiant, and fixed; not of those who shun the cross or sell their birthright for a mess of pottage. He balked no danger for the sake of his blessed testimony, which he bore faithfully in England, Holland, the Low Countries and Barbadoes; and had

also sore travails among the heathen in America, as in Maryland, Virginia, and New England, preaching the gospel of Christ among them. He travelled on foot through the wilderness, from Virginia to New England, in danger of wild beasts and venomous creatures, enduring much cold, hunger and weariness, and through bogs and waters, often obliged to eat chestnuts for food when hungry, as appears at large in the record of New England's persecution.

He was a good example, as well for his liberality as faithfulness, for as the prosperity of God's truth was above all things, so he was always cautious of making the gospel chargeable to any; having some estate of his own, he freely employed it in the Lord's service, counting nothing too dear for the name and service of the Lord.

Thus having labored his natural strength away in this heavenly warfare, for the promoting of the glorious truth of the Lord, and for the advancement of its interest and dominion in the world, for above twelve years together, he did with perfect understanding, and an extraordinary enjoyment of the Lord's life, majesty and presence, to the refreshment of beholders, cheerfully lay down his mortal body.

George Fox, visiting him on his sick bed, queried whether he had anything upon his mind to write to friends in England or beyond sea. He said he was clear of writing to them; and that as the Lord by his power had carried him through England and other nations, so he had nothing to write; but he desired his love to all Friends.

One thing, he said, did lie upon him, in that he understood Lodowick Muggleton (a most blasphemous ranter) and his company would boast against him, and understanding George Fox was preparing a book in answer to the said Muggleton, desired he might put in a few words as his last testimony against Muggleton; which George Fox desired him to prepare, and he would call for it as he came back.

George Fox, when he came back again, found Josiah sitting by the fireside, filled with the power of the Lord, and speaking to friends about him as followeth: "Well, friends, be faithful to God and seek nothing for self, or your own glory; and if anything wrong arise, judge it down by the power of the Lord God, that so you may be clear in his sight, and answer his witness in all people; then will you have the reward of life. For my part, I have walked in faithfulness with the Lord, and I have thus far finished my testimony, and have peace with the Lord, and his majesty is with me, and his crown of life is upon me; so mind my love to all friends."

Then he spake to Stephen Crisp, saying, "Dear heart, keep low in the holy fear of God, that will be thy crown." Afterwards he said, "A minister of Christ must walk as I have walked." Then he desired George Fox to pray that he might have an easy passage; and friends seeing him begin to be heavy, desired him to go and lie down on the bed, which he did, and he was filled with the power of the Lord and Seed of life, which was over all. So in that he departed in the arms of his friends, as he sat on the side of the bed, and had a very easy passage into eternal life. He died in London, aged thirty-five years, in the year

1668. He labored in the ministry twenty years.

Does Paul Forbid Women to Teach in the Church?

BY J. M. ADAIR, (in the United Presbyterian Witness)

[Although the following article traverses ground not unfamiliar to Friends, yet it will even for our members to review the ground of doctrine from season to season, as in this instance the honest inquiry and view of a Presbyterian clergyman is of added interest to us.—Ed.]

The answer to this inquiry, yes or no, will be according to the interpretation given to two passages in Paul's epistles. The first, in 1 Cor. xiv: 34, 35, "Let your women keep silence in the churches, for it is not permitted unto them to speak, but they are commanded to be under obedience, as also saith the Lord. And if they will learn anything let them ask of their husbands at home, for it is a shame for women to speak in the church." The other passage is in 1 Tim. ii: 11-12, "Let a woman learn in silence with all subjection. But I suffer not a woman to teach nor to usurp authority over the man but to be in silence."

It must be admitted that these passages seem to give an affirmative reply to this question that Paul does forbid woman to teach the church. And commentators favor this interpretation; so far as I have had access to their writings I find that almost without exception they adopt the view, that in these passages that woman shall take part in the public exercises of teaching and prayer in the church. In Jamison, Isett and Brown it is said, "The women should learn, not teach." "She should not even take part in the public assembly." Good says in his Paraphrase, "It behooves women to be hearers and not speakers in religious assemblies." The same interpretation is given in the Pulpit Commentary, the Preachers' Catechism, and by all the older commentators. The Bible Commentary has as following on 1 Tim. ii: 11: "In public worship the man only is to teach as well as to pray." Shaff Herzog's Encyclopedia says in the article on Woman: "Paul seems to refuse woman the right of speaking in the public meeting of the congregation." That this opinion as

"Certainly to prophesy is 'to speak,' and the prayer is speaking; and these are services which Paul expressly admits to be incumbent on women in the congregation or assembly, instructing the brethren in the garb to be worn when they thus appear. So all words of public singing are to be included under speaking. But the Greek in which Paul used is not so sweeping as to ban all speaking from women in meetings. It merely says, 'Let women keep silence in the church.' In the assembly for worship 'it is not permitted unto them to talk';—'it is a shame for women to talk in the congregation,' and true Friends comply with this prohibition, their doctrine of ministry forbidding not only women to talk on such occasions, or to do anything or teaching that is below the spirit of prophecy. To speak then, but not mere talk, is permitted both by the apostles and by Friends, male and female, (both) 'one in Christ Jesus' when it is of the living spring of prophecy, prayer, or praise that is in the immediate, living authority of 'the Head over all things church.'—Ed.

very prevalent might be inferred from following graphic lines:

But the brethren only seemed to speak; modest the sisters walked, and meek; and if ever one of them chanced to say that troubles she met with on the way, how she longed to pass to the other side, or feared to cross over the swelling tide, no voice arose from the brethren then: not one speak but the 'holy men,' or have ye not heard the words of Paul, 'h, let the women keep silence all?'

This prohibition is not supposed to be lodged only against what is known as official teaching; or that what Paul means is that women to be excluded from the ranks of the ministry, but it applies to all teaching of the Divine Word in the public or promiscuous assembly; that women have no right to take part in preaching the word or conducting religious exercises in the presence of men.

This interpretation has been so long and so generally held, that many women in the church everywhere have felt themselves under the necessity, and however well qualified to engage in Christian work, they have feared to do so lest they might expose themselves to the charge of officious meddling in sacred things, and in the displeasure of the Head of the Church. In instance of this the writer met some years since in Thomasville, Georgia. The Southern Presbyterian church is very conservative on the question of women's rights to engage in Christian work. Some good women in the congregation there lamenting the cold state of opinion in their congregation, agreed to meet weekly in the church for prayer. On one occasion these good women were holding their sister meeting when a man dropped in to enjoy the meeting. The ladies felt that they should not proceed with their meeting in the presence of a man and one of them went to the parsonage near by for the pastor, who came in and closed the meeting as they supposed in a scriptural manner.

Now it must certainly be apparent to all that this interpretation of these passages is incorrect and Paul has really forbidden women to teach the Word in the promiscuous assembly, then much of her work as it is carried on today in the Sabbath school and mission fields is forbidden. For it is certainly true that what is given is still binding. If the Head of the Church by his Holy Spirit led Paul to decree in these verses that women should be silent in the church and not take part in the work of teaching that is the end of the controversy, his will is absolute law from which no dissent will be allowed. But it is held by some that the customs of society have rendered this prohibition necessary have changed that it is no longer necessary and now has become obsolete, and women may lawfully disregard it. But in reply it must be said that the laws and appointments of the law of the testament church are not subject to any change but remain in force however the customs of society may change. If this prohibition was given and women were forbidden to teach the Word in the promiscuous assembly in Corinth or any other place in that day, the prohibition is still in force whatever may be the customs of society in our day.

In the great question is, has Paul really

given such a prohibition or are not these passages capable of a different interpretation?

(To be continued.)

Counsel to our Members as Citizens.

(Concluded from page 162.)

In accordance with the concern which we have felt at this time, we believe it will be proper to revive some of the excellent counsel of our ancient Friends. Our honorable elder, George Fox, in his unremitting care and labor for the preservation of the members of the Society, in consistency with its religious principles, thus addresses them in the year 1659: "Friends, take heed of joining with this or the other, or meddling with any, or being busy in other men's matters; but mind the Lord, his power and his service, and keep in that which answers the witness in all." And again, in 1685: "Whatever bustlings and trouble, tumults and outrages, quarrels and strife arose in the world, keep out of them all; concern not yourselves with them; but keep in the Lord's power and peaceable truth, that is over all such things; in which power ye seek the peace and good of all men."

Stephen Crisp, under a deep concern respecting the state of our Society, and an awful prospect of the commotions and judgments then impending, endeavors to bring Friends to a serious recollection of the place of their beginning, the day of their first conviction: showing that the light which shined in their hearts, being Divine, it led them into an entire subjection to the cross of Christ, and enabled them to despise the pleasures, treasures, honors and friendships of this world, and produced fruits which were truly acceptable in the sight of the Lord, and which must ever be the case of the faithful in all ages. After describing various snares by which some were induced to think that a "day of more liberty was come," in which "they need not stand so straitly to try things and words as at first," and were now esteeming some things to be "little," which at the beginning they saw were "great things," he says: "O Friends, be ye all watchful, and take heed lest any of the testimonies of Truth be laid waste; for that which leads thee to be weary of bearing witness to the Truth, and to lay it waste, the same will lay thee waste, and bring thee into such a state, as thou wilt want the Truth to bear witness for thee. Therefore, let all lukewarm ones, who are neither hot nor cold, be awakened; and all that have gone backward, be warned to return to their first love; else the Lord will come against them; and the day hastens that will divide such their portion among hypocrites, except they repent."

Although our ancient Friends respected and supported the governments under which they lived, declaring that "Magistracy is God's ordinance, the good ends thereof being for the punishment of evil-doers, and the praise of them that do well," and availed themselves of the protection which the law affords, using the elective franchise according as they individually felt freedom so to do; yet, in times of civil disturbance and excitement, they were concerned to advise their fellow members to refrain from participating in those convulsions, with reference to which Stephen Crisp thus addresses them: "Oh, Friends, while all these things are working and bringing to

pass, repose ye yourselves in the munition of that rock, that all these shakings shall not move; in the knowledge and feeling of the eternal power of God, keeping you subjectly given up to his heavenly will; and feel it daily to kill and mortify that which remains in any of you, which is of this world; for the worldly part in any, is the changeable part; and that is up and down, full and empty, joyful and sorrowful, as things go well or ill in this world. For as the Truth is but one, and many are partakers of its spirit, so the world is but one, and many are partakers of the spirit of it; and as many as do partake of it, so many will be straitened and perplexed with it; but they who are single to the Truth, waiting daily to feel the life and virtue of it in their hearts, these shall rejoice in the midst of adversity. These shall not have their hearts moved with fear, nor tossed with anguish, because of evil tidings; because that which fixeth them remains with them."

"And when you see divisions and parties, and rendings in the bowels of nations, and rumors and tempests in the minds of the people, then take heed of being moved to this party or to that party, or giving your strength to this or that, or counselling this way or that way; but stand single to the Truth of God, in which neither war, rent nor division is. And take heed of that part in any of you, which trusts and relies upon any sort of men of this world in the day of their prosperity; for the same party will bring you to suffer with them in the time of their adversity, which will not be long after; for stability in that ground, there will be none.—When they shall say, come join with us in this or that, remember you are joined to the Lord by his pure spirit, to walk with Him in peace and righteousness; and you feeling this, this gathers out of all bustlings and noises, and parties and tumults, and leads you to exalt the standard of truth and righteousness, in an innocent conversation, to see who will flow unto that. And this shall be a refuge for many of the weary, tossed and afflicted ones in those days, and a shelter for many whose day is not over."

Having thus brought into view the exercise with which we have been impressed, and the counsel which our early Friends published on similar occasions, it is our affectionate desire that those in membership with us may regard the concern with that seriousness and weight which its importance claims;—that as the Truth is unchangeable, we may be engaged to bear a harmonious testimony to its power and efficacy; walking by the same rule, and minding the same thing. We should then experience the fear of the Lord, as a fountain of life, to preserve us from the various alluring objects, which under the promise of emolument to ourselves, or of eminence in civil society, are pressingly soliciting our acceptance, and by which the soul may be defiled.

When capable of duly estimating the awful and responsible station of a member of the body of Christ, we are made sensible of the liability to defilement, by uniting with anything that is impure; and assuredly know, that that which stands not in the counsel of God, must ever be regretful to the kingdom of his dear Son, our Lord Jesus Christ. Oh! how very important are the obligations resting upon a holy profession! What fear, what

circumspection and caution should always attend those who take upon them his holy name—that sincerely and steadily seeking to honor him in their humble consistent walking, they might be instrumental to the spreading of his reign upon the earth, who is King of kings and Lord of lords.

With the salutation of unfeigned love, we are your friends and brethren.

Signed in and on behalf of our Meeting for Sufferings, held in Philadelphia, the 15th of Eighth Month, 1834.

JONATHAN EVANS, Clerk.

Trust Schemes.

Extract from annual address of President—the Lady Somerset—of National British Women's Temperance Association, Sixth Month 4th, 1902.

The cultivation of a candid and tolerant spirit does not render it necessary that we should blindly accept whatever is offered us as a solution for the reform of the licensing system. It does not require that we should accept a stone as a substitute for bread, or a serpent instead of a fish. The experience of the country, with respect to grocer's licenses, and with regard to political and social clubs, has been such as to warn us against a too easy acquiescence in the proposals of men who, from good, honest motives, but partial and unbalanced views of the subject, evolve schemes which, however specious, are not calculated to promote, but rather to hinder, the temperance reformation. None doubt the motives which influenced Gladstone when he brought forward his Grocers' License scheme. He meant to give the nation a fish, but it turned out that he had given them a serpent, and the undoubted excellence of his motive did not in the least change the character of his gift. Experienced and alert temperance reformers strongly opposed the measure. Many who were regarded as men of light and leading, and who actually had in other matters much experience and sound judgment, supported it. They lacked, however, the closer knowledge of the subject, and saw in it only many commendable characteristics, and therefore, brushing aside the warnings of temperance experts, they induced the nation to accept it. The measure has turned out as injurious in its effects as though it had originated with the most dishonest, and had been supported only by the most foolish people. Such experiences, I believe, have been given to us for our warning, and it is incumbent on us to be vigilant and firm in all our dealings with the projects of liquor legislation. The experience of the results of the Grocers' Licenses and of the Beer Bill, introduced to promote temperance, with their disastrous effects on national sobriety, ought to make us wary of any scheme for drink selling or drink distribution, for blunder now may lead to national calamity, and eventually to national disaster.

The Trust scheme introduced by Earl Grey claims our close attention. It is temptingly held out to us, and, like the forbidden fruit, can certainly be very speciously recommended. The advocates of the scheme argue that public-houses under the Trust would be much better managed than public-houses under the trade, that the licensing laws will be less

often broken, and that conduct which, without being illegal, is deemed to be injurious to the customer himself, will be discouraged to a greater extent in the public-houses belonging to the Trust than in those of their rivals. This seems to be the object of the scheme, and the promoters have carefully considered the measures to carry it into effect. The argument, therefore, is that under these circumstances the Trust houses will be much less injurious to their customers, as well as to the neighborhood in which they are situated, than the ordinary drink shops. Now to me this is not at all clear. Harmlessness and respectability are not, I believe, one and the same thing. The Grocer's Licenses have in the past, I think, proved this; their respectability has been a considerable element in their increasing danger. Political and social drinking clubs, in their earlier years at any rate, were esteemed highly respectable, and attracted as regular visitors many young and middle-aged men who had abstained from attending public-houses; but the evidence which was given before the Royal Commission has undoubtedly proved that club frequenters have not infrequently become drunkards. There is, therefore, a reasonable fear that the lure of respectability of the Trust's houses will constitute a peculiar danger to the young men in the neighborhood in which these houses are planted. Now it is most important to note that the special, indeed the supreme danger of the public house or of the drinking club is not that the customer should not now and then get drunk, but that it should become a place of habitual resort, where steady drinking, short of drunkenness, will be carried on, and where the diseased appetite for alcohol will be acquired, for when this is accomplished the man, as a rule, at least, is on the road to ruin. Gradually and imperceptibly he will become a slave to this imperious appetite, although his respectability may for a time hardly be held in question. The highly respectable character of houses such as those held by the Trust are specially suited for doing an extensive business of this nature, at little danger to their reputation for respectability, for, when a customer reaches the offensive stage of his downward career, the Trust's house as a place of habitual resort will be made uncomfortable for him, and he will gravitate to the lower class of public house, where such customers are to be found in plenty.

There are grave errors in the public mind as to what it is that really constitutes the chief evil of our drinking customs. It is not such drunkenness as that of which the police courts take cognizance; it is the enormous amount of drinking short of absolute drunkenness, which is usually talked of as harmless or as a matter for jest—drinking which the police would never think of dealing with, and indeed are not entitled to deal with—but the drunkenness in which a large proportion of the people habitually indulge, and which in time develops the fatal diseased appetite for alcoholic liquor, causes the perversion of brain function, and is now recognized as the chief agent in the production of physical and mental decadence and the premature death-rate of this country.

Many, I am aware, will regard this suggestion as to the extent and effect of the evil as

a great exaggeration, but it may be doubted whether it gives anything like an adequate idea of the actual magnitude of this destructive agency. It is now a commonplace to say that men above suspicion, men of science and of wide social experience who are not temperance extremists, have over and over again uttered warnings against this national peril. For instance, the late Sir William Gull, physician to Queen Victoria, told the Lord's Committee on Intemperance that: "It is one of the commonest things in English Society that people are injured by drink without their drunkards. It goes on so quietly that it is even very difficult to observe. A man's nearest friends will frequently not know it." And he continued: "I should say from my experience, that alcohol is the most destructive agent that we are aware of in this country. There is a great deal of injury done to health by the habitual use of wines in their various kinds, and alcohol in its various shapes, even in so-called moderate quantities. It leads to the degeneration of tissues; it spoils the health, and it spoils the intellect. I would like to say that a very large number of people in Society are dying day by day poisoned alcohol, but not supposed to be poisoned by it."

That is very striking testimony indeed, and suggests something of the extent to which drinking in a degree short of police-court drunkenness prevails, and clearly indicates the character of its effects. The report of the investigating committee of the British Medical Association strikingly corroborates Sir William Gull as to the extent of this harmful drinking which is not at present recognized as drunkenness. They reported that the committee had found that out of a little over fifteen thousand men, all of whose cases of death had been investigated, only forty per cent., including "teetotallers," had been "strictly temperate." The other sixty per cent., or three-fifths of the whole, had been in varying degrees intemperate, a considerable proportion of them—about a half—markedly so.

Now it is not with "police-court drunkenness" merely or mainly we, as temperance reformers, have to deal. We have to deal with the intemperance of the whole sixty per cent. among adult males, and with a very great amount, we cannot as easily estimate, much amongst women. Can we confidently reckon on the Trust's public houses to do us?

First, what can they do for us with the drunkards? Nothing, or next to nothing. They can refuse drink to these disease-stricken people should they come to their houses in a state of drunkenness. They will certainly do what the other publicans also are bound by law to do, and sometimes they keep the bar if a customer is very drunk and offensive. But the refusal of drink in the house belonging to the Trust will simply send the drunkard to the place where he gets his drink now, and cannot see in what way the introduction of such a house belonging to the Trust will in any way or to any extent reduce drinking among the class contemplated. And what will they do for us with the enormous army of partially intemperate? They can do nothing in the way of curing the insatiable appetite. They can and will supply comfortable, orderly place in which a cus-

rink respectably, and even copiously, so as he does not give obtrusive signs of inebriety. They will only have one house here among many others. If they do not vary what their customers want, their customers will go elsewhere.

The Special Commissioner of the United Nations Alliance, visiting a house professing to be conducted in the manner in which the houses are to be conducted, was told by the manager: "But my principal bother here is to get people coming from other places. The place is doing no good. One of its kind places is no use. If we had all the houses in the place under our management we could do more good, but what would be the use of closing earlier, or anything like that, if our customers would just go across the street to the public-house opposite?"

Far, therefore, that so far as the promotion of temperance—and that is the point in which we are chiefly interested—is concerned, the trust's houses, except under such conditions as will rarely be found to exist, will be a failure. But they will not be innocuous. If the object of their projectors was to popularize temperance drinking, to increase the consumption of alcoholic drinks, to set up establishments which, by being exceptionally attractive to a section of the community who do not frequent public-houses, will be quite respectable enough as places of resort, they have a scheme likely to accomplish their purpose in every particular. Such, I well know, is the object of the projectors of this scheme. But what then? How does this fact affect me? I fear it will not do so at all. There is no proverb about good intentions which I can quote. And most of us know that the great blunder of the Beer Bill was perpetrated by men who had the best of motives; that the Stone's Grocer's Licenses Act, which had to have been opposed by nobody but fools, was granted with the object of promoting temperance; and political clubs, where pure drink was to be supplied and consumed in an entirely blameless manner, the publican and private interest have been eliminated from the management of public houses, had the same laudable purpose. If these schemes were intended to be resisted, and, although promoted by men with good intentions as are those of the promoters of the Trust scheme, each has cursed the country. They have all through special facilities for drinking, co-operated as feeders of traffic, by creating and strengthening the craving—the most fatal of modern evils—among sections of the community; but for them, would have been comparatively free from it.

The Bible is not academic but "It was as if before it was a literature; it was an exercise before it was an expression." It was as if living epistles," then written ones, and added to live again. It does not belong to scholars only, but came from the lives of men who were filled with the Holy Spirit, and may be received by other plain men who are filled by the same Spirit. For sympathy, for every sorrow, for every joy, his Bible arsenal has an appropriate weapon. Every one who lives by it will have the truest sense of good success. Let us ad-

mit its truth into our minds; submit our lives to be ruled by its precepts; commit its watchwords by heart, transmit it to others.—*McDowell.*

A YOUNG man who had been brought up in a religious home spent a summer in a community of strangers, persons who, though of considerable social standing, yet gave little consideration to the things of religion. The young man wrote home, after a few weeks, "Religion never before seemed so important to me as it does here, where it is discounted. You cannot imagine the smallness of the lives and interests of these folks. Their conversation, and especially their constant social bickerings, would astonish you. Nobody seems really happy, with a deep-down unchanging happiness. As near as I can make out, all this is due to the lack of real spiritual impulses. A true revival of religion would mean the social and intellectual salvation of this entire community."

WE are distracted by the many schemes for good, which are sometimes the device of despair rather than the fruit of faith. We are disheartened at the failure of the partial panaceas that appear like false Messiah's and draw after them many. We are weary of the slow coming of a better time, and the rectification of all things. What peace and power it is, then, to realize that the prince of this world is judged already; that the Lord, our Redeemer reigneth, that the Kingship of God is already fixed in its everlasting seat. The Cross is that judgment throne; its victory is our sphere, the grace of it is our gospel, and our charge. For the supreme sake of the kingdom of God, let us pay more attention to the gospel than to the kingdom. It is through the church of the judged and saved that the kingdom comes. Let the kingdom be what the true church makes it. But let the church be what the gospel makes it, rather than what our dreams of a millennium seem to require. The gospel is our business, the kingdom is the Lord's. We were not charged with the kingdom. Ours is the gospel, the Spirit, the church; but thine is the kingdom, the power and glory forever.—*Forsyth.*

ENCOURAGEMENT.

'Twas long ago I read the story sweet,
Of how the German mothers, o'er the sea,
Wind in, throughout the yarn their girls knit,
Some trinkets small and tiny shining coins;
That, when the little fingers weary grow
And fain would lay aside the tiresome task,
From out the ball will drop the hidden gift,
To please and urge them on in search of more.
And so I think the Father, kind, above,
Winds in and out the skein of life we weave,
Through all the years, bright tokens of his love,
That, when we weary grow and long for rest,
They help to cheer and urge us on for more;
And far adown within the ball we find,
When all the threads of life at last are spun,
The grandest gift of all—eternal life.

Items Concerning the Society.

George Fox charged his fellow members to instruct and teach "how that Christ, by the grace of God, tasted death for every man, and gave himself a ransom for all men, the propitiation for the sins of the whole world."

The Australian General Meeting, which opened in Melbourne on the third of Eleventh Month, is

reported as a very satisfactory occasion. A deputation of three from London Yearly Meeting, was in attendance.

"George Fox in New England in 1672" is the title of a valuable little reprint, says the *London Friend*, by Augustine Jones, president of Friends' School, Providence, R. I. "The missionary energy," says the same, "of the early Friends is in striking contrast to the quietism that came over them in subsequent years, and Fox's visit to New England is but one illustration out of many. It is of interest to recall that the New England Yearly Meeting dates as a representative body from the year 1661, before the time of the formation of the London Yearly Meeting as such."

In a lecture delivered last week under the auspices of one of its branches by a clergyman, nominally of the church of England, on St. Francis of Assisi, the speaker referred to "Quakers" and other Nonconformists as "heretics." At the close of the address the chairman invited discussion, when one of the audience (a member of the Church of England), challenged the lecturer's right to such phraseology. The term, however, was not withdrawn, and on the point being pressed, the chairman ruled the objector out of order, amid the applause of those who were responsible for the meeting.—*London Friend.*

Notes from Others.

The first thanksgiving service known to have been held on the North American continent was observed with religious ceremonies conducted by a priest of the Church of England named Wolfall in 1578 on the shores of Newfoundland.

John G. Paton, the venerable missionary of the New Hebrides, has recovered from a long and severe illness, and at the age of seventy-six has returned to his work on the island of Aniwa. He was enthusiastically received by the natives.

F. C. Taylor, who recently took charge of the new mission at Valdez, Alaska, thinks that few people in the States can begin to realize the terrible conditions obtaining in a new mining town.

The *Advance* says the Bible lives to-day because its books take hold upon the great fundamental ideas of God, life, duty; which no change of fashions in thinking, manners, new inventions, or new civilizations can disturb.

F. D. Phinney, superintendent of the Baptist Mission Press at Rangoon, Burmah, has designed and perfected a modification of the Remington typewriter with Burman characters. It is very ingenious and as easily operated as those carrying English characters.

The *Universalist Leader* believes that "the most destructive preaching in the world is the argument in defence of or apology for the eternal verities. The people are not going to believe the minister's doubts, and are not going to rush to the support of his uncertainties."

The *Examiner* (London) has the following: "There can be no manner of doubt that if ever the kingdoms of this world are to become the kingdom of God, the work must be done by God's people here and now. The city of God is not merely a pattern laid up in heaven, it is an ideal meant to be realized."

Many Catholics and a number of the Protestant and Jewish clergy of France believe that the separation of Church and State would end the present religious conflicts in that country.

Dr. R. P. Johnson, pastor of a Fifth Avenue Baptist church, New York, advocates the practice of admitting people to the Baptist churches without baptism.

General Booth says: "Our flag flies in forty-nine countries. We have 7,495 societies, and our preachers travel in thirty-one different languages. We have 13,486 chief officers, 3,000 employees and 47,000 local officers. There are 17,000 men playing in our musical bands. The Army publishes sixty-one periodicals and twenty-seven newspapers in twenty-three different languages, with an annual circulation of 52,000,000 copies."

On behalf of the Victorian Sunday School Union, Victoria, Australia, F. W. Fry travels by van to reach the people of the forests and of the timbered lands in the north and near the coast. He is a grandson of the famous Elizabeth Fry. W. Fry travels about four hundred miles on each trip, much of it through lonely roads and far from any habitation. By the aid of a lantern and slides and a micro-photograph he never fails to secure an audience and to give them wholesome instruction.

The pope, in his apostolic letter appointing the commission for promoting the study of the sacred Scriptures, says: "The fitting seat for such a council is Rome, under the very eyes of the supreme pontiff himself." A portion of the Vatican library has been set apart for the use of the commission, and a large collection of codices and volumes dealing with biblical subjects are to be added.

But the *Germania* of Berlin, the most influential Catholic organ of Europe outside of Rome, now reports that on account of the energetic opposition of a number of prominent members of the Cardinals' College, the papal international commission for biblical studies will for the present suspend its activity.

SUMMARY OF EVENTS.

UNITED STATES.—The President in his message to Congress recommends the regulation by appropriate legislation of monopolies, unjust discrimination, and other evils of "trusts;" recommends the repeal of the duty on anthracite coal, urges the increase of the navy, favors arbitration to settle differences between nations; calls attention to the claims of Cuba upon this country, and the obligation it is under to deal generously with it, considers it undesirable to make extensive radical changes in the tariff laws, and recommends the adoption of reciprocity treaties with other countries; states that in dealing with the Indians the aim should be their ultimate absorption into the body of the people—though in many cases this absorption must and should be very slow. In regard to labor and capital, he says: "Every employer, every wage-earner must be guaranteed his liberty and his right to do as he likes with his property or his labor so long as he does not infringe upon the rights of others."

The Coal Commission has been again engaged in bearing the testimony of miners, etc., some of whom complained that the promises made by the operators to reinstate them in their former positions had not been fulfilled.

The production of gold in the United States during 1901 was about \$78,606,700, and the entire stock of gold in the country, including bullion in the mints, is estimated at \$1,192,395,607.

The Secretary of Agriculture in his annual report says that he finds that "the demands of many public institutions for men to conduct research in scientific fields and for ability to manage agricultural enterprises encourage us to make every possible use of the opportunities thus afforded. The teaching of the science of agriculture and of the sciences relating to it are receiving more attention in the colleges instituted for the purpose, many of which have neglected their full duty in the past."

The methods devised for the analyses of soils in the field have been so perfected that the amounts of nitrates, phosphates, sulphates and the like can be determined to within ten or five pounds per acre, one foot deep. Concluding his review of the Soil Survey work, the Secretary says: "I know of no line of work which has been underwritten of more fundamental importance than that of the Division of Soil management, nor one which offers promise of more valuable results to agriculture. It will tend to solve fundamental problems, giving a reliable basis for the development of the best methods for the cultivation, fertilization and cropping."

It is stated that there are nearly 8,000,000 children in the United States under twelve years of age whose lives

have been insured in three companies, which have been doing such business more than twenty-nine years. Public attention has lately been called to the subject of infant insurance by the death of certain very young children in this city, under suspicious circumstances, whose lives had been insured; and additional legislation to regulate this business has been proposed.

The Commissioner of Immigration reports that during the year ending Sixth Month 30, 1902, there was a total alien immigration of 730,798. The increase of immigrants in 1902 over those of 1901 was 167,930. The larger numbers came respectively from Italy, 184,683; Austria-Hungary, 175,900; Russia, including Finland, 109,724. The total number from those three countries was 470,304.

The Atmospheric Product Company has established works at Niagara Falls for the manufacture of nitrogen from the air by means of electricity. The method, as described, is this: A large chamber containing dry and cold air is supplied with electric discharges of small quantity and high tension, and the discharges produce the chemical changes that result in gaseous oxides of nitrogen. The air from the chamber, so charged, is conducted to an absorption tower, where it comes into contact with the substance whose nitrate it is desired to obtain. If the air is carried into pure water nitric acid results, if into caustic potash, saltpetre results; if into caustic soda, Chile saltpetre is the product.

This annual report of Factory Inspector James Campbell for the year ending Tenth Month 31st, 1902, recently made to the Governor of Pennsylvania, says: "The first year's report of the department in 1890 showed that over 10 per cent. of the employees were children between the ages of twelve and sixteen years. This year's report shows that less than 5 per cent. were employed between the ages of thirteen and sixteen years. He recommends that the coal breakers in the anthracite coal fields be subject to factory inspection, and the age limit at which children can be employed at such places be raised to at least thirteen years."

Governor Yates, of Illinois, has issued a proclamation prohibiting the importation into that State of cattle and sheep from the States of Vermont, Massachusetts, Connecticut and Rhode Island, also from adjoining States of New York, New Hampshire, New Jersey and Pennsylvania.

Governor Stone has written a letter to Governor Yates protesting against his action, and advising him that there has been no such disease in this State since 1882; that there has been none in New York, and there is none and has been none in New Jersey.

State Superintendent of Agriculture of New York states that the coal breakers in the anthracite coal fields there is an outbreak among the animals in the States of New Hampshire, Vermont, Massachusetts, Rhode Island and Connecticut of foot and mouth disease, and orders them to cause all cars in which any animals have been transported since Eighth Mo. 1st to be thoroughly disinfected before further use.

A dispatch from Eagle City, Oklahoma Territory of the 4th, says: Eagle City last night was cordfire and prairie. This morning it was a town of 3000 inhabitants, with a complete municipal organization, a bank in operation, a daily newspaper established, a fairly good hotel, four restaurants, seven saloons and at least a score of mercantile establishments.

On account of the liability of paper made from wood pulp to catch fire from exposure to light and air it is believed by men who have made this matter a specialty that within fifty years the newspaper files of the present day cannot be accessible to the public without great restrictions on account of their fragile condition. The Congressional Library is preserving the files of about 600 newspapers daily.

It is reported that earthquakes are occurring daily in South Utah. Much damage has been done, but no lives lost.

There were 450 deaths in this city last week, reported to the Board of Health. This is 4 less than the previous week and 10 more than the corresponding week of 1901. Of the foregoing 223 were males and 227 females: 56 died of consumption of the lungs; 72 of inflammation of the lungs and surrounding membranes; 3 of diphtheria; 2 of scarlet fever; 21 of apoplexy, 8 of typhoid fever; 1 of scarlet fever and 1 of sunstroke.

FOREIGN.—It is said that the continued depreciation in the value of silver is likely to produce a serious financial crisis in China. The import trade is practically at a standstill, and there is no prospect of an immediate increase in exports.

It is reported that there has been a case of yellow fever originating in Cuba during the past four months.

A despatch from Guadeloupe, of the 5th, says: Profes-

sor Lacroix, who was sent out by the French Government to investigate the volcanic situation in Martinique, reports that the volcano had been in dangerous action during the previous week. There have been several tons, and ashes have been thrown out, but have fallen over the regions already devastated and evacuated.

During the night rumblings have been heard in the central cone appears incandescent. It falls from the crater in sometimes three kilometers high. We are advised not to approach the coast.

A recent writer, Dr. A. Hrdlicka, states that the descendants of the Aztecs scattered in many to Mexico, and the mountains country in base St. Morelos "there are in particular two large St. Teletingo and Ocuiltepec, in which the Aztec descendants not only speak the pure Aztec language, but they also preserve the Aztec dress and the art of building their dwellings. In both of these villages the natives are almost free mixture with whites."

It is stated that probably 600,000 persons in Britain are without employment, and suffering from hunger as a result of the decrease in demand for skilled labor. Germany, Russia and Sweden have similar situations.

NOTICES.

Received from Thomas H. Whitson, agent, Pa., Hannah Arnett.

FRIENDS' FREEDMEN'S ASSOCIATION is preparing to send goods to Christiansburg Industrial Institute, for clothing, or material, shoes or books, will be made use of the school. The sewing teacher will be clothing that needs mending or altering is properly. All should be at Friends' Institute, No. 20 South Tenth Street, Philadelphia, marked "For Christiansburg" later than Twelfth Month 18th.

WANTED—Position as mother's helper.

Address "G."

Office of THE FRIEND.

A MEETING FOR WORSHIP, to which the public is invited, has been appointed to be held in Friends' House, Ninth and Tenth streets, Wilmington, Del., on First-day afternoon the 14th inst., at 3.30 o'clock.

A PART OF THE COMMITTEE for Abington Quaker Meeting propose being at Frankford Meeting, on Day morning the 14th inst., and at an Appointed Meeting at Norristown, at 3 o'clock, and at Germantown at 7 in the evening at 7.45 o'clock. All Friends as well as others are invited to be present and join with us the solemn act of Divine Spiritual Worship.

WESTWOWN BOARDING SCHOOL.—For convenient persons coming to Westtown School, the stage will train leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when Stage fare, 15 cents; after 7.30 P. M., 25 cents each. Teach the school by telegraph, wire West Coast Phone 1144.

EDWARD G. SMEDLEY, S.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in reference to instruction and discipline should be addressed to

WM. F. WICKESHAM, Friends' Boarding School, Westtown, Pa.

Payments on account of board and tuition, and communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

FRIENDS' RELIGIOUS AND MORAL ALMANAC FRIENDS' CARD CALENDAR FOR 1903 are now for Friends' Book Store, No. 304 Arch Street. Prices: manna four cents each, by mail five cents; thirty per dozen, by mail thirty-eight cents. The same paper cover five cents each, by mail six cents; forty per dozen, by mail forty-nine cents. Calendars five by mail ten cents.

DIED, (apparently whilst asleep) on the night 22nd of Eleventh Mo. 1902, in the seventy-second year of her age, ELIZA A. HOBSON, relict of Thomas H. Hobson, of Chesterfield Monthly and Plymouth Friends' Meeting.

—, at her residence Hartford, N. J., Eighth Mo. 1902, HANNAH S., wife of Amos Ashed, aged 78. A member of Chester Monthly Meeting of Friends. She found much comfort in the passage "Because ye shall live also," spoken to her by a beloved friend of the Society; and she left on record that she perceived "the good hope of being admitted in Heavenly Father's Kingdom."

Moving in the Divine.

Is there one thing to say and to hear said year after year, that "God is not far from every one of us. For in Him we live, and move and have our being." But it is another thing to feel the Divine situation. It is as a life from God, to come to the discovery of God in ourselves, to have the revelation dawn upon our consciousness, that in Him our life lives, that our motions move, in Him who is the Father, our little being exists. "I have heard and seen," says the soul, "by the hearing of the heart, and now my eye seeth Thee! Therefore I love, and I hate, and I abhor myself in dust and ashes." The revelation of God in us accepted in faith is a new birth making a new man. When I move, "I discovered in the witness of my heart to be a fact, becoming accepted in a holy resolution saying "In Him I move, in harmony with Him by his grace I move, must move or be lost!" may become quickly compared with our own sense of estrangement, a past life of complete alienation from the life of God in us, a broken sense of unfitness for the pure presence of our lives with Him and in Him, and as we are by our past and weighted down by its load of sin in our character. Can he justify me and yet be just? Oh, divine Redeemer to taste the wages of sin for me—a Saviour or I die, a Redeemer to live forever! Oh for an Arm to take hold of me and bring salvation! To whom is the glory of the Lord revealed? Happy for the soul when the gospel revelation of Christ, the Arm of God who "hath borne our sins and carried our sorrows," is applied by the witness of his Spirit to a sense of the remission of the sins that are past, and a cleared

conscience for walking with Him henceforth in the light, moving in Him as a son or daughter accepted in the Beloved, knowing and believing the love that God hath to us. How glorious is the gospel discovery revealed to be, that He in whom we live, and move, and have our being "is Love, and he that dwelleth in love dwelleth in God and God in him!"

Let the Same Name Cover the Same Things.

A few years ago the anomaly was presented of a claim in some quarters of the professing Society of Friends, that the Society should recede from its hitherto steadfast position on the Baptism of Christ as the one Baptism, and retreat to the baptism of John so as to embrace that also, in order to take in some of its votaries as members. Such revolt did not gain rapid headway, partly because the requisite sacerdotal machinery was not yet ready. For each system, that of carnal ordinances and of virtually a stated priesthood, will naturally require the other.

We remember in those days contemplating what the Baptist Church might have to do, if at one end of its camp the standpoint of Friends should develop, as that of Baptists had done under our name, to assail the integrity of its standard doctrines in their practice. A movement to take into Baptist membership persons who had not submitted to the water-baptism would be as irreconcilable with the distinctive stand of that church, as was the movement to receive into our membership persons who adhere to water-baptism.

That turn in the wheel of Baptist time has now come round. We have noted in another column an apparent weakening among Baptists of the position in which they have for generations so strongly intrenched themselves, namely that of immersion as a condition of their church membership. A weakening but not a weakness. For while it is a weakening denominationally, it is personally a strengthening in the spirituality and growing enlightenment of all whom those four advocates of the spirit above the letter represent. Thus we are in sympathy with them doctrinally rather than denominationally. How can a new doctrinal enlightenment in some and an inveterate church standard walk together, except they be agreed?

They whom the truth differentiates should

differ, and they who differentiate themselves from a system have an honest right to do so. But if it be from a fundamental standard that they separate themselves, their moral right to the old organization and name drops. Should they call themselves by a changed name,—for instance Optional Baptists (that is, holding to the water, or Spirit, or both, whichever one chooses), that course would be quite honest and consistent. In the spiritual tendency of their movement they as men have our encouragement. They are apparently approaching the higher plane of baptism where Jesus standing, pointed his church upward—a standard which must eventually increase, as promised to increase, while the outward and carnal decreases. While these Progressive Baptists seem to be on the right track of truth in some openings of doctrine, it is not truth for them or for their present denomination to reckon such as its legitimate representatives. There are essentials of Christianity, and a special set of essentials for each Christian Society. There are essentials of patriotism, but a special set of essentials for each political party, holding to which one partisan could not be a member of the other party. But members of the one party may have as much patriotism as those of the other.

Concerning the Doukhobors.

Extracts from letters of Sarah Boyle to Joseph S. Elkinton.

Ninth Month 15th, 1902.—I love the people more than ever, and I am kept fairly busy. A poor man in the nearest village met with a very serious accident, three weeks ago, his horse knocked him down and then tramped on him, causing severe internal injuries, the people sent for me at once, and I really thought the poor man would die, but he is recovering, slowly but surely:

I get many things in return for medicine, such as chickens, eggs, butter and vegetables, and they show me so much kindness in many ways that I feel grateful to God that He sent me here.

Eleventh Month 9th.—Our six villages are all right, and the people are quite content, a good many of them have taken up land, and a great many say that they will do so in Spring, if they are not too late, as ever so many people are out here land hunting, every day.

The poor things that left their all to go as it were on a pilgrimage, have suffered, and a few have died. The women and children were kept in the immigration hall in Yorkton, and the men went where they liked. The govern-

ment officials were very kind and patient, and the people in Yorkton were very good about giving food to the Doukhobors.

The Doukhobors in Novatoritskaia village made and sent four wagon loads of bread, and then all the other villages did the same. Before the people left their homes they cleaned their houses, and even pared some potatoes, and left them in a pot of cold water, ready to be cooked by any pilgrim who chanced to come that way.

Peter Veregin's brother was able to stop a good many of them from leaving their homes. He got home just about the time that they were thinking of going away.

I firmly believe that the Doukhobors will come out of this trial all right; poor things, I have seen women crying as if their hearts would break, because their fathers and mothers had gone off not knowing where.

We have a little house (real Doukhobor), beside the Buchanan's, indeed Buchanan got it up for us in a hurry, when the cold weather set in. . . .

Twelfth Month, 2nd.—The box of medicine has arrived, and it is needless to say that I am pleased. I have had a good many patients lately and thy gift is a great boon just now. A number of the dear people who went on a pilgrimage are suffering from the effects of exposure to cold, and their friends have been coming to me for medicine for various ailments. Poor things, I trust that the desire for wandering has been taken away. I see so much to admire in them, especially their willingness to suffer, that I want to help them all I can.

Not one of the Good Spirit Lake Doukhobors went away, and a good many of them have taken up their homesteads.

At present I am trying to find one who can speak English, and who will go to meet Peter Veregin; all the Doukhobors seem quite anxious to see him. I pray that he may be a means of blessing to them.

[It will probably be remembered that the writer of above, Sarah Boyle, is a nurse, sent out by London Friends to care for the sick and injured among the Doukhobors.]

A letter from England under date of Eleventh Month 30th, states that J. Obed Smith, immigration commissioner of Winnipeg, Canada, has met with Peter Veregin in England, thus confirming the report that he has been released from exile.

Extract of a letter from Anastasia V. Veregin to Joseph Elkinton, dated Eleventh Month 25th, 1902.

I am extremely sorry to confess that a part of us vex all our benefactors and friends by their foolish actions, but I hope that our Creator will enlighten our reason and help us to finish our common life in the best way.

The Lord had pity on me, and sent me a great consolation,—my son Gregor, who came recently from Siberia, and the joyful news that my other beloved son, Peter, is on the way to Canada; I am sure you will partake of my hearty rejoicing.

We quote from the Manitoba *Free Press* that C. W. Speers, colonization agent of the Dominion government, returned Eleventh Month 19th from Yorkton, driving through the Doukhobor settlements as far as Fort

Pelly, where he was met by Agent Harley, of the Swan River district. "The Doukhobors," said C. W. Speers, "have returned to their respective villages and are again occupying their former homes. Their houses were in perfect readiness to receive them. Ample clothing was carefully piled up in the corner and things set in order previous to these people starting on their pilgrimage. The villages are well supplied with roots and vegetables and these have been protected by the department from frost during the absence of the people. In fact, I had arranged some time ago for everything of a perishable nature to be protected. The villages are also well supplied with grain, consisting of wheat, oats and barley and a quantity of flax. There is yet some threshing to do and a number of grist mills that have been built by this community are in operation.

"These people will require very little to support them for six months and they are at present consuming their own product. There is a greater spirit of contentment than I expected to find and a great majority of the returned pilgrims will again assume the duties of life along right lines.

"I was informed that they purchased nine pairs of horses at Pelly on their return journey, which would go to prove that they are moving in the right direction. They met rather a cool reception from their brethren who remained and were not affected by the mania. This is having a good effect, because it must be remembered that only about twenty per cent. of these people were affected. I have been having officials taking an inventory of all ascertainable property and find the villages in a most satisfactory condition as far as supplies are concerned. The pilgrims feel that their missionary work was not a success and I think I can safely say that eighty per cent of the younger men are impressed with the necessity of commencing to work. I met a few who still want to preach and there are a few leaders who will possibly keep up an agitation for a time, but it would be a difficult undertaking for any set of men to conduct such a movement again. I consider the situation highly satisfactory and that the great majority of these people will be saved to the labor market of Canada and make useful settlers.

"The influence of the Doukhobors who remained at home is constantly working in the right direction. There has been considerable outside influence brought to bear upon these people and some are remaining among them to advise them. As to how successful these influences may be, I can not say. I am led to believe that these people should be let alone for a time, as they have had sufficient excitement. I have observed that in Saskatchewan, where we have sixteen hundred of these people, they are considered good settlers, are in a state of perfect contentment and have had no one among them giving any special advice.

"The mounted police have left Yorkton for Regina. The local N.W.M.P. are remaining at their posts, and are doing the usual patrol duty."

PETER VEREGIN FREE.

SWAN RIVER, Man., Eleventh Month, 21.—Cable advices received here to-day announced that Peter Veregin, the acknowledged leader

of the Doukhobors, had been released from Siberia after sixteen years' exile, and is now in England. He intends to proceed to Canada as speedily as possible. Veregin has ability and influence, and favors a quiet settlement for the Doukhobors. He will solve everything satisfactorily.

Additional news of Peter Veregin thus appears in a letter in the London *Friend*:

In the company of a member of the Society I had yesterday the opportunity of hearing Peter Veregin, whose words Vladimir Telkoff interpreted in fluent English. Both an enthusiastic reception and patient hearing. Both referred to the sad pilgrimage of the Doukhobors, and touching upon the petition to the Sultan of Turkey and other European governments, V. Tchertkoff, who is in contact with the Russian emigrants, informed us that the document in question did not press the views or wishes of the majority of the Doukhobors, but was drawn up probably by one Russian, not a Doukhobor, who had gone with the sectarians to Canada, and a small following among them.

Peter Veregin is a most sympathetic and modest in his bearing and yet full of nobility, a man whom one at once recognizes as one of nature's own noblemen. He expressed himself very hopefully about the future. Indeed if he is still of the same opinion as when he penned his letter to the Empress Alexandra Fedorovna during his exile in the government of Tobolsk, there is no reason why he should not succeed in reconciling fellow-believers to their lot. If these people could only be left alone, if Russian agitation would but keep their hands off them, there seems no ground for doubting that they would settle down under the wise and moderating influence of Peter Veregin, whose departure for Canada will have taken place for this appears in print.—Your sincere friend,

C. C. SCHABER
RUTLAND, Bournemouth, Twelfth Month, 1, 1902.

NO HALF-WAY WORK.—Bad habits can be left off by degrees. There must be square, clean cut. Webb, the noted physician, who was remarkable for vigor of body and mind, drank nothing but water. It was one day recommending his regimen to one of his friends who was fond of wine, urged him with great earnestness to a course of luxury by which his health and intellect would be destroyed. The friend appeared convinced, and told him that he would conform to his counsel, and though he did not change his course of living at once, would leave off strong drink by degrees. "By degrees!" said Webb, with indignation. "You should unhappily fall into the fire, you caution your servants to pull you out by degrees?"

WATCH your way then, as a cautious traveler, and don't be gazing at that mountain river in the distance, and saying, "How I ever got over them?" but keep to the level little inch that is before you, and accomplish that in the little moment that belongs to it. The mountain and the river can be passed in the same way; and, when you get to them, you will come to the light strength that belongs to them.—M. A.

Paul Forbid Women to Teach in the Church?

(Continued from page 173.)

Whatever interpretation may be given to passages, there are various considerations which go to show that we should not exclude Paul, or any other apostle, to prohibit women from teaching in the Church.

We apprehend that a prejudice will at once be against our reasoning, through fear that it will go too far, that if it is conclusively shown that woman is not forbidden to teach in promiscuous assembly, then it will be followed that she is eligible to the office of ministry and may be ordained to officially administer the sealing ordinances. This does not necessarily follow, as we will endeavor to show before leaving the subject.

Among the reasons which should lead us to conclude that surely Paul does not forbid women to teach in the Church are the following: It was plainly foretold in the Old Testament in the New Testament day women were to be employed in teaching the Divine

Word. An instance of this prediction we have in the prophecy of Joel ii:28, 29, "And it shall come to pass afterward that I will pour out my Spirit upon all flesh; and your sons and your daughters shall prophesy, your old men shall dream dreams, your young men shall see visions; and also upon the servants and the hand-maidens in those days will I pour out my Spirit." Here it is foretold that men, the daughters as well as the sons, and hand-maidens as well as the servants, shall prophesy or teach the Divine word, as this prophecy is to be understood.

That this prediction was to be fulfilled in the gospel day, and that it refers to the teaching of women in this day, there should be no doubt. For Peter quotes it in his sermon on the day of Pentecost, and asserts that it was fulfilled in the giving of the Holy Spirit on that occasion. So it is certain beyond question that women were to be employed in teaching the word in the New Testament day. And the history of that occasion confirms this view, for the Holy Spirit was given to the women as well as to the men, and they as well as the men spoke with tongues as the Spirit gave utterance.

When prophesying, that was predicted in Joel that was done by men and women after the day of Pentecost, was not mainly the foretelling of future events by persons possessed of the spirit of inspiration; neither was it the teaching by persons ordained to the office of the ministry. And certainly it was not known as private teaching, such as is admitted by all, that women may do in their own families and among their own sex; it was proclaiming, telling the resurrection of Christ and salvation, in private and in public to all everywhere, without regard to condition or the sex of the hearers.

It is most significant, indeed, that this prohibition of woman was foretold in connection with the promise of the Spirit. It was under the controlling, mellowing power of the Spirit that the disciples of the new dispensation were enabled to accept of her aid, and fall in with the new and broader fellowship where there was neither Jew nor Greek, neither bond nor

free, neither male nor female, but all are one in Christ Jesus. As a result of the Holy Spirit's presence and power, Old Testament rites were displaced. By the death of Christ, types were fulfilled and virtually abolished; but it took the power of the Holy Spirit to untwine the hearts of worshippers from them, and bring the worshippers to accept the more spiritual rites of the New Testament Church. It was this very revolution, we may call it, that overcame the long prevailing prejudice against woman, and made the Church willing to accept of her service.

This prediction in Joel is entitled to much consideration in this question of woman's work in the New Testament Church. There is perhaps no other passage of the Old Testament quoted in the New that, in its scope and breadth of meaning, is of more momentous import than this great promise of the Holy Spirit to the New Testament Church. And the fact that woman is here included with men as teachers gives great prominence to this truth; and surely we should not expect to find in the New Testament any prohibition of her work.

Another prediction of similar import we have in Ps. lxxviii:11, "The Lord gave the word: great was the company of those that published it." The Revised Version gives what is regarded as a more correct rendering of this verse: "The Lord giveth the word: the women that publish the tidings are a great host." This is a Messianic Psalm containing a number of predictions that are being fulfilled in the New Testament Church. And among them is this one about women teaching the word. The word that God gives is the gospel of salvation, and women are to publish the glad tidings. And do we not see in women's gospel work in our day, in their various and multiplied agencies and operations in Sabbath school and temperance and mission and rescue work in home and foreign lands, no small part of which is done to and for the male sex, and in public in the presence of men in the promiscuous assembly; do we not see in all this a fulfillment of the prediction that the women that publish the tidings are a great host?

In the light of this prediction, and the fulfillment of it that we are permitted to see, we would not expect the great missionary to the Gentiles to prohibit women from engaging in this manner in gospel work.

(To be continued.)

THE POWER OF STILLNESS.—A score of years ago a friend placed in my hand a little book which became one of the turning points of my life. It was "True Peace." It was an old medieval message, and it had but one thought, and it was this, that God was waiting in the depth of my being to talk with me if I would only get still enough to hear Him.

I thought that this would be a very easy matter, so I began to get still. But I had no sooner commenced than a perfect pandemonium of voices reached my ears, a thousand clamoring notes from without and within, until I could hear nothing but their noise and din. Some of them were my own questions, some of them my own cares, some of them my own prayers. Others were the suggestions of the tempter and the voices of the world's tur-

moil. Never before did there seem so many things to be done, to be said, to be thought; and in every direction I was pulled and pushed and greeted with noisy acclamations and unspeakable unrest. It seemed necessary for me to listen to some of them, but God said, "Be still and know that I am God." Then came the conflict of thoughts for the morrow, and its duties and cares; but God said, "Be still."

And as I listened, and slowly learned to obey, and shut my ears to every sound, I found that after a while, when the other voices ceased, or I ceased to hear them, there was a still, small voice in the depth of my Spirit. As I listened it became to me the power of prayer, and the voice of wisdom and the call of duty, and I did not need to think so hard, or pray so hard, or trust so hard, but that still, small voice of the Holy Spirit in my heart was God's prayer in my secret soul, and God's answer to all my questions.—A. B. Simpson.

Polar Expeditions.

"Isn't it a pity, grandfather," said James Henry, "that the Peary expedition should have been a failure?"

"What makes you think it was a failure?"

"Well, it was organized for the purpose of finding the North Pole, and here they are all back!"

"And they didn't bring the North Pole with them. Is that what you were going to say?"

"No, not just exactly; but they didn't find what they went in search of. Isn't that failure?"

"Not by many degrees. By his persistent efforts Peary reached 83°27' degrees north latitude on the mainland of Greenland's north coast, and on this expedition he went on the ice to 84.17 north. That surely was not a failure."

"Have any explorers ever gone farther north than Peary?"

"Yes. Other venturesome men have gone farther north on the ice which covers the great bodies of water in the polar regions, but Peary's expedition went nearer to the North Pole on land than any other. When arctic explorers reach the end of their journey north they usually leave some record of their work in the form of maps and manuscripts in metal boxes, so that future searchers for the undiscovered region may be guided by their experience, and so that in case of mishap to them the results which they attained may not be lost. The records of that kind left on the mainland are in themselves proof that the people who left them there reached that spot. But those explorers who leave their records on ice, no matter how firm the ice may be at the time, run the risk of having their records carried either north or south before others may find them. So, you see, we are never so sure as to how far a man went whose dash for the pole was on icefloes."

"Who were the men who went beyond Peary's most northerly point?"

"Nansen reached 86°14' north, and that was called 'farthest north' until Captain Cagni, of the Duke of Abruzzi's party, went nineteen miles beyond that point, or to 86°33' north."

"But didn't Greely make a still better record with his brave men?"

"Greely set the pace. Until Peary established his record Greely's men had gone on mainland to the northernmost point ever reached by civilized man."

"Did't he have pretty hard luck with his expedition?"

"He had a desperately hard time, if that is what you mean by hard luck. The expedition was organized in 1881 and succeeded in establishing an observation station on the eastern coast of Grinnell Island, in Lady Franklin Bay, 81°44 north latitude. The party retreated in 1883, and the seven survivors of the original party of thirty-two were rescued in June, 1884. It was a small party of Greely's men under Lieutenant Lockwood, known as the Lockwood Brainerd party, which reached north latitude 83°24 on the mainland of Greenland. This was the record trip north until 1894, when Peary went a little beyond the Lockwood-Brainerd mark."

"According to that, the best records have been made by Americans."

"Yes, the best records on mainland, which are always, as I explained to you, the most reliable."

"When did people first attempt to reach the North Pole?"

"I don't know whether the first arctic explorers cared much for the pole, but Sir Hugh Willoughby took three ships from England in 1835 with which he hoped to find a maritime route from the north of Europe and Asia to India and China. Two of his ships were lost, and the third reached the mouth of the Dwina River. Then came Stephen Burroughs, and after him Jackman and Pet, all Englishmen. The Dutch took up the work then and in 1595 an expedition under Barents reached the Kara Sea, and a year later the same explorer discovered Spitzbergen. A whaler named Roule reached what is now known as Franz Josef Land, and constant efforts were made by Russian, Norwegian and other venturesome navigators to go farther east than Nova Zembla along the northeast passage. The first man to succeed was Nordenskjöld on his ship Vega. That was in 1879."

"Which was the first great expedition to the north?"

"The expedition under Sir John Franklin probably attracted more attention than any other up to that time. Franklin was a rear admiral in the British navy, and was a fighter as well as an explorer. He was at the head of polar expeditions in 1818, 1819 and 1825. His last venture in that direction was in 1845, when he took the Terror and the Erebus and 168 men under orders to find the north passage. He never came back, and for thirty years search expeditions were sent out from all parts of the world. Among the leaders of these search parties were MacClure, McClintock and Kane. Kane was an American physician who had travelled in Asia and Africa, and had served in the Mexican War. When an expedition was organized in Philadelphia to search for Franklin he joined it, and had command of the second one. Like all the rest, he found no trace of Franklin."

"Was nothing ever heard of him?"

"Yes; a young lieutenant in the United States Army, Fred Schwatka, cleared up the mystery. In 1878 he conducted an arctic expedition, and before he returned he found the

graves of the last of Franklin's men and much valuable information concerning the expedition."

"Who else tried to go to the North Pole?"

"Dr. Hayes, who was one of Dr. Kane's companions, went up to latitude 81°35, and Dr. Hall reached 82°16. Dr. Hall died in the arctic regions, and his followers were rescued after floating 186 days on an icefield. They travelled in that time about 1,700 miles. There were many others, but the most notable of them was Fridtjof Nansen, who started in the Fram in 1892 for the north, and did not return to civilization until late in 1896. He took his ship farther north than any navigator had done before him."

"But what good has all this polar research done?"

"It has helped man to get an idea of that part of the world, and you may rest assured that he will not be satisfied until he knows more, and whatever scientific discoveries are made, they will be of benefit to the human family.—N. Y. Tribune Farmer.

FOR 'THE FRIEND.'

A Universal Spirit.

The exhortation, "Be of a universal spirit," is by no means one only of modern use, but was used by the early Friends, and the substance of its meaning is of common use amongst us, when speaking of the "universality of Divine grace." The term is an equivalent to the apostle's prayerful blessing, "the grace of the Lord Jesus Christ be with you all." This was the fulness of the blessing of the gospel of God, his power in Christ Jesus made manifest to save, which our predecessors in the Truth were called forth and ably qualified to preach by the outpouring and the renewings of the Holy Spirit upon them in their work. Through faith they saw and laid hold of God's promises through his prophets, "The glory of the Lord shall be revealed, and all flesh shall see it together; for the mouth of the Lord hath spoken."—Is. xl, 5. The apostle says, "God was in Christ reconciling the world unto Himself," and Christ Jesus the true witness also bore testimony to the Father's work in Him by the miracles which he wrought by his Divine power, that, as He said, "they might know and believe that the Father is in me, and I in Him."—John x, 38. The apostles, believing, "beheld his glory, the glory of the only begotten of the Father, full of grace and truth."—I. 14. And, as God's glory was by them thus seen as Christ came in the flesh, so did Jesus pray the Father that all those who should hereafter believe in Him, and receive Him as He came in spirit, "might be with me where I am, that they may behold my glory, which thou hast given me;" and hath he not given to all true believers in Him an understanding to know Him as He comes according to his promise and makes his presence known and felt with his people everywhere, even though there be but the two or the three? On these he breathes the breath of life, his Holy Spirit; in Him they live and in their souls is kindled a flame of love to God and man. "Lo, I am with you always, even to the end of the world." This is the fulfilment of the twice repeated prophecy by Isaiah (xi, 9) and Habakkuk ii, 14, "The earth shall be filled with the knowledge of the glory of the Lord, as the

waters cover the sea." As then our Father becomes by grace renewed and thus filled the Spirit of the Lord, we come to have a universal spirit of Christ, which breathes "peace on earth, good will to man," as children of the new Jerusalem with branches of victory, we can gladly greet King, crying "Hosanna! Blessed is the name of Israel, that cometh in the name of the Lord."—John xii, 13.

In conclusion, let me quote a very record of the use of this term. It is found in a postscript to the London Yearly Meeting. Written epistle of the year 1678, and reads:—

"And, dear Friends and Brethren, keep in the pure and peaceable wisdom of Jesus, that you may be in all things ordered to the Lord's glory, and your mutual peace and refinement. Friends, though the enemy be never betray with fair pretences, the Lord is never to preserve his heritage and water his path, therefore let none wax cold, let none murmur; watch against all vain jealousies, all evil surmises, and that spirit that works in a mystery against the blessed unity, exalting itself under the words and profession of the ancient truth, against the life and power thereof, and the brethren that abide them. And be noble and valiant for the Truth on earth; look to the Lord God of your life, keep your eye steadfastly to Him, and be of a universal spirit, and by how much the more is a day of trial and an hour of temptation, forsake ye not the assembling of yourselves together, but by so much the more, be zealous in keeping all your meetings . . . in the Lord's everlasting power, by which they are set up; and as you are found diligent and steadfast in the work of the Lord, the God of peace will suddenly tread down Satan at your feet, and plentifully reward into many bosoms your patience and perseverance, in the durable blessings, peace and joy of his Kingdom, which was before the world began, and that never shall have an end."

W. W.

It requires a well-kept life to do the will of God, and even a better kept life to will of his will. To be willing is a rarer grace than to be doing the will of God. For he who is willing may sometimes have nothing to do, must only be willing to wait; and it is so far to be doing God's will than to be willing to have nothing to do—it is easier far to be working for Christ than it is to be willing to cease. No there is nothing rarer in the world to-day than the true willing soul, and the nothing more worth coveting than the will of God's will. There is no grander provision of any Christian life than the transparently simple mechanism of a sincerely loving heart.—Drummond.

A FEW months before his death Charles Spurgeon received a letter containing something in the nature of a threat. You may call his manly reply: "You may write life across the sky: I have nothing to contribute. Here was character incarnate. Truth is better than Truth taught. When a man realizes his ideals, then his creed becomes vital, vigorous, victorious. 'There is no quence,' writes Emerson, 'unless there is a man behind the speech.'—K. B. Tupper.

TELL HIM SO.

If you have a word of cheer
That may light the pathway dear
Of a father pilgrim here,
Let him know.
Show him you appreciate
What he does, and do not wait
Till the heavy hand of fate
Lays him low.
If your heart contains a thought
That will brighten make his lot,
Then, in mercy, hide it not;
Tell him so.

Bide not till the end of all
Carries him beyond recall,
When beside his sable pall,
To avow
Your affection, and acclaim
To do honor to his name
And to place the wreath of fame
On his brow.
Rather speak to him to-day,
For the things you have to say
May assist him on his way;
Tell him now.

Life is hard enough, at best,
But the love that is expressed
Makes it seem a pathway blest
To our feet;
And the troubles that we share
Seem the easier to bear,
Smile upon your neighbor's care,
As you greet.
Rough and stony are our ways;
Dark and dreary are our days;
But another's love and praise
Make them sweet.

Wait not till your friend is dead
Ere your compliments are said,
For the spirit that has fled,
If it know,
Does not need to speed it on,
Our poor praise; where it has gone
Love's eternal golden dawn
Is aglow,
But unto our Brother here
That poor praise is very dear,
If you've any word of cheer
Tell him so.

Righteous Concern From a Friend.

Friends, bear with me while I tell you
Have been enabled to view the broken
walls of Jerusalem by night, and feel a
tendency to call your attention to some of the
causes. And I wish to be
with you in this concern to arise to a
faithfulness to abstain from the weak-
ness spoken of.

I come solemnly before me, especially
near the time called Christmas,
annual feasting, but to give to the poor
money at all times, not waiting for a set
time to do good. Paul says, "Ye observe
all times. I am afraid of you lest I have
laid labor upon you in vain" (Gal. iv. 11).
We do observe days and times when we
rejoice on birth-days; and when there is
a large conform to the world's custom in
after so many years, a tin, silver or
remembrance; and also at the time of mar-
riage to another of the world's vain
show, in throwing rice upon those just mar-
rying, converting the hearts from the solemn
things they have just entered into before
the altar? Also the increasing reunions,
going to pleasure grounds and lawn ten-
nising pastimes; and the money paid

for the use of these goes to keep up a dancing
platform. Oh, consider these things. Does
it become a people who should be in this world
pilgrims seeking a heavenly country, a treas-
ure in heaven, where to do the will of our Fa-
ther in heaven is our aim in life?

"Enquire for the old paths that ye may walk
therein."
E. B.

WINONA, O.

"Satan Came Also."

The following letter was written by William
Grimshaw, rector of the parish of Haworth,
Yorkshire, in 1749, to one of the smaller an-
nual assemblies of Friends in the Provinces
that met in that county. The situation ex-
plains itself; and although the letter and
David Hall's reply were published years ago in
the "Irish Friend," they describe a situation
so remarkably similar to certain conditions
among our meetings to-day in the newer lo-
calities, that it has been thought they might
not be without interest to many Friends.

David Hall was a Yorkshire schoolmaster,
prominent as a minister and elder, and he
made his home at Skipton, in the same neigh-
borhood. He died Ninth Month 16th, 1756,
at the age of 74.

A. M. G.

To the people called Quakers at Stanbury,
these 11th of ye 4th month, 1749.

DEAR FRIENDS :

Your Meeting annually on this day at Stan-
bury is doubtless well designed,—the glory of
God and the Edification of your souls, where-
fore my sincere prayer is that the holy Spirit
may be in the midst of you and fill all your
hearts with the wisdom, Power and Love of
God.

But dear Friends, I trust you will indulge
me the freedom to advise you on one thing
which I am persuaded you are not utterly in-
sensible of; I mean the Evils that not inten-
tionally on your part yet continually follow
the Meeting. There are you know great num-
bers of carnal careless People young & old
who under pretence of coming to hear you,
make no more of it than a mere Rendezvous of
Vanity and Wickedness; Drunkenness, Curs-
ing, Swearing, Fighting, revelling, &c. abound
and this with many not only for the Remain-
der of the Day following but commonly all the
night and most of the Day following if not
longer.

This has obliged me this 7 Years past as
constantly on this day with our Ch. Wardens
and Constable to go amongst them, to en-
deavour the Suppression of the Disorder, tho'
but with little Success. Therefore being now
almost 'tired with the trial of this Expedient,
I determined with myself to make my applica-
tion to you, who, I am satisfied are as far as I
can be from countenancing or in any wise en-
couraging such Immoralities—Nor do I see
any other way of suppressing them.

The most likely Expedient, permit me to
intimate it, is either that you would meet of-
tener or totally suspend it. By the former
means the Novelty will cease & therewith
these Evils, by the latter the Effect will be
the same; I wish you would take the matter
however, into serious consideration and cor-
dially concur with me in a Speedy and effec-
tual endeavour to put an end hereto.

I hope you are not so tenacious of your an-
nual custom, tho' the Blessings experien-

tally attending your Meeting were never so
weighty & precious to your own souls, as not
seriously to consider & industriously to pre-
vent such a train of evils, as may tend, no less
to the Dishonour of God, the Contempt of re-
ligion, & the eternal damnation of numbers,
Yea and deeply enhance your own souls in the
same Destruction; For as much as we must
own it is righteous with God to charge the
mischief incident to others upon you and me
which we might have prevented but did not.
This is my Casuistry.

May our dear Lord bless you daily more
and more unto the perfect day may his Grace,
Love and Truth abound and shine farther in
your Hearts, Lips & Lives and may you & I
and all men be steadfast immovably and al-
ways abounding in the will and work of the
holy Spirit till we all come to appear before
Him in glory & to rejoice for ever together in
His Presence where there is fullness of joy
and at Whose right hand there are pleasures
for evermore. The Lord bless you all this
day.

I am your respectful Friend,

WILLIAM GRIMSHAW,

Priest at Haworth in Yorkshire.

Excuse hast and errors.

To Priest Grimshaw's Epistle.

Answer as Follows.

MUCH ESTEEMED FRD., tho' at present per-
sonally unknown:

The good Character thou hast born for these
several Years with regard to thy Concern and
Endeavours for the Suppression of Woe and
promotion of Virtue & Piety among Mankind
without a rigid bigotry to any one set of Men,
has some Years ago rais'd in me a desire to
write to thee by way of Encouragement there-
in, & approbation thereof, but hitherto one
thing or other hath letted me.

But upon perusing thy Friendly and Chris-
tian-like Epistle to the People called Quakers
at their Annual Meeting at Stanbury dated ye
11th Instant, can no more omit giving thee a
few Lines, whereby I do assure thee that thy
1st Epistle was and is well taken, by our
Friends and tho' I perceive it came rather too
late for a Suitable and General Personal before
ye Meeting, yet care was taken to answer part
of the Contents thereof, by giving a very close
Charge or Caution at the Close of the Meet-
ing that all Young People & others should be
careful to depart Soberly and in good Order,
& if none should by any means behave them-
selves amiss in Ale-houses or elsewhere, the
Inn-keeper (near the place especially) was
earnestly desired not to sell Liquor to any, be-
yond the just bounds of Moderation, &c.

Some inconveniences & disagreeable things
attended those anniversary Assemblies hereto-
fore at Stanbury have not Escaped ye Notice &
consideration of Divers of us, with strong de-
sires the same might be redressed.

The two Expedients thou proposest & per-
haps some others for remedying ye sd Grievan-
ces, I believe, will be taken into ye Consi-
deration of our Friends.

May God almighty crown thy well intended
Endeavours with Success replenish thee more
& yet more with ye Enlargement of the hearts
& effectually loos'ning of thee from every
thing that in any wise would Eclipse ye Bright-
ness of the Sun of Righteousness (wh. is I

am well assured, Gloriously Risen in thy heart) or curtail thy service in ye everlasting Gospel of Peace, & may thou my beloved Frd. entirely resign thy self to ye will & disposal of him who hath call'd thee, & thus far prevailed upon thee, that in due time thou mayst attain to a Capacity of fully believing receiving, of ye practising (according to that primitive Precept of our Blessed Lord ye Author of ye Gospel)—Freely ye have received, freely give.)

Oh! Dear Friend I can but say to thee 'tis a pity such a person as I believe thou art, should be rank'd & numbered in ye Catalogue of ye Mercenaries.

Farewell, saith thy Cordial, well-affected & sincere Friend in much Brotherly kindness & Charity,

DAVID HALL.

Skipton ye 24th of ye 4 Mo. 1749

Helpers.

"You've been a help to me," she said;
"Your life has strengthened mine for years."
I looked into her honest eyes
Through sudden mist of grateful tears.

My desert blossomed as the rose;
My dreary past grew luminous;
Life's spectres vanished in that light,
And cares, that all too sorely press.

A new song lifted in my heart,
Set to the music of her word;
Way-weariness gave place to joy;
Alone I knelt and thanked the Lord.

—Selected.

Adam needed a helpmeet for him. God gave him one. God's choice is always the right one. He makes no mistakes. Marriages made in heaven are not failures. But men, and women, too, are slow to ask God, for a life mate. They consult their foolish and silly companions on the subject of marriage, but how many times do they forget their best friend and wisest counsellor. God chooses a suitable companion and helper.

To know how to help one another in the home is the secret of home-happiness. The very presence of a mother at the head of the table is a help to all, by giving dignity and cheer to the members of the family. How pleasant it is for the presiding genius of the home to bless by her cheery smiles and words of approval and encouragement the gathered household at the regular meal, or at the family altar!

The fact is patent to every one that a home without a loving wife, and none but men present, lacks an essential element of perfection.

But there is something worse than even this, viz., a household where mother and daughters feel under no obligation to help in any way the general work and ends of family life. There are homes where the female members are everywhere a burden and a drawback. We are glad to think these are few. But the natural heart is so utterly heartless and selfish that nothing needs cultivation among the female members of families more than the art of unselfish devotion to the common well-being of all.

Generosity in the home toward even the weakest and most heartless goes a long way to remove difficulties and smooth the way. A gentle response to a surly remark, or a readiness to run to the help of the over-exacting

demands of others, is the graceful thing for girls to do. By such things they show the true delicacy of womanly nature. By this they rule the world; not by the masculine ways of mastery over their fellow-creatures.

Some of the greatest men—men whose names are renowned—have been helped by the presence of the one whom they love. The writer once knew a president of Jefferson College, who had, in her absence, his wife's shawl placed so at his side as to remind him of her at all times, as if she were there looking on his work. This was to him as an inspiration. To many who saw it, it was an evidence that he was a goose. Yet he was a great man and fine scholar, and who knows how much of his greatness was to be attributed to that shawl?

Other instances of a similar character could be enumerated. The silent influence woman exerts in the world can never be measured or told until the secrets of woman history are revealed on the last day. Let no woman who is living an upright life be cast down or be discouraged because she cannot see and measure just how far her influence extends at the present.

But silent influence is exerted for evil as well as for good. The very presence of the impure woman is contaminating. Hence she is shunned not more from abhorrence of her criminal life than from motives of self-preservation which is the first law of nature. Hence the wise man so strongly urged the simple ones to go not the way to her house.—*Christian Instructor.*

Christiansburg Industrial Institute.

The Christiansburg Industrial Institute, under the fostering care of Philadelphia Friends for upwards of thirty years, first as a common school, then as a high school and now as an industrial school, starts another year under brighter prospects than it ever has enjoyed. With a hundred acre farm which is gradually being brought up to a high grade of cultivation and on which there is an equipment of live stock, tools and implements valued at eight hundred dollars; a modern barn costing upwards of two thousand dollars; a shop building for carpentry, blacksmithing and printing, that cost one thousand dollars, and a dormitory in course of erection which when completed will cost ten thousand dollars, the school may well congratulate itself upon the fact that it is making rapid progress. By way of comparison we might say that five years ago when school opened it owned just one building in which the academic work was carried on. The industries were conducted in a building belonging to the Colored Baptist Church of Christiansburg, but now the entire plant including buildings, tools and materials is estimated at sixteen thousand dollars, and when dormitory is completed it will be worth twenty-six thousand dollars.

To teach the students to work, to do the best work, and to create a love for work for the work's sake is one of the aims of Christiansburg. Farming is the central industry. All others hinge around it. The boy who works on the farm has his clothes mended in the sewing room, his washing done in the laundry, his meals cooked and served in kitchen and dining-room. As a result of his work the

farm yields produce,—wheat, corn, potatoes which go to feed him and those who minister to his necessities. Under present conditions our farm will not yield enough of produce to run the boarding department, so the Board decided to supplement what the farm can with a certain amount which goes to buy supplies are necessary over and above the student produces. Is this plan practicable? We have found it entirely so. In the greater part of this year we have had boys working on the farm. It has produced so far about one hundred bushels of potatoes, eighty-four bushels of wheat; peas, beans, garden truck to the value of twenty-five thirty dollars, besides corn which has been cut ready to gather, from which we are expecting two hundred bushels, to say nothing of hay and forage for horses.

But Christiansburg, like Hampton and Tuskegee, is aiming to train the head, the heart and the hand. The school is undeniably but thoroughly Christian. In the dining room of the boarding hall a chapter from the Bible is read each morning and prayer is offered, thus developing in the students a love for reading and the habit of family devotion which we try to impress them to carry out to their homes. Connected with the school are religious societies for young men and young women. They are wholly in charge of students but are guided by teachers who are also members.

In the academic department thoroughness in the English branches is the aim; no fancy is taught. The academic course has the hearty endorsement of the County Superintendent and the school board of Montgomery County. They have placed all the colored schools in Christiansburg District under the supervision of the principal of ours. This shows the confidence they have in it and the work he is doing.

In conclusion we select a passage from the report of the chairman of the executive committee of Friends' Freedmen's Association that states:

"From a country school we have become a normal and industrial institute. We possess a school-house which has cost seven thousand dollars; a farm five thousand dollars; industrial shops one thousand dollars; barn one thousand dollars; dormitory which will cost five thousand dollars to eight thousand dollars; and live stock, tools, etc., valued at thirteen hundred and fifty dollars; a total of say twenty-three thousand dollars.

A well equipped industrial building of a few minor necessities may require ten thousand dollars more. This amount we Friends will contribute.

With so much in hand and in prospect, will we stand? Will it not be in our place? Can less than this be our due?

Many, many are the noble endowments the general cause for which we work.

"Let us then be up and doing, always doing more and more."

Owing to the increased facilities school there will be required to run the next year sixteen hundred and twenty-five dollars more than it has cost in previous years. Of this amount the county of Montgomery, Pa., pays five hundred and fifty dollars to maintain its two schools under our supervision.

ving ten hundred and seventy-five dol-
be raised by our treasurer over and
what he has in other years raised. The
eels that this step is wise and necessary
es Friends will respond liberally to the
of three thousand dollars for the run-
xpenses of the school this year. All
utions should be sent to J. Henry
good, Treasurer, 648 Bourse Building,
lphia, Pa.

Selected for "THE FRIEND."

Thomas Loe.

as Loe, of Oxfordshire, was a faithful
and minister of Christ Jesus, and com-
pany to truth, especially in Ireland,
e travelled through great hardships,
e going thither was about the year
Francis Howgill, Edward Burrough, and
having been there before him. He had
ellent gift, sound and clear in the mi-
nister's speech, sharp and quick in
understanding; and many people flocked
to him, and received truth by his ministry
ation; and others he confirmed in the
who were convinced before. He was
publicly engaged with priests and op-
posed the Lord made him a sharp instru-
ment in his hand, to confound the adversaries
of truth, and the mouths of gainsayers were
shut. His company was very desirable,
pleasant and sweet in conversation, and
in dealing with his friends in affliction, so
that he could speak a word in due season.

At several times a prisoner for the testi-
mony of truth, and went out of England
several times to visit the nation of Ireland, in
which he found his natural strength was much
increased. He also labored in the work of the
Lord in London, being often there; and
when sick in that city, expressing on his
bed what exceeding encouragement he
received from the Lord, as follows: "Glory
be to God, for thy power is known. God
bless thee." Then speaking to William Penn,
the Lord had made him instrumental to
him, he said, "Dear heart, bear thy cross,
and be faithful for God, and bear thy testi-
mony day and generation, and God will
give thee an eternal crown of glory that shall
never be taken from thee. There is not another
like thee, the holy men of old walked in, and
in all posterity. God has brought immortali-
ty, and immortal life is felt; glory,
and he is worthy. My heart is full,
and I say? His love overcomes my
sufferings; my cup runs over. Glory! Glory to
the Lord forever. He is come, he has ap-
peared and will appear. Friends, keep your
eyes for God; live with Him, and He
will live with you." Another time he said to
his friends, "Be not troubled, the love of
God overcomes my heart." And again he
said to George Whitehead, and other friends
present: "George, the Lord is good to
thee. The day He has covered me with his
love, I am weak, but I am refreshed to see
that the Lord is good to me." Another
time he said, "How art thou, Thomas?"
and he said, "I am near leaving you, I think;
but as well in my spirit as I can desire, I
am still here; and I never saw more of the
face of God than I have done this day." He
being expected to depart, the power of
the Lord arose in him, and he sang to the

Lord, "Glory, glory to thee forever!" And
so continued praising God for some time,
which much affected the standers by.

He departed in peace the 5th of the Eighth
Month, in the year 1668 at London.

JUDGE NOT.—Why, because our judgments
are our fashions. Lecky has declared that
the two most influential factors in shaping
character are our judgments and our occupa-
tions. Every judgment leaves its mark upon
our being, and determines its final shape and
color. No judgment passes away in fruitless
impotence; every judgment tends to enrich
or impoverish the soul. Now, censorious judg-
ments are thoughtless and they are therefore
mentally enfeebling. They are harshly, and
therefore they are spiritually benumbing. They
are aggressive, and therefore they are de-
structive of the fine reserve and modesty of
the soul.

The authorities at Greenwich have been very
much concerned lest the electrical railways,
which are now undermining London, should
emit subtle currents which might destroy the
accuracy of their exquisite astronomical instru-
ments. Now it is the presence of subtle cur-
rents created by foreign matters, which per-
vert the truthfulness of our moral judgments.
It is the beam which corrupts our decision.
Envy is a perverting medium. So is avarice,
prejudice, pride.

At Wragley in Yorkshire, there is a curious
old painted window representing a man
with a beam across his eyes trying to extract
a tiny speck from the eye of another. Is it
altogether without suggestiveness that the
window is in the minister's vestry?

"How canst thou say to thy brother," etc.
—J. H. Jewett.

Items Concerning the Society.

HADDONFIELD QUARTERLY MEETING.—Haddonfield
Quarterly Meeting, held at Moorestown, N. J., on
Twelfth Month 11th, 1902, was largely attended.
This betokened an interested membership when the
disagreeable weather is considered. The large
house was filled.

The first meeting commenced with a deep silence
and with a sensible evidence of the Divine pres-
ence. This was succeeded by vocal exercises, there
being sixteen offerings in prayer and exhortation.
The number of Friends so engaged did not weaken
the strength of the meeting, but sensibly tended
to increase the baptism into the Holy Spirit. There
was a unity in the labors of exercised brethren and
sisters, which we feel should confirm and build up
in the things of Christ's kingdom.

The need of approaching worship or our spiritual
activities with the expectation set only on Christ,
was dwelt upon. The weary and heavy laden were
invited to come to Christ, and in Him find their
rest. To bear his yoke was truly depicted as
yielding peace and love and joy. We were ex-
horted not to be ashamed of his glorious gospel,
and to forsake the fashions of the world which so
soon shall perish.

The second meetings were times of active and
earnest labor. The report of the committee having
charge of the Atlantic City Meeting showed that
the attendance during the past year had ranged
from about thirty to two hundred on First-day
mornings. The average attendance for the year
had been seventy-six. All these meetings, whether
held in silence or accompanied by much vocal min-
istry, had been felt to be favored times. Many
not Friends had been deeply interested, and it was
felt helped, by these meetings.

The answers to the first Query incited the re-
membrance of our outward mercies and temporal
advantages, and the inquiry as to whether we were
not thereby called to make the sacrifice of any
time involved in attending mid-week meetings.
Young parents were reminded that if their chil-
dren were permitted to grow up without being ex-
pected to attend Meetings for Discipline whenever
practicable, a generation of non-attenders of such
meetings will in years to come only weaken or
decimate the church organization. At the same
time, the encouraging fact was exhibited that
many young men find much comfort and value in
the hours of mid-week worship.

The second Query revealed much love and unity.
It was caused for deep thankfulness that all our
Monthly Meetings were able to report that "no
differences" were known to exist within their bor-
ders.

In connection with the answers to the eighth
Query, it was announced that there had been no
disownments amongst our Monthly Meetings during
the past three months.

The interest in the Quarterly Meeting was con-
tinued until the end of the long session, and the
details of business were transacted in love and
consecration. The meeting then concluded, and
many kindly hand-grips and salutations were ex-
changed as Friends left for their respective homes.

Twelfth Month 11th, 1902.

We are informed that the treatise on Water Bap-
tism, by James H. Moon, which was noticed in our
columns last week, is on sale by William C. Cow-
perthwaite, 304 Arch Street, Phila., at 25 cents, or
if by mail to any English-speaking country, 30
cents.

For the encouragement of our readers we will
say that a literary woman of practised talent
resident in the State of Maine, but, it is supposed,
not a member of our religious Society, writes:
"We have many magazines and papers — news,
reform and religious — but nothing that at all
takes the place of THE FRIEND. My husband never
fails to read it first, before any periodical, and it
has been in this community a continual missionary."

Inasmuch as the book entitled "A Chinese
Quaker," is declared to be a true story, and not a
work of fiction, as fiction is understood to be, we
venture to give the following information from a
private letter of Joel Bean: "The hero of the story,
"The Chinese Quaker," is Sing, a boy beloved by us
here, a member of our Association of Friends. Our
daughter Lydia taught him awhile and prepared
him for college."

Wilhelmina Proctor of the story is
our friend, Wilhelmina Jones, who brought up
Sing from a child eight years old. He was a dear
Christian boy, a real Friend, a regular attender of
our meetings. Now he is a mandarin in China, but
still the lovely boy whose letters you will see
specimens of in the book. Thy sister Mary will
know about the parties mentioned. The authoress
is a gifted writer, a friend of ours. She met Inazo
and travelled with him in the Swiss mountains,
and wrote about him to W. B. Jones."

The current *Independent Methodist*, in publishing
a chapter from the late Francis Frith's "Quaker
Ideal," entitled the "Quaker Ideal of Ministry,"
adds the following editorial note: "Our teaching
and attitude concerning ministry is part of our
Quaker inheritance, and it is matter for profound
satisfaction that we have in no way departed from
the Ideal. A careful perusal of this article will
bring a renewed sense of our indebtedness to the
early Friends, as well as reveal our close identity
with them in the matter of ministry and the
teaching of the doctrine of the Priesthood of Bel-
ievers." Our friends, the Independent Methodists,
it is clear are not far away from us in spirit, says

the *London Friend*. Still, before vouching for them we would have to be witnesses of their practice; as we have to do in the case of much preaching which of late passes for "Quaker," but really is based on the principles of preaching in vogue amongst others.

Notes from Others.

"I, for one," says J. Wilbur Craft, "expect little reinforcement in counteracting the corrupting tendencies of our times from free libraries from which little goes out save fiction, and much of that not the best—some of it nearly the worst—no adequate effort being made to guide even juvenile readers; or from art galleries, where susceptible and uncultured youths are turned loose in yet more dangerous forms of Frenchy realism."

Yuletide has been held as a sacred festival by numerous nations. Christians hold December 25th as the anniversary of the birth of Jesus. China, on the same day, celebrates the birth of Buddha, son of Maya (See Bunson). The Druids held during the winter solstice the festival of No-lagh. (Higgins). Egypt held that Horus, son of Isis, was born toward the close of December. Greece celebrated in the winter solstice the birth of Ceres, Bacchus and Hercules. Numerous Indian tribes kept Yuletide as a religious festival. (Monier Williams). Mexico holds in the winter solstice the festival of Capetame. (History of the Indies, Volume II., page 354). Persia at the same period honors the birth of Mithra. (Gross). Rome celebrated on December 25th the festival "Natalis Solis Invicti." Scandinavia held at Yuletide the festival called Jul, in honor of Freya, son of Odin (Brewer, page 321). etc.—*Tribune*.

We noted last week that the idea of admitting people into membership of the Baptist church without water baptism had found at least one advocate, and this none less than pastor R. P. Johnson of the Fifth Avenue Baptist Church of New York. We may add that this occurred at the Baptist Congress recently held in Boston, on a discussion of the question: "Is Baptism Essential to Church Membership?" To the surprise of many present all four ministers chosen to address the conference on this subject answered the question in the negative. The arguments of the above-named speaker, who are fairly typical of those put forward by his three colleagues, are summarized as follows:

"I. To make baptism essential to church membership is to emphasize ceremony rather than character, and is to exalt the letter above the spirit.

"II. To make baptism essential to church membership is to demand more for the church than is required for the kingdom. For, in harmony with our age-long contention, baptism is not essential to membership in the kingdom of God. The kingdom preceded the church and produced it, just as the love of liberty and independence preceded and produced the declaration of independence and the institutions of our country.

"III. To make baptism essential to church membership is to perpetuate a cleavage in the body of Christ along the line of ceremony merely.

"IV. To make baptism essential to church membership compels us for the sake of ceremonial observance to disregard the fundamental Biblical principle of the right and duty of individual freedom of Scripture interpretation. The only reasonable course is to recognize individual freedom of interpretation within the limits of essential principles. We do that in other matters, why not in matters of baptism also?"

These positions are repudiated by the conservative Baptists, as they ought to be by those who would consistently claim the name of that church—a name which has been given an established meaning from the first, by its distinctive doctrine of immersion as a condition of admission.

The Boston *Watchman* pronounces these yielders of their fundamental principle as "but masquerad-

ers and pretenders when they call themselves Baptists." But the *Chicago Standard* (also Baptist) says: "The discussion is evidence of our oft-urged contention that Baptists lay much less stress on the ordinances than on a changed life; that they contend much more earnestly for the faith than for the form; that they strive first for the spirit, then for the letter. . . . We must not too strongly regret that our denominational position should be reviewed, for we Baptists would rather be right than be Baptists."

SUMMARY OF EVENTS.

UNITED STATES.—The hearing of testimony by the Anthracite Commission has continued, in the course of which many of the grievances of the miners have been stated. They have alleged their wages are not sufficient to provide a proper living for their families, and that the operators are arbitrary in their dealing with their employees.

The recent cold spell has caused great anxiety in many cities and towns, and much suffering among those who are not provided with fuel. President Baer, of the Reading Railway, lately said that at the end of Eleventh Month, 1901, 40,495,000 tons had been mined. This year, owing to the weather, only 36,100,000 tons had been mined at the end of Eleventh Month. This shortage has been largely made up by the burning of bituminous coal, but there is still a large shortage. Although a number of school-houses and some charitable institutions are scantily supplied with coal, a canvass recently made in this city shows that the laboring man is really the greatest sufferer. In Washington, the supply of coal in the public buildings is almost exhausted.

The number of Jews in this country has greatly increased since 1880, when they were less than a quarter of a million. Since then nearly a million has been added. In 1882 the severe measures taken against them in Russia, caused a large emigration to the United States.

A valuable improvement in navigation is stated to have been caused by the invention of the stellar compass by Captain R. T. Lawless, by which it is possible to steer a vessel after dusk by fixing the compass on a particular star.

Dr. Adolph Lorenz, of Vienna, has lately performed several operations upon young children for congenital dislocation of the hip, by means of his method of "bloodless surgery," which have been witnessed by many hundred medical practitioners and surgeons in this city, and have awakened great interest here as in other cities where similar demonstrations of his method have been successfully made.

A sudden change in the course of the Missouri River has lately left Nebraska City, Neb., three miles inland.

Evidences of the importance of regulating the immigration into this country of aliens from abroad have accumulated of latter time, and point to the necessity of additional legislation. Goodwin Brown, representing the New York Lunacy Commission, testified recently before the Senate Committee on Immigration that the cost of the foreign born insane to the States in the past ten years reached the sum of \$50,000,000. There is, it is stated, an increasing number of unfit persons coming into the country by way of Canada.

Dr. J. T. Rothrock, in his annual report as Secretary of the Pennsylvania Forestry Association, said: "I can see no reason why a fully equipped school of Forestry should not also be found at one or more of the great educational institutions of this State, for forestry is something more than a mere art. It takes rank in Germany with other well recognized branches of political economy. It would be well indeed for the nation if all of our statesmen recognized its bearing upon the prosperity of the country."

Natural gas has been discovered near Livingston, Mont.

Governor Yates, of Illinois, explained that his action in excluding cattle from Pennsylvania, New York and New Jersey, only requires that such cattle must be accompanied by a certificate to the effect that they have not been within the quarantined States for the past thirty days.

The end of the Pacific telegraph cable, which is to connect San Francisco with Honolulu, has been landed from the steamer *Newbury*, which afterwards proceeded on her voyage to Honolulu.

A system of wireless telegraphy for commercial purposes has been established between White's Point, Cal., and Catalina Island, a distance of thirty-six miles.

There were 459 deaths in this city last week, reported to the Board of Health. This is less than the previous week and more than the corresponding week of 1901. Forty-three died of consumption of the lungs; 81 of inflammation of the lungs and surrounding membranes;

13 of diphtheria; 15 of cancer; 13 of apoplexy; typhoid fever; 3 of scarlet fever and 2 of smallpox.

FOREIGN.—A long pending controversy with the account of the non-payment by it of certain claims of Great Britain and Germany has developed into measures by these two countries. A dispatch from Washington states that the dispute "grows out of made by the Governments of Germany and Great Britain for losses sustained by their respective citizens, reparations and local disturbances. For a number of years Venezuela has been in a condition of chronic riot, and in the progress of these numerous rebellions the property of the foreigners has been despoiled and appropriated at will by one or other party to fare."

It is said that in seventy years there have been one hundred and four revolutions in Venezuela. It is stated that Castro, President of that country, who had been averse to an arbitration, had become willing to accept of it, and had made overtures to Great Britain and Germany to this end, and requested that the States should act as an intermediary, to which the authorities at Washington had given assent. On the 13th, a British and a German cruiser bombarded the port of Puerto Cabello, the second sea port in size in Venezuela, which has caused great excitement and has led to an installation upon German and English residents in Venezuela.

China is stated to be the richest country in the world in coal, though the want of mining and transportation facilities have rendered this source of supply unavailable up to the present time.

Information has been forwarded from China, of serious disturbances are occurring there in certain provinces, from the largely directed against the foreigners.

It is stated that there is great suffering among the unemployed poor. Thousands of them depend upon charity bread and soup for their living. Seven thousand soldiers back from South Africa are among the sufferers.

Cholera alone in Egypt, in Japan, in China, in the Philippines is said to have carried off a multitude of persons estimated as high as 600,000 during the recent year.

The Great Nile reservoir and dam lately completed was formally opened on the 10th inst., when the gates were swung open and a great body of water was let through them. It is estimated that this dam has cost about 124 millions of dollars will increase the agricultural earning power of Egypt about 13 million dollars yearly. It will permit the irrigation of 1,000,000 acres. The dam is straight from end to end and its length is about a mile and a quarter, its width is about twenty-three feet, and the deepest part is two feet. The height from the lowest part of foundation to the top is 131 feet.

A despatch from Berlin, of the 10th, says that extremely cold weather prevailing in Germany, in connection with the hard times, is causing much suffering. Persons have been frozen to death in the worst districts provinces and also in the northeastern part of the country.

A definite treaty of reciprocity between Cuba and the United States has been signed, which, however, subject to the approval of officials in the two countries. It provides for a uniform reduction of 20 per cent on present tariff charges on Cuban products entering the United States.

The drought in Australia the present year is the most frightful that has ever been known in the large area of wheat lands in Northern Victoria. Nothing this season, and there is great distress among farmers in that region. During the drought it is stated that forty millions of sheep have been killed in Australia.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For care of persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.15 A. M. and 4.32 P. M. Other trains are marked on the Stage fare, 15 cents; after 7.30 P. M., 25 cents. To reach the school by telephone, wire Westtown Phone 114x.

The Day-Star.

The early glimmerings of that prophetic light which lighteth every man that comes into the world, man does well to take heed, and to be drawn of spiritual consciousness in his own horizon, until the Day Star arise in the East. For that is not first in our recognition which is spiritual, "but that which is first, and afterwards that which is spiritual." We live the animal life before we are born of the Spirit. But the clearing vision of the Day Star, the revelation of this Day-Star of Righteousness unto a man as his light and morning star," when accepted and laid under, will be found to have no book like the Bible to reflect it and harmonize with it, as a record penned under the light of the moving of the Spirit of God. Therein, as in a holy witness for Truth, we have felt that holy men of God spake as they were moved by the holy inbreathing, and as they saw the same bright and morning Star which was the root of David's vision and experience, and the offspring of the same Divine Light. The light of Christ is the Star of Truth that leads to the recognition of the Day-Star of Jesus, and to the revelation, which is the birth, of Christ in us the hope of the world. Who are they who have, from generation to generation, come to worship Jesus Christ? They are the wise who have seen his light, and have been obedient to the vision. These bring their choicest gifts to his cradle, and going on in grace lay down at the foot of his Cross.

From the first dawning of the day-star in the East, through every spiritual discovery, until when his eyes were opened to see the light, to say, "Thou art the Christ!"

and all the way onward to the excellent glory, Christ is to the wise a progressive revelation, and upon the rock of this Divine revelation He builds his church of living and obeying witnesses. They being wise shall shine as the sun, and bringing many to righteousness "shall shine as the stars forever and ever."

They alone have celebration-power of the birth of Christ who know of the new birth in themselves. These, as children of the light and children of the day, though they may pass under clouds and storms, yet while they abide in Him know no sunset to their Christmas day.

The Scriptures.

A short series of articles will begin in the present number, expressing the exercise of concerned Friends in regard to our right attitude towards the Bible.

If any of our young members have been persuaded that in the field of holy Scripture, while men slept, "an enemy has sown tares," let them observe the counsel of the Master to those who would extract them. "Nay, lest while ye gather up the tares, ye root up the wheat also with them. Let both grow together until the harvest." Such work, where radically related to the faith, is assigned to the angels only. Walk in the Spirit and we shall not stumble at things hard to understand in the letter, nor wrest them to our own destruction.

The following passages reflect the counsel of Philadelphia Yearly Meeting hitherto:—

A declaration of the Meeting for Sufferings issued in 1828, was:—

"The Society of Friends have always fully believed in the authenticity and divine authority of the Holy Scriptures, and acknowledge them to be the only fit outward test of doctrines, having been dictated by the Holy Spirit of God, which can not err.

"They are profitable for doctrine, for reproof, for correction, for instruction in righteousness, that the man of God may be perfect, thoroughly furnished unto all good works; and are able to make wise unto salvation, through faith which is in Christ Jesus; and whatever any teach or do contrary thereto they reject as a delusion."

It seems seasonable this time affectionately to caution our members against the dangers involved in a merely intellectual study or literary criticism of the Scriptures. Their chief evidence is the witness for Truth in each heart. This, we believe, will not be wanting in any who reverently read them, with the mind

humbly directed to the Holy Spirit who dictated them, and through whose enlightenment alone they can be rightly understood. For, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned" (1 Cor. ii: 14).

A Bit of Commonplace Biography.

A woman who lives in a Maine village, has on her reading table a copy of John Woolman's Journal, a history of the Friends and several of the little Barclay books. In her library an old volume of Job Scott finds kinship with Joseph Walton's "Incidents and Reflections." She has distributed in the local W. C. T. U. considerable Quaker literature and has given away many carefully marked copies of THE FRIEND, which has long been an esteemed member of her family.

Possibly this is worth noting for the reason that there is not a Quaker in the town nor has the woman ever made the acquaintance of one. Neither, so far as the writer knows, are there any bona-fide Friends' meetings in this state, though there are a few "Friends' churches."

At the age of fourteen she united with the Calvinist Baptists and straightway began a promiscuous reading of her own and other denominational books and papers. She soon discovered that she was no Baptist and, after some trying experiences, succeeded in severing her connection with the church, though she continued to attend its services and work in its "Sunday school."

Being of a speculative turn of mind she beat about in many troublous theological waters, little guessed by those who knew her, but she came at last to see that the current of the years had been bearing her steadily toward Quakerism. At this period it was a pleasure for her to remember that her mother's ancestry a generation removed furnished a long line of loyal Friends. Looking further into her genealogy she came upon the to her interesting fact that an ancestor who helped whip the Quakers at Dores Neck, in the Seventeenth century, was punished by seeing his four sons soundly converted to the faith of the persecuted.

The churches in this town of three thousand inhabitants are seven. One of them recently sent out the following on a good-sized pink flyer.

"Hallow'en Social and Entertainment.

"Witches and choice spirits of darkness will hold high carnival.

"Among the features of the evening will be the Hallow'en Fortune Teller, Madame Meade. Come prepared to have your fortune told and to visit the Room of Mysteries. Purchase a piece of Cupid's Cake and find your prize." Etc., etc.

The woman asks if a church which can only support itself by an annual series of entertainments (which engross its chief attention) is giving a satisfactory reason for its existence? Is a thinly attended "Sunday service" and a thinly attended prayer meeting a satisfactory equivalent for carrying on the show business?

The other six churches are pretty nearly in the same practice. Yet the woman, though continually seeing much which she must condemn, though frequently tempted to separate herself and remain at home, still believes she has the chance to hear a more effectual testimony to the truth (as she receives it) than she could possibly hear if she remained away. Her interest in the "Sunday school" and in the W. C. T. U., a natural impulse to speak her views plainly, and an undeniable influence over many lives, seem to encourage her in this conclusion. She asks is she wrong?

Every-Day Blessings.

The accustomed things are usually occupied as a matter of course. One seldom stops to think of the beating of his heart which causes the blood to flow through his body, or of the process of breathing by which that blood is filled with life-giving oxygen.

Immunity from disease does not impress one until it ceases. Ability and opportunity to work are not always regarded as blessings. Friends with whom one has genial intercourse—wife or husband, children or parents—how little, after all, we appreciate them until we lose them!

Habit is responsible, also, for much neglect to consider whence come the gracious rains, and how it is that harvest succeeds seed time in the recurring years.

The spectacle of the sunset and the glorious panorama of the dawn are neglected for cheap representations of them.

The nightly pageant of the stars is less thought of than a street parade.

The mute appeal in the eyes of the dumb beasts is too often denied, and we are thus deprived of the kindly comradeship of our fellow mortals. Even when we do accept that comradeship we fail to prize it as a Divine blessing.

The old earth itself, swinging through the infinite spaces of the universe, might fly from its orbit into chaos, for any serious thought that we give to the matter.

If one pauses a moment to consider these things he will be filled with wonder at the orderly plan of nature, and will be moved by reverent awe in the presence of a power and a mystery beyond his comprehension. Thankfulness, therefore, is the proper mood for human kind . . .

It is fitting for youth that it may face life with some appreciation of its significance and for age, that it may approach its end knowing that the Power which has guided the universe through the eternities and a single human soul through its brief span on earth, will not cease his care at that transition which we call death.—*Late Paper.*

Keep your most refined and gentle manner for the home.

Never refer to a mistake that was made with good intentions.

When a wrong is pardoned, bury it in oblivion.

FOR "THE FRIEND."

Comment Upon an Autocrat's Position.

The *Tribune*, of New York, remarking upon a recent report of the Czar being a victim of melancholia, and rehearsing instances of sundry alleged mental maladies in the Muscovite line, makes the following observation: "Prior to and largely during the reign of Nicholas I., the Czars had the ordinary dangers of an absolute monarchy. To the general uncertainty of life and the uneasiness of the head that wears a crown, the rise of Nihilism added the awful certainty that organized plots of assassination covering many years and including many persons in all classes of society, were being steadily pursued. This would be sufficient, together with the precautions that have to be taken, to bring an average man into nervous prostration, and the average woman into melancholy."

Now, so far as concerns Nicholas I., his reign began auspiciously, the young emperor, hardly thirty years of age when he ascended the throne in 1826 seeming inclined to follow in the footsteps of his father, the beneficent Alexander I. Thus, a year after his accession, we find Daniel Wheeler, in the midst of his own important service in Russia, writing as follows to a friend in the early part of 1827:

"The Emperor Nicholas is indefatigable in his exertions to support the interests of his people throughout the empire, by strictly insisting upon the most rigid adherence to justice in all causes; which has given great satisfaction. His leisure hours, at least those absolutely necessary for exercise, he makes subservient to the general good, and is daily going about to inspect the hospitals and other public institutions, in the most minute manner, which has already had a salutary effect.

"I may be mistaken, but I think he is almost the first crowned head that ever entered the doors of a prison, with the benevolent object of inquiring into and improving its state; this he has lately done, and not in a superficial manner; having, in many instances, entered closely into the examination of particular cases with great interest, and caused many to rejoice in being set free. This work is carried on without any parade; he just steps into a sledge with a single horse, and no one knowing where he is going, of course there can be no preparation made to receive him; in this manner all are taken by surprise, and the real state of things is fairly developed, whether rough or smooth. He has a great work before him, and stands in need of that wisdom which is better than rubies, to direct and support him in such an arduous and responsible station."

This estimate of a ruler who, in later years, has been pointed to as the type of a stern autocrat, is corroborated in the memorials of John Venning. The latter was a philanthropic Englishman, a resident in Russia at the time of which D. Wheeler speaks, as well as for a number of years before and after, and in his work of ameliorating the condition of the prisons and reformatory institutions, he earned the imperial confidence and cooperation, as also that of many of the nobility. He thus records the impressions produced on his mind, early in the reign of Nicholas:

"Nicholas is truly the father of his people,

and his character is strongly marked by his sincerity and high sense of honor. He confidently asserts from personal experience he must be met with similar sentiments whether by private individuals or by characters, foreign or domestic, or by the failure of success; but meet him on his noble principles, and you will succeed. All many acts of injustice are exercised by him, yet they are without his edge or sanction; and, as soon as I promptly remedied." Having given instances of this assertion, John Venning relates the following instance in support of the declaration he makes that "every one who has lived in Russia knows that where there is danger, there is Nicholas." It is evidence of the fact that this monarch's natural impulses were good, while he is seen to be an example of the "strenuous life," of which we have frequently heard.

"When the cholera-morbus raged at St. Petersburg, in 1832," says the narrative, "the ignorance of the lower orders there, as in many other countries, broke out in great acts of violence, and in the assembling of great numbers to destroy the hospitals and the lives of the medical men. On one occasion many thousands of the common people were assembled at one of the hospitals in St. Petersburg, owing to absurd and incorrect reports that the food, water and medicines were purposely poisoned. The noble and imperial monarch was then residing at Peterhoff, about twenty miles from the capital, with his imperial family; and as soon as he heard the uproar, he fearlessly started for town, on horseback, into the midst of the infuriated mob, and addressed them in the most energetic plain language. 'Are you Russians to act thus shamefully? Are you not destroying the very means which I wish for your relief? This is God's awful retribution for our sins. Down every one of you on your knees, and implore mercy from me!' Struck and overawed by this appeal from his monarch, all knelt down, and the emperor offered up aloud a prayer, which, being finished, the people dispersed.* Never while I was in Russia, did I know him turn away either his eye or his heart from misery. He is styled beloved from one end of the empire to the other."

Nevertheless, the political opposition encountered appear to have embittered the mind of Nicholas, changing his rule in a measure to that of a despot. First, a long-prepared military conspiracy was suppressed with real vigor and harshness; then, a national uprising of the Poles was, with difficulty overthrown; the conquered kingdom being converted into a Russian province; a long contest was waged with the Caucasian mountaineers, who were defeated for a greater degree of independence; and finally came the hapless Crimean war, the course of which (1855) he passed at St. Petersburg. In the meantime Nihilism was lifting its head as a determinately aggressive factor in the empire. Knowing a little of the cumulative perils which waylay the elements of the second Nicholas, it seems pathetic to turn a backward glance three centuries of a century, to the word-picture of Daniel Wheeler, telling how the then

*Whether the Emperor was right in giving this order, I pass no judgment.—L.

owned Czar "just steps into a sledge on a single horse." Were the present Czar, the promulgator of the rescript which eventually in the International Tribunal at The Hague, surrounded by disinterested, liberal-minded advisers, it is not probable we would find those successive coercive measures towards the Finns, which seem likely to alienate from the empire the adhesion of that progressive and hitherto patient people. The rescript interposed to his carrying out cherishing and benevolent purposes, may be an occasion of the alleged melancholia.

JOSHUA W. LEEDS.

from the Memoirs of Margaret Woods, 1771

Evening of Seventh Month.

"I have no hope who never had a fear;
Alas, that never doubted of his state,
Alas, perhaps—perhaps he may, too late."
—*Cowper*.

However we may sometimes flatter ourselves with the safety of our situation, yet I like there are seasons when fear seems almost to prevail, and doubts will arise in the mind respecting our admittance into that glorious state, which our souls have ardently sought. And Oh, that I may continue to have no sense of fear and doubt, if they will in any way tend to my final preservation.

When on the verge of an awful futurity, nothing must wear a solemn aspect. We form no idea of the place to which we are going, and but faint ones of the attributes and perfections of our Creator. We cannot live our lives without acknowledging that we have done those things which we ought not to have done, and neglected to do those things which we ought to have done. We have been conscious as well as unprofitable servants. The multitude of our failings seems to rise up and handwriting against us, and we can almost fancy we hear the sentence pronounced, "Thou art weighed in the balance and art wanting" (Dan. v. 27.) That we are going, we must with all reverence and humility own. We can only pray that our reliance may be accepted, and our sins blot out from the book of remembrance; for we stand before a Being of infinite purity and holiness, and find anything to plead in doubt? Yet there are seasons when hope rises, and we feel enabled to cast all our sins upon Him who died for us. Upon Christ, we came into the world to redeem us from all unrighteousness and become our eternal salvation. Our confidence are in Him, as the apostle of the Father, to bring us to glory; having so loved the world as to give his only begotten Son, that those who believe in him should not perish but have everlasting life. We trust will shew mercy to our transgressions, and with Him give us all things.

B-NEWINGTON, England, 1802.

"He is God's school, and they that will listen to the Master there will learn at God's school."
—*George Macdonald*.

USE to the exhaustless fountain of all truth must be that man who, borrowing some of the Truth, and bringing it into his own being, becomes thereby a fountain of truth to the world.

Does Paul Forbid Women to Teach in the Church?

(Continued from page 179.)

In our last we proposed to give several reasons why it should not be expected that Paul, or any other New Testament writer, would forbid woman to teach in the public assembly; and we endeavored to present one reason, and that was that it had been plainly predicted in the Old Testament that women should be engaged in teaching the gospel in the New Testament Church. In this article we shall present two additional reasons.

1. That Paul does not intend in these passages to forbid woman to teach in the Church is evident from the fact that he elsewhere plainly recognizes her right to teach and to pray in the public assembly.

In the eleventh chapter of First Corinthians the apostle mentions, and reproves, two abuses that prevailed in the public worship in Corinth. One was in the observance of the "Lord's Supper"—a want of proper solemnity, partaking of it much as they would of an ordinary meal. The other disorder that he corrects is that of women appearing unveiled in the public assembly, and taking part in the exercises without the usual covering of the head. In this the apostle refers to the universal custom in Oriental countries, and that was regarded as so very important—of women wearing a veil or having their head covered when they go out in public. This was an emblem of modesty and chastity, and was also a mark of proper subordination to the husband on the part of the wife, and it is so regarded to the present day. The apostle shows at length that Christian women, while brought into the liberty of the gospel, and they might consider themselves liberated from the bondage of such a custom, should not discard the veil when appearing in public assemblies, but out of respect to long-established and universal custom they should wear the veil, and not expose themselves to the suspicion of immodesty and immorality. And in this expostulation he mentions in the fifth verse the fact of their praying and prophesying. "But every woman that prayeth or prophesieth with her head uncovered dishonoreth her head." Now, Paul here incidentally recognizes the right of women to pray and to teach in the public assembly. This is not the subject or point of which he is speaking. He is speaking particularly about the manner of worship, about the covering of the head in the public assembly; but while speaking of this, he does clearly recognize the right of woman to pray and teach in the public assembly. That this is the case, we will see by noticing the similar expression in the preceding verse in the case of man. "Every man praying or prophesying having his head covered dishonoreth his head." In the worshipping assembly, man should abide by the prevailing custom as to the head, and have his head uncovered. And is there not here a clear recognition of man's right to pray and prophesy or teach in the public assembly? And certainly the same is true in the case of woman. The language is the same in both cases, and if the inference is legitimate in one case, it must be in the other. And Paul virtually teaches that woman has a right to take part in the exercise of prayer and teaching the Divine word in the public or promiscuous assembly.

She must do it in a proper manner, so that it will be to general edification; but her right, it would seem, cannot be questioned. Then, if this reasoning is correct, these passages must have some other than a prohibitive interpretation.

2. That Paul does not prohibit women from teaching in public and from engaging in gospel work, seems certain from the fact that, in his epistles, he gratefully mentions women that labored in the gospel with him and others.

In his letter to the Church of Philippi he refers particularly to the women in that church. He mentions two of them by name—*Euodias* and *Syntyche*. And in chap. iv, 3, he requests someone whom he styles true yoke-fellow to remember and help certain women who had aided him and others in gospel work: "And I entreat thee also, true yoke-fellow, help those women who labored with me in the gospel, with *Clement* also, and with other my fellow laborers whose names are in the book of life." Let us remember the prominence that woman had in founding the Church there. The first assemblage to which Paul preached was composed entirely of women, met for prayer by the river side. The first convert was a woman, *Lydia*, a seller of purple. Possibly the second was the damsel out of whom the evil spirits were cast. It would seem that women were active there in gospel work, and when the apostle wrote to that church from Rome, he remembered those faithful workers and interceded on their behalf.

Paul says that the women labored with him and others "in the gospel." This was the distinctive characteristic of their labor, they labored in the gospel and they labored with him in the gospel. Paul labored in the gospel. He taught it and commended it to others, and endeavored to persuade all to believe it. And these women in their way labored in the gospel, too. In view of this and also in view of the prediction that women as well as men were to teach, and that at Pentecost the Spirit was given to them, and that then they did teach the gospel, would it be reasonable to conclude that all Paul meant was that they taught the word in their homes or in a private way to their own sex? And in the last chapter of the Epistle to the Romans, the Apostle mentions quite a number of women who were noted for their work in the gospel. *Phoebe*, the servant of the church at Cenchrea, *Priscilla*, *Mary*, *Tryphena*, *Tryphosa* and the beloved *Persis*, all of whom he says helped him and labored in the Lord.

Now when the presumption is so strong that Paul and others had been much aided in their great work by women, we would not expect to find him prohibiting them entirely from teaching the gospel or praying in the promiscuous assembly.

In view of all these reasons it is not manifest that there must be some other interpretation of these passages than the one so generally adopted?

(To be continued.)

As a dear friend can look the love which he cannot utter, so I read the face of nature, so do I read the record of God's interposing mercy. I feel myself embraced with a kindness too tender and strong for utterance.—*Orville Dewey*.

The Sacred Scriptures.

[The following is the first of several papers recently prepared by different Friends regarding the sacred Scriptures. They have been furnished for publication in *THE FRIEND*.]

I.

In this day of high literary culture and attainments, when new theories are being advanced and old ones set aside; and when even the sacred Scriptures have not escaped the pen of the modern critic—a fear has been felt lest some of our members—and particularly those of the younger class—should be so far influenced by the sophistry of certain writers as to allow their own reasoning powers to usurp the place of the Holy Spirit, in endeavoring to explain some of the mysteries of the Bible. Our Society has always believed that a portion of that Holy Spirit with which the writers of the Scriptures were inspired is necessary for the right understanding them, as is so well expressed in our Book of Discipline. "As a true understanding of the Divine will and meaning of Holy Scripture cannot be discerned by the natural—but only by the spiritual—man, it is therefore by the assistance of the Holy Spirit that they are read with great instruction and comfort."

George Fox says of the Holy Scriptures:—"We believe they were given forth by the Holy Spirit of God, through the holy men of God, who, as the Scripture itself declares in 2. Peter i: 21—spoke as they were moved by the Holy Ghost."

In writing of the Scriptures, William Penn uses similar language:—"We in truth and sincerity believe them to be of Divine authority, given by the inspiration of God through holy men,—they speaking or writing them as they were moved by the Holy Ghost, etc."

In order fully to comprehend any literary production, it is necessary that we should—in good measure—be endued with, and enter into, the spirit of the writer. If this be true of any ordinary writing, how much more important is it that in our endeavors to understand and explain the sacred Scriptures, we should seek the aid of that same Holy Spirit which inspired the writers of them.

The Apostle Paul—in writing to the Corinthians—says:—"But the natural man receiveth not the things of the Spirit of God; for they are foolishness unto him; neither can he know them, because they are spiritually discerned" (1 Cor. 2: 14). Our Saviour in speaking of the mysteries of the kingdom said:—"I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and has revealed them unto babes."

It is well for us at all times to remember that the Bible is not a scientific book, and that it was not written to advance or confirm any scientific theory. but that it is essentially a religious book—our collection of books,—and contains a record of God's dealings with his creature man from the earliest history of the world. It was written long before the origin of the modern sciences by holy men of old as they were moved by the Holy Spirit, and is not a speculation as to the origin of things, but an authoritative statement of the truth from God to man. Our blessed Saviour frequently referred to what are called the Old Testament Scriptures in such a manner as to demonstrate

his full belief, not only in the record of fact, but also of many of the miracles therein recorded. He confirmed the Mosaic account of the Deluge in his remarks as given by Matthew xxiv: 37-39. He also bears testimony to the truth of the Bible account of the destruction of Sodom in Luke xvii: 28-29. His belief in the miraculous daily fall of manna as food for the Israelites, and of the preservation of the life of the Prophet Jonah are also recorded.

If we allow ourselves to doubt the authenticity of any one of the miracles recorded in either the Old or the New Testaments, we may—with equal right—entertain doubts in regard to a second or a third, and thus lay the foundation of what may unhappily end in disbelief of the whole.

Among the many attributes of the great Jehovah is that of Omnipotence. Did we but appreciate to the fullest extent the might and the power implied in this, no doubt would be entertained, that He who in the beginning formed the earth and the worlds, and breathed into man's nostrils the breath of life, whereby he became a living soul, could also cause the waters to flow from the flinty rock—or provide a great fish to preserve the life of the disobedient prophet, or raise the dead Lazarus from the grave.

May we then—both older and younger—accept in faith all that we find recorded on the sacred page; not relying on our own intellectual faculties to explain that which may seem obscure or unnatural—carefully excluding the erroneous idea that we are not bound to believe what we cannot understand—for things that are impossible with men are possible with God.

RICH FOR A MOMENT.—The ship *Britannia*, which struck on the rocks off the coast of Brazil, had on board a large lot of Spanish dollars. In the hope of saving some of them a number of barrels were brought on deck, but the vessel was sinking so fast that the only hope for life was in taking at once to the boats.

The last boat was about to push off, when a midshipman rushed back to see if any one was still on board. To his surprise there sat a man on deck with a hatchet in his hand, with which he had broken open several of the casks, the contents of which he was heaping up about him.

"What are you doing?" shouted he. "Escape for your life! Don't you know the ship is fast going to pieces?"

"The ship may," said the man: "I have lived a poor wretch all my life, and I am determined to die rich."

The midshipman's remonstrances were answered only by another flourish of the hatchet and he was left to his fate. In a few minutes the ship was engulfed in the waves.

We count such a man a madman, but he has too many imitators. Many men seem determined to die rich at all hazards. Least of all risks do they count the chance of losing the soul in the struggle.

And yet the only riches we can clasp to our bosom with joy in our dying hour are the riches of grace through faith in our only Saviour, Jesus Christ. Let us make these riches ours before the dark hour comes. They will continue and will afford joy and comfort when earthly riches are useless.—*Ec.*

GOD KNOWETH BEST.

Some time, when all life's lessons have been learned
And sun and stars forevermore have set,
The things which our weak judgment he
spurned,

The things o'er which we grieved with lash and
Will flash before us out of life's dark night,
As stars shine most in deeper times of bl
And we shall see how all God's plans were
And how what seemed reproof was love made

And we shall see how, while we frown and s
God's plans go on as best for you and me;
How, when we called, He heeded not our cry,
Because his wisdom to the end could see.
And even as prudent parents disallow

Too much of sweet to craving babyhood,
So God, perhaps, is keeping from us now
Life's sweetest things, because it seemeth

And if, sometimes, commingled with life's w
We find the wormwood, and rebel and shri
Be sure a wiser hand than yours or mine
Pours out this potion for our lips to drink
And, if some friend we love is lying low,
Where human kisses cannot reach his face
Oh, do not blame the loving Father so,
But wear your sorrow with obedient grace

—E. B. Brown.

Football Brutalities.

It is a particularly vehement denunciation of the game of football which one Thomson, an old graduate of Princeton University, indulges in in the *Princeton Weekly*. His observations are the more impressive because of the knowledge which he brings to the discussion, and the prominent place he occupies with reference to college athletics. I am not a sentimentalist complaining about conditions of which he has no practical knowledge, but a veteran of long experience with its popular and strenuous college sport.

That the game as it is commonly played in this country has been improved in the last few years, from the point of view of the security from injury of the individual members of the team, is very well known. It is, however, still far from an intellectual, sagacious, gentlemanly pastime. As the writer in the *Princeton Weekly* asserts, it cannot be indulged in without long training, which absorbs the time the student should devote to his lectures and books. He must frequently interrupt his studies altogether to make a journey of some days or weeks at a mountain seaside resort in order to put himself in the pink of condition for a contest with a rival team. There are abundant opportunities, even in a well refereed game, for untactful tactics. A whole team will often conspire to disable a player who is known to be weak at this break up the line of defense. It is intolerant to every spectator that the game is full of brutalities, since it is frequently stooge to enable wounded men to recover, since players are often called from the side to a squad of substitutes is kept at hand constantly from which to replenish the team when strength begins to fail.

If this is a noble and civilized game, the fact is not entirely obvious. However, the player may revel in the zest and excitement of the sport, or however much the spectator may enjoy the "points" of the exhibition, the exhilaration of a shouting crowd in the brisk autumn air, or the opportunit

pretty faces and fine costumes, the fact being that it is a game that does not well comport with the legitimate work of a university. It may not soon be cut out of the curriculum altogether; but there is urgent need for its further reformation, with the understanding that if it still cannot be played without brutal feature, public opinion will see to it that it shall at last go the way of all evil games.—*Public Ledger.*

Mary Harris.

Mary Harris, of London, a maid young and beautiful, went often with her relations to the meetings of the people called Quakers, and was raised in her to the blessed Truth, to whom they held it in a pure conscience; still lived in the customs and fashions of the evil world. But the same love of God had begotten tenderness in her heart and to Truth followed her, and would not suffer her to sit down in the world without hope. The Lord visited her with great brightness, so that she grew ill, and fell into a slumber for about three years; and being visited by Josiah Coale, and put in mind to consider whether the hand of the Lord was upon her for her unfaithfulness and disobedience, she did consider the matter, and the Lord set it home upon her heart, and she came to Him for mercy; and applied her heart to the Lord and his faithful messengers, saying, "I have hardened my heart at many previous meetings, when the Lord hath smitten me, and I have seen plainly that the Lord hath gathered me; but I said in my heart, if I receive this, if I give up to this, I am a Quaker, and I cannot be a Quaker. I would I take my heart from attending to the ministration of Truth, and then it would be more hard. What shall I do," said she; "that now I may receive the faithful sympathy of the servants of the Lord? Oh! that my heart were open; but it is shut and hard. How shall I find mercy in this state?"

She remained so for some time, and grew weaker in body; and on the first day she took rest, she was much under the righteous judgments of the Lord, and felt his word in her heart as fire. But the Lord in judgment withheld mercy, and, having brought her low, He showed her the child's state, which she with great delight desired; and indeed became as a little child, fit for the kingdom of heaven. Then did the Lord reveal, and showed her his glory, and the brightness of his pure Truth, and the light out of darkness, and in it she saw light, and received the knowledge of God; and her words were filled with joy and praises to the Lord, saying, "I am well, I feel no pain. I am full; my cup runs over. I am filled as it were with marrow and fatness. I have seen the Truth, and tasted his precious Truth. How is God's everlasting Truth? Nothing so precious as that they indeed receive it are made holy by it. Praised be the Lord who hath made me a partaker of it, and placed me among his people. Oh! blessed God, who hasten me cause to sing aloud of thy name."

Her precious words she spoke to several persons who came to visit her, to their satisfaction, showing to some who lived in darkness, her hands, saying, "See here, the

Lord hath made these bones bare for my rebellion; because I would not submit to his precious Truth. He hath brought me to the dust, and I must lay down this body as a sacrifice. Oh! do not you stand out; it will cost you dear, if ever you find mercy!" Then she would sing praises to the Lord, and exhorted all speedily to embrace the Truth, and warned others professing Truth from following the fashions of the world, crying to the Lord to wash her thoroughly. Some would say to her, "It may be thou mayest recover."

"No, no," she replied, "I must lay down this body for my rebellion. In my vain life, if any had said I should recover it would for a little time seem to refresh me; and if they had said surely I could not live long, it would cast me down; but now I long for death. I must lay down this body; for," said she, "when I received God's everlasting Truth I received the sentence of death;" and this she was positive in all along.

More sensible expressions she uttered, which I omit for brevity. About half an hour before her departure she was taken with a very great trembling, and seemed to be somewhat troubled. When one near her said, "Art thou in any doubt concerning the Truth of which thou art made partaker?" she replied, "No, no; that is God's pure, everlasting Truth which the people of God called Quakers are made partakers of, and for which they suffer; that is everlasting, that is the true Spirit, and their God is my God; and although I see it not now as I have seen it, yet I bring in my testimony, that is the Truth which enlighteneth every man coming into the world; the little seed in me is become great, great, great! Blessed be God, who hath placed me among his people, and I possess what they possess; and when the faithful die as I die, my portion will be their portion; and my cup is full, it runs over and over." Then she breathed a little thicker for about the space of a quarter of an hour, and closed her eyes and slept. Glory to God forever!

She died at the widow Mary Forster's in St. John's street, near Smithfield, London, in the year 1668.—*Selected.*

There is an old story about a Greek maiden named Eulalia; she wanted to be friends with Lucinda, a very gay and worldly woman. One day she said to her father, Sophronius, "I would like to call upon Lucinda; may I go to-day?" "I cannot allow you to do that, my daughter," replied Sophronius. "But father, you must think me exceedingly weak if you suppose I should be injured by going," said Eulalia, crossly. Her father stooped down and picked up a piece of dirty coal and held it out. "Take that in your hand, my child; it won't hurt you." She did, and her fingers became smudged. Eulalia did not understand. "Why," she said, "did you give me this? It blackens." "Yes," came the reply, "coal, when it does not burn, blackens. Do you see the lesson of the old Greek? Bad company will blacken if it does not burn."

The grandest aim that can be set before a man is that of having his whole personality—body, mind, spirit, skill, character, powers and possessions—made a means of saving man and glorifying God.

Science and Industry.

WHOLESALE MAGAZINE FOR THE YOUNG.—A correspondent in Canada writes: "Having found so much trouble to find a paper for the children free from fiction and evolution theories, I now find that 'Birds and Nature, published by A. W. Mumford, Chicago (203 Michigan Avenue)' serves to fill the requirement. Our own observation decidedly agrees with this recommendation of our friend.

PHOTOGRAPHS on linen are very popular. A patent was recently granted for a new process in doing the work. A kind of seaweed is saturated in water, and to the extract thus obtained citric acid and ammonium chloride are added. The linen is soaked in this mixture, and dried, after which it is soaked in a solution of nitrate of silver, and again dried. It is then sensitive to light, and when placed under the negative in a printing frame, will produce the picture just like the prepared paper. The ordinary toning and fixing baths follow, when the picture becomes permanent.

TOOTHED PAPER WHEELS.—So remarkable are the number and diversity of uses to which paper has been put recently, that one need hardly be surprised at this substance being substituted in many instances for metals in the mechanical arts, says the *Publisher's Circular*. Friction wheels of paper work wonderfully well in the driving of certain high-speed machines, but now spur and bevel wheels are among the latest successes with this remarkable material. . . . Paper pinions are not only strong, but exceedingly durable.

ALCOHOL AND CRIME.—Referring to an article in a French medical journal, *Good Health* says; "The writer calls attention to the fact that the official statistics of the police court of Paris show that for several years past there has been a rapid increase in juvenile criminality. Even among murderers there is found a large percentage of young people, some almost children. This increase of juvenile crime is charged to alcohol, which has been shown to act, not only directly, but indirectly, through heredity. Alcoholic insanity is increasing with great rapidity in Paris. Alcohol is perhaps more active than any other agent in producing human degeneracy, and is one of the most direct and potent causes of criminality and insanity. The children of drunkards are very liable to be epileptic and idiotic, as well as criminal. The children of alcohol-drinking parents, when young, do not appear different from other children, but about the age of puberty their criminal instincts begin to manifest themselves. . . . Careful observations have shown again and again that there is an intimate relation between diet and alcoholism, especially that tea, coffee, and condiments lead to the use of alcohol. It has also been demonstrated that flesh-eating creates a thirst for alcoholic beverages and an appetite for tobacco, the use of which almost invariably leads, sooner or later, to the use of alcohol in one form or another."

By thy worthiness make the other esteem thee, and do not feel that marriage gives any right to demand, or dictate, or criticize.

"He'll Do."

Four years ago there entered one of our Eastern colleges a clear-eyed, plainly clad, and wholesome-looking young man with health unimpaired by dissipations of any kind. He had never smoked a cigar or cigarette in his life and he did not know the taste of any kind of intoxicant. He had exactly one hundred and twenty dollars with which to "go through college."

On the day of his arrival he paid one hundred dollars for his tuition, and more than half of the remaining twenty had to be spent for books. He had noticed in the window of a house near the college a card with "Rooms to Let" printed on it. He went back to this house after he had paid his tuition, and when the lady who had rooms answered his ring he asked her if there was anything he could do in or around her house that would pay for the rent of her smallest room.

"Why, yes," she said at once, attracted by the young fellow's manly bearing. "I want some one to wash windows and clean rugs once a week, and before long I shall need some one to look after my furnace."

"Would you let me do those things in return for a room in your house? I am about to enter the college as a student, and I must earn my room rent in some way. I am not above washing windows and cleaning rugs and taking care of a furnace; and I will do the work well."

He was given a small hall bed-room, and thus the question of his room rent was settled. Then he went to a large dining-hall on the college grounds and said:

"I have heard that sometimes students earn their meals here by acting as waiters two or three hours a day. I would like to do work of that kind in return for my meals."

The frank and manly way in which he made this proposition pleased the man in charge of the dining-room, and he replied, "I can give you your meals in return for your services two hours a day."

Thus the determined young man's room and his meals were provided for. He cared nothing for the fact that the menial occupations he had taken upon himself would debar him from associating with the students who formed the "exclusive set" in the college. He had no time for their frivolities and no interest in them. Before the end of his first term he was earning money for new books and for his future tuition by tutoring some of the Freshmen of this same "exclusive set." When the summer vacation came he went to a large seashore hotel and worked as a waiter all summer.

When the college opened in the fall his little room was ready for him on the same terms on which he had occupied it the year before, and they were glad to have his services in the dining-hall. His teachers became interested in him because of the high marks gained by his hard and faithful study. He applied himself steadily to the one object of getting an education. He put aside all temptation to waste his time. He lived soberly and righteously. He began to be talked about as one of the brightest and most promising students in the college. At the end of the second year one of the college professors secured him an excellent position as teacher in a summer

school. During the year he had won scholarship prize money to the amount of two hundred and fifty dollars. This money, with that earned in teaching the summer school, enabled him to rent a room, and the time he spent in working to pay room rent could now be given to study.

It is needless to say that this young man graduated with high honors. One of his teachers pointed him out to some one on commencement day and said:

"That student rings true every time. He has what I wish more of our American boys had, and that is clear grit. He came here believing rightly that poverty was no obstacle if a young fellow made up his mind to secure an education."—*Forward.*

'The Virtue of Being Dependable.

It is a splendid quality in a man to be absolutely dependable. Some people are not. Some who pass for good, who really are good in many ways, continually fail those who depend upon them.

There are some who are slack and careless in meeting their money obligations. It is popularly said, for example, of a certain man who does many generous things that he cannot be depended on in the matter of paying his debts. He gives much money to benevolence. His name is never wanting on subscription papers in behalf of worthy causes. He is active in the work of the church of which he is a member. He takes part in the weekly prayer meetings and is ready, even eager, to do whatsoever he findeth to do in religious service. But it is known everywhere that he is very slow in paying his debts. It is needless to say that the man's goodness in other ways and his generosity and devoutness suffer irredeemably from his opinion of others through his disregard of his money obligations and his want of dependableness.

But there are other ways in which too many people fail to be dependable. They make engagements with their friends or neighbors and do not keep them. The worst of it is, the breaking of the engagement does not appear to trouble them. They do not think of it as in any sense a moral delinquency. They send no apology to those they have disappointed and put to inconvenience. When the matter is brought to their attention they show no regret at the annoyance their neglect has caused.

There are a great many of these people. It is impossible to calculate the amount of trouble and inconvenience they cause to those who depend upon them and are disappointed by their want of faithfulness. Then the effect upon their own name and reputation is most disastrous. Any one may now and then find himself justifiably unable to do what he has promised to do. He should then instantly send his explanation and express his regret. But where no explanation is given and where the failure is repeated again and again, it soon becomes evident that there is a flaw in the person's character. He is not a man of his word. He has no sense of the sacredness of a promise.

There are tradesmen and business men who make small headway because they are not dependable. The painter or the paperhanger promises to do the work you want on a cer-

tain day, and neither comes nor sends any explanation of his not coming. When you call on him for not keeping his word, he has some lame excuse which you know is not true. The dressmaker promises your gown positively by a certain day. You tell her you want to wear it that evening and she must not fail. She assures you you need not be afraid it will be delivered to you in good season. It is not delivered, and when you show vexation, she is very sorry, but some one failed her and she had to disappoint you. You can only make the best of it, for your gown is under way and you cannot take it out of her hands. But you will probably not go to her with your next gown.

In the end all such treatment of others, all such disregard of one's word, will result in the destroying of one's reputation. People are very patient, but ultimately they will cease to patronize the man who is not dependable. They cannot afford to be disappointed and it is to inconvenience, and compelled to suffer again and again, through any man's dishonesty in the matter of keeping his engagements. The tradesman, the merchant, the business man in any line, who keeps his word, is the one in whom people ultimately put their confidence and to whom they give their patronage. It is a splendid character for a store, for example, to get—that its statements regarding its goods may be absolutely depended upon, that its advertisements tell the precise truth, that its salespeople never misrepresent anything they are trying to sell, that a child, the most simple-minded person will be as easily dealt with as the keenest-eyed purchaser who comes in. The way for any store to test such a reputation is always to be what it wishes its patrons to believe it to be.

It is most important for young people to train themselves in all things to be absolutely dependable. Let them begin in early life to keep every engagement, however trivial it may seem, never to break a promise, though it be only for some small matter, never to exaggerate, never to misrepresent, never to fail any one's trust or confidence. A life which begins in this way and never in the least deviates from the strictest faithfulness will gain at last a reputation which will be worth more than the largest fortune.

Here are some noble words, words all worth pondering, quoted from Dean Sturges: "Give us a man," he says, "young or old, high or low, on whom we can thoroughly depend, who will stand firm when others first flinch, the friend, faithful and true, the adviser, honest and fearless, the adversary just and unalarming; in such a one there is a fragment of the Rock of Ages."—*Selected.*

ISAAC'S WAY TO END STRIFE.—"There is a short way of ending disputes between brethren, which I would recommend, and hereby ways to take, which is to submit to win. I insisted on, though apparently to my loss, rather than to contend. It is better to be said of us, that we are sufferers for peace sake, than that strife is continued because we will not be content to suffer; when we consider how much our Redeemer suffered for us, this should reconcile us to bear patient the sufferings [which by his permission befall us] by the way."—*John Kendall, 1778.*

The Sinfulness of Sin.

W. E. Gladstone, who, whatever may be the weight of his political opinions and movements, was certainly an intelligent observer of things, is quoted as saying:

There is one feature which almost universally marks writers who do not absolutely excommunicate while they reject the Christian faith and the authority of Scripture. They seem to have a very low estimate both of the quantity and quality of sin; of its amount, as if like a deluge over the world; and of its ability, intensity and virulence of its nature. I mean a low estimate, as compared with the mournful denunciations of the sacred Scriptures, or with the language especially of the Christian Confessions."

The fact thus expressed has doubtless attracted the attention of many others. We judge sometimes of the whole mental and moral attitude of the man when we learn what he thinks of sin. With many, sin is but a human error, a mistake, a lack of development, a step in the path of progress, something inevitable and of little account. With others it is that evil thing which God hates, which He abhors which He rebukes, which He punishes which He punishes. "The wages of sin is death." "The soul that sinneth is guilty." These are the aspects in which sin is presented in the Holy Scriptures.

Others who belittle sin, despise the law which God gave to Moses. They criticise, they find fault with it, they question its authority, they disregard its sanctions, they bring charges of cruelty and inhumanity against it, and they often speak evil of things which God does not. On the other hand those who see sin at God's estimate say, "O how they love the law! It is my meditation all the day." They learn that "the law is holy, just, and good," and that by "the law is the knowledge of sin." Under the rebukes of that law they learn the importance of repentance and the need of forgiveness, and are prepared to comprehend the value of the sacrifice offered for sin, and of the great gift of the well beloved Son of God, who "Himself bare our sins in His own body on the tree."

Others who really comprehend what sin is, who do, who contrasts this world of sorrow and of Paradise which was lost through sin; who trace man's sinful course as marked by a path of mourning, and lamentation, and who see in man who can read in the records of the world, the cities of the plain, overthrown Nineveh, fallen Babylon, desolated and down-trodden Jerusalem, the records of the disobedience against sin, and the fulfilment of the curses which He has uttered. We conclude that sin is no light matter, that the soul that sinneth against God wrongs himself and his soul.

It is no advantage to any man to think of himself as free from sin. How many thousands are weakened and ruined by sin. How many are being undermined by the iniquities of the people. How many souls are perishing through sin. Sin brings sorrow, guilt, and death. Sin scatters blight through the world. Sin strikes its fangs into the heart of humanity. "The sting of death is sin; and the strength of sin is the law," and only God can give us the victory through our Lord Jesus Christ. Let us learn to flee from sin.

Let us pray that God, the living God, will show us the evil of the sins which He hates, and will teach us the preciousness of that blood of Jesus Christ His Son which "cleanseth us from all sin."—H. L. Hastings.

The Word of God.

In thinking of the "Word of God," which lives and abides in man, we must carefully distinguish it from language, and from any and every sacred book. Language may be, and often is, the vehicle of the Living Word; but the vehicle and its occupant must not be confounded. The Living Word goes forth in a thousand different vehicles. Yea, He often goes forth incognito, as the Breath of Life, without a vehicle. "He is King of kings and Lord of lords," and the Bridegroom of the soul; and though "thou hearest his voice within thee, thou canst not tell whence He comes," nor how He comes; "So is every one that is born of the Spirit." It is God's life, it is his love, it is his truth, it is his word, his will, his power entering into the soul, to make all things new. It is the sun illuminating the whole world of the inner man. It is unknown wealth to those who know their own poverty. It makes the least and humblest human spirit conscious that he is greater than the world. In short, the Living, indwelling Word, supplies all our need for time, for death, and for eternity, and finally crowns us with the fulness of Life, the triumph and the glory, and the bliss of Life.

Hearst thou the voice of the Divine Harmony which was before all things? Thou hearest many things which bewilder thee; but hast thou an ear for the music of the Word, which is the reconciliation of every discord? Hearst thou his promise which is thy sure hope? Is Christ, the all-bearer, the all-sufferer, and the victor in thee?

Beware that you do not substitute the reading and hearing of Scriptures for the Creative Word of God. A written analysis of the constituent properties of bread is not bread. Scriptures may represent Christ, but they are not Christ. Christ is the embodiment and mediating power of the Infinite and Eternal Spirit.

Love Him, delight yourselves in Him, and He will lead out all the germs of your nature into freedom and harmony, and thus will fulfill all the desires of your heart. From Him as "The Word" or Perfect Will of God is the joy of your being, the Crown of your reason, the completeness of your character. He is your Ineffable Humanity, nor can any man or woman be rightly blessed, wholly blessed and complete, until created in his exquisite Image and Likeness, "you are complete in Him."—"Loyalty to Christ," by John Pulsford.

Items Concerning the Society.

At its recent sitting, Philadelphia Monthly Meeting for the Western District appointed evening meetings for worship to be held in its house on Twelfth Street below Market, at 7.45 p. m., on every Fourth-day evening until Yearly Meeting week in Fourth Month next, except on those evenings in which the adjourned Monthly Meetings are held.

Notes from Others.

ON AMERICAN HUMANITY.—The wife of Wu Ting Fang says in the *Woman's Home Companion*: "It is not to be denied that my people are not so

progressive or aggressive as are the Americans. We are ready to acknowledge that we can learn much from our zealous occidental cousins, but, and with all due respect to you, we think that there may be some things that you may learn with profit from us. I think of this sometimes when I mentally compare your nervous, rushing, never-resting nation with my own less strenuous one. The rush of Western life is in the very atmosphere the American breathes. It greets a traveller before he places his foot upon your shores. His baggage is seized and checked for his hotel before he leaves the steamer; the moment he lands he is hurried into a cab and whirled away to his lodgings. From his windows there he sees men going through the streets at a speed that would be employed in China only in a case of life or death. Everywhere he is impressed with the nervous haste which appears to be the predominating motive of all classes of society.

"Now, in my country the very opposite of this obtains. There is an equippose, tranquility and patience about the people, which may be attributed to a lack of enterprise, but which adds immeasurably to the comfort of their daily lives. It is said that as a nation we are without nerves, and while this statement may be exaggerated, yet it is undoubtedly true that the oriental races are not of the nervous temperament. This absence of nerves is an inherited condition. A Chinese baby drinks in repose of character with his mother's milk. If you doubt this, look at our infants in arms. They never wriggle and squirm with restlessness, as do the American babies. And this disposition remains with them through life. A Chinaman never wastes his energy. He takes things deliberately; he does not get nervous over his work, and this lack of nerve enables him to sleep under almost any circumstances. To him the American impatience is unaccountable. He reasons that impatience and hurry but make one uncomfortable, and why should any one do anything so unnecessary as to make himself uncomfortable? No, he prefers the even tenor of his way, even if that way is not as swift as could be desired."

General orders by General Chaffee call attention to the heroism of Alice Kemmer, of the army nurse corps in the Philippines. While on leave of absence Alice Kemmer learned that a nurse was needed to care for two smallpox patients in Manila. Although she had never had the disease, she gave up her leave and volunteered for the dangerous and loathsome duty. For two whole months, in the hottest weather, she was shut up alone with her patients, doing both day and night duty, and never having more than two hours' sleep at a time. Both patients were nursed back to health. If soldiers receive medals for heroic deeds performed on the battle-field, this nurse surely deserves as much for her conduct in the presence of an enemy more dreadful than any Filipino.

Archbishop Ireland lately said: "Of course every association has the right to establish its own code of ethics, this is true. For instance, every Church establishes its own creed, or rather puts forth a creed that is its own, but not every Church has the right to go out in the streets and the public places and say, 'If you don't come to my code of ethics, well, I'll hit you.'"

THE "MURDEROUS GAME."—A few years ago so many were killed and wounded in football games that public sentiment demanded and accomplished the abolition of the flying wedge; but during the recent games the slaughter has been worse than ever before. Ever since the flying wedge was done away with it is said that football "coaches" have been trying to invent new formations equal to it, and have introduced the tackleback formation, which is another form of momentum mass play.

A New Year and the Imperishable Newness.

As we view our ink bottle, imagination fails to exhaust the possibilities of written language which it contains. One man may with the tip of the pen therein draw forth a drop and let it out on paper as to make it draw thousands in silver and gold from a bank. Other might be so guided as to turn the ink into words of the most sacred inspiration to Divine Scripture for ages to come. Others to a declaration of war for woe to thousands. No poem in all the ages has been produced so excellent as one all the turns of whose stand in many an inkstand. No statue of marvellous beauty and expression exceeds one imbedded in many a rugged rock. The human soul ever known under heaven is possible in many a man, who we fear is kept buried, latent and dwarfed in the skin of self.

What has made so telling a difference in the ink? It is *mind* coming in between the ink and the bottle and the same on paper. *Mind* outlining its thought, its feeling, its commands, knowledge, instructions in certain arrangements of the one fluid. It is the spirit transmuting a brute element as with its live power into shapes of living and immortal import. To kindred minds these shapes speak with intelligence the mind of the shaper. That which is not mind they remain but ink. So in all other expressions of thought human or divine—it takes sense to sense, intelligence to read intelligence, to discern spirit, inspiration to recognition. "What man knoweth the things of a man but the spirit of man which is in him? Even so the things of God knoweth no man, but the spirit of God."

New Year begins with every day, every day. And so the same quality of temporal newness is inherent in each succeeding

day, as in that which begins to receive the number 1903. But there is a living newness that we want in these our days. May the inward man be renewed day by day, and the progressive newness of the Spirit shall keep the year really new till its end, and really happy. "If any man be in Christ Jesus he is a new creature," or creation; and the outward creation is new to his eyes. "Old things are passed away, behold all things become new, and all things of God, who hath reconciled us to himself by Jesus Christ, and hath given unto us the ministry of reconciliation." Not our forms or our formlessness, but a new creature is what avails. It is the Spirit that quickeneth, and makes the senseless ink or letter, or stone, or other form seem to spring into life and express its word.

"Where are our preachers?" asks a periodical at this hour, under a sense of "a famine of hearing the words of the Lord." The preachers wanted are in the Holy Spirit. Though there be so much speaking, it is in the Holy Spirit alone they are to be revealed, thence only to be drawn. The possibilities of a Peter or a Paul or George Fox are in the self-same Holy Spirit. There is the making of plenty more where they came from. He alone is our source of supply and for both ministers and their ministry. The sculptor may draw from brute marble human forms that almost seem to breathe, but their substance will be but stone still. We may draw from colossal schools of theology the man-made minister by scores, and have but man-made furniture still; ecclesiastically carved, polished, adorned and ordained; an echo of words once holiest, now borrowed; if he come not forth of the Holy Ghost, and his utterances not fresh from the same, he stands a human manufacture, a pulpit photograph.

This revived sighing for a living, prophetic ministry which we hear of as raised on both sides of the Atlantic, is a hopeful sign. For the sighing of the poor and the crying of the needy may the one Fountain of true ministry soon arise. He is risen, but what we on our part need is to resort singly to Him for the ministration of Life, and when our dependence is wholly on Him, it will be supplied, if not in enticing words of man's wisdom, yet in demonstration of the Spirit and of power. Perhaps, then, having part in the Fountain, we

shall less hunger for instrumental declarations of the Fountain; but if we crave for the low-born ministry of the intellect to be replaced by that of the Holy Ghost and his fire, we must rely wholly on Him as the one Source who putteth forth his own, and in whom are hid all the possibilities of a George Fox, an Edward Burrough, a James Farnell, or a Thomas Loe, that can revive or feed a hungry, waiting, and surrendered church. The deterioration of ministry under our name has all come by looking lower, and the lower supply has spent its short-lived newness.

The Doukhobors.

The following succinct account of the recent "pilgrimage," taken from the *Youth's Companion*, being perhaps the fairest, and the most nearly in accordance with the facts as known to the Philadelphia Committee, are thought worth being presented to the readers of THE FRIEND.

"Wide-spread interest and sympathy have been aroused during the last two months by the strange hallucination and pathetic pilgrimage of the Russian Doukhobors of western Canada. For a time these peculiar people made wonderful progress in the new land to which they were brought, when their religious beliefs made residence in Russia no longer tolerable; but lately ideas have spread among them which in all breadth of view and all charity must be regarded as fanatical."

"Having long refrained from eating meat because it involved the shedding of blood, they next turned their cattle loose because they considered it wrong for a man to enslave the lower animals. Then they discarded woolen clothing for cotton and linen, and leather shoes for foot-wear made of rubber or binder twine."

"At last, in the late fall, when the weather was already severe, they began their 'pilgrimage'—a march 'to look for Jesus,' as they expressed it. When some had perished and others gone insane, when husbands and mothers had deserted their families, the strong arm of the law reached out and led them gently back to their homes."

"The incident has been a strange, pathetic and impressive thing. Not even the most cynical can doubt the sincerity of the Doukhobors, nor the most suspicious allege any but pure and holy motives for their acts. Yet the heart of mankind in the aggregate understands that they are wrong, and while it pities, restrains them."

"It may not be possible to draw with absolute justice the line between sane belief and fanaticism, but it must never be forgotten that Christ alleviated rather than caused suffering, and blessed and cherished the human affections."

THE NEGLECTED CALL.

[Some may be pleased to find in the following poem an old acquaintance. Several years ago a Friend in Nanctand handed it to one who now offers it to our readers.—Ed.]

When the fields were white to harvest and the laborers were few,
Heard I thus a voice within me, "here is work for thee to do,
Come thou up and help the reapers, I will show thee how the way,
Come and help them bear the burdens and the toiling of the day."
"For more convenient season," thus I answered, "will I wait,"
And the voice reproving murmured, "hasten ere it be too late,"
Yet I heeded not the utterance, listening to "Lo here, Lo there,"
I lost sight of all the reapers in whose work I would not share,
Followed after strange devices, bowed my heart to gods of stone;
Till like Ephraim joined to idols, God well nigh left me alone.
But the angel of his patience followed on my erring track,
Setting here and there a landmark, wherewithal to guide me back.
Onward thus I went and onward; till there met me on the way,
A poor prodigal returning, who like me had gone astray,
And his faith was strong and earnest, that a father's house would be
Safest shelter from temptation, for such sinful ones as he.
"Read the lesson," said the angel, "take the warning and repent,
But the wily tempter queried, "Ere thy substance be unspent?"
Hast thou need to toil and labor, art thou fitted for the work?
Many a hidden stone to bruise thee in the harvest field thou lurk!
There are others called beside thee, and perchance the voice may be,
But thy own delusive fancy which thou hearest calling thee,
There is time enough before thee, all thy footsteps to retract!"
Then I yielded to the tempter, and the angel hid her face.
Pleasure beckoned in the distance and her siren voice was sweet,
"Through a thornless path of flowers, gently will I guide thy feet,
Youth is but a rapid river, gliding noiselessly away;
Life is but a pleasant garden, cull its roses whilst thou may.
Press the juice from purple clusters, fill life's chalice with the wine;
Taste the fairest fruits which tempt thee, all its richest fruits are thine."
Oh! the path was smooth and easy, but a snare was set therein,
And the feet were oft entangled in the fearful mesh of sin.
And the canker-worm was hidden in the rose-leaf folded up,
And the sparkling wine of pleasure was a fatal Circen cup.
All its fruits were Dead Sea apples, tempting only to the sight,
Fair, yet filled with dust and ashes, beautiful but touched with blight.
"Oh my Father," cried I, "truly thou hast striven, I have willed,
Now the mission of the angel of thy patience is fulfilled.
I have tasted earthly pleasures, yet my soul is craving food,

Let the summons thou hast given to thy harvest be renewed,
I am ready now to labor, wilt thou call me once again?
I will join the willing reapers as they garner up the grain."
But the still small voice within me, earnest in its truth and deep,
Answered my awakened conscience. "As thou sowest, thou must reap;
God is just! and retribution follows each neglected call,
Thou hast thy appointed duty, taught thee by the Lord of all,
Thou wast chosen, but another filled the place assigned to thee,
Henceforth in my field of labor thou mayst but a gleaner be.
But a work is still before thee, see thou linger not again—
Separate the chaff thou gleanest, beat it from among the grain,
Follow after these my maidens, let thine eyes be on the fields,
Gather up the precious handfuls, their abundant wheat sheaves yield;
Go not hence to glean, but tarry, from the morning till the night;
Be thou faithful, thou mayest yet find favor in thy Master's sight!"

FOR "THE FRIEND."
On the Sacred Scriptures.

II

Many Friends have been brought under an exercise on account of the disposition shown by some writers on Biblical literature to call in question the authenticity of parts of the Old Testament scriptures which narrate events of a supernatural character, and to discard everything that cannot be comprehended by their natural reasoning powers.

We believe such teaching tends to destroy the very basis of Christianity; since the advent of the Lord Jesus Christ on the earth, his miraculous works in healing human diseases, controlling the elements, raising the dead to life, his own resurrection from the tomb, and final ascension to heaven, are relied upon to test his Divinity, and are the material proofs of his mission in the world for man's redemption and eternal happiness.

To discredit the miraculous events recorded in the ancient Scriptures because they do not agree with natural phenomena as they ordinarily appear to our senses, involves a principle which must equally apply to the record of the New Testament, and cause a rejection of his Omnipotence and Godhead, who declared that all power in heaven and earth was given unto Him, and that He and the Father are One (Matt. xxviii: 18; John x: 30.)

The Lord Jesus expressly endorses the writing of Moses in conversing with the Jews, saying that if ye believe not his writings, how shall ye believe my words." For he wrote of me" (John v: 46-47); also after his resurrection He said unto the apostles, "these are the words which I spake unto you while I was yet with you, that all things must be fulfilled which were written in the law of Moses and in the prophets, and in the psalms concerning me" (Luke xxiv: 44).

Our Saviour commended to his disciples a child-like confidence in Him as a key to unlock the mysteries of his kingdom (Matt. xviii: 2-3), and Paul declares that the natural man receiveth not the things of the Spirit of God,

for they are foolishness unto him; neither can he know them, because they are spiritually discerned." "If any man among you say to be wise in this world, let Him become that He may be wise. For the wisdom of this world is foolishness with God" (1 Cor. i: 18-19).

It was the ancient Hebrew Scriptures of which Paul declared to Timothy that he was able to make wise unto salvation through faith which is in Christ Jesus, and were given by inspiration of God. Peter likewise averred that "the prophecy came not in old time the will of man, but holy men of God spake as they were moved by the Holy Ghost."

It is our earnest desire that those engaged in searching the Scriptures may not be misled by the "simplicity that is in Jesus" to vain speculation on things that are far beyond the domain of human reason, and can only be spiritually discerned.

A humble acceptance of the recorded words of Holy Writ and their practical application to daily life and conduct, through submission to the transforming work of the Spirit of Christ in the heart, has, we venture to say, never led any one into error or loss; whereas the pride of intellect and that knowledge which puffeth up, has, we fear, gradually many into the paths of skepticism and some to a final rejection of the cardinal principles of Christianity. JONATHAN E. RHOA

THE LOST HEART.—I know a man who had lost his heart. His wife had not got it and his children had not got it, and he did not seem as if he had got it himself.

"That is odd!" say you. Well, he was starved himself. He scarcely had enough to eat. His clothes were threadbare. He stood all who were around him. He did not seem to have a heart. A poor woman owed him the rent. Out she went into the street. Had no heart. A parson had fallen back a little in the payment of money he had lent him. The debtor's children were crying for bread. The man did not care who cried for hunger, or what became of the children. He would have his money. He had lost his heart.

I never could make out where it was lost. I went to his house one day, and saw an iron safe; it stood behind the door of an inner room, and when he unlocked it with a heavy key, and the bolts were shot and the door was opened, there was a musty, fusty thing within it, as dry and dead as the kernel of a walnut seven years old. It was his heart. If you have locked up your heart in an iron safe, get it out as quickly as ever you can.—Sageon.

How does one generation of men succeed another? The fathers are not swept away in a body to make room for the children, but by one the old drop off and the young come on, till a day is reached when none of those men that once were here. How does some of our human speech become extinct? About a hundred years ago an old lady named D. Dentreath died in Cornwall. She could speak the Cornish language; after her death there was nobody that could. Thus quietly did the living Cornish language become a dead language, and in a like unobtrusive manner have been wrought most of the new beginnings which are changing and are changing the earth.—J. R.

FOR "THE FRIEND."

ing Counsel, Thanksgiving and Exhortation of Friends—With Biographical Notes.

Healed for my life, and I offered it at his altar; but he gave it me as a prey, with a noble addition. He called for my will, and assigned it at his call; but he returned it to me in token of his love. He called me to the world, and I laid it at his feet, with thanks thereof. I withheld them not at the beckoning of his hand. But mark the exchange! For he gave me instead of a kingdom of eternal peace; and in the crowns of vanity, a crown of glory. *Thomas Story (1666-1742).*

THOMAS STORY was born not far from Carlisle, in the county of Cumberland, England, and his parents being members of the Established Church. A brother was chaplain to the Countess of Carlisle. After his conviction of the principles of Friends, T. S. was engaged, in the course of his frequent travels, in maintaining against the priests the denomination with whom he had formerly affiliated, and others, the simplicity of doctrine and of practice of those with whom he cast his lot. He declined the practice of law, for which he had studied, and (he says) "by the same grace [of God], I was enabled to undergo the displeasure of others, to close my eyes from all worldly views, and to stop my ears forever from hearing to any preferments there." Nevertheless, upon coming over to Pennsylvania, he abandoned this, as a religion of duty, to the desire of William Penn, that he accept the position of recorder of the county. The passage from his journal, above referred to, was frequently quoted with deep interest by the late Joseph Scattergood, of West Chester, Penna., who had doubtless been spiritually strengthened by its perusal, and by its acquaintance with the dedicated life of him who penned it.

In the outward Temple they cleansed first the inward part of the house of the Lord, and then came along to the porch, until the Temple was thoroughly cleansed. In the morning of the precious day of visitation, the axe was laid to the root of the corrupt tree, and the hammer to the hard rocky heart, and the spiraling kindled in the stubble. Now, dear friends, in the Word of Truth I say unto you, that with the holy light of Christ Jesus, whose work has prospered in your souls; whether you that knew a right beginning first in the inward part, have come along fully in the work of sanctifying the heart of the temple, from the inward part to the outside; see whether the root has not escaped the axe, the rocky heart the hammer, and the stubble kindled in the stubble. Now, dear friends, for if it has, the cause is not in the Lord, nor in his power, but in your disobedience and negligence, going from the axe, the hammer, and fire, and so sparing the best, as the Lord Saul and Israel did; so the root of unbelief springs up against the work of God in this heavenly wisdom. — *Charles Marshall 1698-1768.*

In the realm of religious narrative, whether that of the Society of Friends or others, readily, I apprehend, would one find with-

in the compass of a single paragraph, so singularly suggestive a recital as that in which CHARLES MARSHALL—a tender-spirited, praying lad of the age of seventeen years, at the time—relates in brief the incidents immediately preceding the setting up of a permanent religious meeting in his native city of Bristol, England. It was on a first-day morning when those "two servants of God," John Gamm and John Audland, coming to the place, the youth went with them "about a mile and a half from the city, to a little spring of water, where," he says, "I had spent many solitary hours in my tender years, seeking the Lord; where we sat some time and drank of the spring." After some hours had gone by, during which John Audland, then only twenty-four years of age, visibly manifested the concern, even to trembling, which rested on his spirit, he desired to return to the city. Charles showing his new friends the way, and inquiry being then made for a convenient place where people might be gathered together, an ancient man led them out to a field of his which was called Earlsmead. What was there said, with an authorization unmistakable, wonderfully reached the hearers to the effectual conviction of many. "It was a notable day worthy to be left on record, that our children may read, and tell to their children, and their's to another generation, that the noble acts of God may be remembered through generations." The testimony concerning Charles Marshall, left by his wife Hannah, is a worthy tribute to one who, starting thus early in the Christian way, cheerfully endured imprisonment and the spoiling of his goods, for conscience' sake; yet being of a self-denying life, and ever a lover of the poor, oft visited them in their families, and sympathized with them in tender compassion and true Christian charity.

Wealth is attended with power, by which bargains and proceedings contrary to universal righteousness are supported; and hence oppression, carried on with worldly policy and order, clothes itself with the name of justice and becomes like a seed of discord in the soul. And as a spirit which wanders from the pure habitation prevails, so the seeds of war swell and sprout and grow and become strong until much fruit is ripened. Then cometh the harvest spoken of by the prophet, which "is a heap in the day of grief and desperate sorrows." O that we who declare against wars, and acknowledged our trust to be in God only, may walk in the light, and therein examine our foundation and motives in holding great estates! May we look upon our treasures, the furniture of our houses, and our garments, and try whether the seeds of war have nourishment in these our possessions. Holding treasures in the self-pleasing spirit is a strong plant, the fruit whereof ripens fast. A day of outward distress is coming, and Divine love calls to prepare against it. — *John Woolman (1720-1772).*

JOHN WOOLMAN was born in Burlington county, New Jersey; he died of the small-pox at York, in England, whither he had gone on a religious visit. He early became convinced of the non-compatibility of slave keeping with the Christian religion, and, visiting several of the Southern States, beheld the forbidding in-

stitution "as a dark gloominess overhanging the land." Deeply affected by the fact that Friends themselves were not clear of holding their fellow-men in bondage, he laid his concern upon the subject before the Yearly Meeting held at Philadelphia, and was greatly instrumental in freeing its borders from the reproach. Unlearned in the schools as Woolman was, his journal in its simple, chaste diction has been many times spoken of as a classic, and the same term may be applied to some of his essays which treat specially of labor and of riches. "Nowhere," says Whittier, "has what is called the 'Labor Question,' which is now agitating the world, been discussed more wisely and with a broader humanity than in these essays." The extract above given is from the one entitled "A Word of Remembrance and Caution to the Rich." It were well did every Christian Socialist, every student of the pregnant theme of the respective rights of labor and of capital, possess this lucid, calmly phrased paper. J. W. L.

(To be continued.)

William Penn on the Scriptures.

Having thus expressed myself to you, my dear children, as to the things of God, his truth and kingdom, I refer you to his Light, Grace, Spirit and Truth within you, and the Holy Scriptures of truth without you, which from my youth I loved to read, and were ever blessed to me; and which I charge you to read daily; the Old Testament for history, chiefly the Psalms for meditation and devotion; the Prophets for comfort and hope; but especially the New Testament for doctrine, faith and worship. For they were given forth by holy men of God, in divers ages, as they were moved by the Holy Spirit, and are the declared and revealed mind and will of the Holy God to mankind, under divers dispensations, and they are certainly able to make the man of God perfect, through faith unto salvation; being such a true and clear testimony to the salvation that is of God, through Christ, the second Adam, the Light of the World, the quickening Spirit. — *Wm. Penn's Advice to his Children.*

ACCUSTOM yourselves in everything that happens, to recognize the hand and will of God. This lesson is of more consequence than you think. Whether it be some great wrong, or some little offence that you meet in daily life, before you fix your thoughts on the person who did it, first be still, and remember, God allows me to come into this trouble to see if I shall glorify Him in it. This trial, be it the greatest or least, is allowed by God, and is his will concerning me. Let me first recognize and submit to God's will in it. Then in the rest of soul which this gives, I shall receive wisdom to know how to behave in it. With the eye turned from man to God, suffering wrong is not so hard as it seems. — *Andrew Murray.*

CULTURE, as one has well expressed it, is not so much quantity as quality of knowledge; not so much an extension of ourselves by addition from without, as enlargement of ourselves by development from within; not so much a result of accumulation, as a result of growth.

them and listen for them. There is in the attuned ear, in the receptive attention, in the wide-awake attention. He who hears and listens will find that God is speaking to him. Nature has a voice for him who is in sympathy with her and responds to her touch and impression. It is a message to the soul that is in harmony with its creations and suggestions. So the word is a word for the true and responsive—*Presbyterian*.

AN EPISTLE BY WAY OF ENCOURAGEMENT TO FRIENDS TO BE FREQUENT AT WEEK-DAY MEETINGS.—By Theodore Eccleston, 1693.
Beloved friends, We having been refreshed in the living presence of the Lord in meetings, and those that have truly rejoiced after righteousness, have there felt that comes from heaven plentifully; and many being thereby nourished in the eternal life, it hath encouraged me to be frequent in meetings; not only on the days but also on week days, to wait upon the Lord in His Divine gift, to be refreshed in Him as the sense of God's goodness is in the bread, and an earnestness of mind to get to the table of the Lord, where souls have been refreshed before; that we may joy the renewings of the heavenly life, increase in it; wherein as we are preserved we shall abide in the favor of God, have a share of his blessings which He is bestowing among the sons of men, whose hearts are prepared and stand open, and expect to receive from Him.

Beloved Friends, let a watchfulness be in the mind of everyone, that this world's end concerns do not become as briars and thorns unto us, hindering their growth to Truth; for, Friends, these outward things the Lord hath bestowed, ought rather to be in our minds thankfulness unto the Lord and to walk in true fear, and lowliness before Him; and unto those that so outward riches, or any outward blessing or grace that He bestows, will not be an occasion to neglect our Christian duty of assembling ourselves together, but so much the more we have received from Him, so much the more to be engaged to serve Him, and to wait upon Him and wait upon Him.

Let thus your good example in frequenting meetings may be an inducement to others to frequent Friends' meetings also, whereas, if looking into our meetings, should see a sloth and slackness in Friends, may they think that our meetings are no more profitable than their own, and so not be drawn by example to be fervent in seeking after the Lord; let therefore the zeal and diligence of Friends in frequenting meetings, show forth the benefit of our meetings and the refreshment that may there be had; and it may prove means to stir up them to consider; that we do enjoy more in our meetings than in any other times, because of our frequenting and waiting upon Him.

Beloved Friends, if any are in straits and difficulties inwardly whom have we to go unto for comfort or our God? Therefore not only in private, but also in the Assembly of the Lord's people, spread your spiritual necessities before Him, and wait upon Him for a

supply; and let the minds of none wander, but (when you are so met) be staid upon the Lord in his heavenly gift, to receive from Him, and if any are not yet come to a stay to their minds, let such be turned to the measure of the Spirit they have received, and, (in faith) therein diligently resist the enemy that would keep you unsettled, and as you abide faithfully warring against him, in due time you'll know a victory; and this will be of more advantage to your immortal souls, than increase of outward wealth, or indeed, than a bare formal sitting in meetings, only to hear the experiences of others. For hereby you'll come to know bread in your own houses, and water in your cisterns, that you'll not need to say to others, give us of your store. For through the heavenly gift that you have received will you be abundantly supplied, and your souls in the receiving will have a sacrifice of thanksgiving and praise to offer to our God, who is worthy thereof, forever and evermore.

And you that are masters and mistresses of families, and parents of children, had need be exemplary in your practise and care over those of your families, that they seeing your zeal and earnestness in assembling yourselves together, to wait upon the Lord, may be drawn by your example also to be diligent in waiting upon Him, and so come to receive for themselves of his blessings and mercies; and then that they together with you, may live worthy of his mercies, is the fervent travail and prayer of

Your Friend,

THEODORE ECCLESTON.

LONDON, Tenth Month 13, 1693.

Remember the time appointed for meetings to begin.

FOR "THE FRIEND."

From a Woman's Journal.

A laboring woman who had the care of an aged and very dear mother once poured out her heart in verse, lamenting the inability to provide all that her love prompted and voicing a dread of what might in the near future befall her precious charge. She had the grace, however, to keep the jeremiad to herself and, coming upon it a few years later, not long after a happy family gathering, she added the following:

Six years have gone and God's kind hand

Hath led us clear;

In plenty we possess the land,

And all are here,

How long to stay

We may not say.

But rainbow-written on the yore

Above the mirkiest path we trod,

And rainbow written all before

I daily read: "Have faith in God."

"Do all these dreary stretches serve as seed-time?" asked a friend, writing to one who had the long-continued care of invalid parents. "It seems to me the physical powers are too overtaxed to allow anything to germinate."

The answer was given: I am certain that "overtaxed physical powers" do not necessarily nullify the conceptive and receptive functions of the mind. Besides, I have been permitted to learn that even close-confining and exceedingly wearisome service upon the sick has its compensations,—in a hushing of many little troublesome matters; in a deepening

sense of dependence on and confidence in the near presence of the Father, in a sincere and exalting gratitude that, since this or that hard and unpleasant thing must be done for the sick one and the loved, I am permitted, commissioned, anointed to do it.

However much at other times perplexed about what to avoid and what to follow, now comes the restful assurance that for once there can be absolutely no question or quibble about duty—a compensation of no small consideration. I have not found my "dreary stretches" only "dreary stretches."

Again the same friend writes: "You say you believe He cares. That I am glad to hear. It will help me to believe, which I fear I don't very much."

The message returned said: "Believe He cares! I believe He cares from start to finish, stitch by stitch, to the end (which is no end.) But if I fail to put my belief into flesh and blood, if I fail to get calmness and courage and guidance out of that belief, day by day, I am worse off than you are, if, as you say, it is indeed true that you 'don't believe much.'"

"It isn't the worst thing in the world not to believe. The worst thing is to believe and not live out that belief."

People who believe in a half-hearted way are the only ones who fear. The out-and-out disbeliever is no coward. Earth and self look too mean to him to be worth much of a struggle to keep. The out-and-out believer, of course, cannot fear. Belief in a future life made the early Germanic races magnificent battlemen. They had it unshakably settled in their hearts that to be brave was to be good, and that to pass in strife was but to go on into Wahalla's mirth and feasting and never-ending hunting.

It belongs to human nature to exalt bravery, because it is the outward show of the only condition of the soul which accomplishes. "I would thou wert cold or hot." The ineffectual must be sweated out. Neither heaven nor earth, no, nor the soul of man can make any use of lukewarm belief. A live dog can lie by his master's fireside and at least wag his tail goodnaturedly now and then when his master speaks to him, and perchance go out and drive up the cows. A dead dog can get buried out of sight. But a dog that is neither dead nor alive, a dog with a lukewarm constitution, neither to be used nor yet to be buried, is an unmitigated nuisance.

Some time ago I discovered a defect in a friend. It was certainly a defect, and though I have written the word "discovered," it is true I had previously suspected the weakness. But the fuller revelation tried my soul. For a time—some hours—I felt estranged. I reasoned to myself that I had two defects to my friend's one, but the reasoning did not in the least warm my heart.

After a change of thought, I reflected, shamefacedly, that I had shrunk away even for a few hours, even with no one to know it but God and myself, from a true and loving friend who had done and had a temperamental tendency for doing—a foolishly impulsive and ill-balanced thing. What was it—that was it to the rich, sincere, always well-intentioned life? Surely, my love was much at fault if it faltered at a fault. "A friend should bear a friend's infirmities" or what's the worth of friendship? How bear them? Bear them as

the shepherd bears the lame lamb. Bear them on the heart. Bear them always with prayer. Bear them away, if possible, by prayer or by reproof.

Then I thought it takes a certain faith in the atonement to make it easy. When we look at a life in the light of that Love which could spend itself to the uttermost for the most defective, how grows our tenderness and our patience! Can we be unkind or indifferent to one for whom Christ found it necessary to die? Christ the teacher brings us immeasurable blessing, but Christ the Saviour, the Suffering One,—He only it is who can impart to us the love that bleeds and loves on. "The only gift is a portion of thyself," says Emerson. "Thou must bleed for me."

COMMON LIVES.—The common people have always been Christ's best friends. It was the common people who heard Him gladly when the great were persecuting Him. From the common people his church has been most largely recruited. Even so to-day the hearts of the common people are the greatest bulwark of the faith. If the common people have honored Christ, still more has Christ honored them by using them in the defense of his Truth and the spread of his gospel. Through them, in a thousand quiet ways, He is daily being preached. They are the mainstay of every movement for righteousness; they comprise the bulk of his church. Verily, Christ uses common lives.

Christ uses common lives, not because they are common lives, but because they are willing to be used by Him.

God requires not talents, but submission. It matters little to Him whether a life be common or great, as the world views it. He only asks that the life be yielded to Him; he is perfectly able to fill it with all power, and to use it to accomplish mighty works in his name. There is no life too humble to be greatly used of God. He wants not worth but willingness.

Most of the work that needs doing in this world does not require exceptional ability. The diffusing of cheer in discouraged surroundings; the repression of sharp and critical words in the ever-recurring moments of temptation; the speaking of messages of encouragement and sympathy; the habit of kindly forbearance; the daily humbling of self for other's sake—these are the common ways in which common lives may be used by Christ.

Greatness in heaven is not measured by greatness on earth.—*Herald of Truth.*

A PHILOSOPHER, seeing that he could not apprehend the flowing and ebbing of the sea, without stopping to consider it further, threw himself into the sea, in order to be taken in by it; and I, having labored for some time in looking at and contemplating the flow and reflow of God, and seeing that I could not comprehend it; without stopping longer to contemplate it, I am lost and swallowed up in Him; and that is the way I have learned more about it in one moment, than I could have learned by my care and solicitude during a life time.—*Madam Guyon.*

MANNERISM we should despise; good manners we should cultivate, as they are "spirit acted out into form."

THEY CALL ME STRONG.

They call me strong because by their tears I shed where none may see;
Because I smile, tell merry tales and win the crowds to me;
They call me strong because I laugh to ease an aching heart,
Because I keep the sweet side out and hide the bitter part.
But, O, could they who call me strong live but an hour with me
When I am wrung with grief in my Gethsemane!
They call me strong because I toil from early morn till late,
Well knowing there will be no smile to meet me at the gate.
They call me strong because I hide an inward pain with jest,
And drive away the care that comes unbidden to my breast;
Perhaps 'tis strength—God knoweth best; He sent the cares to me!
And his—'not mine the strength that keeps through my Gethsemane!

—*Los Angeles Herald.*

Science and Industry.

GOVERNMENT STENOGRAPHERS' SALARIES.—In Washington, under the Civil Service system of the United States, a stenographer and typewriter receives from seven hundred and fifty dollars to fifteen hundred dollars a year. The hours are from nine until sometimes four or five, and there are rather more free days in the year than are usually allowed. Department stenographers are paid on the following principles: accuracy counts five out of ten points; speed counts two, and spelling, handwriting and arithmetic one each. We may say that in all the departments accuracy is the first requirement. Next to that comes the capacity to think independently, and to act quickly and intelligently. Among the questions put to ascertain the clear-headedness of applicants is this: What would you do if you discovered a smell of smoke without being able to discover its source?

ART SUBDUING NATURE.—The great Assouan Dam, the most extraordinary engineering work of the kind, has just been opened under imposing circumstances. There being practically no rain in Egypt the purpose of the dam is to hold back the waters of the Nile during the flood period, permitting of their gradual use for irrigation during the rest of the year. This will increase by a million acres the cultivatable land of Egypt. It will enable large tracts to bear two crops a year instead of one, and in increased production of cotton and sugar will add twelve million dollars a year to the wealth of the country. The dam is a mile and a quarter long, and will hold the water 347.6 feet above the level of the Mediterranean Sea. It is pierced by 180 openings, each 23 feet high and 7 feet wide. Some of these sluices go 75 feet below the ordinary rock surface. Twelfth Month 10th, the opening day, is Ramadan, the great annual Mohammedan feast; the ceremony had to be postponed till four in the afternoon. The Khedive turned the key which set in motion the electric machinery. Several sluice gates gradually opened and the volume of water rushed out. A stone to commemorate the event was put in place by the Duchess of Connaught.

The work cost more than \$10,000,000 and the work of 16,000 laborers, of whom 14,000 were native Egyptians.

BY RAIL THROUGH AFRICA.—It is impossible that Cecil Rhodes' magnificent dream of a railroad through Africa from north to south—"from Cairo to the Cape,"—may be realized before many years. On the British South Africa railroad trains will soon be running from Cape Town to Bulawayo, a distance of fifteen hundred miles, and railway building in Rhodesia is progressing rapidly. It was proposed, under a recently signed convention from the King of the Belgians, to carry the road through Congo Free State to the upper waters of the Nile, the route being from Bulawayo to Victoria Falls, three hundred miles, and thence to Lake Kasai, the most southerly navigable point on the Congo, even hundred miles. Stanley Falls, on the upper Congo, will be connected with the Egyptian railways at Mahiga on Albert Nyanza by a link four hundred and eighty miles long. It was formerly intended to carry the road through German territory, and that line may also be built.

INSANITY FROM ALCOHOL.—The seventy-ninth annual report of the officers of the Connecticut Hospital for the Insane at Hartford, Conn., has just reached us, says the *Christian Advocate*. In a strictly professional way the distinguished superintendent, Dr. Henry P. Stearns—in his own having the temperance question, technically so called, in view—thus discusses the subject:

"You will further observe from the tables of statistics appended, that in no less than twenty-one of the admissions—that is, in more than seventeen per cent.—the insanity was thought to have been caused by the abuse of alcohol. This may be a higher percentage of such cases than exists in some State institutions, but it corresponds quite accurately to our own history [seventy-nine years], in its respect.

"In fact, alcohol plays so important a role in the production of insanity and crime—especially in cities and large towns, that so to speak should use every means to educate the rising generation as to the danger attending its use as a beverage.

"The effects of alcohol upon the elements of the nervous system are much greater twenty years of age than afterward. The brain is more sensitive to the effects of its influence during the period of adolescence, and young persons acquire habits of using both alcohol and tobacco much more readily than during later periods of life. When formed during this period they are much more likely to become incorporated with the development of the system and thus become permanent.

"They may eventuate in such cases in a degeneration of the cells of the brain and the vasomotor portion of the nervous system. In other cases, before such a stage is reached, there may result morbid changes in the vital activities of the individual, attended by cravings which become very difficult, and in some cases impossible, to resist. The power becomes much impaired, and the high ideals of the individual are lost."

Francis Howgill.

Selected.

Francis Howgill, of Grayridge, in the county of Westmoreland, an early minister of the Gospel of Jesus Christ, was convicted of the crime of High Treason by George Fox, at that notable trial at Firkbank Chapel, in Westmoreland, in the year 1652. He soon became a powerful preacher, and preached Christ freely as he pleased him. He came to London with Edward Burrough early, to visit that city; and he came to Bristol and divers parts of that city, and suffered imprisonment in Appleby in the year 1652; and "a nasty, stinking of it was."

He was set at liberty the latter end of the year, and grew valiant and bold for the name of the Lord, travelling up and down on foot, preaching the gospel. He went to the steeple-tops and to many places, warning both the rich and people of the day of the Lord that was coming upon them, directing them to Jesus, their teacher and Saviour. He came to London on foot, with John Camm, to meet Oliver Cromwell, soon after he was made Protector; and he went with Edward Burrough to Ireland, and preached Christ in great sufferings there, until he and Edward Burrough were banished by Henry Cromwell to Ireland. Afterwards he was imprisoned in London in the year 1661, at the beginning of the Fifth Monarchy people rose up again, but was clear of that bloody act, and was set at liberty, and continued laboring all down the nation, in the work of the Lord, and turned many to God. In the latter end of the Fifth Month, 1663, he was sent for to the market in Kendal, by the magistrates who tendered him the oath of allegiance, and because for conscience' sake he would not take it, they sent him to Appleby Prison; and at the assizes, for refusing to take the oath, sentence of prebimure was given against him by the Judge in these words: "You are put out of the king's protection, and are a traitor to the law; your lands are confiscated to the king during your life, and your goods and chattels for ever; and you to be a slave during your life."

Howgill replied: "An hard sentence for my obedience to the commands of Christ; the Lord forgive you all."

Howgill said: "Well, if you will yet be subject to the laws of the king, the king will show you mercy." F. Howgill: "The Lord hath no mercy unto me, and I have done nothing against the king or government or any man, blessed be the Lord; and herein stands my peace; for it is for Christ's sake I suffer, and for evil doing." The court broke up, and any were sorry to see what was done against him; but he signified how contented he was that he had anything to lose for the Lord's precious Truth, of which he had abundantly borne testimony, and that he was contented to suffer for it. He was kept a prisoner in Appleby jail four years and a half; and by being much spent in his public travels and labors in the gospel, was not able to do such close confinement, though he bore sufferings in much patience and cheerfulness, until the time of his decease.

Howgill was taken ill the eleventh of the Eleventh Month, 1668, and though his departure was high, yet was he kept in perfect under-

standing, being often very fervent in prayer, and uttered many comfortable expressions, to the refreshment of those about him. Two days before his death, his wife and friends being present, he said, "Friends, as to matter of words, you must not expect much from me, neither is there any great need of it, or to speak to matters of faith to you who are satisfied; only that you remember my dear love to all Friends who enquire of me, for I ever loved Friends well, and any others in whom Truth appeared. Truly God will own his people, as he hath ever hitherto done, and as we have daily witnessed; for no sooner had they made that act against us for banishment, to the great suffering of many good Friends, but the Lord stirred up enemies against them, even three great nations, whereby the violence of their hands was taken off. I say again, God will own his people, even all those that are faithful; and as for me I am well and content to die; I am not afraid at all of death. Truly one thing was of late in my heart, and that I intended to have written to George Fox and others, even that which I have observed, which thing is, that this generation passeth away, when so many good and precious Friends within these few years have been taken from us; and therefore Friends had need to watch and be very faithful, so that we have a good, and not a bad savor, to the next succeeding generations; for you see that it is but a little time that any of us have to stay here."

Often he said in the time of his sickness, that he was content to die, and that he was ready; and praised God for the many sweet enjoyments and refreshments he had received on that, his prison-house bed, where he lay, freely forgiving all who had a hand in his restraint. And he said, "This was the place of my first imprisonment for the Truth in this town; and if it be the place of my laying down the body, I am content."

Several persons of note, inhabitants of Appleby, as the mayor and others, went to visit him, some of whom praying God might speak him to his soul, he sweetly replied: "He hath done it;" and they all spoke well of him. A few hours before his death, some being come to visit him, he prayed fervently with many heavenly expressions, that the Lord by his mighty power would preserve them out of all such things as would spot and defile. A little after recovering some strength, he further said, "I have sought the way of the Lord from a child, and lived innocently, as among men; and if any enquire after my latter end, let them know that I die in the faith that I lived in and suffered for!" These words he spoke, with some other words in prayer, and sweetly finished his course in much peace with the Lord, in the Eleventh Month, 1668. He labored in the gospel sixteen years.

I do not forget how often, for many a disciple, "the closet" may be impossible, in its literal sense. But even then, even in a crowd, "the secret of the Face" can be entered; and the soul, aye, in a time measured by moments, can, if it has learned the habit of "remembering God," step in to be alone with Him. Only, to that very end, where "the closet" is possible, let us use it to the uttermost. Let us covet and greedily grasp the interview alone, in the quiet corner of the busy house, with the Father, in the Son.—*Bp. Moule.*

INDEPENDENTLY POOR.—She always had a good time, the other girls said of Jessie—said it half enviously, some of them. Her home was an old-fashioned, rather shabby house where the furnishing and the style of life were of the plainest, but she welcomed her friends there cordially, and shared with them what she had without pretense or apology. She wore her plain clothes in the same way—pretty and daintily made, but inexpensive always—and made the most of whatever pleasures came in her way without regard to appearing in costly array.

"You seem to get as much satisfaction out of everything as if you were independently rich," said a discontented acquaintance one day. "I don't see how you can."

"Well, if I am not independently rich, I am independently poor, and I suppose that's the next best thing," laughed Jessie.

After all, it is the independence that counts rather than either the wealth or the poverty. The simplicity of standing for just what one is, without sham or pretense, lifts a burden of fret and anxiety, and leaves the spirit free.—*Wellspring.*

A MAN must not choose his neighbor; he must take his neighbor that God sends him. In him, whoever he be, lies hidden or revealed a beautiful brother. The neighbor is just the man who is next to you at the moment. This love of our neighbor is the only door out of the dungeon of self.—*George MacDonald.*

If the women Friends and young girls who are engaged in Christian work would observe simplicity in dress in going about among those whom they desire to help, they would find they were having a decided influence for good by example rather than by precept.—*A Baltimore Y. M.*

Notes from Others.

Bishop coadjutor Mackay-Smith of Philadelphia regrets that the American clergy quote the Bible so seldom in their sermons. He says the English clergy use the Bible much oftener. They are taught to acquire it at school.

Says the *Universalist Leader*: "The Church must be, like its great founder and Master, not a scribe, but a prophet, not pointing to what men have believed about God, but pointing rather to something that men can see and believe and do now."

A writer in the *New York Observer* believes that unless a new standard of benevolence and self-sacrifice enters into our life as a republic we shall reap an evil and painful harvest. "Great wealth without mercy, charity and self-devotion," he says, "is not a blessing but a curse."

The *London Christian* says: "Do we realize the value to a nation of its Christian people? What would England be without them? It is a high and glorious calling—to be children of God—light in the midst of darkness, salt permeating corruption. It is not for them to bow down their heads, or hang their harps on the willows. The world cannot do without them; they have much to live for."

The University Extension Lectures in Association Hall will be resumed on First Month 6th, when W. Hudson Shaw will begin a course of six Wednesday evening lectures on "Imperial Rome," and on First Month 12th a course of six second-day afternoon lectures on "Venice." Besides these he will deliver his six Fifth-day afternoon lectures, be-

ginning Second Month 19th, on "The Life and Teaching of John Ruskin."

On Second Month 17th Edward Howard Griggs will begin a course of six Third-day evening lectures on the Philosophy of Plato. His aim will be to present the essential contribution of Plato to the world of human thought, and to show the value of his philosophy for modern life.

Said Bishop Potter on the day called Christmas: "There are some churches that we pass upon the street and say to our friends, 'This is a church.' When we enter it, however, the interior appearance gives the idea that we have made a mistake and that we are in a theatre instead."

"Of the one hundred and fifty thousand Indians in the country, seventy thousand have received allotments of land in severally and have become citizens of the United States. During the past year about twelve thousand ceased to receive rations, and, instead, were given work whereby they were able to support themselves. This is making very rapid progress. The reports of the religious work among the Indians show good results, and also indicate that the distinctive Christian work has been an important element in the progress made."—*Ram's Horn*.

The New York *Tribune* presents several extracts from "The Oldest Egyptian Book," a papyrus manuscript said to be four thousand five hundred years old. Two of these are of religious interest to us, namely:

"If thou art a wise man, sitting in the council of thy God, set thy thoughts toward that which is wise. Keep silence rather than pour out thy words. When thou speakest, know what objections may be made to thee. To speak in council is an art, and speech is criticised more than all other work."

"Doubly good is the precept of our Father from whose heart we come. May what He tells us be in our hearts. Do more for Him than He said."

OPPOSITE EXTREMES IN THE TIMES OF ACCOMPLISHING MARRIAGES.—Friends now living remember when it was requisite for a couple desiring to be married to declare their intentions orally in person before a Friends' Monthly Meeting on two separate occasions, a month apart, and receive the meeting's permission later on.

Last week, on the 25th, ten persons on the same evening, in Armstrong, Mo., without letting their outside friends know of their intentions, were married at the same time and by the same minister. Each prospective bridegroom took dinner with his intended bride, and after the meal the five couples repaired to the minister's house. There they formed a circle around the parson, clasped hands and took the vows prescribed by the church. Only a few persons beside the contracting parties were witnesses, not to sign the certificates as witnesses.

SUMMARY OF EVENTS.

UNITED STATES—A despatch of the 26th ultimo from Washington, says: The scarcity and high price of coal has greatly stimulated the inventive faculty of Americans in the invention of fuel substitutes and of machinery for the making of briquettes from combustible materials now allowed to go to waste. Hundreds of patents have been filed, and the development of industry in these directions is to be expected; but the first practical steps are likely to come from Europe, where, especially in Germany, Belgium and France, the making of briquettes is already successful and profitable. A combination of the manufacturers of briquette making machinery in Germany has been formed, and will soon establish a branch office in New York City, in charge of a competent engineer, who will examine sites for briquette factories and will furnish estimates on the cost of installing plants near available locations. There is no lack of material in this country for such purposes. Western New York, New Jersey, New England, Michigan, Illinois, Wisconsin, Oregon and Washington have vast beds of peat; the Dakotas and the Gulf States have deposits of lignite and kindred substances,

and the great culm banks in the anthracite fields of Pennsylvania can be utilized.

A plan of improving country roads at a small cost has been proposed for brick track wagon road system, which consists of two wheel tracks of a width ranging according to the conditions from twelve to fifteen inches, with a wheel bearing surface of vitrified brick, bedded in Portland cement, making practically a solid stone the entire length of the road, which is not affected by the grinding of the wheels, the action of water or the disintegrations of frost.

A few years ago the Navajos Indians were able, by means of their large flocks of sheep and their industry of weaving blankets, to maintain themselves. Drought for six consecutive years has, however, reduced their flocks and impoverished them as a people. The reservation, which is two hundred miles east and west by one hundred north and south, is mainly arid and irrigation is needed. It is urged that what they need is instruction in the way of developing by their own labor the natural resources of their country. Schools and teachers are needed.

The trans-Pacific cable from San Francisco to Honolulu has been successfully laid to the island of Oahu, a distance of 2238 nautical miles. When completed to Manila the new system will have only three relays, instead of fourteen, as at present, and will reduce the price from \$1.66 to \$1 per cablegram. The cable will also be used for the route to Japan and China. The first section will extend to Honolulu, the second westward from Hawaii to the Midway Islands, the third to Guam and thence finally to Manila Bay, where it will be spliced to the shore end, completing the cable to the Philippines.

The *Railroad Gazette* estimates that about 6026 miles of steam railroads were constructed in the United States during the year, making the total mileage in the United States not far from 200,000. In 1850 there were only 9021 miles. It was estimated that at the close of the century there was one mile of railway for every 400 people. In Europe, it is stated, there is only one mile of railroad for every 2200 people.

Dr. D. E. Salmon, of the United States Bureau of Animal Industry, has stated recently in a despatch that "At the present time 1300 head of cattle have been slaughtered in Massachusetts, and under favorable conditions all of the known infected herds should be killed and disposed of within the next week or ten days."

Dr. L. F. Fick, of Philadelphia, the president of the Pennsylvania Society for the Prevention of Tuberculosis, has lately returned from Europe, where he visited several institutions established for the treatment of consumptives. In speaking of the "Free Hospital for Poor Consumptives," maintained by the Pennsylvania Society at White Haven, Pa., he said: "Our method is the one that is recognized now as the best all over the world—outdoor life, with forced feeding. We expect to extend that work by the establishment of like institutions, and also the opening of dispensaries in other parts of the State. Ours is a popular movement, which any humane person can join. Our present membership is between seven hundred and eight hundred, and it is increasing rapidly outside of Philadelphia. Auxiliary committees of women are to be formed in all the towns and cities of the State."

The new German phonetic spelling which has been adopted by order of the Kaiser throughout Germany is to go into effect in America about First Month 1st. The new spelling eliminates all unnecessary letters. A combination of farmers has been organized in Indianapolis, which proposes to extend its operations throughout the country, and by means of a system of reports ascertain the yield of various crops, and fix a minimum price which will rule for a year. Also to encourage the building and maintenance of cold storage warehouses in the principal cities where farm produce may be held for advantageous prices.

The annual report of the Commissioner of Indian Affairs shows that the 1800 people composing the Osage tribe of Indians are the richest people per capita in the world, the tribal possessions including \$8,584,498 to their credit in the treasury of the United States, besides 1,400,000 acres of land in Oklahoma.

There were 470 deaths in this city last week, reported to the Board of Health. This is 65 less than the previous week, and 10 less than the corresponding week of 1901. Of the foregoing 230 were males and 240 females; 58 died of consumption of the lungs; 74 of inflammation of the lungs and surrounding membranes; 4 of diphtheria; 25 of cancer; 19 of apoplexy; 14 of typhoid fever; 1 of scarlet fever, and 3 of small pox.

FOREIGN—A despatch of the 26th from Washington says that the claims of Great Britain, Germany, France and Italy in Venezuela will be submitted for adjudication to the tribunal of The Hague is now certain. The notes of the allied Powers agree to accept the arbitration of The Hague Court should President Roosevelt be un-

willing to act in that capacity, and the will of Venezuela to recognize the same authority was on this morning, Secretary Hay is preparing a note to the Powers, in which the gratification of the United States Government is expressed for the course agreed upon by them towards a settlement of the pending difference.

President Castro has telegraphed his acceptance of a proposal to submit all pending differences to arbitration of The Hague tribunal, subject to certain conditions. Venezuela was not one of the signatories, but with equal satisfaction this court of arbitration, but in view of the fact that the jurisdiction of the tribunal may, within conditions laid down in the regulations, be extended to disputes between non-signatory Powers, it is agreed on recourse to the tribunal.

It is stated that the number of natives of the Philippine Islands who have died since the United States military operations among these islands, those who have been killed by cholera and other diseases, is probably more than a million.

In a recent address in New York City, President of Cornell University, a former member of the Philippine Commission, said of the Philippines: "The people in those islands are in dire distress. Their cities have been largely destroyed, their industries and their lives have been ruined by famine and pestilence. And, in these things, the islands have lost \$1,000,000 in the last twelve months, because of the decline in silver fluctuation in the rate of exchange. We have lost the islands capable and well-paid teachers, but the Government has insisted upon one language in the schools. Imagine the education in an American town of 4000 persons in charge of a Spaniard who insisted that the language of all the schools should be Spanish."

To increase the export of Siberian butter the Government of Agriculture in Russia has appropriated \$100,000. It is said this amount will be used in increasing the number of instructors for creameries in Western Siberia, in maintaining creamery schools in Kurgan and Novosibirsk, educational courses in creamery economy, and in establishing laboratory laboratories in the organization of creameries in Western Siberia, and for travel expenses of instructors and foremen.

The representatives of the Marconi Company in London state that it is calculated that the company is able to handle 1000 words per hour. As soon as it is able to get the postoffice authorities to connect with the inland telephone, the company will begin large commercial business between Cornwall, England, and Norway.

The number of deaths from the recent severe earthquake at Andjian in Russian Turkestan is now estimated at from 4 to 5,000. This city, which has a population of 56,000, has suffered damages amounting to millions of dollars. A despatch of the 26th says that the oscillations of the earth still continue. Many thousands of persons are homeless.

Hot milk is obtainable in Stockholm during the winter from automatic slot machines placed in the streets. Swedish Temperance Society.

A railway company in England has lately obtained a verdict of \$140,000 against a labor union for striking its employees and thus inducing them to break their contracts. The legality of this decision has been sustained by the final court of appeal.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage and trains leaving Philadelphia 7.16 and 8.18 A. M.; 1.22 and 4.32 P. M. Other trains are met when required at Stage fare, 15 cents; after 7.30 P. M., 25 cents; return free the school by telegraph. Write Westtown, Pa. Phone 1144.

EDWARD G. SMEDLEY, A.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to

WM. F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

DIED. On the eighteenth of Eleventh Month, 1902, the residence of her brother, Thomas Sharpless, Birmingham, Chester County, Pa., EDITH SHARPLESS, of the late Aaron and Susanna Sharpless, in the sixteenth year of her age; a member of Philadelphia Meeting of Friends.

Domestic Elocution.

which that could be said to every professional Christian which was said to a Galilean of Christ, "Thou also art one of them; speech bewrayeth thee." That is, that out of all the tones, modulations, and of their voice truly marked them as the spirit and nature of Christ in their For we believe there is a gospel note through the voice and conversation of a Christian, which does indeed affect the ears of hearers with a secret influence or though they be not able to identify it by to their intelligence. That select of utterance of man to man born of the Spirit is spirit, and to be out must be spiritually discerned; that which is born of the flesh is the voice, expressive of the breathing of about of no spiritual life, or echo of within the hope of glory.

need no schools or vocal training to cultivate is note of the Divine harmony, except school of Christ whose spontaneous prophethese vocal reflections of the spirit of te. Given the genuine Christian extension of the love and converting power of Christ, and the pronunciations of te among the signs following. They tell to modify the accents of a whole wherein is stationed even one whose position is "as becometh the gospel of t.

matter how much we have been trained elocution of the schools, the happiness fully needs in its members the elocution of Christ, tempering its "habits, manner ways of speaking and of answering spoken to and of helping and smoothing own and brightening things up; and with in tones of voice and in managing nerves and in governing the tem-

per." Many need that domestic elocution of Christ's spirit as a post graduate education, which should have been taken in with the very breath of a kindergarten training.

The expression of the voice is from the heart before it is from the mouth, for there its spiritual and moral quality begins to be formed; and so the door of the mouth is the heart, where the watch is commanded to be set. As "what comes from the heart goes to the heart," so the same person is variously affected by the same words, according to the spirit of the person uttering them. One may ask a question, and by it provoke peace; another give forth the very same question and provoke resentment. "What is the matter?" asks the latter. "Did not Hannah ask the very same question this morning and it was received graciously?" "Yes; the same,—but not the same. The words were the same but not their savor. Grace was poured into her lips, and my response vibrated to the same note."

The peacemakers are among the blessed; and we do well to study the modulations of voice which make for peace, or for comfort, or for courage, or for purity or for incitement to higher life. They come unstudied from hearts and lips imbued with the gospel spirit; but they have a reflex action even on the imitator who aspires to their virtue. The very concern and effort to produce them is a part of that service by which we receive more grace, and become of that nature whose tone we would imitate in quest of so holy an endowment.

The Psalmist's aspiration contains the progressive rule of the school of Christ wherein all gospel elocution, including the domestic, is taught: "Let the words of my mouth and the meditation of my heart be acceptable in thy sight, O Lord, my strength and my Redeemer." The four steps of this Christian voicing are experienced in the reverse of the order thus expressed. First He is faithfully believed in as "My Redeemer." Thereupon a sense of this power is received and ascribed to Him as "my strength." Thence is inspired that meditation of the heart which is acceptable in his sight, and out of the abundance of a heart thus exercised come forth acceptable words in the acceptable spirit.

To the wise it is better to be suggestive

than exhaustive. These hints may suffice towards the peace and prosperity of various departments of our social relations. But we can hardly forbear adding these never too well known words of John Woolman:—

Some glances of real beauty may be seen in their faces who dwell in true meekness. There is a harmony in the sound of that voice to which Divine love gives utterance, and some appearance of right order in their temper and conduct whose passions are regulated; yet these do not fully show forth that inward life to those who have not felt it; this white stone and new name is known rightly only by such as receive it.

NOTE.—The authorship of the article on the Scriptures in our last number was misunderstood, when given as in the name of "Jonathan E. Rhodes." In absence of writers' consent to add their names, we withhold them.

On the Sacred Scriptures.

111

The testimony of the religious Society of Friends throughout the early periods of its history, was clear and emphatic concerning the Divinity of the Lord Jesus Christ, his miraculous birth, resurrection and ascension; nor was it less pronounced as regards the mighty works which He wrought, the Divine teachings He uttered, and the spotless example by which these were enforced and commended. They gladly and fully accepted, as a most precious doctrine, that this sacrifice on Calvary was made for the sins of the whole world; that thereby a new and living way of access to the Father has been opened, and that He forever lives as the adorable advocate and intercessor for the believing, repentant sinner. Whatever tends to invalidate or weaken our testimony on these points must lower our gospel standard, and our efficiency for good as a body of Christian believers.

We have been therefore deeply concerned to observe the persistent and too successful efforts by many acute writers of the present day, which tend, if they are not designed, to undermine the faith of the unwary in the validity and authority of the Holy Scriptures, wherein are clearly set forth the events and truths which are the very foundation of the Christian religion. Our Lord, in his teachings, frequently appealed to the writings of the Old Testament as authoritative, and declared concerning them "they are they which testify of me." As foretelling his coming in the flesh, and setting forth the purpose and character of his mission, he would, therefore, have them searched and believed in.

We are not disposed to call in question facts or discoveries that have been brought to light through modern science and research, and

which have modified to a certain extent the views once entertained regarding some of the statements contained in the Sacred Writings.

Nevertheless we feel bound to accept the general tenor of their testimony concerning the attributes of the Most High, his omnipotence, omnipresence, and omniscience; his infinite purity, justice and mercy, and the manifestation of love for his creature man, as revealed in the coming of the Saviour of the world in all his gracious offices.

While sympathizing with those to whom some of the truths contained in the Scripture Volume may seem dark and incomprehensible, we would tenderly remind them of the declaration of the Most High through one of his prophets that "as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts." Thus, in view of our own limited powers, are we not led, by all right reason, to accept the statement of the Apostle Paul, in his first Epistle to the Corinthians, that "the natural man receiveth not the things of the Spirit of God; for they are foolishness unto him, neither can he know them, because they are spiritually discerned." And again—the same apostle asks, "What man knoweth the things of a man save the spirit of man which is in him! even so," he continues, "the things of God knoweth no man, but the Spirit of God." Is it not most reasonable to believe that, from this high source of spiritual enlightenment, we are to look for those revelations of Divine truth to our souls which "make wise unto salvation, through faith that is in Christ Jesus."

In the humble, teachable attitude thus begotten, we shall indeed be instructed regarding the mysteries of the heavenly kingdom, which are still "hidden," as our Lord declared, "from the wise and prudent," but continue to be revealed unto the "babes" in spirit, so far as is needful for their growth in grace, or as they may be able to receive them.

Here, also, a holy settlement will be reached as regards those views of Christian faith and practice that distinguish our religious Society from fellow Christians of other persuasions, while strength not our own will be given, not only to uphold them faithfully, but commend their excellency and the high authority whereby we believe they have been laid upon us to bear before the world.

SOME while ago two aeronauts, hanging in mid-air, looked down to the earth from their balloon, and wondered to see how small great things had grown—ample fields were contracted into little patches, the lake was no larger than a looking glass, the broad river with ships floating on the bosom seemed like a silver thread, the wide-spread city was reduced to the dimensions of a village, the long, flying, rapid train appeared but a black caterpillar slowly creeping over the surface of the ground. And such changes the world undergoes to the eyes of him who, rising to hold communion with God and anticipating the joys of heaven, lies above it and looks beyond it. This makes it easy, and even joyful, to part with all for Christ—"this is the victory that overcometh the world, even our faith."

Thomas Guthrie.

THOU canst not fatten thy soul on furniture.

Heartening Counsel, Thanksgiving and Exhortation of Friends—With Biographical Notes.

(Continued from page 195.)

There is a life that ought to die on the cross, which is easier saved alive under testimonies, he they ever so substantial and excellent, than under the immediate teachings of Christ; whose voice is as a fire against evil of every kind, and affords no peace after it is discovered, until it be given up for destruction, and to be purged away by the spirit of judgment and burning. This pure voice speaks to us in such a manner that we can by no means turn it off from ourselves by applying it to the states of others, which may be done under the most searching testimonies; there being a partiality to ourselves, which, through the deceitfulness of the heart, we are apt to fall into; and also to flatter ourselves by supposing the pleasure we take in hearing the doctrines of Truth delivered, arises from the good in us; when it may be no other than the state of those to whom the prophet Ezekiel's words and declarations were "as a lovely song of one that hath a pleasant voice;" for they heard his words, it seems, with pleasure, but did them not, their heart going still after their covetousness.—*John Griffith* (1713-1776).

A Friend who had lived some time in Pennsylvania, visiting at the home of JOHN GRIFFITH, in Radnorshire, Wales, and giving a very pleasing account of the newly settled country, the desire of the lad, then thirteen years of age, to go thither where he had near relatives, was acceded to. A brother accompanied him. Their home was with an uncle about twelve miles from Philadelphia. When about nineteen years of age, passing an evening with some companions in "frothy vain conversation and rude actions," a message was brought to J. G. after he had retired to bed and had been not long asleep, that one of his so recent jolly companions was dying. John hurried to his bedside, and witnessing his dreadful agony, was himself plunged into deep anxiety. The young man in time recovered, while John was mercifully brought to "a state of sincere repentance and deep contrition of soul." He was recorded as a minister when he was twenty-one years of age. Removing from Darby to England, he married (a second time) and settled at Chelmsford, in Essex. The observation above quoted occurs in connection with a religious visit through the upper countries of England, in the course of which he felt several times called to be "an example of silence." A humiliating engagement of this kind, not readily submitted to where there may be naturally an easy flow of words, is one which can be scarcely contemplated when a stipend is paid for preaching.

I was in the nineteenth year of my age when John Camm and John Audlan came first to Bristol, in the power of the great God of heaven and earth; and I am a living witness that his presence was with them, and made their ministry so dreadful, that it pierced the hearts of many. Oh, the terror that seized my heart, at the sound of John Audlan's voice, and the sight of him, before I rightly understood what he said. But before the meeting was over the spirit of the Lord moved

in my heart, and I came to see my deplorable state, which made me cry to God for me. A day never to be forgotten by me. And I have arrived to the seven and fiftieth of my age. Oh! the many deliverances, inward and outward, which I have been a living witness of; the decrees that have been sealed against us, the threatenings of ruin and destruction which have been so in our ears—how have we been as it killed all the day long, and counted as for the slaughter; and yet behold we are to this day, to praise the Lord!—*Elizabeth Stirredge* (1634-1706).

The autobiographical relation which is left by ELIZABETH STIRREDGE, of Somersetshire, contains frequent salutations to "dear children," with many ejaculations of praise and thanksgiving interspersed. As she reviews the conflicts within and without, she is likewise more than once ready to testify against the subtlety of Satan, who would have had her strive no longer, to should never inherit the kingdom of heaven, "but a liar he is, and ever will be. My soul is at enmity with him; the Lord in whom I trust preserve me and my house forever." Brought back from a brief season of wandering, in which she says, "Willing to have a little rest and comfort, I lent an ear to the enemy of my soul, and let my mind go for fine clothes," she was preserved there to follow faithfully her Guide. This led her, when fully settled into the close service going to King Charles, a hundred miles away, with "such a plain testimony as the Lord require" of her: also a similar message "the mayor of Bristol for his and his associates, persecutions of 'the righteous servants of the Most High God,'" of which sort of it was her lot and her husband's to witness grievous experience three years later, when, through the instigation of the priest of the parish of Chew-magna, they were cast into Ilchester (or Ilchester) jail. The reason is a moving one, that tells of the visit of Elizabeth Stirredge to the judge who had her, and the bishop who sat with him on the bench, at the hour when, after the customary adjournment, they were seated contentedly together at meat. So searching and fully was her appeal, that both were effectively reached, and though on the following day when the keeper was ordered to "bring the Quakers," a five shillings' fine was imposed upon each, no word was said about payment of the penalty, the judge and keeper, the admiration of the indicted ones, went away, while "above fourscore prisoners were before them that day, were freed."

One day, in corn harvest, as I was on the road to Sheldon, in deep exercise, taking a view of my condition, being in tribulation and anguish, condemning and striking myself, it pleased the Lord on a sudden, unexpectedly and unlooked for, to cause the Day Star to arise in my heart, and the Righteousness with healing in his wings, when the sorrows of hell seemed to take me. Then it pleased the Lord to appear to me, and to visit me with the day-spring on high, in a very powerful and wonderful manner, in great mercy, goodness, grace, and infinite loving-kindness. I was, in

man, full of the power and presence of
 God, and his heavenly, glorious light
 in me mightily; so that I may truly say,
 exceeded the brightness of the outward
 and the eye of my understanding was
 filled, and I saw that it was the Lord's holy
 that appeared in me, and I believed,
 could do no otherwise. Oh, then I was
 and my soul was filled with joy!—*John*
(1643-1711.)

working about with care for the acceptable
 way cast up, which is the way of
 Jesus, JOHN GRATTON was emphatically of
 the non-associated band of Seekers to be
 in England in the time of the first and
 second Charles, and of the Puritan Common-
 wealth. He went first amongst Presbyterians
 and Independents and "a people called Ana-
 baptists." "Afterwards," he continues, "I
 came and kept from all people, and joined
 none, having tried almost all persuasions
 of Protestants, and much sorrow I had in
 it, and was deeply baptized with the spirit
 and burning; and I saw the baptis-
 m of the Holy Ghost and fire; and my
 mind empty notions and opinions, yea, my
 heart I had got by the wisdom of men was
 cast up." It was very soon after this that
 he speaks of the assuring experience,
 unspeakable, above related. Fittingly
 we prepare him for the persecutions and
 sufferings (when he had united with
 the Friends) that marked much of the time of his
 residence at Monyash in the county
 of Devon, one of these experiences as "a pris-
 son for the gospel's sake," including an im-
 prisonment of above five years and a half in
 jail. Nevertheless, opportunity was not
 lost to visit in gospel love, many meetings
 and, as also some in Scotland and Ire-
 land, that he came to realize with all, the
 presence of the Lord Jesus Christ, in receiv-
 ing a hundred fold of "brethren and sisters
 and children, and lands, and visitations;
 and [doubtless] in the world to
 eternal life." He finished his days at
 the age of a daughter, at Farnfield, in Not-
 tinghamshire. J. W. L.

(To be continued.)

THREE THINGS.—"I once met a school-
 ing Bishop Whipple, 'who told me that
 if he had read every book he could
 assail the religion of Jesus Christ,
 he said he would have become an infidel
 in three things.'"

First, I am a man. I am going some-
 where. To-night I am a day nearer the grave
 than last night. I have read all such
 as can tell me. They shed not one solitary
 ray from the darkness. They shall not take
 me only guide and leave me stone-blind.
 Second, I had a mother. I saw her go
 to the dark valley where I am going, and
 I saw her go with an unseen arm as calmly as
 I do to sleep on the breast of my mother.
 That was not a dream.

Third, I have three motherless daugh-
 ters, and he said it with tears in his eyes—
 "I have no protector but myself. I would
 shield them more than leave them in this sinful
 world; you blot out from it all the teachings
 of the Gospel."

Must learn of God as well as labor for

THE PATH TO THE BUSH.

For "THE FRIEND."

Some Christians in South Africa adopted the plan of
 retiring to the bush for prayer and meditation. A watch-
 ful sister came to another and expressed her anxiety
 about her soul's health, and when asked why, the reply
 was: "The grass has grown over the path to the bush."

Trample down the growing way,
 Tread the hardened sod,
 Angels gather here to stay,
 Precious path to God!

Sacred bush with silent tongue,
 Uttering not a word;
 Gathered thoughts a potent throng,
 Round the feet of God;

Sheltered spot, where hearts may rest,
 Unobserved, alone,
 Place where holy hand is pressed,
 And heart-throbs swell to song.

Meeting place 'twixt God and man,
 Interchange most dear,
 Here we learn the wondrous plan,
 Which make the way so clear.

The sheltered strength makes doubly sweet,
 The precious private road,
 And helps us holy joys to meet,
 Joys only found in God.

The calm retreat, the silent shade,
 With prayer and praise agree,
 And seem with Thy sweet bounty made,
 For those who follow Thee."

BEANSVILLE, Ont.

Does Paul Forbid Women to Teach in the Church?

(Concluded from page 187.)

[The substance of an omitted portion may
 be gathered from what here follows:]

That this is the mind of the apostle is more
 apparent still, if you notice the phrase in the
 twelfth verse, "Nor to usurp authority over
 the man." This phrase follows the sentence,
 "But I suffer not a woman to teach." Now,
 if Paul here has the public sanctuary in mind
 and is declaring that he will not suffer a woman
 to teach there, why does he add this con-
 junctive phrase, "Nor to usurp authority
 over the man?" Woman in teaching the Di-
 vine word, in her work in the gospel, as seen
 in her work to-day, is not usurping authority
 over man, and there does not seem to be any
 necessary tendency in this direction, she is
 but filling the place and doing the work which
 the Master has assigned her. Then notice fur-
 ther the apostle uses the singular number
 "man," not men as he would certainly have
 done had he been referring to the public as-
 sembly. But "man," in the singular number,
 just what we were expecting him to say if
 referring to the home, to a wife usurping au-
 thority over her husband.

The truth is that in this chapter Paul is in-
 structing Timothy about ordinary duties of
 Christian life, and not about, who shall, or
 who shall not engage in the work of teaching
 the gospel. And in these verses he shows
 that the gospel does not interfere with the
 appointed government and order of the home.
 God has instituted the family, he has lodged
 authority in this head, and the apostle here
 teaches us that Christianity does not disturb
 or reverse or set aside this order in the home
 and that the woman is to occupy the same po-
 sition of subordination to the head of the fam-

ily to which she was assigned by her Creator;
 and she should not aspire to the position of
 authoritative head and teacher in the home.
 And it is to this that the apostle refers when
 he says that the woman must learn in silence
 with all subjection and not usurp authority
 over the man. It should be remembered that
 Paul is not to be understood here as declaring
 that women should not teach in the home; not
 by any means. It is assuming the position of
 supreme authority in teaching, a step that
 usurps authority over the man, it is this and
 not the work of teaching in the family as we
 usually see it that is forbidden.

Since women hearken as well as Jewish who
 were converted and brought into the liberty
 of the gospel and taught their rights that as
 members of the body of Christ they were en-
 titled to social recognition and were the equals
 of their husbands, it is probable that they
 would be tempted to exceed their rights and
 usurp authority over their husbands. And
 specially would there be danger of this in cases
 where their husbands remained worshipers of
 false gods. They might feel that in that
 case they should not be under authority, but
 would even have the right to assume control
 over the husband and family. But the apostle
 informs Timothy that it was wrong for them
 to entertain such thoughts. The gospel was
 not intended to reverse the government of the
 home, but even in such cases Christian wives
 should be subject to the authority of their
 husbands. Then in view of the whole subject,
 in view of the reasons given why we should
 not expect to find this prohibition in the New
 Testament and in view of the explanation
 given of these passages, does it not seem a
 reasonable conclusion that Paul does not for-
 bid women to teach in the church? It might
 be inferred from this, no doubt, many will
 say, that if this interpretation is correct and
 woman is at liberty to engage in Christian
 work and teach and pray in the promiscuous
 assembly, then she may go further and the
 way is open for her to be ordained to the of-
 fice of the ministry.

[Here we cannot further follow our writer,
 as on seeing the first of his series of articles
 we hoped we could. He excludes women from
 the "ordained ministry," after arguing that
 gifts of public prophecy, prayer, and teaching,
 are conferred by the Head of the church on
 women. What else does public vocal ministry
 consist in than the exercise of those three
 gifts "by the self-same Spirit?" And if that
 is ordained for women, and there are churches
 where men will not "ordain" what Christ
 has ordained, so much the worse for those
 churches' conception of gospel ministry.—Ed.]

SOME one has suggested that when at the
 Tower of Babel men tried to glorify them-
 selves by building a tower to heaven, God
 made them talk in different tongues; but when
 at Pentecost they set about glorifying Jesus,
 God enabled them to speak with other tongues
 so that they could understand one another.
 Pride and selfishness are often at the root of
 separations, and the love of God alone will
 bring them together.—*Exchange.*

 ousy.

Doukhobor Leader Has Arrived.

From the Winnipeg "Free Press News Bulletin," Twelfth Month 23, 1902.

For three hours before the train from the east pulled in yesterday afternoon, a number of people patiently promenaded the platform awaiting its arrival. One of them—a woman—had been there since early morning. She was awaiting her brother, whom she had not seen for fifteen years. She knew nothing of the congestion of traffic along the C. P. R., and so kept steadfast watch lest the train might get in before its advertised time, determined, no matter when it arrived, that her brother should find someone there to meet him.

When, at a little before three o'clock, the train drew in, there alighted from one of the front coaches a tall, quiet-looking man, carrying a black leather valise studded with nickel bosses arranged in curious design. A dark-blue gaberdine reached half-way to the knees, over his trousers were fastened close-fitting, dark-grey leggings, piped at the edges with black-cloth. His headgear was a black fedora. Around his neck he wore a long cord, fastened to what was a heavy silver watch and a richly-chased gold pencil. Alongside the watch-pocket was a fountain-pen, secured by loops of the cloth.

The traveler was Peter Verigin, newly come to Canada after fifteen years of Siberian exile. The woman awaiting him was his sister.

Accompanied by Interpreter Harvey, who had gone east to meet Verigin, and by Ewan Ivan, Paul Plavudin and Simeon Rieben, three Doukhobors who had been deputed by the communities to extend to the Doukhobor leader a welcome on his arrival, Verigin walked eastward along the platform.

A HAPPY REUNION.

His sister saw him, standing half a head taller than the average, and ran towards him, followed by the other waiting Doukhobors, with joyful cries. Verigin dropped his valise, took off his hat, opened his arms and cried "Anna!" He kissed his sister and the others, and quietly walked on toward the immigration buildings.

On the party's arriving at the immigration buildings, Verigin was shown the room set apart for his use. Here he spent a little time chatting with his sister and friends, enquiring after his mother—who is eighty-six years of age, and who lives at Poterjevsk village with his sister, whose full name is Anna Vasilievna Verigina. Then, after the baggage had been packed away and the foregoing domestic enquiries made, the party moved downstairs to Acting Commissioner Moffatt's office.

Com. Moffatt greeted Verigin warmly, welcoming him to the west in the name of the Dominion authorities. In answer to his inquiries as to his voyage Verigin said it was a long journey—good, but rough. He had sailed from Liverpool after crossing Europe from Moscow to Warsaw, and thence to England.

"You'll be glad to be in a country," said Moffatt, "where there is religious and individual freedom."

"I haven't looked around yet," answered

Verigin, through the interpreter, "so I cannot yet tell whether this is a free country or not."

"You know, however," said Com. Moffatt, "that in Canada we do not put people into prison because of their political or religious views."

"Oh, yes," answered Verigin, "I know that."

"People have been looking for your coming for a long time," said Agent Crerar. "There are three hundred Doukhobors at Yorkton station, watching every train for you. And there is one person very anxious to see you—your mother."

WANTS TO SEE HIS MOTHER.

Verigin had up till that time been quietly courteous and dignified; but here his manner underwent a change, becoming alertly interested. "Did you see my mother; yea?" he asked. "When did you see her? Was she well?"

Agt. Crerar satisfied him on these points, and then Verigin asked him when the train could take him there. "I am in a hurry to see my mother," he said. "There is no train till to-morrow, yes? I would go to-day if I could; yes!"

Then he realized that perhaps he might be taking up too much of the commissioner's time. "Shall I see you again, yes?" he asked. "You are perhaps now too occupied."

Being assured on this point, Com. Moffatt asked him concerning his visit to Ottawa.

"I couldn't talk much business," he said, "for I had not seen the Doukhobors. Of myself I know nothing of their troubles—only of what I had heard. They told me the people would not take up their homestead lands."

"Did you hear of the pilgrimage?" asked Agt. Crerar, "and of the action taken by the government to prevent the pilgrims from being frozen to death?"

"I had not heard any particulars," answered Verigin. "It was in print in Russian papers. They said that two hundred people were frozen to death."

Agt. Crerar told him that this was entirely false. Pointing to the *Free Press* representative—who was the only newspaper man present at the interview—Crerar told Verigin that he had accompanied the pilgrims throughout their wanderings, and personally knew of all the facts in connection therewith. "Is that so, yes?" said Verigin. "I shall have much to ask him."

VERIGIN'S PERSONALITY.

Throughout the interview Verigin said little, only speaking in reply to questions, and allowing the others to do the talking. His manner was marked with a natural courtesy and simple dignity that would single him out for notice anywhere. His voice is low, and of singular sweetness. Physically, Verigin is a splendid type of his race. Tall and strongly built, and of erect and graceful carriage, he would attract attention among hundreds of good-looking men. His features are regular, and his skin of an olive pallor. His hair and beard, which is luxuriant, are black as jet. His eyes are dark and thoughtful, and his whole expression that of a man who has suffered much, and has triumphed over every-

thing through the force of kingly courage and constancy.

It was evident that he would make a statement as to his future actions, counsel he would give the Doukhobors for months have been anxiously awaiting, till he had personally familiarized himself with every phase of the situation. Com. Moffatt, indeed, and wisely, did not attempt to draw from Verigin any statement. "You will know all about the trouble the government has had with the Doukhobors," he said, "when you get among them. I hope your coming may have a very good effect. We will do anything possible to help you. You must be tired after your long journey. And you must be hungry. So I will say good-bye to you, and wish you a safe journey to your mother to-morrow."

Verigin listened gravely, and when this was translated, rose and shook hands with the commissioner. "I thank you much," said I hope my coming may be good. I hope, indeed," and so went up-stairs to his room.

HIS EXILEDOM.

The *Free Press* man asked Verigin something concerning his life in exile, which would be a long story," he said. "If I talk English I should much like to tell you. But you cannot always trust interpreters. I was sent to exile from the Caucasus five years; when that was passed I was sentenced for another five years, and when that was had gone, I was given yet another five years. When I was allowed to go free I wanted to go to the Caucasus to see my wife and children, but the government would not allow me, nor would they allow them to come to see me. They might have come to Canada with the Doukhobors four years ago, but they did not because it would take them farther from me, and I do not know whether the government will give them passports to come to Canada, and perhaps I shall never see them."

As Verigin talked of his wife his face broke several times. He sprang up from his chair and paced up and down the room while speaking of them, and it was some minutes before he regained his composure.

"What did you do while in exile?" asked the reporter.

"Do?" repeated Verigin, "why we attempted, of course. I used an axe and entered and built stores. We had all torn our own living, for the Russian government allow nothing for the sustenance of its exiles. Many times I asked for a trial, but it was always refused. I was never condemned by a judge, or by due process of law, but by an 'administrative order' of the government which enables them to detain any person at will."

"Are the reports of cruelty and ill-usage to the exiles, of which we sometimes hear, true?"

RUSSIAN BRUTALITY.

In what way you mean, ill-use?" answered Verigin, "the exiles are sent to a village. They have to walk all the way. If an angry man is tired and fall behind they are beaten. If they try to run away they are shot. If they go outside the village boundaries they are punished—maybe sent down the mines. In the kusk there were some student exiles. They said they wanted the limits of their walk-

that it was ridiculous to confine them in a small space. Soon after they marched into a building. Expecting to reply to their request they went. The big was surrounded by soldiers. They yelled, wounding many of the students flying two."

Moscow, Verigin saw Count Tolstoi, who rejoiced at his release. "I wonder if the moment hasn't made a mistake," he said, "better get to Canada soon, for they change their minds and give you another year."

Verigin's sister and the others completed their preparations for the meal. The table was set on the white table cloth by the Doukhor women—it was spot-clean and did not soil it in the least—as a samovar. Bread and Cross & Kell's jam were the staples. Loaf sugar piled out on a plate and eaten as a relish. A lemon in thin slices, and poured with the Free Press representative to drink at his meal. During the progress of the feast, Verigin chatted with perfect ease on all topics. He said he wanted to take a walk around the city that evening, as his friends had often written to him of the city. He looked with some surprise at the electric light, when it was turned on, but remarked, "I am seeing new things here."

A Daughter Worth Having.

Verigin, who had been parted for years, in the crowded city street. The one who was the city was on his way to meet a business engagement. After a few minutes of delight, he said:

"Well, I'm off; I'm sorry, but it can't be helped. I will look for you to-morrow at dinner, remember, two o'clock, sharp. I want to see my wife and child."

"Or one child?" asked the other. "Or one," came the answer, tenderly; "a girl. But she is a darling."

When they parted, the stranger getting a street car for the park. After a block two groups of five girls entered the car. They evidently belonged to families of the city. They conversed well. Each carried a prettily decorated lunch basket. They were well-dressed. They, too, were going to the park for a picnic. They seemed very amiable until the car stopped, this being in a pale-faced girl of eleven, and a boy of four. These children were shabbily dressed, and on their faces were looks of distress. They, too, were on their way to the park. The gentleman thought so: so did the other girls, for he heard one of them say, "What a look of disdain."

"I suppose those ragamuffins are on an excursion."

"I shouldn't want to leave home if I had to look at that, would you?" This to another

girl. "No; and there is no accounting for it. I think there ought to be a special car for the lower classes."

It was spoken in a low tone, but the gentleman heard it. Had the child, too? He caught the pale face and saw tears. He was angry. Just then the exclamation, "Why, that's little! wonder where she is going?"

caused him to look out upon the corner, where a sweet-faced young girl stood, beckoning to the car driver. When she entered the car she was warmly greeted by the five, and they made room for her beside them. They were profuse in exclamations and questions.

"Where are you going?" asked one.

"Oh, what lovely flowers! Whom are they for?" asked another.

"I'm on my way to Belle Clarke's. She is sick you know, and the flowers are for her."

She answered both questions at once, and then glancing toward the door of the car, saw the pale girl looking wistfully at her. She smiled at the child, a tender look beaming from her beautiful eyes, and then, forgetting she wore a handsome velvet skirt and costly jacket, and that her shapely hands were covered with well-fitted gloves, she left her seat and crossed over to the little one. She laid her hand on the boy's thin cheeks as she asked his sister:

"This little boy is sick, is he not? He is your brother, I am sure."

It seemed hard for the little girl to answer, but finally she said:

"Yes, miss, he is sick. Freddie never has been well. Yes, he is my brother. We're going to the park to see if it won't make Freddie better."

"I am glad you are going," the young girl replied, in a low voice, meant for no one's ears except those of the child. "I think it will do him good; it's lovely there, with the flowers all in bloom. But where is your lunch? You ought to have a lunch after so long a ride."

Over the little girl's face came a flush.

"Yes, we ought to, for Freddie's sake; but, you see, we didn't have any lunch to bring. Tim—he's our brother—he saved these pennies so as Freddie could ride to the park and back. I guess mebbie Freddie'll forget about being hungry when he gets to the park."

There were tears in the lovely girl's eyes as she listened, and very soon she asked the girl where she lived, and wrote the address in a tablet which she took from a bag on her arm.

After riding a few blocks she left the car, but she had not left the little ones comfortless. Half the bouquets of violets and hyacinths were clasped in the sister's hands, while the sick boy with a radiant face, held in his hand a package, from which he helped himself now and then, saying to the sister in a jubilant whisper:

"She said we could eat 'em all, every one, when we got to the park. What made her so good and sweet to us?"

And the little girl whispered back:

"It's 'cause she's beautiful as well as her clothes."

When the park was reached the five girls hurried out. Then the gentleman lifted the boy in his arms and carried him out of the car across the road into the park, the sister, with a heart full of gratitude, following. He paid for a nice ride for them in the great carriage, and treated them to oyster soup at the park restaurant.

At two o'clock, sharp, the next day the two gentlemen, as agreed, met again.

"This is my wife," the host said, proudly introducing the comely lady; "and this," as a

young lady of fifteen entered the parlor, "is my daughter."

"Ah!" said the guest, as he extended his hand in cordial greeting, "this is the dear girl whom I saw yesterday in the street car. I don't wonder you call her darling. She is a darling, and no mistake. God bless her."

And then he told his friends what he had seen and heard in the street car.—*New York Evangelist.*

A Correction and Remark.

In the article "Comment Upon an Autocrat's Position," in the issue of Twelfth Month, 27th, Alexander I. is incorrectly referred to by me as the father of Nicholas I. instead of as his brother. He was many years older than Nicholas, and, indeed, was married before the latter was born. The succession rightly devolved upon Constantine, the second brother; but, Alexander knowing his unfitness for the throne, induced him to abdicate his right, while conferring upon him the military governorship of Poland, and giving his royal assent to his marriage. Constantine, however, soon put an end to the harmony which had existed between the Czar and the Poles, and an insurrection breaking out (1830), he was driven from Warsaw, but still kept his hold on the kingdom. This explanation makes clear the lines of Whittier in those "Early Stanzas" of his *Voices of Freedom*, penned about 1832:

"Go—let us ask of Constantine

To loose his grasp on Poland's throat;

And beg the lord of Mahmoud's line

To spare the struggling Sultane,

Will not the scorching answer come

'From tarbated Turk and scornful Russ:

'Go, loose your fettered slaves at home,

Then turn, and ask the like of us?'"

Yet the dual event—the release of the slaves of the two countries—afforded one of the singular contrasts of history: America's emancipation of her negro bondsmen happening through a terrible fratricidal war, while the "scornful Russ," in the person of Alexander II., the eldest son of Nicholas, issued his decree peacefully emancipating upwards of twenty million serfs, a single month before this country's civil war began. J. W. L.

BE GENEROUS WHILE ALIVE.—I have felt that it is a great mistake to put off being generous till after you are dead. In the first place you lose the pleasure of witnessing the good that you may do; and, again, no one can administer your gifts for you as well as you can do it yourself. It is a great pleasure to be brought into personal relations of that kind, and to make people feel that you are not a philanthropist in the abstract, but that you are interested in them personally and care for their welfare. In that way you benefit them not merely in a natural way, but you make them feel that men are really brothers, and that they were made to help one another. That feeling is not only agreeable in itself, but it will be apt to prompt them to carry out the principle themselves. Put yourself into all you do, and let others feel that you are there. Do not only contribute to a charitable fund, but go yourself and help. It may seem an inconvenience at first, but soon you will come to consider it worth any inconvenience.—*G. W. Childs.*

FOR "THE FRIEND."

The Institute For Colored Youth.

A few weeks since THE FRIEND printed an article in which some points of present history in the affairs of the Institute for Colored Youth were outlined. Since that time a farm at Cheyney, Pa., has been acquired and preliminary steps have been taken to establish the Normal work of the Institution in the country. The farm contains about 116 acres; there is a large farm-house and barn upon it, a blacksmith shop and a very fair tenement house. The farm is well located at the Railroad Station, is well watered by Chester Creek and presents a variety of soil in upland and meadow. The buildings now standing can be turned to immediate account, but new buildings will be required before any very active effort can be attempted.

Naturally, to interested Friends not entirely familiar with the more recent history of the work, difficulties present themselves as they reflect upon this apparently radical departure from the policy of the last fifty years. Some of these Friends know that the initial step in the history of the Institute was a farm experiment, and that after several years of struggle this experiment ignominiously failed. In regard to this original project it is to be observed that it was merely an apprentice system under which boys of very moderate acquirements were to be trained to farm labor, and incidentally to receive some instruction in "school learning." It was attempted long before any system of agricultural education had been developed, and while the colored man was hardly a factor in northern society. In view of the great work at Hampton and Tuskegee this failure is now interesting as fulfilled prophecy, and it need not discourage the present effort. Such a Normal School as is now intended will deal with well educated young men and women who give distinct promise as teachers. The training in farming will be incidental to the larger training in those fundamental activities of head and hand now felt to be of greatest moment to the Negro race. The student teacher, if worthy of a place in the School, will understand that the preparation there is for leadership, and that in all likelihood it will be in a farming neighborhood that the future opportunity for leadership will be found. Be that as it may, the farm training will be only a part of the hand training given to every graduated teacher, and the hand training and the head training will in turn be parts of a well related whole to have their highest fruition in a well regulated, thrifty and happy home. To give the equipment for such teaching the Institution must maintain such a home and this is practically impossible in the city.

Difficulties in establishing and maintaining such a work will doubtless be very great, but the call has seemed to the Board to be clear and the eye of faith has not faltered.

When the war was over and the call went forth for colored teachers to come to the South the Institute could rejoice that it had so many to send. Now that a practical system of education has been developed and northern capital has started to flow by millions to establish the new type of school, another call comes for a different type of teacher. The demand this time is for a specialist and

to have part in training this specialist is still to keep the lead in influence with the colored race. Friends may be discouraged at the little progress of thirty years, but the true Friend can not long dwell under discouragement. His hope and his faith are fixed in the "universality of the gift."

To some minds in addition to the objection treated above it may seem that the proposed Cheyney project is a duplicate of the excellent work at Christiansburg. We think so well of that effort that were this true it would not present itself as an objection. We hope Christiansburg can be manifolded but as a matter of fact the Normal training contemplated in the Institute for Colored Youth at Cheyney will be of a grade in advance of that given in the Virginia institution. We shall expect to have Christiansburg graduates take our course and in turn shall be most happy to furnish teachers for Christiansburg. True the new work of the Institute puts it in the field to solicit funds and at first thought this will be a disadvantage to projects already languishing. The Tuskegee effort however proves that there is another and more hopeful view of this matter. A right stimulation only is needed and funds are bound to flow to right enterprises. The liberality of the philanthropic grows by use and the reason that more money is not now given to the efforts for the colored race conducted by Friends is that too many have not yet learned the great pleasure of giving. One more live Institution added to the list of those now active in soliciting funds should bring a larger return for all. In any event Christiansburg and Cheyney if both right will both find support. The past thirty years of effort for the Negro has not been thrown away. On the contrary thirty years have been needed to perfect a satisfactory system of education. Once this system is put into active service the harvest will not be far to seek.

J. H. BARTLETT.

Science and Industry.

STARVATION DIETS.—The hardest fate that six strong men and a boy of fifteen ever kept alive on was the daily menu of the *Widow's* survivors, who were cast up on the Irish coast near Kilslegg, a few weeks ago. They lived for sixteen days on stewed rope yarn, without a crumb of anything else to help digest it, except water, and, though it made them ill, they kept alive on it, and did not waste away very much.

The *Widow's* was a bark carrying salt between Spain and the States, with an English crew, and she was dismasted and abandoned about one thousand miles out on the Atlantic. Three of the crew were killed by falling masts, and two others were washed overboard; but the other seven took to the whaleboat and set out for Britain. Being in too much of a hurry, they took too little food, but three large butts of water, besides the tank the boat already held. The result was they ate up the provisions in four days, but had water enough for a month, and, after starving two days more, they tried boiling lengths of tarred hemp rope into a pulp and swallowing it. They had a keg of paraffine wax, and, though it made them very ill at first, they eventually contrived to live on the boiled hemp, the tar,

boiled to a jelly, adding to the nourishment of the rope. They landed in comparative good health.

Two men who went to a small island on the Irish coast a little while ago, kept themselves going for ten days on a diet almost entirely of rope. They landed in comparative good health, but a wave on their trying to relaunch the boat they were left on the bare, rocky island, and they had only a slight scalp of coarse turf, out food. Fortunately there is a spring on the island, but nothing in the way of fish or fowls, which they could not catch, and, being unable to make a fire with as a distressing result. There are not even any shellfish, as there is no beach, and the pair had to subsist for ten days on cold, raw seaweed washed up by the tide. For two days they starved, but then they tackled the seaweed, making their meals a day of it until rescued. When taken off they were a good deal emaciated, but the ill effects resulted. The same thing happened off the same coast five years ago, when some fishermen were imprisoned on an island, and they lived on "kelp" grass for six days.

A diet of boots is one of the commonest of last resort foods; and, though it is hardly a well-fed person to imagine that anyone could masticate and digest shoe leather, a pair of long sea boots will keep a man alive for a fortnight, if he has a little water. Captain Maholy, of the founded steamer *Gualini*, and his second officer created a record last year by living for seventeen days on boot leather and a pint of water per day each.

Of course, no teeth can tear cowhide, and they have to be cut up and shredded with a knife, and the shreds chewed and swallowed. Boiling, even when possible, does no good at all, but takes from the boots what nourishment they contain. A few ounces of meal, being so hard to digest, stays the stomach for fifteen or twenty hours.

The best known and most useful of starvation diets for wrecked or castaway people, however, is that of barnacles, and if anything of the kind happens to you they will probably be your staple food. Barnacles are strong, tough, half shellfish, half vegetable creatures that grow on the undersides of vessels. The Englishmen and a crew of Lascars who were forced to abandon the sailing vessel *North Star* a few months ago, kept themselves going for over a week on barnacles, and only two of the crew died. The worst of it was that they give one internal cramps and cause an insufferable thirst; but they do not hurt the frame. You have to reach under the vessel's side and pull them off, taking care not to let the best half of them sticking to the side. Only a starving person could possibly eat them. Many a castaway crew however, has done better than nothing.—*Answers.*

ANOTHER TELEPHONE TRIUMPH. The great scientist, Ducretet, has been making the most interesting experiments in telephoning through wires. He places an ordinary telephone transmitter in direct communication with the earth, and at a considerable distance away, on the other side of some buildings with its wires and cellars, he has a receiver, connected by one wire to the earth and by another wire to a small metallic sphere let down through an opening to the floor of the catacombs and

When words are spoken into the trans- they are heard in the receiver with clearness than in a common telephone. ning through the earth appears pos-

physician in talking about physical breath- the open air, says that persons who fined by their work may take the ex- for a few minutes every day at an open . He specially advises women to take breathing for the development of the al muscles. Corsets and other modern ations have made a condition in which per part of the lungs is taxed at the of the lower, and the abdominal mus- brought very little into play. This s for the accumulation of fatty tissues. reathing also develops the chest, and y it will be noticed that air may be re- longer in the lungs.

PATIENCE AND LONGEVITY.—Dr. Arlidge, ish physician, has recently published lts of years of close study of longevity, in the *Chicago Tribune*, and his conclu- instructive and valuable. Dr. Arlidge ded that the indolent rich are the short- of all classes, and gives as the cause seeming anomaly that they worry their ay. The farmer stands at the head of of long lives; he generally has to d, but his work is in the open air, an altogether healthier environment. ggestion with him waits upon appetite, eats heartily of wholesome food, which s his frame and makes good red blood. in order of longevity are the clerical, al medical professions. The clergyman ountry leads a life somewhat closely ing that of the farmer: he is much oors, his hours are necessarily regu- he is precluded by the nature of his rom dissipated habits of a worldly lawyer's lines, so far as health is rd, are not cast in such pleasant places. it is a more strenuous one, generally excitement, with the brain kept for e time at high pressure, and the n the strain.

the three learned professions the phy- to calculate on the shortest life. A icious doctor must of necessity be eed-abetting of men; and as a rule, he ite or no time to think of himself, as it is continually burdened with the re- abilities of his practice. In both town ountry the medical man is compelled per- tive under unnatural conditions; he is ill weathers and at all times; and it eruly said that a busy physician can ill an hour his own. Then he is con- exposed to infection, and a large part le is spent in the depressing and de- zek atmosphere of the sick room.

lts, according to Dr. Arlidge, is one of nc healthy of occupations. This fact e proved time and again—Gladstone, onfeld, Bismarck and Thiers are con- examples of the truth of this state- . Great brain workers are notoriously l, and among literary men, scientists, es and teachers, the mortality is far n among the industrial classes. There- D Arlidge holds that activity of the

mind, if bent in the right direction, has more to do with the health of the body than muscular exertion, but he thinks that a judicious combination of both forms of exercise brings about the ideal condition.

Employers of labor are especially subject to heart affections. Nervous complaints come second, apoplexy third and consumption fourth. The commercial traveller is a man who seldom reaches the allotted term of years. Irregular habits, too much drinking and smoking, and poorly cooked food are the factors that tend to bring his existence to an untimely end. Policemen are, as a class, very healthy and live to an advanced age, due to the fact that they are chosen for their soundness, and that their life is largely spent in the open air. Rheumatism is the affection with which the policeman is chiefly troubled. The mail carrier is healthy on account of his outdoor life, but for the same reason is peculiarly subject to rheumatism.—*Medical Review*.

Born of the Spirit.

The first years of our existence are simply animal; then the life of a young man is not that of mere instinct, it is a life of passion, with mighty indignations, strong aversions. And then passing on through life we sometimes see a person in whom these things are merged; the instincts are there only for the support of existence; the passions are so ruled that they have become gentleness and meekness and love. Between these two extremes there must have been a middle point, when the life of sense, appetite, and passion, which had ruled, ceased to rule, and was ruled over by the life of the spirit; that moment, whether it be long or short, whether it be done suddenly or gradually, whether it come like the rushing mighty wind or as the slow, gentle zephyr of the spring—whenever that moment was, then was the moment of spiritual regeneration. There are cases in which this never takes place at all; there are grown men and old men merely children still, still having the animal appetites, and living in the base and conscious and vicious indulgences of those appetites which in the child were harmless. These are they who have not yet been born again. Born of water they may have been; born of God's eternal Spirit they have not been. Before such men can enter into the kingdom of their Father that word is as true to them as to Nicodemus of old, "Marvel not that I say unto you, Ye must be born again." O, it is an awful thing to see a spectacle such as that; an awful thing to see the blossom still upon the tree when the autumn is passed and the winter is at hand; an awful thing to see a man, who ought to be clothed in Christ, still living the life of the flesh and of passions! The summer is past, the harvest is ended, and he is not saved.—*Selection*.

NON-RESISTANCE.—In the moral sphere, Christ, with his doctrine of forgiveness and of non-resistance did not mean the discontinuance of fighting. Christ was the greatest fighter the world has seen. Alone He stood up against the mob, against the priesthood, against the empire, against almost everything there was, and with the might of his spirit fought for a new kingdom and a new style of life. The weapon He introduced is only just

beginning to be understood, so slowly does human history move. But as surely as electric traction will take the place of animal haulage, so surely will Christ's way of dealing with evil and with our enemy supersede the brute force method of an earlier time. Christ's method was to oppose to the enemy the force, not of muscle but of soul. That force could not have been used before humanity had reached a certain level, for [Christ crucified] was not there. But its mystic pulsations are now being felt over ever-widening areas and with ever increasing distinctness, and there can be no doubt what the result will be. Those of whom Athenagoras says, "When struck they do not strike again; when robbed they do not go to law; they give to those who ask of them, and love their neighbors as themselves" were men who knew themselves as conquerors. They were in charge of a force against which swords and spears were as naught. And whenever since it has been tried the results have been equally unmistakable. In John Woolman's delightful autobiography, we read how he went, singlehanded and unarmed, to preach the gospel to a tribe of Indians, actually on the warpath against his own countrymen, delivered his message, and returned without a hair of his head being injured.—*J. Brierly in London Christian World*.

"I AM debtor both to the Greeks and to the barbarians, both to the wise and to the unwise." Paul considered himself a debtor to every man who had need of the Truth he had to deliver, whoever he was, or wherever he lived, and he spent his life trying to pay his debts.

Notes from Others.

A VICTORY OF CHRIST'S SPIRIT.—French journals give the story of a Chinaman who was shot by a Russian soldier in the streets of a Manchurian village. The Chinaman refused, when called upon by the commanding general, to identify his assailant. "I forgive him," the Oriental said, as he lay on a cot in the military hospital; "you shall not punish him." "I forgive"—that was his last word. He never recovered consciousness; an hour later he was dead. "Even the hardened souls of the Cossack officers were profoundly moved by the spectacle of this majestic death. The inquiry was abandoned. And never since (says the narrator) have we heard of Russian violence in Karlin."

We are informed that the young woman in New York who was moved to translate the above account from the French, was herself lately shot so that she died, but likewise refused to the last to give the name of her murderer.

The Emperor Menelik, of Abyssinnia, has issued an edict prohibiting the importation of alcoholic drinks into his empire. French wines and German beer have, he says, found their way to his court. He has watched their effects, and has come to the conclusion that if he does not put a stop to the drinking that is going on his empire will soon fall a prey to other nations. The emperor has no objection to European arts and sciences, but he sets his face against European poison, and declares that he will punish importers of alcoholic liquors by forcing them down their throats until they die. In the preamble to his edict he says that drunkenness is pernicious, enfeebles a race, and destroys the body and mind. He desires that his people remain strong, healthy, independent, and as a means to that end prohibits alcoholic drinks in every part of his domains.

A certain paper puts it in this way:

Stealing \$100,000—is called a case of Genius.
Stealing \$500,000—Litigation.
Stealing \$25,000—Insolvency.
Stealing \$10,000—Irregularity.
Stealing \$1,000—Corruption.
Stealing \$500—Embezzlement.
Stealing \$100—Dishonesty.
Stealing \$50—Thievery.
Stealing \$25—Total Depravity.

And a similar table of numbers of persons killed by men might be made out, using the largest numbers of slain as marking military glory, and so on down through Patriotism, Bravado, Pluck, etc., down to the killing of one, which is Murder.

Said an exchange recently: "If Mary Nixon of Bryn Mawr, Pa., lives until Christmas morning she will be one hundred and two years old. She is a remarkable old woman. Her health at present is good and the conditions are favorable for a big celebration by her family when she enters on the second year of the second century. She is the last of a family of twenty-one children, nearly all of whom died at half her age. Mary Nixon has a good memory and can enumerate incidents of her early youth. She is an interesting talker, and despite her advanced age is still able to read newspapers, write letters and do sewing."

"When men hire themselves out to shoot other men to order, asking nothing about the justice of the cause, I don't care if they are shot themselves," said Herbert Spencer to a well-known military man. But we as Christians must say that we care. Their taking into the bargain the danger of being killed is one of the risks of the business, does not relieve such deaths from any of their awfulness.

A minister returned from his vacation recently, and remarked that he had heard many sermons, but not one in which the atonement figured as the prominent and basal factor. There is a growing lament among thoughtful Christians that the sacrifice of Christ for sin is largely dropping out of modern preaching. Christ is not ignored in many aspects of his teaching and life, but the cross is not emphasized as formerly. If this is the case, it is no wonder the pulpit is declining in spiritual and saving power. A Redeemer's atoning blood is the glory of a gospel ministry and will be kept ever in view by the true and faithful preacher.—*Ex.*

Men and Women is the name of a new Roman Catholic family magazine published in Cincinnati. In appearance and contents it somewhat resembles the *Ladies' Home Journal*.

Arrangements for the inaugural ball had been made at the capital of Nebraska, and the committee called on Governor Mickey to tender an invitation. To the consternation of the business men and society women of Lincoln, he denied it flatly. "I am a Methodist, gentlemen," he said, "and Methodists are opposed to dancing. I am a trustee of the Wesleyan University, and it would be as much as my good name is worth even to give my consent to such a function, much less to attend it."

SUMMARY OF EVENTS.

UNITED STATES.—A dispatch from Washington of the 2d inst. says: "By direction of the President, the Attorney-General will take cognizance of cases in which negro office-holders are mistreated by the community in which they live, and proceed against the offenders." The issue is made in the case of a colored woman at Indianapolis, Miss., who has resigned the office of Postmaster because of threats made against her by the whites. The President has closed the postoffice at Indianapolis, and has directed the Attorney-General to take action against the alleged offenders. The case was discussed at the Cabinet meeting, and the President decided that this was the time to test the question whether a community could force out an office-holder appointed by the Executive, and also

the question whether the Federal Government was powerless to interfere in the race problem."

Telegraphic communication between San Francisco and Honolulu was established on the 2d inst., when a message was sent to President Roosevelt and a reply returned. The line has been opened for business at the rate of 50 cents a word for private messages.

The review of business operations during the past year indicates that almost every branch of trade shows an increase over previous years, and in many there has been a great development which has not been sufficient to satisfy an ever increasing demand.

The total of gold coin and bullion held by the Treasury has risen to \$35,000,000. The gold in the Treasury is not idle and useless, says Treasurer Roberts. It kept in active circulation as currency the certificates issued against it, and, moreover, \$346,681,016 in United States notes and \$30,000,000 in Treasury notes, or over \$160,000,000 more than its own value.

A despatch of the 1st inst. from Baltimore says: The effect of the coal shortage on the 4,000,000 persons of Maryland, the District of Columbia, Virginia and West Virginia is seriously felt. Few towns are supplied with anthracite, and in many there is a shortage of all kinds of fuel. In the smaller towns the residents substitute wood for coal, but in the larger places this has not been possible. In some entire counties nothing but wood is used.

Foot and mouth disease is reported now to be under control in the New England States.

A report on crime, submitted for the information of Congress by Dr. Arthur Macdonald, specialist in the United States Bureau of Education, makes this statement: "It may be said, with few exceptions, that within the last thirty or forty years there has been an increase, relative to population, in crime, suicide and insanity. The youth, as compared with adults, have committed more crimes as society has developed. Statistics show that the States which show the greatest education and intelligence, as the North Atlantic and North Central States, also exceed in insanity, suicide, nervous diseases, juvenile criminals and almshouse paupers."

The Ohio Fuel Supply Company, of Zanesville, has drilled in the largest gas well ever struck in Ohio. The new well is in the Homer field, in Licking county, and has a daily output of 4,000 cubic feet.

Professor Willis L. Moore, Chief of the Weather Bureau, has lately said that it cost \$1,250,000 a year to make the weather forecasts; that the worst warnings of a few days ago in Florida saved millions of dollars to the people of that State, and the forewarning of a single cold wave recently saved shippers \$4,000,000.

In the neighborhood of Bangor, Me., black bears have appeared in such numbers as to have become pests to the farming population. A few years ago a law was repealed which offered a bounty of \$5 for every bear killed, since which they have multiplied greatly.

It is said that the Cornell College of Agriculture will inaugurate a system of experiments with a view to the domestic cultivation and harvesting of ginseng.

There were 532 deaths in this city last week, reported to the Board of Health. This is 62 more than the previous week and 44 more than the corresponding week of 1901. Of the foregoing 283 were males and 249 females; 65 died of consumption of the lungs; 91 of inflammation of the lungs and surrounding membranes; 9 of diphtheria; 19 of cancer; 26 of apoplexy; 10 of typhoid fever; 1 of small pox.

FOREIGN.—The State Department at Washington has been officially advised that the second instalment of the Chinese indemnity fund, due on the 1st inst., will be paid on a silver basis. The first instalment of the indemnity, which was due Seventh Month 1st, was paid on a silver basis, the nations receiving the money and reserving the right to reclaim the difference between the silver and gold basis. Most of the first instalment paid to the United States, nearly \$500,000, was in payment of missionary claims for damages in the Boxer outbreak. The State Department adopted the plan of paying 25 per cent. of each large claim. This absorbed nearly all the first instalment. The State Department has decided not to protest against the payment of the Chinese indemnity on a silver basis.

A despatch from Peking of the 30th ult. says: The missionaries in the Sian-Pu region have been officially notified to leave the country to leave by the 1st inst. It is recommended that the women and children be sent to safe ports.

On the 1st inst. Edward VII of England, was proclaimed Emperor of India, at Delhi, amid a great display by the Viceroy Curzon. A message from the King was read in an assembly estimated to have numbered 70,000 persons.

It is reported from Liverpool that contracts have been made for 200,000 tons of coal for shipment from English, Scotch and Welsh ports to Eastern ports of the United

States. The purchase of coal and the engagements are expected to continue for several weeks; steamers have already been chartered.

The Philippine Commission in a report to recommends among other things that an amendment to the Chinese Exclusion act giving power to Government by law to admit a fixed and limited number of Chinamen into the Philippine Islands who are to be skilled laborers, on the bond of the employer for every Chinese skilled laborer employed he will a Filipino apprentice, and that he will return the skilled laborer thus introduced within five years admission to the country, and that he shall pay a fee of exceeding \$50 for each Chinaman so admitted. The Insular Government to meet the expense of enforcement of these restrictions. The Commission unqualifiedly admits of Chinese will be unwise.

Of the breadstuffs used in Great Britain about 90 per cent. are imported from this country. The States also supply about seventy-five per cent. of the fresh beef, seventy per cent. of the bacon, and 85 per cent. of the ham which Great Britain uses and consumes. Earthquake shocks are reported to have been felt on the 28th ult. at Andjien in Russian Asia and at G. in South America and also in France. On the 1st shocks were felt in Costa Rica.

It is stated that while villages on the Island of Mindanao, one of the Philippines, are being depopulated by cholera.

A despatch of the 1st inst. from Winnipeg says: "Marcon is making tests preparatory to installing a wireless telegraphic service through Canada, where he is experimenting in the Rocky Mountains, where he expected, the diverse electrical currents in the atmosphere of the high altitude may interfere with the successful sending of messages. Winnipeg is to be half-way house of the system. It is understood that the line will be located at Story Mountain, about twelve miles from here. It will receive Eastern news from Mount Royal, at Montreal."

The bubonic plague has appeared in the city of Mexico, Mex., and it is estimated that 5000 persons have died in the city in alarm.

United States Consul Goding, at Newcastle, Australia, says that Australian crop shortages will call for about 200,000 tons of breadstuffs from wheat producing countries.

The volcano at Santiago, Nicaragua, is reported to be active.

A newspaper published in Porto Rico lately says its intention of suppressing gambling-houses in San Juan in the following words: "We hereby give notice of the notorious gambling-houses in San Juan, the doors of which are closed at once to the public, the new warrants for the arrest of the keepers of the gambling-houses and the owners or agents of the houses of the houses who knowingly rent their premises for the purpose." "We propose to make what effect may have, in obliterating the vice, perpetual." An immediate effect was produced and the houses were closed.

RECEIPTS.

Received from James Hobson, agent, Ireland, in Daniel Alesbury.

NOTICES.

Under concern of a member of the Yearly Meeting Committee to visit subordinate meetings, and in operation of Woodbury Monthly Meeting, a public duty for Divine worship will be held in Friends' Meeting at Woodbury, N. J., First-day afternoon, the 1st of First Month, at 3.30 o'clock. Members of the Meeting's Committee, and Friends generally, are invited to be present.

WESTTOWN BOARDING SCHOOL.—For covered persons coming to Westtown School, the stage will leave Philadelphia 7.16 and 8.18 A. M., and 4.32 and 4.34 P. M. Other trains are met when required, stage fares, 15 cents; after 7.30 P. M., 25 cents. To Westtown school by telegraph, write West Phone 1144.

EDWARD G. SMEDLEY, Superintendent.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters to be introduced and discipline should be addressed to

WM. F. WICKESHAM, Principal.
Payments on account for board and tuition, and communications in regard to business should be forwarded to
EDWARD G. SMEDLEY, Superintendent.

Our Homeless Youth.

There is a picture entitled "Breaking Home" which has dimmed the eyes of many ears, when they have beheld the scene of youth about departing from his paternal home to make his way in the world. Members of his family are taking perhaps their last look at their brother and son, men are carrying him out at the door, the mother's hands are on the dear boy's shoulders, her eyes are turned earnestly into his as she speaks the words of blessing and her aching heart swells with prayer for his preservation.

There are few households in the country that have not passed through such a scene. What prayers follow the youth to the land whither he may go! What blessings are called down in a yearning love upon the youth, in answer to parental supplication, for the friend him. A mother's and a father's blessing in eternity upon those who shall take the place of father or mother to him! The youth little he knows now what he is doing, how little he knows now what he is doing, how unsuspecting of the pitfalls of a new life, how inexperienced to detect evil and seducers who was worse and worse deceivers. The parents dread all this, they lead him into the battle of life defenceless, they strip the armor of God within and the unseen and above.

But is a Friend's son, and going to Philadelphia? "There is some hope in this. Surely his friends will look after him there. They will throw protections around him. When they hear that he is a member, they will be kind to him, or perhaps as parents or spiritual guardians concerning his best interests. Such hopes as these bring a measure of comfort over the strained hearts of parents. What art thou and am I doing that

their hope may be justified and their boy preserved?

Do we sufficiently dare to face the question, how many sons and daughters claiming membership in the Society elsewhere are among us as strangers and continuing as strangers, till they are lost to the Society and sometimes to morality? There are plenty of seekers after their acquaintance to take very prompt interest in them, to entertain their evenings with the cards or the pool playing, to show them the sights of the town, to aid them to the theatre, to open the hospitalities of the saloon, and of that society for which drink arouses the passions.

If evening after evening must hang heavy on a young stranger's hands here in our city, without well-concerned members of his religious Society to meet him more than half-way, and provide him with proper acquaintance and with substitutes for the seducing institutions which abound, we must expect him, if not a character unusually strong, to be drawn into some of these temptations. The Friend's Institute does what it can to furnish a reading-room and wholesome place of resort; and in the winter occasional lectures, with sometimes a gathering for social acquaintanceship. Its motive and its work are to be highly commended, so far as they go in this direction.

But the need of a more settled home-life under the kind and sympathetic care of qualified members, has been seriously felt and dwelt upon of late years, in some sessions of our Yearly Meeting—for the gathering of the strangers who may come among us from other meetings, into a boarding home where they may feel they are associated with their own people, and are subjects of a righteous interest in their welfare. We are glad to see that the subject of a Friend's boarding home for such is taking practical hold on a considerable number of our members, and we trust our religious Society in these parts will increasingly awaken to the responsibility of rescuing from the enemy many sons and daughters, who may yet be turned into valuable standard-bearers of the Truth, through the preserving ministry of such a life-saving station.

A GREAT moment at which to take any new step in grace is at the fainting-point, when it would be so easy to drop all, and give all up; when if thou dost not, thou art endued with power.

Baptism.

It is often stated that Friends are alone in the position that Christ commanded no rites or ceremonies. But this is far from being the case. Yet we confess to a feeling of surprise at finding a Baptist minister, Dr. Johnson, of New York, reading before the recent Baptist Church Congress a paper of which the following is reported:

"Could there be a church without baptism? One's answer must depend upon one's views of the efficacy of baptism. I assume that baptism is an expression of confession merely, an act of obedience only, and that it is essential neither to salvation nor to the highest type of Christian character. To make baptism essential to church membership is to perpetuate its cleavage in the body of Christ along the line of ceremony merely. It would compel us, for the sake of a ceremonial observance, to disregard the fundamental Biblical principle of the right and duty of individual freedom of Scriptural interpretation. The policy of receiving members without baptizing them has been followed by many English Baptist churches. Its adoption here would not mean the discontinuance of baptism nor the disappearance of immersion."

But our surprise was still greater in reading the remarks of *The Outlook* to find a paper of such wide circulation and influence among the different denominations taking such a strong ground on this subject, and using expressions, many of which might have been written by a Friend. It is certainly an evidence that on this point as on others, positions long held by the Friends are being accepted by others. Why should not we be more ready to spread them? *The Outlook*, (Twelfth Mo. 20th) says:

"We agree absolutely with Dr. Johnson. Strictly speaking, neither baptism nor the Lord's Supper was originally a church ordinance, and certainly baptism was not a prerequisite to the first communion. The communion was held by Christ with the eleven before the Christian Church was organized; the Passover feast which it supplanted was a family, not a church, festival; not one of the eleven who shared in the first communion had ever received Christian baptism; and there is no reason to think that more than four of these had ever been baptized by John the Baptizer. The Lord's Supper was originally a simple festival meal, generally held in private houses, and in memory of the Master; and baptism was a ceremonial form of confessing Christ borrowed from an antecedent ceremony which accompanied the act of receiving a proselyte from Paganism to Judaism, by which he signified that he disowned and washed away his old pagan beliefs and practices. It thus soon grew to be the customary door of admission to the Church, and later, in Roman Catholic theolo-

gy, a necessary condition of admission to the kingdom of God and therefore to heaven. Even unbaptized infants, however helpless and innocent, were supposed to be left in the vestibule of hell because they had not been baptized. Dr. Johnson, if we understand aright his position, is simply reaffirming the attitude of the Apostolic Church, the only essential qualifications for membership in which were spiritual, not ceremonial. His paper is one of the many indications of a trend in our time away from insistence on the accidents and externals of religion toward its essential life and spirit."

Our position that the one saving baptism is that of the Spirit is good. But we are not to let this doctrine satisfy us, until we know the experience which it calls for. To hold it apart from the experience is to bear testimony against ourselves. The lack of experience cannot be set down to ignorance, nor to the Lord's unwillingness. It must be our carelessness or disobedience. — *The interchange.*

Selected for "THE FRIEND."

Giles Barnardiston.

Giles Barnardiston, of Clare, in the county of Suffolk, England, came of a family of great account in the world, and had his education, accordingly, at the university, and his natural parts were answerable thereto; but when he received the Truth, he saw not only the emptiness of those things, but of their way of worship also; and, like Moses, chose rather to join with the poor, suffering people of God, called Quakers, than to enjoy the pleasures of power for a season. After he was converted, it pleased God to permit a dispensation of the gospel unto him, and He laid a necessity upon him to preach the same; which he faithfully performed to the day of his death, not regarding the tenderness of his body so much, as to fulfill the will of God.

When he was about to enter upon an hard journey, or otherwise exercised, he would say, "That is but for a short time, and we shall have done with this world; and I desire that I may be faithful to the end, that I may enjoy that of the hand of the Lord, that I received the truth for. If it had not been to obtain peace of conscience whilst I am in this world, and hopes of everlasting rest with God in the world to come, I would never have left the glory and pleasure of this world which I had a share of with them that are in it. Neither would I now leave my house and home, where I have a loving wife, with all that a man fearing God needs to desire, if it was not to obey the Lord, and to make known his truth unto others, that so they may come to be saved. For this cause do I forsake father and mother, wife and estate; and whosoever thinks otherwise of me, with the rest of my faithful brethren whom God hath called into his work, to declare his name and truth among the sons of men, they are all mistaken of us, and I would they knew us better."

He continued faithful in the Lord's work to the end; and he was blessed in his labor, for he turned many to righteousness. It pleased the Lord to visit him with sickness in his return from London to Chelmsford, and his sickness was short; in which time he gave testimony to the goodness of God, and said that

the Lord was his portion, and that he was freely given up to die, which was gain to him; and on the eleventh of the Eleventh Month, in the year 1680, he departed in peace.

How Cigarettes Impair the Schoolboy's Mind.

Cigarette smoking boys in the public schools of Kokomo, Ind., are an average of two years behind the non-smokers of their own age.

This startling conclusion and others almost as important are the result of a year's careful investigation by Prof. R. A. Ogg, superintendent of schools and a member of the Board of Trustees of the Indiana State University.

The investigation was carried on quietly but thoroughly by each teacher, and Superintendent Ogg summarizes their reports on the matter as follows:

"The investigation has involved nearly twelve hundred boys from the first grade through the high school. More than one-third of these admit that they do smoke or have smoked at some time. All these have been included in the list of smokers, and only those who say they never smoked are counted in the list of non-users. Surprising uniformity is found in the effect in all buildings and in all grades. Those who belong to the class of smokers average one year older than those of their grade who have never used tobacco. The inveterate smokers are two years behind the non-users. This is true through all the grades.

"It might be expected that the divergence would increase in the higher grades. That such is not the case is doubtless due to the fact that those who smoke fail and drop out of school at an earlier age and in larger numbers than those who do not smoke. If, instead of including all who have smoked at all in the list of smokers, we take only those who smoke habitually, the difference in age in favor of those who do not smoke is nearly two years. Here is a terrible loss which may clearly be charged up to the cigarette habit.

"But there are other losses beside those of progress in their studies. The teachers' reports show that the conduct of the smokers is far below the average. Some of the reports say of smokers: 'Self-control poor, inattentive, not trustworthy; bad memory, careless, excitable, nervous, bad conduct; lazy, sleepy, slow to move; very dull, blank look; heavy eyes, sick frequently; never did any good work in school; no energy, naturally bright but no power of concentration; vacant stare, gloomy, listless.' One boy failed regularly while smoking. He quit the habit and now passes successfully. Physical deterioration is very noticeable, including shrinkage of chest measurement."

A crusade against the cigarette immediately followed this alarming report, and as a result the four hundred cigarette smokers have given up the weed. Now the effect is just as noticeable the other way.

THERE is a bit of comfort for us commonplace, humdrum people, to whom God has only given one or two talents, and who can never expect to make a figure before men. We may be little violets below a stone, if we cannot be flaunting hollyhocks and tiger lilies. We may have the beauty of goodness in us after Christ's example, and that is better than to be great. — *Anon.*

Poems by Mechthild Hellfde.

These poems were written in the d. hour of the middle ages by Mechthild Hellfde, who died in 1277. She is also known as Mechthild of Magdeburg. Her sweet utterances were long unknown till in 18 the convent library of Einsiedeln a trans of her poems into the high German, made in 1344, was discovered. She was one of the faithful witnesses to the grace of God.

H. W. WEST.

WESTERLY, R. L., 1903.

I.

"My Beloved is mine, and I am his; He feedeth the lilies" (Cant. ii: 16.)

Thou hast shone within this soul of mine,

As the sun on the shrine of gold,
When I rest my heart, O Lord, on Thine,

My bliss is manifold.

My soul is the gem on Thy diadem,

And my marriage robe Thou art;

If aught could sever my heart from Thine,

The sorrow beyond all sorrows were mine
Alone and apart.

Could I not find Thy love below,

Then would my soul as pilgrim go

To Thy holy land above;

There would I love Thee as I were fain

With everlasting love.

Now have I sung my tuneless song,

But I hearken, Lord, for thine;

So shall a music sweet and strong,

Pass into mine.

"I am the Light, and the lamp thou art;

The River, and thou the thirsting land;

To thee thy sighs have drawn my heart.

And ever beneath thee is my Hand,

And when thou wepest it needs must be

Within mine arms that encompass thee;

Thy heart from mine none can divide,

For one are the Bridegroom and the Bride;

It is sweet, beloved, for me and thee

To wait for the Day that is to be."

O, Lord, with hunger and thirst I wait,

With longing before Thy golden gate,

Till the Day shall dawn

When from Thy lips divine have passed

The sacred words that none may hear.

But the soul that, loosed from earth at last,

Hath laid her ear

To the mouth that speaks in the still sweet

Apert and alone—

Then shall the secret of love be told,

The mystery known.

II.

MADE ONE.

"He that is joined unto the Lord is one spirit" (1 Cor. vi: 17).

The mouth of the Lord hath spoken,

Hath spoken a mighty word;

My sinful heart it hath broken.

Yet sweeter I never heard:

Thou, thou art, O soul, my deep desire

And my love's eternal bliss;

Thou art the rest where leanness my breast,

And my mouth's most holy kiss.

Thou art the treasure I sought

And found rejoicing over thee:

I dwell in Thee and with Thee am I crowned,

And Thou dost dwell in me.

Thou art joined to me, O mine own forever,

And nearer Thou canst not be—

Shall aught on earth or in heaven sever

Myself from Thee?

GOODNESS has ever been a stronger good than valor. It is the surest policy always to have peace with God. — *Bishop Hall.*

ening Counsel, Thanksgiving and Exhortation of Friends—With Biographical Notes.

(Continued from page 203.)

few weeks afterwards, there was an affectional meeting at my uncle's, at which a certain member William Hammons was present. I was highly prejudiced against him when he came up, but I was soon humbled; for he preached the Gospel with such power that I was obliged to confess it was the truth. But, as he was the instrument of assisting me in many doubts, my mind was not wholly free from them. The morning before this I had been disputing with my uncle on baptism, which was the subject nearly this minister, who removed all my scruples beyond objection, and yet I seemed loath to leave that the sermon I had heard proceeded from Divine revelation. I accused my uncle of having spoken of me to the contrary; but they cleared themselves by telling that they had not seen him since my complaint he came into the meeting. I then thought him as the messenger of God to me, laying aside my prejudices, opened my mind to receive the truth—the beauty of which was shown to me, with the glory of which I continued faithful to it.—*Elizabeth Ashbridge* (1713-1755.)

As by a singularly varied and tribulated life that ELIZABETH ASHBIDGE, of Middlemarch, Cheshire, reached that point in her pilgrimage journey which enabled her to pen a faithful record above given. Brought up in the way of the Church of England, and brought to sing and dance, she was nevertheless often affected, even to tears, as she went upon the different religious societies of her day, desiring that she might be directed to the one it would be best for her to follow. Marrying very early, without the parental consent, five months later she became a widow. Alienated from her father, she sought a home with a relative in Dublin, and, of religiously restrained life; then, another connexion in the west of Ireland, where she had all the liberty she wished. Calling to go to an uncle in Pennsylvania, she ventured herself to a plausible, but unscrupulous gentleman, for her passage. Still, feeling of Providence seems to have been in the knowledge of the Gaelic language had gained enabled her to expose to the world a murderous plot among the Irish rebels. Arriving in New York she entered into a contract of servitude attended by great hardships, and though her master allowed card-playing guests of the clergy at his house, "his example," she said, "made me of his religion." Then came the temptation to become an actress with a strolling company of players, but this being put aside, she consented to the marriage proposal of a school teacher, who fell in love with her while dancing. How the Lord at last brought her to Himself in the midst of many changes of abode from Massachusetts to Delaware how she patiently endured the incongruities and even brutal treatment of her husband how she was strengthened to cast in her lot with Friends, and to persevere in attending their meetings, notwithstanding the opposition and threatenings of her unnatural com-

panion, and how the latter was at last brought to cease his persecutions ere death stayed his hand,—all these make up a pathetic narrative beside which a "Sorrows of Werther," or other sentimental production of a mind unsubjected to the cross of Christ, seems of but trifling worth in comparison. It remains to be said that Elizabeth at the age of thirty-three years, was married at Burlington, a union not to be repented of, to Aaron Ashbridge, and later having her mind drawn to visit the meeting of Friends in Ireland, she was acceptably engaged nearly two years in that country, but, falling sick, "departed this life in a quiet frame," her body being laid in the burying-grounds of Friends, at Ballybrumhill.

* * * * *
My father frequently read the Bible to us, as well as other religious books, particularly on First-day. One evening when collected for that purpose, I read to the family William Leddra's epistle, written the day before he was executed. It had a very powerful effect on me, tendering my heart in an unusual degree, and bringing me to trembling; under which I was favored with an extraordinary visitation of heavenly love, producing a sense of my sinful, impure condition, and fervent desires after holiness—that I might become changed, and hereafter live a life of acceptance with my Heavenly Father. I had never had the same view of myself, nor felt the same willingness and desire to dedicate myself to Him as at that time. The savor of it continued many days. The light of Christ shone clearly into my heart, showing me that many of my habits were contrary to the Divine purity and must be abandoned—that many of my words were light and unsavory, and a guard must be placed at the door of my lips. Love flowed in my heart towards my gracious, Almighty Parent pre-eminently, and then towards all men as brethren and creatures of the same all-powerful hand. I desired above all things to be with Jesus, and to know Him to continue with me, and at that time it seemed as if He did condescend to manifest Himself in a clear manner, so that his countenance was lovely, and I walked under his guidance and protection with great delight. It was the baptism unto repentance, the day of my espousals—the beginning of a new life; and while favored with these heavenly feelings, I thought nothing would be too hard to part with in obedience to the will of my Saviour.—*William Evans* (1787-1867).

Born in Philadelphia of godly parents, and surrounded by many relatives and friends who had been carefully "brought up in the nurture and admonition of the Lord," WILLIAM EVANS was yet conscious, in the search for true peace, of the same need of a surrender of self, of subjection to the cross and a coming under the purifying process of Him who sitteth as a Refiner of silver, as was the troubled and tossed Elizabeth Ashbridge, whose home environment was so different, as were also her early and rough experiences with the world. The compendious Journal of William Evans, reaching to 700 printed pages, is no prolix narrative. The man of business will find therein a savory recital upon engagement in mercantile pursuits, with its Divine limitations as to the character of business embarked

in, the time accorded it, and the outreach for riches. Appearing for the first time in the ministry at the age of thirty years, when accompanying his mother on a religious visit to New England, he was often himself engaged in similar visits during the succeeding fifty years, frequently to the nearby Quarterly Meetings, but also to many others, from New England to Iowa, and from Canada to Carolina. Many thoughtful observations upon the right training of children at home and in schools, upon war, trading, the keeping of slaves, the ministry, etc., will be found throughout the pages of this instructive Journal. * * *

The sweet influences of the Morning Star, like a flood, distilling into my innocent habitation, have so filled me with the joy of the Lord in the beauty of holiness, that my spirit is as if it did not inhabit a tabernacle of clay, but is wholly swallowed up in the bosom of eternity, from whence it had its being. * * *
As the flowing of the ocean doth fill every creek and branch thereof, and then retires again towards its own being and fullness—and leaves a savour behind it; so doth the life and virtue of God flow into every one of your hearts, whom He hath made partakers of his Divine nature. And when it withdraws but a little, it leaves a sweet savour behind it, so that many can say they are made clean through the word that He hath spoken to them: in which innocent condition you may see what you are in the presence of God, and what you are without Him. Therefore, my dear hearts, let the enjoyment of life alone be your hope, your joy and consolation; and let the man of God flee those things that would lead the mind out of the cross, for then the savour of life will be buried.—*William Leddra* (c. 1680).

In an open jail, in an extremely cold winter, chained to a log, the "enjoyment of life" of which the soon to be martyred WILLIAM LEDDRA wrote the day before his execution on Boston Common, assuredly had reference to that life with Christ which never dies. This beautiful epistle opens with the salutation, "To the Society of the Little Flock of Christ, Grace and Peace be multiplied." An inhabitant of the Island of Barbadoes, William Leddra had become convinced of the Truth as held by the Society of Friends, and came thence (1658) under an apprehension of duty to the town of Newbury in Massachusetts. With his companion, William Brend, he was carried to Salem, sent to the House of Correction upon a false accusation of denying Christ and the Holy Scriptures, then removed to Boston, and for five days kept without food, and finally whipped with a three-corded lash. Banished from Boston, he nevertheless felt it his duty very soon to return thither, notwithstanding imprisonment, with severe suffering from the cold and lack of food, and cruel chaining to a log, awaited him. Not the lips of a deluded one or of a malefactor could phrase the parting words to a friend as he was led to the place of execution—"All that will be Christ's disciples must take up his cross;" nor as the halter was ignominiously put about his neck, calmly say, "I commend my righteous cause unto thee, O God! and at the last, as he was turned off, cry out, "Lord Jesus, receive my spirit!" J. W. L.

(To be continued.)

Science and Industry.

Under the patronage of women a diet kitchen is to be established in Washington whose patrons are expected to be mainly physicians, who will send in prescriptions for food to be supplied in the same way that prescriptions for medicine are sent to pharmacists. It is now realized that proper food is as necessary as medicine.

BORAX AND EXPERIMENTS ON YOUNG MEN.

—The following is from an editorial in the *New York Evening Post*: "Apparently it has not occurred to Dr. Wiley that experiments on such healthy, robust young men will not be of much service. Nobody claims that borax is a violent and immediate poison like arsenic or strychnine. It is merely believed or suspected that it interferes with digestion, and thus in the long run impairs the health of those whose stomachs are not vigorous. Young men in the student age usually do not know they have stomachs: they are apt to boast they could eat broiled brickbats on toast. Borax is not likely to affect them visibly: but children and adult dyspeptics—most American adults are dyspeptics—must be injured by a chemical which arrests fermentation, disguises the badness of tainted meat and fish, and retards digestion. More persons are kept awake at night by retarded digestion than by any other cause, and insomnia does as much to impair vitality and make one feel wretched as insufficient nutrition."

The last sentence is of importance to millions of people who gormandize late at night or eat a second meal too soon after the first, or a third meal too soon after the second, and then wonder why they do not have a good night's sleep.

THE REINDEER'S RUN TO THE SEA.—"Grandfather," said James Henry the other night, as the two sat before the open wood fire and watched the red flames wallow up the chimney mouth, "what about those reindeer you promised to tell me of?"

"When did I promise that?" asked the old man.

"Why, the day we saw the wild fowl going by over the marshes, like a great arrow in the sky. Don't you remember?"

"Oh, yes. I remember now," his grandfather answered. "The straight flight of the birds made me think of the great run of the reindeer for a taste of the salt sea. I never saw the reindeer make this run, but I have heard others tell about it. I wish that I had been up in the frozen countries where the reindeer, the only sort of deer that man can tame and harness, live, but I never have been, and I am too old now ever to get there. You know, I suppose, that the reindeer live in the cold countries to the far north of us, especially in Lapland, in northern Europe?"

"Yes," said James Henry: "we learned that at school."

"Well," said his grandfather, settling back comfortably as a log sank down into the fire as if easing its position, sending a shower of sparks up the chimney. "some day you will know what it means to live a life none too full of variety, excitement, adventure, and to long for something you cannot have; to greatly desire in summer a whiff of cold

northern air; to ache for the freedom of the woods and the cool plunge in a mountain stream while you have to slave all day in a hot office in the city. And then you will think of what I am going to tell you about the reindeer."

"For once in the life of the reindeer, so they say, he must taste of the salt water; he longs for a drink of it, and has to get that drink or he dies. The Laplanders travel in large numbers together, and with them they have hundreds of reindeer, tame and docile. But one morning one of the youngsters of the herd is seen to prick up his nostrils and scent the breeze. It may be that the village is a hundred miles from the sea at the time; but he seems to sniff the salt, and it makes him restless. His restlessness the next day has spread through the herd, and the Laplanders begin to pack up their cooking utensils and bedding, for they know what is going to happen."

"The herd gets more and more restless, more and more unwilling to be harnessed, till one morning they all start in a body toward the distant ocean, moving slowly and cropping the moss as they go. The Laplanders follow them, having to carry their goods on their own backs, and themselves drag the sledges. Soon the herd breaks into a trot and forgets to crop the moss. Then the reindeer breaks from a trot to a gallop, and from a gallop to a breakneck race, the thunder of their hoofs reaches the camp for a few minutes, and then they are gone to drink from the polar sea."

"The Laps who are following find the trail broad at first, but on the second day it has narrowed down, there are stains of blood to be seen, and soon the bodies of the weaker deer appear on the plain, trodden down by their stronger companions in the now deadly race for salt. The narrow trail is like an arrow, straight for the sea, for the sharp, salt draught ahead."

"How do the reindeer know the way to the sea? No man can say. They have an instinct that guides them, like the birds. Perhaps they smell it afar off. At any rate, when the Laps come up to the beach, they find their animals grazing quietly by the shore, quite tame and docile again, having had their one long drink. Once more they can be harnessed into the sledges. But during the time when the call of the salt water comes to them no power on earth can stand between them and their desire."

"But do they do this every year?" asked James Henry.

"No," said his grandfather; "every year the Laps journey with them to the sea, where at that season there is better grazing and plenty of salt. But once in the life of every reindeer a sudden desire comes on him for a drink of salt water with unconquerable force, and then he must go to the water, wherever he is. If he happens to be by the sea, there is no trouble, no stampede. But I suppose this great desire does not come when the ocean is near. As you grow older you will find that men, too, do not desire certain things half so much when they have them at hand as when they are far from them."

"That is true," said the boy, half to himself. "I've wanted lots of things, air guns and that sort, ever so much, till I got them,

and then they didn't seem half so nice. Grandfather smiled, and poked the *New York Tribune*.

THE CARIBOU.—The great reason present neglect of rice raising in the pine is lack of caribou to carry on this most useful animal having been decimated by the hand of man who slays them in great numbers during the winter, as a war measure, the creatures being at the hands of both our soldiers as the enemy. After the destruction came the ravages of pestilence, the dying in great numbers from a disease the rinderpest, which swept off a very large proportion of the caribou of the Visayan Islands.

The caribou is a great ungainly animal about the size of the ox, but I think stronger or possessed of the endurance of an oxen in the United States. He is of a mild color, with very large horns, is generally possessed of the proverbial patience of the States in submitting to the yoke, and at times he is filled with a sort of fury when he breaks loose from all restraint and the utmost speed makes for the nearest where he submerges himself till the passes away. The native driver is not to drive him too hard or too long in water, as too long abstinence from water is liable to cause the death of the animal and drive him to fury. The caribou, ungainly as he is, is probably the most useful animal in the Islands. He is pre-eminent as a beast of burden, and the only one with exception of an occasional cow or bull, that is used to a keel or cart. The native horse is used to draw loads, his only occupation being to transport passengers. The aristocratic Filipino horse draws the men and women of the land; the humble caribou bears the burden. In every pueblo may be seen the wheeled cart to which is attached the animal, the driver riding in the cart or on the back of the caribou, as may best accommodate his pleasure.

In the sugar fields the plow is drawn by him, and in the rice paddy he may be seen knee deep in mud and water bearing the weight of the onerous burden of the rice culture of the Archipelago. He may truthfully be said to be the foundation of the past industry of the Philippine Islands, and when a new agricultural system is adopted, this faithful animal figure conspicuously in the design, what it may be, and thus it should be even upon American enterprise and capital and labor-saving inventions that cause the change to be a thing of the past, for during the centuries of Spanish domination the caribou bore the burden of the Philippines.

This animal is well suited to the Philippine. The Caribou is slow; so is the Filipino. The caribou is regardless of the value of time; so is the Filipino. The caribou believes in a slow life easy and enjoying the present regardless of the future; so does the Filipino. When the buffalo was to the American Indian, the caribou is to the Filipino. They are suited to each other. It is difficult to hurry the caribou; it is very difficult to hustle the Filipino. The caribou is characteristic of the country, going, patient and extremely slow, un-

a paroxysm of fury, and not easily excited in which latter respect he affords a good example to the American resident of London, whose first lesson to learn is that of patience, the great lesson of the Orient, to which is necessary to health and peace of mind.—*W. F. Norris, in the Presbyterian.*

Ceremonies.

What an inveterate tendency there is in the human heart to trust in outward forms, as of seeking the inward grace! And this is the case, what a hindrance, a painful help, have these forms proved to growth, nay, to the very existence of that life which constitutes the real and true experience of Christian experience."

It is a calamity deeply to be deplored that should thus put the form in the place of the power, but they have always been doing so. It is only another species of that idolatry which has prevailed from the foundation of the world."

When forms are exalted and idolized and become . . . they become 'Nehustan,' as we say of brass, or a piece of bread, or a cup of water. As the apostle said of circumcision when the Jew had put it in the place of the truth, 'Neither is that circumcision which is outward in the flesh . . . Circumcision of the heart, in the Spirit, and in the letter; whose praise is not of men, but of God' (Rom. ii: 28-29.) We feel perfectly that if Paul were here and could see the consequences which have arisen from the idolatrous regard given to what are the Sacraments of the Supper, and of Baptism, he would say precisely the same with regard to them; for even if Jesus Christ himself were to be permanent institutions, which there are very strong arguments put forth by many most devoted and intelligent Christians ever since the days of the apostles, amongst whom are the Friends of our own time, we feel sure Paul would say baptism is nothing, and the ceremony of the Lord's Supper is nothing."

Christians often say to me when I put this before them, 'Oh, but you have no authority to remit the Supper, because the Lord would have us to take it in remembrance of Him who died for us.' I answer that He left the matter to all perfectly discretionary; and as to the continuance, that entirely depends on the coming of the Holy Spirit. Friends, many others of the most spiritual and faithful Christians of all times, have been told that He then referred, as in so many places which are generally misunderstood, to his coming at the end of the Jewish dispensation. Any way, our Lord, who had been sent to the woman of Samaria, to the Samaritan, and now is, when the worshippers shall worship the Father in truth' (John iv: 23), anywhere, everywhere, could not have intended to say that God could be more acceptably or truly worshipped through any particular ceremony. . . . Neither is it creditable to a spiritually enlightened mind that He should say, 'If a man love me he will keep my commandments, and my Father will love him, and we will come unto him, and make our abode with him' (John xiv: 23) could have intended to say that through the earthly medium of

bread and wine. His people were to remember Him on whom their thoughts were to be constantly concentrated, or to commune with Him in any special sense above that in which they were to commune with Him always and everywhere. The water which Jesus gives, and to which alone He attaches any importance, is that which is in us, "a well of water springing up into everlasting life" (John iv: 14); and the wine which He values and promises to drink with us in his Father's kingdom is that wine of the kingdom which is righteousness, and peace and joy in the Holy Ghost."

"Friends, do you partake of these sacraments? If not, rivers of earthly water, vineyards of wine, will avail you nothing; they will be as 'Nehustan' (a piece of brass).

"If we were to have any binding forms in the new and spiritual kingdom, in which all forms were to find fulfilment, it seems to me that there is a great deal more ground for insisting on washing of one another's feet than for either of those already referred to; and in this we can see a great practical lesson on the human side which our Lord actually laid down. How comes it, I wonder, that many of those who regard the former with sanctimonious reverence can utterly, and without scruple, set aside the latter? I fear that human pride and priestly assumption must be held largely responsible."

"Further, nothing is more evident to all who have any acquaintance with the history of Christianity, than that the undue value set upon these ceremonies has been one of the greatest hindrances to the extension of Christianity. Again and again have its valiant warriors turned aside from the battle with the great forces of evil to quarrel amongst themselves concerning these externals."

"When I was in Ireland, some of the oldest and most experienced Christians who took part in the great revival some twenty-five years ago told me that a great proportion of the results of that wonderful work of God were lost in consequence of a controversy about water baptism. Do you wonder that we of the Salvation Army shrink from the possibility of such a sacrifice of the greater to the less, especially when we are backed up by the great apostle to the Gentiles thinking God that he baptized none of his early converts, and for the very same reason, namely, because they were making the ceremony a cause of controversy."

"Oh, the thousands of souls who are resting their hopes of salvation on the fact that they have been baptized, not only such as believe in the palpable delusion of baptismal regeneration, but amongst ordinary church and chapel going people. . . . I do not think there are many thieves, or harlots, or drunkards, or openly immoral people who claim baptismal regeneration. It is only genteel sinners who can bring themselves to believe such a palpable sham, and yet if baptism possesses any efficacy, it should be as effective in the one class as in the other."—*Catherine Booth.*

THE world must not see us staggering under our crosses. It must see that we are in the "fellowship of his sufferings," and that we are supported in that fellowship by a supernatural power.—*Nicoll.*

Mary, the Selfish Scholar.

Mary, a schoolgirl, is now at home again. She was away for a long time—at preparatory school—at college. She went through a full course. Even when at home attending high school Mary might almost as well have been away. Her studies were so numerous, her lessons so long, her teachers so exacting, her standards so high, her ambitions so strong, everything was absorbed in school life. It was school, school, school—all the time. When she went away to the seminary to prepare for the college one of her sisters said: "Mary is not much more away now than she has always been." School life, even though the student be at home, is often such engrossing work that young people lose home influence while yet at home. And this is an unfortunate thing.

There is an education which every girl needs—and every boy, too—which no school can give and which is more important than the education that the school does give. It is an education in things of life—everyday life—things practical and "common"—pertaining to habits and manners and ways of speaking and of answering when spoken to and of helping and smoothing things down and brightening things up; an education for parlor life and dining-room life and bedroom life and kitchen life; an education in burden-bearing and errand-going; an education in tones of voice and in managing the facial nerves and in governing the temper. Well, there are many things Mary ought to have learned before going to school and practised at home while going to school. It would have given her a better start and made her great parchment diploma worth so much more.

Mary is now at home—she and her diploma. If all the things which the diploma says in Latin about Mary, are true in English, she is a remarkable girl. And she is. She knows a great deal of history. The outlines of it are in her mind and the filling up. She knows the men and women who made the history of the world and can tell you when and where and how they lived and what they did. She has fine powers of analysis in the study of character. Her biographical studies and acquisitions alone would make her a rare companion and an exceedingly rare teacher. She has insight into motive. When Mary talks about Cæsar and Cromwell and Lincoln she does not linger among the most obvious phenomena of their lives—where they were born and when, who educated them and how, what they became and what they did and when they died.

She penetrates into the hereditary forces and the influence of the age and the pressure of immediate circumstances: the balance of personal powers, the ruling motive in each case and influential motives which might have been sufficient to produce other and widely different results, but for that all-dominant motive which made each man what he was rather than that possible other. It is positively delightful to hear Mary talk on such topics. She seems wise beyond her years. And the investigation of ordinary people of her acquaintance, by the tests which she applies to the extraordinary people of history, is sometimes as comical as it is wonderful. College did a deal for Mary.

Mary's tastes are delicate and accurate. In literature she has studied the best standards, until her own thought puts on the fine, flexible and elegant expression of her models. She detects infelicities with an artist's insight. Thought, in her case, stands no "hedge" at the door of speech." She has the gift of language. She has so long read and loved what the masters have spoken and written, that she herself has gained mastery over tongue and pen. In the fine arts Mary is well trained. She is gifted rather than trained, although her education has developed the gifts. Nor is it at all affectation with Mary. She is all that she professes. In painting and sculpture she has the critical and cultivated eye. She has read much, seen much, practised much, talked and written much, and her judgment along these lines is consulted and respected by her seniors. She is a versatile girl. She could give lectures on literature, art and music. She could teach almost anything anywhere. Money has been spent upon her. She had the faculties to begin with and she has improved them faithfully. She shines in society. Men admire her. Some women envy her. When the glow of achievement is on Mary's face in the parlor, or while the brilliant discussion is going on, Mary's mother is proud of her. She looks into the girl's fine illuminated face and says to herself, "Mary is a wonderful girl!"

Mother thinks another thought. She thinks it but does not speak it. She does not, however, wholly succeed in suppressing the sigh that grows out of the thought. Why should Mary's mother sigh at thought of Mary? Sure enough, why? Because she knows Mary. She sees both sides of her—the society side and the home side—the matter-of-fact every-day side. She sees through the fine show into the secret soul. She knows what she dare not tell. She does not want to tell. She wishes that what she knows were unreal, so that she could not know it. In fact, for we might as well out with it, Mary is an incarnation of refined selfishness. Mary is polished marble. She is selfish—a selfish scholar, a selfish talker. She is a product of the one-side education which looks only at the intellect and neglects the heart and conscience. She has no sympathy with the children at home. They jumped for joy when they knew she was coming home from school. She froze their joy within twenty-four hours by her want of interest in their simple pleasures and by her sharp rebuke of their "noise." She is "proud" of her father when he is dressed for society and thinks her mother "looks very well" when ready for church—but that is all. Father might come home with aching head, with anxiety over some business matter, but she must practice her new sonata whether it is agreeable to itching heads or not. Mother is sometimes very tired—very tired, caring for children, carrying on kitchen work, superintending the sewing woman, preserving fruits, and a pair of hands could relieve her so much. But Mary as Crawford's or James' new novel and doesn't want to be disturbed and wishes the "children would be quiet," and thinks—and says—"what a nuisance babies are anyhow!" For folks at home, Mary has no smiles, no sympathy, no help. For society she has time and suavity, song and talk, inexhaustible

resources and unwearying patience. No wonder mother sighed.

Alas for those who, having a right to love, receive indifference; who, reaching out to find a heart, grasp—a stone; who, having made sacrifices all their lives through love, expect some slight return, and for return reap scorn! Alas for the mother whose sons and daughters are insensible to her devotion and to the service and self-abnegation by which they enjoy the brightest and best things that come into their lives! If there be one thing in this world more cruel than another, it is the ingratitude of a child on whom love has been lavished without stint and who has turned all advantage into self-gratification.

Mary needs more schooling. She should take a post-graduate course. The sooner she registers and begins the better. She needs to learn what a mean thing selfishness is, and to look upon it with loathing. She needs to see that culture of the intellect and of the "tastes" is a very small part of education, and that without tenderness and the spirit of self-sacrifice and of helpfulness, it is not only useless, but it is a curse to those who have it. She needs a course in kitchen work and nursery sympathy and sitting-room manners. She needs to know how to spell the words "gratitude," and "honesty," and "patience;" and how to pronounce the words, "father," "mother," "brother," and "sister," so that there shall be heart in the sound; and to read the words of the Lord Jesus, "Take up thy cross and follow me;" and how to sing (with the Spirit and the understanding also),

Thy nature, gracious Lord, impart;

Come quickly from above;

Write thy new name upon my heart,

Thy new, best name of Love."

What pictures she could then paint! What a light would then shine in her face! And mother looking on could say, and without a sigh, "Mary is a wonderful girl."—From *Studies in Young Folks*, by John H. Vincent.

A little boy declared that he loved his mother "with all his strength." He was asked to explain what he meant by "with all his strength." He said: "Well, I'll tell you. You see, we live on the fourth floor of this tenement, and there's no elevator, and the coal is kept down in the basement. Mother is dreadfully busy all the time, and she isn't very strong; so I see to it that the coal hod is never empty. I lug the coal up four flights of stairs, all by myself. And it is a pretty big hod. It takes all my strength to get it up there. Now, isn't that loving my mother with all my strength?"

SUFFERING searches us as fire does metals. We think we are fully for God until we are exposed to the cleansing fire of pain; then we discover as Job did, how much dross there is in us, and how little real patience, resignation and faith. Nothing so detaches us from the things of this world, the life of sense, the birdlime of earthly affections. There is probably no other way by which the power of the self-like can be arrested, that the life of Jesus may be manifested in our mortal flesh.—F. B. Meyer.

INTEGRITY is a great and commendable virtue.

For "THE

The Priesthood of Believers.

Aaron as high priest, and his priests, under the law, were washed, with holy oil, and clothed in garments of beauty. None but those of the family of Aaron were eligible to act in the holy temple, a temple made of living stones. Under this higher and spiritual dispensation of God's only begotten Son, now here, Christ Jesus is of God made a High Priest after the order of Melchizedek to continue forever. And all, who are anointed as He was, with the Holy Spirit, that they may serve in God's temple, not made with hands, but built up of living stones' those who are the workmen of his holy hands. These as priests are washed in the laver of regeneration, baptized with the Holy Spirit, clothed in garments of righteousness, freely given forth as a wardrobe of Christ.

God, an invisible, omniscient, and omnipotent Spirit, needing nothing of our aid, possessing all created things, by his own declared "the hour cometh and now is, when true worshippers shall worship the Father in spirit and in truth; for the Father requires such to worship Him. God is a spirit, and they that worship Him must worship Him in spirit and in truth" (John iv: 23-24). He commanded our High Priest. They are the sons who are led and guided by his Spirit. These are of the family of Christ, of the household of God, as Jesus said, "Whoever shall do the will of my Father, who is in heaven, the same is my brother, and sister, and mother" (Matt. xii: 50). He leads them the paths of righteousness, for his time upon them. They are like trees "planted in the house of the Lord, they shall flourish in the courts of our God" (Ps. xcii: 13). The fruits, those of the Spirit, are righteousness, a righteousness not their own, their garments are those of holiness, decked with ornaments of grace, wherein He clothes and beautifies his people, that they may glorify His Father and their Father.

His temple is his people, whose he is sanctified; the sacrifices they offer are spiritual; their altar is a contrite and humble heart, one that in holy fear trembles before the word. The holy fire is such as comes down from heaven, even the Holy Spirit; that gives unction and ascendeth thither where he came.

The conversation of these who are redeemed from earth (their carnal mind), is in heaven as becometh their high and holy calling, Christ Jesus, as his saints. These seek to be in the beauty of holiness. His name is on their forehead, and God is pleased to accept them, and to extend his mercy and grace towards them for the sake of his dear Son.

A befitting order and solemnity attend his house. God sitteth between the cherubim, his judgment and his mercy seat. He sitteth upon the throne of his glory, reigneth righteously. Christ as the Son and Head of the house, ordereth all things, according to the Divine will, directing and putting each and every one who is truly grafted into the spirit, appointing to and calling upon each to exercise their several service. God's love and power as a canopy is over all, and

of his love and mercy at times ex-
others present, so that as the apostle
they are constrained "to worship God,
port that God is in you of a truth" (1
: 25).

should it be, and thus will it be, in all
watchful, true and faithful to the
of Divine grace, the grace or gift to
us through our Lord Jesus Christ.
his Son have sent the Spirit of pro-
lead his people into all truth, to teach
the Divine will, to order them in all
services, to empower them to forsake
of sin whose end is death, and to the
way of holiness which leads to God.
in Christ speaks to us by his grace,
did to Israel of old by his prophet,
en unto me ye that know righteous-
people in whose heart is my law;
not the reproach of men, neither be-
of their revilings;" again, "a law
proceed from me, and I will make my
it to rest for a light to the people"
(and 4.)

ow speaks to us by the Spirit of his
om God has appointed as the Mediator
himself and man; and whether it be
aint or sinner, the word spoken will
be one of love and mercy, as we give
ear, a yielding of our soul in faith
to Him, as we hearken to his reproofs
away from folly. It matters little
we are when first He meets us in the
mighty He is able by the renewings
grace to transform us, and make us
would have us to be. Saul the per-
found mercy, Peter declared himself
ful man," King David on various oc-
casionally sinned; on repentance, God
forgave him all, putting away his
for this very purpose Christ died,
might redeem us from all iniquity,
nity unto himself a peculiar people
of good works."

hen as willingly yielding our hearts
erations of his Spirit, from being de-
unholy, He, by his Spirit, cleanses
us and makes us holy, that as priests
and made holy, we may tread his
holiness, that we may offer "spiritual-
ness" acceptable to God, through
Jesus our High Priest. And as we
ship God in spirit offering sacrifices
of prayer or thanksgiving, the savor
is sealed to our souls, as Paul de-
scribes "eating of the sacrifices are made
of the altar" (1 Cor. x: 18), that is,
leashed to bestow upon such of the
and blessings which by his will accrue
to us, the church of Christ, whom Christ
through his sufferings, death and medi-
cine purchased to himself. This is ful-
fillment to Abraham, "In thee and in
all the nations of the earth be

is this: God hath made his only
Son, anointed with the fulness of
Spirit, an almighty, all-sufficient High
priest, things pertaining to God. Christ
hath called sinners from among
Jews and Gentiles, "washed them from
iniquity in his own blood, and made them
unto God his Father, to
glory and dominion for ever, Amen."

W. W. B.

THE ECHO PRINCIPLE.—The story of the
boy and the echo is an old one. He learned
to know the echo once upon a time, and, sud-
denly provoked, he called it hard names. The
hard names came back to him from the hard
face of the cliff. He became angrier and
more abusive, but abusive word and angry
tone were thrown back at him. Then the boy
ran to his mother and cried in anger and de-
feat. But she was a wise woman, who told
him to go back to the echo and to speak kin-
dly to it. The boy did as he was told. Sud-
denly the tone of the echo changed. Loving
words came back to him from the cliff which
had scorned him before. He ran in glee to
his mother and told her he had found a friend.

There is a deep principle involved in this
simple story. The world does give us back
what we give it. If we scorn life, life will
scorn us in return. If we abuse law instead
of obeying it, law will break us instead of
saving us. If we give the world love, we
shall find that the very atmosphere of the
world is loving. If we cast our kindness
broadly, we shall receive rich returns in kin-
dness. There is no use in weeping angrily
when we seem to hear the harsher notes of
life. It is most likely that these are the echoes
of a censorious spirit within our own
hearts. The only cure is to give the world
kindness and love. Then the echo principle
obtains, and love and kindness are thrown back
to us richly.—*Zion's Herald*.

A WRITER tells how a little child once
preached a sermon to him.

"Is your father at home?" I asked a small
child at our village doctor's doorstep.

"No," she said, "he's away."

"Where do you think I could find him?"

"Well," he said, with a considering air,
"you've got to look for some place where
people are sick or hurt, or something like
that. I don't know where he is, but he's
helping somewhere."

Notes from Others.

There can be but little doubt from the reports
that come from the Vatican that Pope Leo is fail-
ing in health and the weight of years is begin-
ning to hamper seriously the wonderful energy
which has marked the closing years of his pontifi-
cate.

The *Leader* believes that instead of taking
commercialism into the Church the Church must take
Christianity into business—not make the Church
more secular, but secular life more sacred.

A large building, one-story high, and capable of
accommodating eleven hundred persons is to be
erected in Philadelphia for the purpose of preach-
ing the Gospel to the Italians and instructing them
in our language and the industries.

The *Christian Endeavor World* says we Protest-
ants give our congregations too little part in
the vocal exercises of the house of God. We have
made one idol of the sermon and another idol of
the choir.

Dr. Kikuchi, the present minister of education
in Japan has recommended the Bible as one of the
best books for students of English to read.

The group of school buildings at Tokyo, Japan,
maintained by the Missionary Association in which
many of our members in Philadelphia are interested,
has been destroyed by fire.

The *Independent* has an editorial entitled "The
Christmas Sward" in which is the following: "Men
care little, too little, for theologies nowadays, but
such theologies are taught to Christian people as
ought to rouse to battle every child who would not
see his Father's character maligned."

The "Freed from Rome" movement at Manila,
under the lead of "Bishop" Aglipay, seems to be
getting serious. The breach between old and new
groups wider and tends to riot. The Roman Catho-
lics are considering the prosecution of the leaders
under the Sedition Act.

It is estimated that the number of Bibles issued
last year from all the printing presses was over
7,300,000 copies. Bible studying is increasing.

In a recent university address N. D. Willis said:
"The greatest weakness of this nation is the lack
of the religious instruction of the young."

The *Advocate* believes that the Church ought not
to be behind the places of amusement in seeking to
hold the best locations in the down town districts
of our great cities.

Eugene R. Shippen, pastor of the First Parish
Church, Dorchester, recently sent to one hundred
and eighty-five of the male members of his parish
a list of twelve questions with the request for an-
swers. One hundred and forty-five men promptly
responded. In answer to the question why so small
a number of men attended church the majority
answered "Indifference." In answer to the ques-
tion what are the most desirable topics for the
pulpit sixty-two answered "Christ," forty-nine
"The Bible," fifty-three "Religious History," forty-
eight "Science," fifty-four "Sociology," twenty-
one "Theology."

There is to be started a Fraternity of Prayer,
chiefly for men. It will consist of a pocket prayer
service for church extension, under the theory that
men may be induced to use printed prayers during
leisure of travel, and other times, when they will
forget to pray extempore!

What do these people think that prayer is?

Episcopalians will push the matter of change
of name, under the claim that the present name,
"Protestant Episcopal," is a misnomer and a hind-
rance to Christian unity. The name favored is
"The American Catholic Church" and diocesan
conventions thus far acting, in response to a com-
mittee request, have generally taken stand in favor
of a change.

Was there ever a time when the well-placed
woman cared so much to improve the world as
now, did so much to assume its misery, spent such
time, and energy, and money in the effort to make
it more intelligent, or more kindly, or more pure in
conduct? In numbers which are to the numbers of
the audacious or the ill-conducted as the numbers
of London to the numbers of Bristol, they devote
themselves with a sort of passion to good works,
preach, teach, distribute, nurse, and comfort all
who are in need of their ministrations. There are
literally dozens of Elizabeth Frys, hundreds of
Florence Nightingales, thousands of Anna L. Bar-
bauds, all unpaid, all glowing with enthusiasm,
and most of them actually working at their self-
appointed tasks as if they were earning their liv-
ings. There is not a slum they do not reach, not
a form of misery they do not face, not a kind of
appeal to which they turn deaf ears.—*Spectator*.

This is the interpretation which some are placing
on the passage: "The Lord gave the word, and the
number of women that published it was very great."
—En.

IMPROVEMENT IN NEW GUINEA.—There are evi-
dences that a change is setting in over New
Guinea. Conscience is at work among the people,
and when they have been committing outrages

they are conscious that they have been doing wrong, and they sink back from their cannibal encounters in twos and threes, and try to avoid the missionary, and they omit the war-song and the war-dance, and the public distribution of the cannibal food, which were formerly customary among them. It is a terrible thing that the cannibal raids should happen at all, and yet they are not carried out as in the old days. The people are, in fact, emerging from their barbarism, though now and then there is an outbreak of their old habits of savagery. . . . All down the coast a change is taking place. The children are being brought into the schools; the sick are being healed; old and young are being taught, and the First-day of the week is being observed as the Christian's day of rest. A portion of the Bible is being printed in the native language. Two New Guinea Christians are already expert composers, and they are devoting their services to the setting up of parts of the Scriptures, and not only so, but industrial arts of various descriptions are being taught to the people. Some are being made boat-builders, and some are being trained as carpenters. White men said that there was one thing which the New Guinea natives could not be taught to do, and that was to work; but Christian missionaries have proved that Christian natives, inspired by Christian motives and living in the Christian settlements, can work steadily at the most laborious tasks, under the hottest of suns, and in the most moist temperatures, and can achieve tasks which white men would find too onerous.

SUMMARY OF EVENTS.

UNITED STATES.—Senator Hoar in introducing a bill into Congress to regulate "trusts" on the 6th instant, discussed the perils to the community of the control of vast wealth by a few individuals. "Is there anything to render it unlikely," he asked, "that if one of these vast fortunes has grown from a hundred thousand to a hundred million, or a thousand million in thirty years, that, in the hands of the next possessor, in another thirty or fifty years, the hundred million may become a hundred thousand million, or the thousand million a thousand thousand million? Is there anything to stop the accumulation of these awful hoards? Can not the same power and business ability and capital that can control all the petroleum in the country by and by control all the coal? Can it not control the railroad and the ocean carrying trade? Can it not buy up and hold in one man's grasp the agricultural and grazing lands of new and great States and the coal mines and silver mines and copper mines?"

But, great as were the possibilities of the accumulation of great wealth by individuals, he did not find in such accumulations the same peril that is found in corporate control of such wealth. This was true, he said, because the natural man dies and his estate is distributed under the law, while the corporation lives forever.

The President has appointed Dr. Crum, a colored man, as Collector of the Port of Charleston. This action, together with his action at Indianola, Miss., in vacating the post-office there on account of the ill-treatment of the post-mistress, a colored woman, has awakened a strong feeling of race prejudice in parts of the Southern States.

Two bills have been introduced into Congress to regulate "trusts," which were being drawn up by Attorney General Knox, and are measures which the Administration proposes. In a letter on this subject the Attorney General says: "The end desired by the overwhelming majority of the people of all sections of the country is that combinations of capital should be regulated and not destroyed, and that measures should be taken to correct the tendency toward monopolization of the business of the country. I assume a thing to be avoided, even by suggestion, is legislation regulating the business interests of the country beyond such as will accomplish the end."

Andrew Carnegie has offered \$1,500,000 to the city of Philadelphia for the erection of 30 branch free libraries here. The offer has been accepted by the Board of Library Trustees, subject to the approval of the City Councils. This city has been the scene of a long catalogue of assaults on non-union men and those dependent upon them has been stated. The cases were not confined to the stoning, beating, stabbing and shooting of men who wished to work in spite of strike and boycott, but, according to many wit-

nesses, the lives of women and children were often willfully endangered.

A recent despatch from Chicago says: 200,000 persons in Chicago are suffering from ailments directly due to cold and exposure resulting from the coal famine. A special Grand Jury has convened in Chicago to inquire into the high prices demanded for coal by the local dealers, and the leading dealers have been summoned to testify before the jury.

The Pennsylvania Railroad Co. proposes to increase its capital stock by an addition of 200 to \$250,000,000.

When the increase is made the total authorized capital will be from \$450,000,000 to \$500,000,000, and it also proposes to authorize the issue of an equal amount in the same addition, if there should be need for them.

The Reading Railway, including all its railroad tributaries and dependencies and its coal properties, has passed into the hands jointly of the Pennsylvania Railroad Co. and the Vanderbilts. Control of the Reading is lodged, for the Pennsylvania, with the Baltimore and Ohio; for the Vanderbilts, with the Lake Shore Railroad Co.

By this purchase the Pennsylvania and the Vanderbilts have acquired control of two of the leading anthracite roads, the Reading and the Jersey Central, and of one-third of the anthracite coal output. Large bituminous fields are included in the transaction, and now, as the Pennsylvania already had possession of the leading soft coal roads, control of both the hard and soft coal business of the country lies in the hands of one man.

A Catholic priest addressed to certain Societies denouncing dancing and asking them to aid him in eradicating "the principal evil antagonizing the work of a parish priest in this region," he adds, "I became fully convinced that it brought ruin to an enormous number of young people." He expresses great admiration for the Methodists for "their noble stand against any kind of dancing."

An earnest plea has been made by President Roosevelt and Secretary of War Root that Congress appropriate at once three million dollars to relieve distress in the Philippines.

A dispatch of the 8th says, the determination has been reached after careful deliberation by the President and his advisers to accede to the claim made by Great Britain and Germany for the "open door" in the Philippines. This claim was recently made by these governments in order to exempt the export duties in Philippine ports on certain cargoes of hemp.

A bequest for masses and for the education of Roman Catholic priests has been declared by the State supreme court of Minnesota to be a trust not authorized by law.

In South Bend, Indiana, people are burning beans for fuel, and at \$1.50 per bushel are satisfied that they are getting the worth of their money.

Henry H. Hays, former of Pittsburgh, has given one million dollars for the establishment of a hospital to treat tuberculosis in this city.

The institute is to be modeled somewhat after the Pasteur Institute of Paris, but will be devoted exclusively to the study and treatment of consumption. It will consist of an administration building containing a Finsen light institute, a hydro-therapeutic institute, with baths of every description, including electric, and every device known to science for the study and treatment of tuberculosis. It is to be under the charge of Dr. L. F. Flick who is considered one of the foremost authorities respecting this disease.

There were 552 deaths in this city last week, reported to the Board of Health. This is 30 more than the previous week, and 81 more than the corresponding week of 1901. Of the foregoing 279 were males and 273 females; 55 died of consumption of the lungs; 110 of inflammation of the lungs and surrounding membranes; 10 of diphtheria; 24 of cancer; 25 of apoplexy; 14 of typhoid fever and 4 of scarlet fever.

FOREIGN.—All the foreign ministers at Peking except United States Minister Conger, have signed a joint note informing the Chinese government that in failure to fulfill its obligations in relation to pay the war indemnity on a gold basis, as provided for by the peace protocol, would entail grave consequences. At the present time the cost of the indemnity in gold would be about fourteen per cent. greater than when it was first agreed upon.

Under the operation of a new law regulating liquor selling in England any one found drunk in any public place may be arrested, prosecuted and punished, and if he is convicted of drunkenness three times within twelve months he is classed as an "habitual drunkard." This involves imprisonment for a month, a being placed on the black list and photographed, and a copy sent to the publications of the surrounding district who are liable to a heavy fine if they serve him with drink during the next three years. Habitual drunkenness is also made a ground for legal separation between husbands and wives.

A dispatch from Washington of the 8th says, appears to be reasonable prospect that the Venezuela trouble can be settled without invoking the mediation of the Hague Tribunal. Minister Bowen has been named by President Taft as his commissioner to the conference. The four points relative to conditions precedent to amicably it is the expectation that the British and German governments will name their ambassadors as commissioners in their own behalf, and that the commission will meet with instructions to endeavor to adjust the Venezuelan dispute at Washington. Minister Bowen was expected to leave for Washington on the 10th.

The amount of coal ordered in Europe for shipment to the United States is said to reach five hundred thousand tons. Of the fifty-four steamers now under charter for the United States, thirty-four are bound for Boston, six for New York, and the remaining nine for Philadelphia and Portland.

A dispatch of the 8th states that an earthquake had been felt at Tapachula, Mexico, which was of short duration and did but little damage to property. A very violent earthquake occurred at Acapulco, Mexican, on the 11th a severe sea shock was felt at Jamiltepec, Mexico.

A dispatch from Berlin of the 8th says: Sixty people sat down to-night to the most remarkable banquet that ever has been given in Berlin. The dishes consisted of the finest meats, and were served in white porcelain. The Society for the Prevention of Cruelty to Animals issued the invitations to the dinner, which was given for the purpose of demonstrating the nourishing and healthy qualities of horse meat, thereby causing less consumption of meat and a ready market for horse meat.

Petroleum in enormous quantities, it is reported, has been discovered in the isthmus of Tehuantepec in Mexico.

NOTICES.

A RELIGIOUS meeting has been appointed by the Board of the Yearly Meeting's Committee to be held in the Meeting-house, Media, on First-day, the 18th of the Month, 1903, at 3 P. M., to which Friends general and others are invited.

WESTTOWN BOARDING SCHOOL.—For covered persons coming to Westtown School, the stage and trains leaving Philadelphia 7.16 and 8.18 A. M.; 12.16 and 4.32 P. M. Other trains are met when ready at Stage fare, 15 cents; after 7.30 P. M., 25 cents extra. To reach the school by telegraph, call on W. F. Wickes, 1144 Chestnut St.

EDWARD G. SNEYLEY, A. M.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to the Superintendent.

W. F. WICKES, Superintendent.
Payments on account of board and tuition, and communications in regard to business should be forwarded to
EDWARD G. SNEYLEY, Superintendent.
Address, Westtown P. O., Chester Co., Pa.

FRIENDS' LIBRARY, 142 N. SIXTH ST., PHILADELPHIA.
Open on weekdays from 11.30 A. M. to 2 P. M., and on 3 P. M. to 8 P. M. Also on Sundays in which Friends' study. Lecture Meetings are held from 7 P. M. to 7.15 P. M.

The following books have been added to the Library:
CARY, E. L.—William Morris.
EARLE, A. M.—Sun-dials and Roses of Yesterday.
HALE, E. L.—Memories of a Hundred Years.
HILLIS, N. D.—Quest of Happiness.
KENNAN, GEORGE.—Tragedy of Fate.
LONG, W. J.—School of the Woods.
MCNATH, JUSTIN.—Reign of Queen Anne (2 vols.).
RICHMAN, I. B.—Rhode Island, its making and its growth, 1636-1683.
RUS, JACOB A.—Battle with the Slum.
VAN TYNE, C. H.—Loyalists in the American Revolution.

DIED, on the eighteenth of Twelfth Month, 1902, Benjamin J. Lord, in his eighty-fourth year of age.

A member of the Monthly Meeting of Friends in Philadelphia, for the Northern District.
He was, at his residence, 1522 Poplar Street, Philadelphia, on the 15th, 1902, HANNAH W. SOUTH, in her seventy-second year of her age; a plainfield, N. J., native. She was a member of the Westtown Yearly Meeting of Friends in Philadelphia for the Westtown District. She was a devoted Christian, and a true spirit, the spirit, they rest from their labors as they work to follow them.

Word in Season—How Good It is!

Give to our readers a share in the enlightenment which we have received in the foregoing extract from a letter from a subscriber in Massachusetts, personally unknown to the editor, and not a member of our religious Society.

Desire to speak of the helpfulness of THE FRIEND which comes weekly to us. It is a rare number that does not give a word or open up a truth and give new light and truths, for all truth is old yet ever new. While you call choice bits from other papers, that are in line with THE FRIEND, yet find the most pleasure and profit from particularly of the Friends and opens a new life of God within. As we pass the time we grow more and more conscious of the true place of worship and as we gather to silence within we find there Him for whom we long, and we adore and worship. Be so patient with us that at length we may have patience with ourselves, and in stillness and quiet silence that we may be at the work for which He predestinated (Eph. i. viii: 29) that is, conformity to his will and the change from glory to glory of likeness as we gaze upon the Christ—as (1 Cor. iii: 18). But the looking upon must be an "open face."

Let us still praise our God for the revelation of Jesus Christ his Son in us.

Adrift in the World.

Following advice, unexpectedly met with a friend in his reading, is forwarded to us reporting with the concern laid before us last week, under the title "Our restless Youth:"—

Isolation has at this time been awakened in our young men employed as travellers and messengers. The exposure of these to the conditions to which they are often unavoid-

bly subjected, has tended to draw aside some from that simplicity, that purity of heart and thought, that strict morality which our Christian principles require. We would submit to the serious consideration of their parents and employers the extreme danger of sending forth into such service, any young person whose religious principles are not fixed, nor their habits formed; and we would encourage Friends in different places where those in this line of employment may travel to continue and extend that kind and hospitable notice, which has been already manifested. The situation of some of our young Friends in other occupations, may deprive them of the advantage of virtuous and instructive associates; these also we hope will not be overlooked by those to whom they are known.—*From the London Annual Epistle, 1816.*

Ostentation is Barbaric, Simplicity is Christian.

Sometimes when a kingdom of this world wishes to inaugurate itself in the minds of a people deemed barbaric, it would cater to the barbaric love of display and outward splendor by the most lavish exhibition of sumptuous expense in gold, silver and precious gems, and of all that can bewilder and dazzle the people's eyes and intoxicate their ears with a sense of imperial magnificence.

The recent Durbar in India, by which England during a whole week sought to impress a sense of its majesty on the peoples of that realm, was on a scale perhaps unparalleled for gorgeous grandeur, except in the imagination of one of her own poets when he wrote of "the prince of this world" who, as Christ declared, "hath nothing in Me:"

"High on a throne of royal state, which far
Outshone the wealth of Ormus and of Ind,
Or where the gorgeous East with richest hand
Showers on her kings barbaric pearl and gold,
Satan exalted sat."

That such display complimented India as being barbaric, is confessed by the much simpler course pursued in celebrating the coronation in England—all too ostentatious, indeed, for Christ, but chaste in proportion to the average advance of the English in a Christian refinement.

Yet how far removed from Christian character, in either case, all this pride of pomp and pageantry seems in the light of the meek and lowly Jesus, Him of whose Church a State assumes to be a joint Head and exponent; Him into whose City the kings of the

earth must bring their glory and honor, and who when entering the earthly Jerusalem, made good the words, "Tell ye the daughter of Zion, behold thy King cometh unto thee, meek, and sitting upon an ass, and a colt the foal of an ass."

Likewise there are churches barbaric, and churches Christian. The one kind seeks to impress men's senses by carnal show, the other their souls by spiritual Power.

MINISTRY IN PROPORTION TO DEDICATION.

—Another serious loss in the ranks of our public ministry is tenderly felt in the decease of a beloved Friend, Sarah W. Roberts, of Malvern, Pa. When even one of our ministers drops out, we now begin to say, how few there are left! Some would allege that this is because those who yield to a call for vocal service, are not sufficiently encouraged,—are not recognized except very tardily. We believe there is a disposition prevailing to recognize speedily every true gift, and that there is a desire to recognize it on every occasion of its utterance. But the recording of a true public representative of our religious Society in the ministry, means other considerations in addition to that of a simple gift in spiritual utterance; and the gift that feeds on the expressed recognition of brethren, is on the verge of extinction. We believe it will be found that the recognition will be in proportion to the dedication—a whole-hearted dedication that keeps its eye single to the Divine encouragement and openings. What did our beloved Friend gain by her dedication? Much, every way. What are our members gaining by a lack of dedication! Certainly not an up-rising ministry. What are they gaining by dallying with worldliness? Certainly, the drying up of the spring of the ministry among us, and the itching of ears for a snarling ministry, even if it have to be of the hireable brand.—Given a revived dedication on the part of our younger members, and there can be no doubt that it will be answered by the pouring out of that Spirit upon sons and daughters, in which they shall prophesy.

It is imperative that a surgeon's hand be clean. Augustine says, "the hand that minds to remove dirt ought itself to study cleanliness. A minister to others must himself be consecrated." "The snuffers of the sanctuary were to be of pure gold."—H. M.

John Collins.

The death of John Collins brings to a close a long life of usefulness and integrity. He was the son of Thomas Collins and the grandson of Isaac Collins, who was appointed printer by King George III. for the Province of New Jersey in the year 1770. John Collins was born on the Fifteenth of the Third Month, 1814 in New York City, on the site of the publishing house of Harper and Brothers. In the year 1818 the family moved to Burlington, New Jersey, where, with his five brothers, he grew up with all the advantages that the best schools and private tutors could afford; at the same time not neglecting the athletic sports of the day, in which he particularly excelled, and which he took much pleasure in after years in recalling for the benefit of a much younger generation. In 1833 he entered Haverford College, and in the following year Daniel B. Smith urged the managers to form a department for the purpose of preparing pupils for the college course, and John Collins and William Gummere were appointed teachers. He left Haverford at the expiration of another year, and devoted himself to teaching and to lithography; one of the most important works which, at that time, he was engaged in, was the drawing on stone of the illustrations for the valuable work of Dr. Samuel G. Morton, "Crania Americana." In the year 1839 he married the daughter of Joshua and Elizabeth Baily. The first few years of their married life were spent partly in Philadelphia and partly in New York City, where for a short time he took charge of the Monthly Meeting school in that place. In 1845 they removed to Burlington, New Jersey, where they passed many years enjoying the valued society, and almost daily intercourse, with such eminent friends as Stephen Grellet, who had married Rebecca Collins, Richard Mott, Harrison Alderson, Susan Smith, Eliza P. Gurney, the Allinsons and many others, whose sterling worth and refining influence were much appreciated by John and Anna B. Collins and the little family which was gradually growing up around them in the old mansion at the corner of Broad and York streets. During these years he was occupied as a teacher in Burlington College, Samuel R. Gummere's school, his own school, private classes in drawing and writing, also sketching and painting, generally in water colors. His indomitable energy and industry were part of the nature of John Collins; quick to learn, and to absorb knowledge, he was constantly adding to his fund of learning; he was familiar with Latin, Greek and Hebrew languages, and able to converse quite fluently in both French and Spanish. To his interest in the last mentioned tongue may be ascribed much of his pleasure in a visit which he paid to Cuba in the year 1859, a trip which not only afforded him much gratification, but this was shared on his return by hundreds of the children of various public schools in both Burlington and Philadelphia, to whom the sight of the large water color drawings of Cuba and the talk upon them, will long be remembered.

The stirring times of the Civil war soon followed, and although no active part was ever taken by him, yet the stern realities of the times were wrought into daily prominence by

the trains bearing the troops, passing, and often stopping in front of the house. Many a basket of fruit, pitcher of cold water or a baking of bread or publication of reading matter was carried out by John Collins and his wife to the tired soldiers.

In the year 1869 John and Anna B. Collins attended the North Carolina Yearly Meeting and became very much interested in the Friends in that section; so much so that in 1870 they believed it their religious duty to connect themselves with the newly established "William Foster Home" in East Tennessee. In the summer of that year they left Burlington, as it afterwards proved, never to return to the old home; as they remained in the South until the year 1879, and then they removed to Philadelphia.

The activity and interest in everything pertaining to the advancement of knowledge and the betterment of his fellow men had firm hold on the mind of John Collins, and after their removal to Philadelphia he was engaged in many benevolent organizations; he was a member of the Prison Society, the Pennsylvania Peace Society, the Temperance Society, and other kindred bodies, and was a frequent visitor to Children's Homes and Public Schools. His interest in all that surrounded him, his desire to render others happy, and to be always busy was characteristic of his life, for he thoroughly believed in the brotherhood of man and did what he could to advance the cause of education. At the age of seventy-six he wrote, "It has been my aim while instructing thousands of children in scholastic knowledge, not to lose sight of teaching sound principles of honesty and integrity, so essentially needed in after life."

To his ability as an artist he added the gift of poetry, and a number of his poems have been published from time to time; the theme being mostly based on either religion or nature. As age drew on apace one of the dominant qualities of this man—that of activity—lost but little of its power, although somewhat enfeebled by illness. Surrounded by members of his family that gave him loving service it was hard for him to realize that his physical powers were not equal to the strain laid upon them by the strenuous active mind; and it was a constant effort and a sorrow, for them continually to present to him the necessity of checking his natural bent.

Vindictiveness and hate were unknown words in the vocabulary of this good man; he loved to think nothing but good of his fellow men, and he sought earnestly to forget injuries. Practically the teachings of the Peace Society, whose cause he so warmly advocated, were carried out in his own life. In his latter years he repeatedly expressed the wish that he might depart peacefully, and he numbered among those who had preceded him that he so frequently spoke of during his earthly pilgrimage. His desire in this respect was most mercifully granted, for on the afternoon of Twelfth Month 17th, 1902, he passed away so gently that the exact moment when the spirit left its earthly tabernacle could hardly be discerned.

Many times has he expressed his gratitude to his Heavenly Father who had led him through the devious ways of life, and he loved to speak of this firm belief in Christ as his

only hope of glory. In one of his later he writes:

"He leadeth me in paths of his own choosing
He knoweth surely what is best for me
Then will I follow on for fear of losing
Thy Heavenly Guide through all eternity."

Southern Schools and Experience.

Hannah H. Stratton, of Winona, Ohio, a minute for religious service among the colored people of some of the Southern States, accompanied by Lydia K. Lightfoot, of Newburg, and by her son, Dillwyn Stratton, recently accomplished the service. The following details of encouraging progress among some of the people of African descent have been furnished by D. S.

"The impressions of Tuskegee gained from the descriptive narrative in THE FRIEND for the winter, were an advantage in making ourselves at home in so complicated and the system of education as is required for both manual and mind training of nearly four hundred pupils.

"To see this large family twice assembled in one room, giving close attention to the gospel labor of one of our ministers, to feel the reverent prayerful attitude of the caregivers towards the spiritual welfare of their pupils and to have their assurance that the outward signs of devotion are accompanied by some knowledge of our Saviour's inward spiritual manifestation, was cause for both some seed must fall upon good ground.

"Representatives of the colored race we met in several of their schools in Tennessee, Georgia and Alabama, assured us of knowledge of the part Friends have taken on behalf of their people, in slavery times and since; welcoming our present visit as a continuance of favors bestowed.

"The Institute at Tuskegee is the largest of its kind in the world. Our three days' stay was all too short to master more than a small line of what they offer in the way of intellectual, and industrial training to their students. It is quite educational to view so many industries, each under the care of a competent foreman or instructor, who I saw gave a history of the work they had in hand. As we stood beside their printing press, we saw it was clicking off the *Tuskegee Student*. We were reminded of the correlation of many departments. The subject matter of the paper gave evidence of the academic training under the care of an alert and talented member of their race, Roscoe Conkling Egle, a graduate of Harvard College. The setting, press-work, folding and mailing are manual training in that line. The little machine that gave the power was an active witness of many branches of student labor. In the mechanical drawing room we saw on paper, in the wood-workers' room we saw patterns made, in the foundry the castings took their form, in the machine shops we saw the lathes, planers and drills, that make ready for the service assigned it. The furniture in the room testified of the cabinet-maker's training. The shoes on the boys' feet most resembled those we had just seen, finished, in the hands of the young men in the shoe factory. The clothes they wore were made in the large tailoring department, where we saw a score of cuts for trouser legs

operation. The cost of boy's regulation is \$10.50, and the girl's, including less than one-half that sum. Plain dress-making, laundrying, and domestic training are taught the girls on extended scale. But we need not go from place in the Slater-Armstrong memorial building for more evidence of the multiplicity of these departments; in its measurement the rectangle is two hundred and eighty-three feet by three hundred and fifteen, with an open court in the center.

Of the fifty or more large structures now on the grounds, all but four were built by the negroes, who mastered each one for himself and at the same time helped to pay his wages. In the school of architecture we saw drawings of some of the buildings worked out by the apprentices. At the brick-works we were reminded of the failure of three years and of Booker T. Washington's long watch for means to make a trial fourth, which to their great satisfaction succeeded; but he did not realize money in time to redeem his time-piece. The machinery was there, capable of turning twenty thousand bricks a day. Two teams of ox-wagons, with four yoke of cattle to each, were capable of carrying five tons at a time. One dusky boy drove the eight patient mules through many angles and turns, to one of the three buildings under process of erection. There were young men busy, not only in the mortar and carrying hods, but laying out the line, using levels, plumbs and squares. At another house the plasterers, carpenters, tinner and electricians were doing their part, in finishing a modern house. The lumber for the carpenters came at the saw-mill, where the boys are ordered to file the large saw, fifty-two inches in diameter, to scale the logs, and grade the water to act as engine for the forty-horse power engine, that furnishes the power. The buildings on the grounds form another evidence in which new industries are represented. The blacksmith, the wheel-wright, the carriage trimmer, each may be seen from the Industrial Institute. Last of the graduating class presented the faculty a new riding vehicle, of their own make, in skill in workmanship and finish, that would credit to mature workmen. This class are planning to give a rubber-tired party. The dinner bell suggested another industry in their industries. To provide a wholesome food is a most worthy educational venture, among the Alabama negroes. The five hundred and seventy-eight men saw feasting on cooked corn, collards, and beans, were mostly of good enough form and constitution to grace a Pennsylvania's sty, were glad to say Tuskegee pork chops after flavor than much of the meat we find in the South. They had twenty or thirty razor-backs, mixed through the breed, to illustrate the contrast, making an objection to their many neighbors that would be effective.

Of the five hundred cattle, most were for the best instruction in their feed and season in breeding up from the inferior stock was well illustrated. The milk was shown the weight of each milking, for

seventy-six cows. Stable sanitation was good, they had clean food and water, and the milk was well cared for in the model creamery, that had a nice class-room attached. The class on care of dairy cattle gave interesting data of the cost of milk from different cows, and value of various feeds. It was interesting to learn that several of the boys expected to return to farms, when through the school course. The seventy horses and mules contributed largely to the farm products, in tilling the soil under the care of student masters. Their harness, their shoes, and the wagons to which they were hitched all were made on the grounds.

"Remarkable as the results are at Tuskegee, the cumulative influence of the thousands who have carried away with them the spirit of competent efficiency, in whatever they have chosen as their occupation, is working a wider basis of credit, independence, and integrity for the African race.

"We were impressed with the accounts given us of Cornelia Bowen's efforts to build up a school among the plantation negroes, away from any village, in Mount Meigs township, where they are "practically all colored" and descendants of the slaves who lived in the same cabins they now occupy. The plantation owners have vacated their large houses to live a city life, and they regulate their tenants by agents, who make new contracts and close out securities on unfulfilled obligations, staying among the colored people but a short time each year.

"Cornelia Bowen was born on Colonel Bowen's plantation in a little house that stood where Dorothy Dix hall now stands, at Tuskegee; she was a member of the first graduating class, and was given charge of the training school for the Institute, when but seventeen years of age. Traits of character shown at this early age occasioned Booker T. Washington to recommend her when application came for an energetic teacher to open school in the most ignorant section of the black belt.

"A plantation of over seventeen hundred acres, by the insolvency of the planter and the cotton dealer in Montgomery, fell to the ownership of Edward N. Pearce, a New England manufacturer, whose company had advanced money, on the security of future crops, to both parties.

"When the new mistress visited her husband's plantation she pleaded that something must be done to educate the poor ignorant negro. E. N. P. gave a strip of land, and loaned Cornelia Bowen and her associates the cost of the new building, \$1735, without security or interest. She opened school with an enrolment of near three hundred pupils, who were to be taught the first elements of civilized life, including the bath and care of clothing. No better proof of her tact in handling the material at her command need be given than the fact that in seven years she paid back the loan in money secured entirely from the colored people, either for tuition of their sons and daughters, or contributions made directly to her work.

"When we called for a ticket to Merritt's plantation, at the Tuskegee railway station, the agent did not know of such a place, but sold us tickets to Chehaw, five miles distant, for fifty cents each. At Chehaw we bought

to another point on the main line, as that agent did not know the said stop either; but the conductor on the train assured us of the existence of such a place, and kindly allowed us to alight at a little store built of rough boards. Merritt's agent soon appeared, and informed us that no vehicle with springs under it could be had to Pearce's plantation or Mount Meigs school. He kindly undertook "to carry us over," and called colored John "to cut the mules from the plow and hook them to the wagon." Three strong, old-fashioned splint bottom chairs were provided for the passengers, while John sat on the end-gate of the rickety farm wagon, and said "get up sah" a great many times, to the able but self-composed mules. We thus covered the three miles in about one hour, mostly through cottonfields diagonally. A few narrow strips of wood land were very pretty. The delicate red tints of the sweet gum, seen through the emerald of the pines and water-oak made a pleasing contrast to the dark brown cotton-stalks dotted with the white cotton. Our driver explained that a drought in mid-summer threatened ruin to their crop, but later rains brought on this last picking. The cabins were in groups of from two to seven, no window-glass, the square opening that served as a window was fitted with a shutter, which at this season is mostly closed. We found they did not esteem it a hardship to live shut from the light, as when it was cool enough to have the shutter closed they had an open fire on the hearth, that made a light to suit them.

Most cabins were built of small pine logs not over six inches in diameter, raised three feet or more from the level of the ground, on posts. Some were of boards, but the old plantation homes were often deserted, the simple cabin having more attractions for the negroes.

In places, the road was too rough for our uncomplaining women Friends, but when they mentioned what our early Friends passed through, we were thankful our lot was no worse, as we fared better than they were given to expect, before leaving Tuskegee.
